FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, JULY 24, 1890.

VOL. XXXV.—No. 1. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

ANSWERS TO CORRESPONDENTS.

RAILWAY TRANSPORTATION OF DOGS.

WE publish in another column the rules of some of the important railroad lines, relative to the transportation of dogs. Many of the lines, it will be noticed, make no charge for carrying dogs and on the others the rates are reasonable. It is not many years since the man with a dog was looked upon by many a baggage-master as his legitimate prey—a sort of private gold mine which was worked for all it was worth—and not least among the items of expense to be considered by the would-be pleasure seeker in distant Eldorados, where game abounded, was the cost of transporting his dog. We have, scores of times, heard sportsmen declare that the extortionate charges of such harpies of the rail alone prevented them from visiting game resorts in distant places. It was not the actual expense incurred that prevented them from taking the trip, so much as the feeling that they were being robbed. The sportsman as a rule is liberal—often prodigal—in distributing coin to those who minister to his pleasure and never more so than when the recipient has shown kindness to his four-footed companion; but when cash was demanded, often insolently, for scant favor, the most liberal sportsman rebelled. Often the profitless discussion that followed stirred up feelings that were anything but conducive to the state of mind that is so essential to the enjoyment of a pleasure trip, and no doubt the recollection of these unpleasant episodes often proved an important factor in determining the route to be chosen for the next outing, and in many cases, as above stated, distant journeys were entirely abandoned. It is satisfactory to note that on many lines the old order of things has been changed, and the man with a dog can now travel in comparative safety from extortionate demands and with the assurance that his companion will receive proper care.

Railroad managers, as a rule, are good business men and are generally wide awake to the interests of their calling, and as soon as they learn that there is money in it, there is no fear that the man with a dog will not receive the consideration that he is entitled to.

THE BLACK BASS.

IF we may accept the signs of the times, the black bass is the coming game fish of this country. This is not saying that in the qualities of a game fish it excels the trout and the salmon. It is rather to assert that more people fish for bass than for salmon. His followers—and devoted followers they are—out-number and out-vote the adherents of trout and all other fresh-water fish combined. For one thing, the bass is more accessible than the others. People can find time and opportunity to meet him at home. Bass fishing comes best when the general vacation time is here, and when it is convenient for men to "get away" from business and go fishing.

We pay a fittting tribute to this game fish in the nine pages devoted to his honor to-day. The material here given if put into book form, and set in ordinary book type, would make an octavo volume of a hundred pages or more, constituting a manual of instruction and chapters of entertainment to the bass angler. We trust that our angling readers will find this special number "to their pleasement," to borrow a phrase from "Kingfisher." There is a variety of material to suit all tastes; but full and rich as these pages are they do not contain all that we had in hand for to-day. In fact, there is left over, simply for lack of space even in our enlarged issue, sufficient material for another black bass number; and these papers will be given from time to time as we can provide the way.

SNAP SHOTS.

IN the bill admitting Wyoming Territory to Statehood, as passed in the House, no reference whatever was made to the Yellowstone National Park, which as is well known, lies for the most part in Wyoming. This omission the friends of the National Park were quick to notice and to bring to the attention of the Senate. Mr. Manderson, of Nebraska, always a consistent advocate of the National Park, has from the beginning said that he would see that a proper amendment should be inserted in that bill when it came to the Senate. The amendment, which we print below, appears to be carefully drawn and to meet all the requirements of the case. It reads as follows:

Provided, That nothing in this act contained shall repeal or affect any act of Congress relating to the Yellowstone National Park, or the reservation of the Park as now defined, or as may be hereafter defined or extended, or the power of the United States over it; and nothing contained in this act shall interfere with the right and ownership of the United States in said Park and reservation as it now is or may hereafter be defined or extended by law; but exclusive jurisdiction in all cases whatsoever shall be exercised by the United States, which shall have exclusive control and jurisdiction over the same; but nothing in this proviso contained shall be construed to prevent the service within said Park of civil and criminal processes lawfully issued by the authority of said State; and the said State shall not be entitled to select indemnity school lands for the sixteenth and thirty-sixth sections that may be in said Park reservation as the same is now defined or may be hereafter defined.

The Philadelphia *Times*, of July 13, contained an interesting sketch stated to be "from a correspondent of the *Times*," written from Anglesea, N. J., July 11, and descriptive of "good gunning at Anglesea with Italian Joe." The paper is nothing more nor less than the sketch entitled, "Italian Joe and de Plov'," prepared originally and expressly for the FOREST AND STREAM, and published in our "Western Number," of June 12. Joe is simply transported to Anglesea and made to decoy his plover on New Jersey marshes. The *Times* has evidently been imposed upon by the Anglesea correspondent, who likewise shows himself to be an impudent thief.

The Rutland, Vt., Fish and Game Club held its second banquet at the Berwick, Rutland, last evening. These social gatherings of anglers and sportsmen appear to be growing in popularity in this country. In Great Britain there are hundreds of them annually.

An esteemed correspondent who believes in a woodcock open season for New York beginning Sept. 1 and closing Nov. 15, takes us to task for what he is pleased to term our "lamentation as to shutting off August woodcock shooting." We have not lamented that at all. What we have deprecated and do deprecate is the manner in which the change was made. The Attorney-General's office declares that the word "woodcock" was smuggled into a bill, which the Legislature in passing it thought referred only to grouse. Now good law or bad law, there is no excuse for legislative forgery. Better lose our game altogether and have done with it than to protect it by "hugger-muggery." If we cannot care for our game by legitimate methods and equitable dealing, it may as well go. A man must be daft on saving the woodcock if he can approve or condone that rottenness which must pervade the Capitol at Albany when game laws are tampered with in this way. The question of right open and close seasons for any bird or for all birds is less important than it is to make sure that whatever law is enacted shall be put on the statute books by methods open, fair and honest. And the principle involved is precisely the same whether the law applies to capital punishment or to shooting woodcock.

The inter-State commerce bill, which passed the Senate May 29, related only to liquors. Last Tuesday the House adopted in place of the Senate bill a substitute reading as follows: "That whenever any article of commerce is imported into any State from any other State, Territory or foreign nation, and there held or offered for sale, the same shall then be subjected to the laws of such State: *Provided*, That no discrimination shall be made by any State in favor of its citizens against those of other States or Territories in respect to the sale of any article of commerce, nor in favor of its own products against those of like character produced in other States or Territories; nor shall the transportation of commerce through any State be obstructed except in the necessary enforcement of the health laws of such State." The House bill is comprehensive in scope, applying to "any article of commerce," and is clearly applicable to game and fish brought into a State. There is a decided difference of opinion as to the propriety of such action by Congress, but it is reasonable to urge that if any law relating to this subject is to be enacted, it should be made to cover all commodities, the sale of which, like that of game and fish, it is essential for the State to control.

We print to-day the text of the Illinois decision upholding the law of that State, which forbids killing quail for sale or selling birds which have been killed for sale. As we said last week, while the decision is sound and will do much to advance game protection, Judge Craig is manifestly in error in adopting the principle of State ownership of game as laid down in the Magner case. By a reference to our issue of Aug. 16, 1883, it will be learned that we there set forth at length the principles governing the subject as determined by the English and American interpretations of the common law and by numerous precedents. The well established principle is that the landowner has qualified property in the game or fish on his territory, the qualified property consisting in the exclusive right to take the same. But the State has authority to limit both the taking of game and its disposition after it has been taken. This authority, however, is not rightly based on any claim of ownership by the State, but it is a part of the police power. This power is ample warrant for game laws, and in it must be found the defense of the Illinois law in question.

Travel in the Yellowstone Park has been very heavy so far this season. Every wheel and every team that the Transportation Co. has or can get hold of has been pressed into the service to accommodate the throngs of tourists who are flocking into the Wonderland. Numbers of travelers are going into the Park from the south by way of Beaver Cañon, though of course the great majority enter it over the Northern Pacific Railroad from Cinnabar.

Next week we shall publish a portrait of the Chinese pheasant, which has been introduced into the Northwest and bids fair to take its place among the game birds of the United States. It is a handsome bird and in every way a worthy addition to the list.

The world is growing better every day. The Sac City, Ia., *Democrat* recently suspended publication of a weekly issue that its force might go fishing.

THE BASSES AND THEIR ALLIES.

FOREST AND STREAM SUPPLEMENT NO. 9.

THE LARGE-MOUTHED BLACK BASS (*Micropterus salmoides*), Fig. 1.—This well-known and widely distributed game fish has received a varied assortment of names, among them being the following: Bayou bass, green bass, moss bass, Oswego bass, river bass, Huron, trout, chub, Welshman and jumper. The great expanse of waters inhabited by the species and the irrepressible tendency of the fisherman to name every strange fish he sees without asking any questions about its previous history, will sufficiently account for the range of local designations applied to the large-mouthed bass. Only two root names have more than a limited distribution —bass and trout, and the former has the more extensive application.

Distribution.—The large-mouthed black bass inhabits fresh-water lakes, ponds and streams from Manitoba on the north to Florida and Mexico on the south, preferring bayous and sluggish streams. In the Gulf States it is frequently found in the brackish water of river mouths. The species is not indigenous to New England and the Middle Atlantic States, but has been freely introduced in those regions, and has become thoroughly adapted to its new surroundings when placed in lowland streams and ponds. In mountain lakes and brooks the species would be quite out of its element. There is, we think, no other commonwealth in the United States which surpasses Florida in the number and size of its large-mouthed black bass.

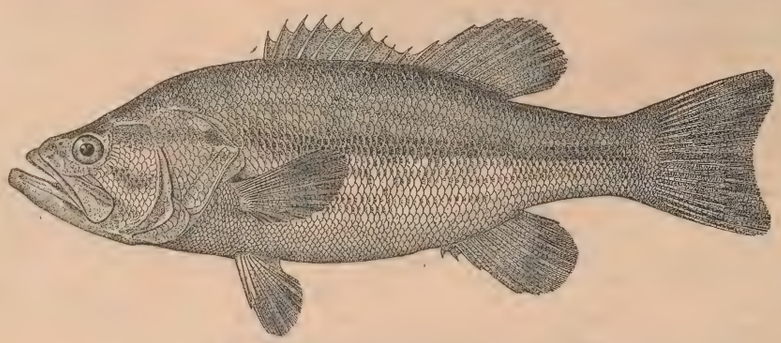

FIG. 1. LARGE-MOUTHED BLACK BASS (*Micropterus salmoides*).

Size.—It is in Florida that the species attains to its greatest size, as attested by the mounted head in FOREST AND STREAM office of an individual that exceeded 23 lbs. in weight. The average weight in Southern waters is below 5lbs., and in the North it is still less. In length the fish may reach 2ft. and upward. Wherever found the growth of the bass will depend upon the amount of suitable natural food in the waters, particularly minnows, frogs and crawfish.

Movements.—This bass is a very active fish, and its movements are affected by seasonal changes and by the daily exigencies of feeding and the demands of the spawning season. In rivers which become polluted there is a prompt effect upon their bass, which seek to avoid the impurities even to the extent of migration, should this become necessary.

Season.—The open season for this species varies in the different States, and in some waters there is no close season at all. In the States which have protective laws the season opens earliest in Wisconsin, where it begins May 1, and latest in Rhode Island, where the date of opening is July 15. In most of the States the fishing begins May 30 or June 1. It would be wise to continue the close season even in the Northern States a little later, for even in Lake Superior black bass have been found heavy with spawn in the month of July.

Food.—The young of the large-mouthed species seek animal food at a very early period of their existence. They have the reputation of being more destructive to one another and to the young of their own species than the small-mouthed bass. This liking for living prey grows with age. Minnows of all kinds, crawfish, frogs, insects and their larvæ, and in fact aquatic animals of all kinds, suitable in size, go to form the varied diet of this active and powerful species.

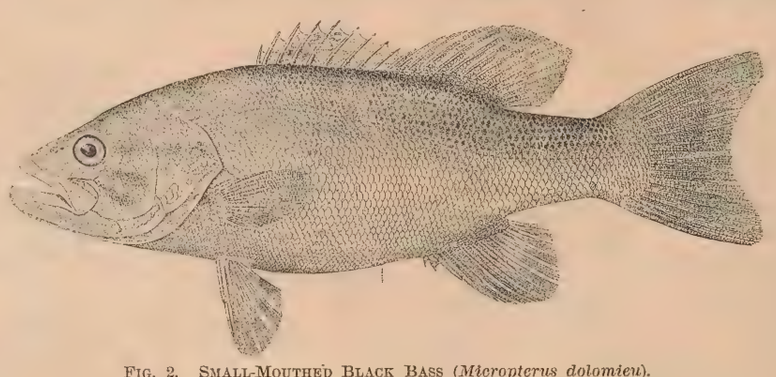

FIG. 2. SMALL-MOUTHED BLACK BASS (*Micropterus dolomieu*).

Habits.—The black bass feed both at the surface and on the bottom, and pursue their prey with wonderful activity. Insects and frogs are freely taken at the surface and even sometimes above the surface of the water. Crawfish, helgramites and insect larvæ generally are sought for under the rocks, which form their hiding places. When surrounded by seines or caught by the hook this species will often leap 5 or 6ft. above the water. In northern waters where the difference between summer and winter temperatures is very great, the large-mouthed bass seeks deep water with approaching cold, and in the severity of the winter hibernates in the mud. We have already mentioned the fact that this species prefers still waters. It particularly delights in the shelter of stumps, logs and overhanging banks. It conceals itself among aquatic plants which shelter schools of small fry upon which the bass feeds.

Reproduction and Growth.—The spawning season of the two species of black bass is about the same, beginning in May and continuing until July. The eggs are adhesive, adhering to stones until batched, and are deposited in shallow water on a gravelly bottom in shallow nests, which some writers believe is prepared by the female before the male joins her. Major Isaac Arnold, Jr., U. S. A., described the nest building habits in FOREST AND STREAM some years ago, and a reference to his observations will be found, also, in the Bulletin of the U. S. Fish Commission for 1882, p. 113. The males fight for the possession of the female, the successful suitor is said to help her eject the eggs by biting or pressing her belly, and the operation may continue two or three days, after which the female alone continues to guard the nest from the numerous enemies of the eggs, among which are the crawfish, and certain fishes. The period of incubation lasts from seven to fourteen days, depending on the temperature of the water, and the young bass remain in the nest about a week or ten days. Cannibalism in this species is more pronounced than in the small-mouth and causes serious loss. Birds, frogs and snakes destroy vast numbers of the young and make it necessary to protect them by means of brush or some other shelter. At three years of age the large-mouth species in suitable waters will weigh from 2 to 4lbs. At the age of about two weeks the young measure nearly three-quarters of an inch in length.

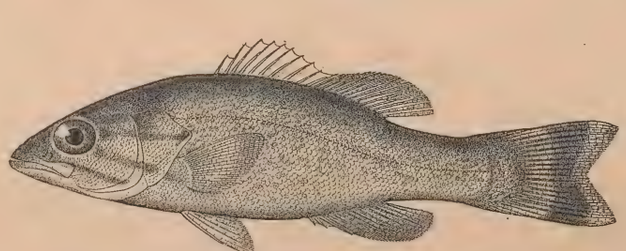

FIG. 3. YOUNG OF THE SMALL-MOUTHED BLACK BASS.

Game Qualities.—It is believed by some anglers that the large-mouthed bass is inferior to the small-mouth in vigor and fighting qualities, a belief for which there is, so far as our experience goes, no foundation. In this opinion we are not alone, many eminent authorities on American game fishes, both among the older writers and those who are now contributing to the literature of angling, holding it with us. De Witt Clinton, Richardson, Thompson, Herbert and many others have put on record their estimate of the game qualities of this species, and Henshall, the apostle of the black basses, admits no superiority of one over the other species.

Food Qualities.—The flesh of the large-mouthed bass is white, firm and well flavored, the fish wherever it is known ranking as one of the best of the fresh-water species. The methods and means employed for the capture of the basses are set forth further on by a master hand, but we will call attention here to some early accounts of trolling. In 1815 De Witt Clinton published some remarks on the fishes of the western waters of New York in the "Transactions of the Literary and Philosophical Society of New York," Vol. I. He says: "It affords fine amusement to traill for the black or Oswego bass when passing over Oneida Lake; even when the boat is in full motion they bite with avidity at a red rag tied to a hook." Richardson, in the "Fauna Boreali-Americana," 1836, states that the Huron (the large-mouthed bass) "readily takes a hook baited with a small fish and a piece of white rag trailled after a boat as in fishing for mackerel."

THE SMALL-MOUTHED BLACK BASS (*Micropterus dolomieu*), Figs. 2 and 3.—One of the early common names of this species is found in the writings of Cuvier, who styled it the "growler," which is equivalent to the French *grogneur*, a grumbler. Cuvier supposed that the name growler was given to the fish because of a certain noise which it produced resembling that of the drumfishes and the gurnards, but he had no proof of this. The Greek name *grystes* signifies growler. It appears that this name growler was pretty generally associated with the black bass in the time of Cuvier. Rafinesque mentions the names lake bass, big bass, spotted bass and achigan. He also refers to it as the painted-tail or bridge perch, the yellow bass, gold bass, brown bass, dark bass, minny bass, little bass, hog bass, yellow perch, black perch, trout pearch, black pearch, streaked-head, white trout and brown trout. The small-mouth in the Southern States is called trout-perch and jumper. It is the mountain trout of Alabama and the bronze backer of some anglers. The name black bass, or small-mouth black bass, has a wider distribution than any of the others, and is the most appropriate designation for the species.

Distribution.—The small-mouthed black bass is a native of the upper parts of the St. Lawrence basin, the Great Lakes and the Mississippi basin. East of the Alleghanies it occurs naturally in the headwaters of the Chattahoochee and Ocmulgee rivers. In the region east of the Alleghanies and north of these streams the species is not indigenous, but has been so extensively introduced as to nearly double the field of its distribution.

Size.—This species is smaller than its large-mouth relative, seldom exceeding 8lbs., and usually averaging 2¼lbs. A 2¼lbs. fish will measure 15 inches. Mr. Al. B. Crooker, of Aurora, Ill., saw a small-mouth bass weighing 7lbs. 6oz., and measuring 23in., which was caught in the Fox River. This was an unusually large specimen for the locality.

Movements.—The small-mouth bass is a lover of clear, rapid-flowing streams, and greater elevations than those in which the large-mouth thrives. Being fond of pure water, it is sometimes forced entirely out of a stream by pollutions. It hibernates in the winter and comes into the shallows during the spawning season. It is governed, also, to a great extent by the presence or absence of suitable food.

Season.—There is no difference in the close season between the small-mouth and the large-mouth species; the two spawn at the same time and in similar situations. Fishing begins in most of the Eastern States May 30 or June 1. In Rhode Island the close season lasts until July 15; in Maine, Massachusetts and Virginia until July 1.

Localities.—The localities in which the small-mouth bass abounds are so numerous that we can not mention them in detail. In the Adirondacks they have been introduced, according to Mr. Mather, in Raquette, Forked, White, Fourth, Bisbee, and other lakes, and in Black and Moose rivers, and Partlo Pond. They abound in numerous small lakes in Massachusetts, some of which we have already mentioned in FOREST AND STREAM. In the headwaters of the Delaware the species is particularly plentiful and the Susquehanna furnishes numerous localities where excellent fishing is the rule; the region between Port Deposit and Columbia is famous for its fine bass fishing. Virginia has a good supply of this fish in the Shenandoah, the James, the Roanoke and the Holston rivers, and in the upland streams generally. Among the Virginia anglers noted places are Eagle Rock, Gala Water and Craig's Creek. Peak Creek, at Pulaski, contains nothing but small-mouth bass. In the summer of 1862, according to Professor Putnam, a specimen of this species was caught in Massachusetts Bay. It was very much emaciated and so changed in general appearance as to be almost unrecognizable, evidently not relishing its salt water experience. The small-mouth has been introduced into England and Germany. In 1882 Max von dem Borne received a small number of black bass from the United States. In the fall of 1884 he had 1,200, and in August, 1885, he had obtained more than 22,000 fry. These fish have been sent also to the Zoölogical Garden at Amsterdam by Mr. Blackford.

Food.—The food of the small-mouth black bass is the same as that of the large-mouth. It has the reputation, however, of being less cannibalistic in its tendencies, and its smaller size limits its power of overcoming large fishes. The young have been successfully fed on fresh water crustaceans, including *Daphnia* and *Cyclops*.

Habits.—The habits of the two species do not differ greatly, but the small-mouth

prefers rapid water and hence is very active in its movements. It often follows its prey into very shallow water and when chased by boats has been known to jump into the boat in its clumsy efforts to escape capture. It swims in schools and feeds wherever food is to be obtained. Some writers state that the small-mouth bass is very destructive to trout and other soft-finned fishes.

Reproduction.—The spawning season of the black bass lasts from March to July. The hatching period lasts from seven to fourteen days. The eggs adhere to stones on which they are deposited. The spawning fish build nests, and protect the eggs and young. Without protection the eggs would soon be devoured by crawfish and other enemies. The spawning habits are very fully described under the large-mouth species. The Canadian government had in contemplation the artificial propagation of black bass as early as 1869, an order having been received from England for eggs of this species in 1868. In 1884 Canada bred 100,000 black bass at New Castle, Ontario. The ease with which small bass can be transported assists greatly in their wide distribution.

Game Qualities.—We need scarcely mention the fact that the small-mouth bass is one of the favorite game fishes wherever it is known. It bites ravenously at small fish of various species, helgramites, crawfish, frogs, trolling spoon and the artificial fly. As a fighter and tactician it is probably not excelled by any species of equal size, except it may be the brook trout. Its resistance when hooked is violent and determined, and with light tackle great skill is essential to its capture. As a food fish the small-mouth black bass stands in the front rank of American fishes.

Dr. James A. Henshall, Secretary of the Ohio Fish Commission, who needs no further introduction to lovers of the black bass and their allies, has prepared brief and clear directions about the capture of the basses, sunfishes, warmouth, crappies, rock bass, etc., especially for this supplement. His instructions are given in quotation marks at the close of the chapter to which they belong. Concerning the black basses he writes as follows:

"Although I have written so much about the black bass, it is ever a fresh subject—a delightful and perennial topic. But in this instance I shall only call attention, briefly, to the best methods of angling and to the tackle to be employed in its capture. My remarks may be applied to either or both species, for the methods of angling for them are the same, from the 20-pound big-mouth of Florida to the 2-pound small-mouth of Northern waters. For bait-fishing the standard Henshall rod of 8oz. and 8½ft. long will answer for all the emergencies and requirements of the same, in the hands of a good bass angler. For particular localities, or for particular tastes, it may be a little lighter or a little heavier as the circumstances seem to demand.

"A first-class multiplying reel and a braided silk line, letter G, or preferably H, should be used with this rod to obtain the best results; for the Henshall rod is not designed to be used with a click reel and a fly-line, or with a very coarse line or a very poor multiplier.

"For still-fishing, a 6ft. leader of single gut may be used, but must be dispensed with in casting the minnow. The hook for bait-fishing in Northern waters should not be larger than Sproat No. 2—most anglers use hooks of too large a size for black bass. Hooks should be tied on single gut snells. The smallest size sinker, or a small brass box swivel, may be used in pond or lake fishing, but is not essential in stream fishing on the riffles.

"The 'shiner' is the best bait, and the 'chub' next. Shedder or soft crawfish, helgramites, frogs, grasshoppers, crickets and even angleworms also subserve a useful purpose at times.

"Casting the minnow is the most artistic mode of baitfishing and the most successful. The *modus operandi* of casting is now so well understood that it is not necessary to describe it here. In casting from a boat it is only essential to say that the boat should be kept in deeper water, and the casts made toward the shallows on which the bass are found. In fishing a stream the best plan is to wade and cast toward the likely spots, as riffles, shallow pools, eddies, etc. In fishing the pools under dams or in the bends of streams, the fishing may be done from the bank.

"Medium-sized minnows, 3 or 4in. long, are the best to use in casting. Larger ones may be used in still-fishing, and they should be hooked through the lips. Crawfish should be hooked through the tail, and helgramites through the cap of the back of the neck, from behind forward. Grasshoppers and crickets and frogs should be hooked through the back, and worms as the fancy of the angler may dictate.

"When the bass is hooked he should be kept on the spring of the rod, and should not be given an inch of line if it can be avoided. When the spring of the rod brings him to the surface and he turns on his side, get him into the landing-net as soon as possible.

"For fly-fishing the rod should not be more than 10½ft. for an 8oz. rod, though one of 10½ft. and 7½oz. is better. A click reel, or a fine multiplier with adjustable click, 30yds. of enameled G line, and 6ft. single gut leader of the best quality, constitutes the fly-fisher's outfit. Flies should be made with gut or gimp loops instead of being tied to snells, in which case the leader should be made with loops for attaching the same by short, separate snells. I have found the best flies to be the polka, Montreal, professor, coachman, oriole, king-of-the-water, Abbey, Lord-Baltimore, Oconomowoc, grizzly-king, silver-doctor, and the various hackles. On bright days, or clear water, use small flies; on dark days or rough or milky water the flies should be larger. Allow the flies to sink a few inches below the surface at times.

"Strike upon sight or touch. Keep the fish on the bend of the rod until he is in the landing-net. Never let him run away with the line if it can be helped.

"On bright days give the bass a rest in the middle of the day; on cloudy days this caution is not so essential. The late afternoon hours are always the best for fly-fishing. Unless you have to travel some distance to the fishing grounds, don't hurry out of bed to go a-fishing. Take your breakfast at the usual hour like a Christian. There is nothing gained by being on the water at daylight, or before the sun is several hours high. Fishes in inland waters do not move about much before 8 o'clok in the morning, as they feed mostly during the first part of the night, and rest or sleep during the latter part."

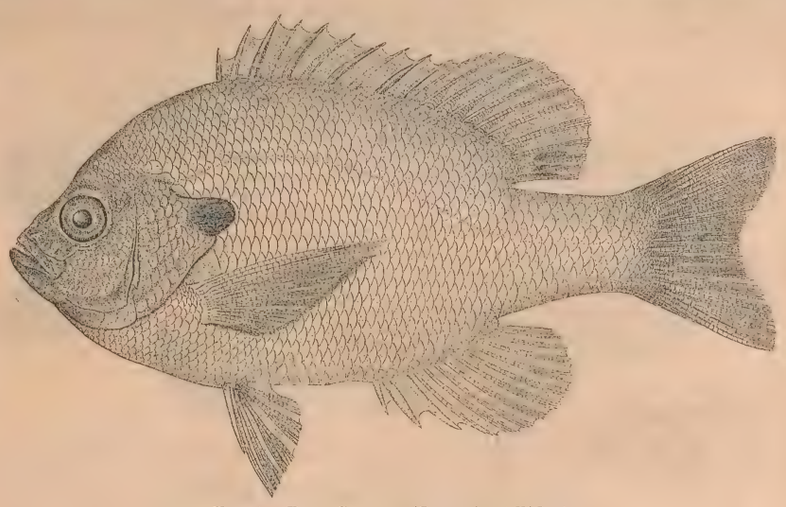

FIG. 4. BLUE SUNFISH (*Lepomis pallidus*).

THE BLUE SUNFISH (*Lepomis pallidus*), Fig. 4.—*Names.*—Blue bream, copper-nosed bream, and dollardee are additional names of this large sunfish.

Distribution.—This is one of the most widely diffused of all the species of *Lepomis*, and is subject to great variations in size, color, length of the so-called ear flap, etc. Its range extends from the Great Lakes to Mexico and Florida. East of the Alleghanies it is found northward to New Jersey.

Size.—The blue sunfish grows to a length of nearly 1ft., and its greatest recorded weight is 2lbs. The average weight is less than 1lb., and the length of adults 8in.

Habits—This fish frequents streams and ponds indifferently and is fond of warm waters. The observations of Mr. Seal, given elsewhere in this number, will furnish a clue to the reproductive habits of the sunfishes in general.

THE LONG-EARED SUNFISH (*Lepomis auritus*), Fig. 5.—*Names.*—Sunfish, bream, perch, sunperch, red-headed bream, red-bellied bream, red-bellied perch and red-breast are applied to the long-eared sunfish in the various parts of its rather extensive range.

Distribution.—The sunfish abounds in streams east of the Alleghanies from Maine to Florida, and in Gulf tributaries to Louisiana. A southern variety, distinguished by larger scales on the cheeks, and a dusky blotch on the hinder part of the soft dorsal fin, replaces the typical *auritus* from Virginia southward.

Size.—The long-eared sunfish reaches an average length of 8in. when adult, and its weight is about 1lb. Southern examples are usually larger than northern, and the number of individuals is greatly increased.

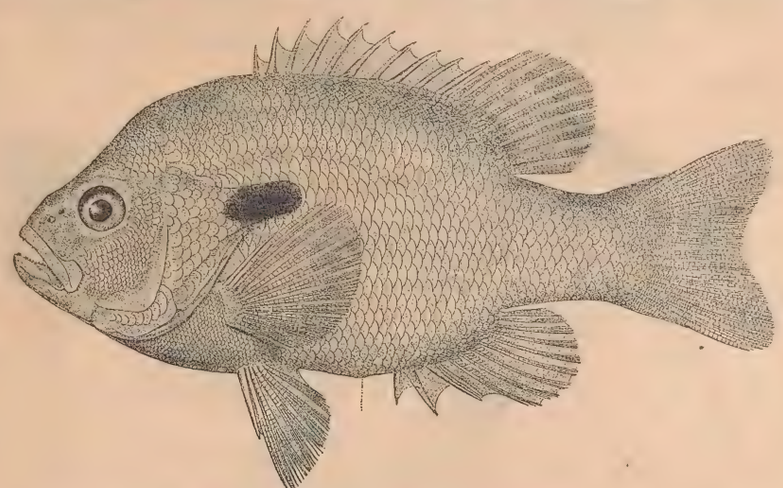

FIG. 5. LONG-EARED SUNFISH (*Lepomis auritus*).

Habits.—Like the blue sunfish, this species feeds on worms, small fishes, insect larvæ, crustaceans, mollusks and aquatic plants. Fishes, however, according to Prof. S. A. Forbes, do not form an important part of the food of the blue sunfish in the Illinois River, but small mollusks, insects, crustaceans and aquatic vegetation supply them with ample nourishment.

Besides the two large sunfishes above referred to there are several smaller species which fall a prey to the youthful angler's tackle in various waters of the United States. Among these is the well-known pumpkin-seed, or sunny, of the Great Lake region and Eastern streams from Maine to Florida. This is the curious nest-builder whose habits in this particular were described by Dr. Gill in FOREST AND STREAM, August 8, 1889, and will be found more recently discussed by Mr. W. P. Seal in the present supplement.

How to Capture Sunfishes.—"The several species of sunfishes or bream (*Lepomis*), furnish considerable pleasure to the all-round angler with the lightest tackle. Some of them, as the blue sunfish, or copper-nosed bream (*L. pallidus*), and the long-eared sunfish (*L. auritus*), and the red-bellied bream (*L. megalotis*), and pumpkin-seed (*L. gibbosus*), grow to the size of a breakfast plate, and are gallant fighters on a slender rod. They are much esteemed in Southern nland waters, and much sought after. They take almost any kind of live bait, and rise eagerly to the artificial fly.

"The same class of rods and tackle mentioned under croppies and rock bass will also answer for any of the sunfishes or bream. The angler who has never fished for 'sunnies' with a 3 or 4oz. fly-rod, drawn gut leader, and midge flies, has a pleasant revelation in store. It is far more sportsmanlike than fishing for fingerling brook trout, and the sport itself is much superior and vastly more satisfactory. I have never forgotten my youthful love for the 'sunny,' and I trust I never shall."

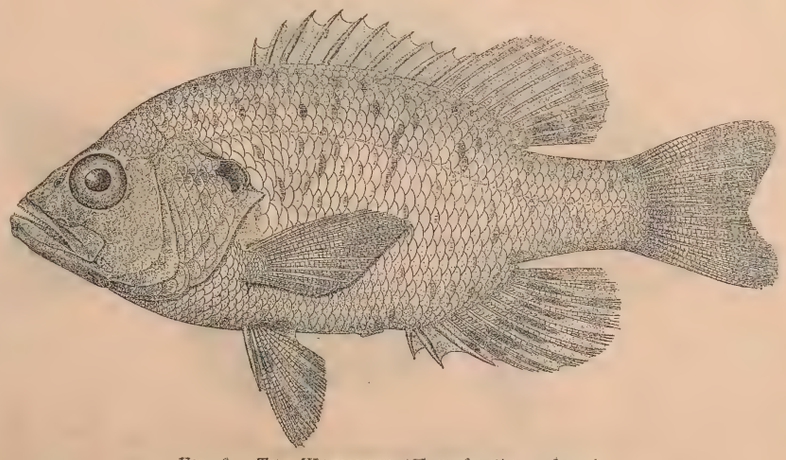

FIG. 6. THE WARMOUTH (*Chænobryttus gulosus*).

THE WARMOUTHS (*Chænobryttus gulosus* and variety *antistius*), Fig. 6.—The warmouth is represented by two well-marked varieties, the *antistius* inhabiting Lake Michigan and the tributaries of the upper Mississippi; the other form abounds throughout the South, both east and west of the Alleghanies, ranging to Texas and Florida southward and to Virginia northward.

Names.—The *C. gulosus*, or southern form, is very generally known as the warmouth. Other names of greater or less distribution are perch, sunfish, goggle-eye, red-eye, wide-mouth sunfish and black sunfish. The variety *antistius* is the black warmouth, styled also the warmouth, bigmouth, sunfish, goggle-eye, black sunfish and wide-mouth sunfish.

Size.—The warmouth grows to a length of 10in., and a weight of nearly 1lb. The body is thick and moderately deep.

Game Qualities.—The warmouths, wherever they are sufficiently abundant, are well known game fishes and highly valued as food. They are strong and vigorous, resembling the rock bass in habits, food and fighting qualities.

Food.—The young feed upon insects and insect larvæ, the adults continue to prey

upon insects to some extent, but nearly one-half of their food is made up of fishes.

Mode of Capture.—"The warmouth perch, or black sunfish, grows nearly as large as the rock bass, with a larger mouth, and approaches more nearly the black bass in appearance and habits. It is a good game fish for its inches, and can be taken with any kind of live bait, as grubs, worms, larvæ, grasshoppers, crickets, small minnows, etc., and also rises well to the artificial fly of almost any color. The same tackle may be employed as for the rock bass or croppie."

THE ROCK BASS (*Ambloplites rupestris*), Fig. 7.—This species is best known as the rock bass. The name redeye is also well associated with the species. In some localities goggle-eye, red-eyed perch and lake bass are names used to a limited extent for the rock bass.

Distribution.—The rock bass occurs in lower Canada, Vermont, and westward through the Great Lake region to Manitoba. It is indigenous in Dakota, Minnesota and southward throughout the Mississippi Valley to Texas. It is a common inhabitant of the Ohio Valley. It has been supposed to be absent from the Middle Atlantic States east of the Alleghanies, but has been known sparingly in the Susquehanna for a number of years, but whether it occurs naturally or introduced we are not aware. In Virginia it has been introduced into some bodies of water and is native in others. It also occurs native in North Carolina.

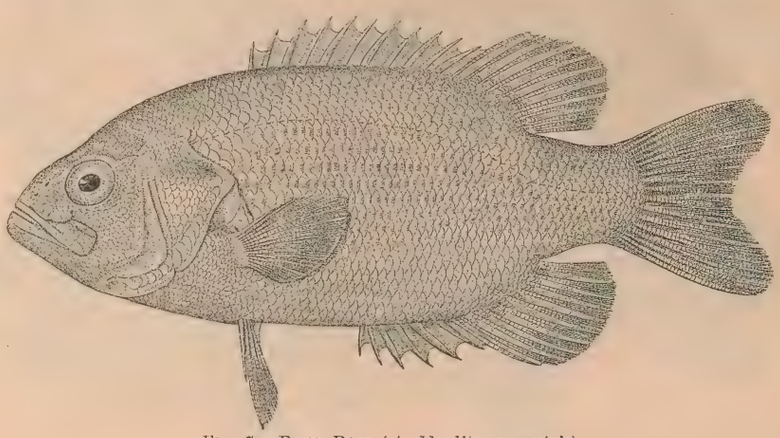

FIG. 7. ROCK BASS (*Ambloplites rupestris*).

Size.—The rock bass in suitable waters usually reaches a length of 1ft., and a fish of this length would weigh from 1 to 1¼lbs., but in very large examples the depth and thickness increases greatly, and it is reported that specimens weighing 3¾lbs. have been caught in Stony Creek, Virginia. The National Museum has an individual which was caught in the James River at Manchester, Va., that weighs 2lbs. It measures 14in. in length and 5¼in. in depth.

Habits.—Early in the spring, in February and March, it resorts to the mouths of small streams, where the water runs fresh, and in the summer months it frequents shady places, going under high banks or shelving rocks. It is gregarious, going in large schools.

Season.—The fishing season begins in June and continues until cold weather.

Localities.—In the region inhabited by this species it abounds in all the streams, lakes and ponds. Sluggish streams with pure dark water suit it best.

Food.—The rock bass feeds on worms, insect larvæ and small crustaceans. It is admirably adapted to pond life, where it flourishes equally as well as in the streams. Early in the summer it feeds upon worms and insects, later upon minnows, crawfish and other crustaceans. The young feed upon insects and their larvæ.

Reproduction.—This species spawns in May and June on gravelly shoals.

Game Qualities.—The rock bass is a very free and ready biter, but its staying qualities are not great. It is an excellent and highly valued pan fish, and hence eminently suited for introduction into Eastern waters.

"The rock bass or redeye (*Ambloplites rupestris*) is a very fair game fish, considering its size, and is also a good pan fish, and with very light tackle there is far worse fishing than rock bass fishing on a shady, rocky stream. It congregates in small schools, is quite a free biter, and a vigorous fighter. I have seen the time when I felt quite proud in the possession of a good basket of 'redeyes;' and the sport I experienced in their capture, with a 4oz. rod, was something to be remembered.

"As with the crappies, the angler can use a light cane rod, 10ft. long, and not over 4 or 5oz. in weight, with a No. 1 twisted silk line the length of the rod, a 3ft. leader of the finest gut, and Sproat hooks, Nos. 4 or 5, tied on drawn gut, and a quill float; this tackle answers admirably for rock bass fishing from a boat on ponds, or in the holes of streams. When a reel is used for casting, an H line of braided silk should be substituted for the twisted silk.

"For baits, use small minnows, grasshoppers, soft crawfish, white grubs or angleworms, the best being the white grub found in decayed stumps or manure heaps.

"For fly-fishing, a light trout fly-rod of 5 or 6oz., light click reel, enameled line, size G, and a fine trout leader are suitable. Any of the general trout flies with red, brown or yellow in their composition, as the Montreal, ibis, soldier, professor, oriole, polka, etc., or the brown, red or ginger hackles answer well for rock bass. They should be tied to drawn gut snells on Sproat hooks, Nos. 5 to 7.

"With such tackle the rock bass will be found to be a game fish of no mean pretensions, and will well repay the angler who is debarred from black bass or Canadian trout fishing."

THE SACRAMENTO PERCH (*Archoplites interruptus*), Fig. 8.—The little information that we have about this Californian species is obtained from the writings of Dr. D. S. Jordan, who says: "This species is known only by the name of perch, a name applied in the San Francisco markets to many very different fishes. It has been thus far found only in the Sacramento and San Joaquin rivers and tributaries. It is abundant in the lower parts of these rivers, large numbers being shipped to the markets in San Francisco. It is there bought and consumed mainly by the Chinese, who value it highly, paying for it more than for any other fish which they consume. Although it is an excellent pan fish, very similar to the black bass, we have never seen any of them bought by Americans. It reaches a weight of a little more than one pound. Nothing distinctive is known of its habits."

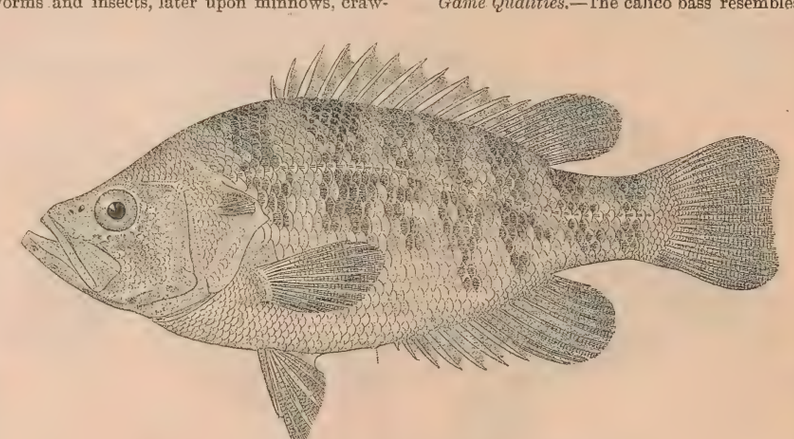

FIG. 8. SACRAMENTO PERCH (*Archoplites interruptus*).

The Sacramento perch is the only member of the sunfish family found west of the Rocky Mountains.

Dr. Henshall is of the opinion that the same tackle and baits used for the rock bass would prove successful with the Sacramento perch.

THE CALICO BASS (*Pomoxys sparoides*), Fig. 9.—Of the variations of the name bass, this fish possesses a goodly share. It is styled strawberry bass, grass bass, lake bass and Lake Erie bass, bank-lick bass, silver bass, big-fin bass. It is known, also, as strawberry perch, chinquapin perch, goggle-eyed perch, silver perch and sand perch. Miscellaneous names of local application for this species are bar-fish, bitter-head, tinmouth, Sac-a-lai, lamp-lighter, razor-back, goggle-eye, black croppie and lake croppie. In the Pennsylvania fish laws this fish is designated as Lake Erie or grass bass.

Distribution.—The calico bass has a naturally wide distribution, which has been greatly extended by artificial introduction. The fish is now living, thriving and multiplying in France. Through the efforts of the Pennsylvania Fish Commission it has become acclimatized in the Susquehanna River. It is indigenous east of the Alleghanies from New Jersey southward to Georgia, and abundant in the Great Lake region, in the upper part of the Mississippi Valley, and in the Missouri. In the Ohio Valley it is naturally uncommon, but has been largely introduced.

Size.—The calico bass reaches a length of about one foot and a maximum weight of nearly 3lbs., but the average weight is little more than 1lb.

Season.—This bass spawns in the spring and is protected in some of the States until June 1. Fish caught in May near Havre de Grace were spawning.

Localities.—Two very fine specimens, 10 and 12in. long, were recently taken at Port Deposit, Md., in the Susquehanna. The Susquehanna and tidewater canal near Havre de Grace has yielded good fishing for this species. Throughout the Great Lake region it is found in abundance; in the ponds of northern Indiana and Ohio it is also very common, and in the vicinity of Covington, Ky., there are ponds which have been thoroughly stocked with this fish. In the rivers of the Southern States, from Virginia to Georgia, the calico bass is one of the common species.

Food.—Worms, small crustaceans and fishes.

Habits.—Very little is recorded about the habits of the calico bass. It swims in large schools, and is found in comparatively shallow water. Like other members of the sunfish family, it is a nest builder and it is a lover of warm water. The nest building has been described by Duclos from observations made in the vicinity of Versailles, France. He noticed more than one hundred nests in water about 8in. deep. Favorite places for the nests were the stone steps descending into the pond. In France a three-year-old fish measured about 8in. in length and nearly 3in. in depth. The young in April measured four-fifths of an inch; in the following August the same individuals measured 3¼in.

Game Qualities.—The calico bass resembles the black bass somewhat in game qualities; it is a free and vigorous biter, and its endurance, considering its size, is remarkable.

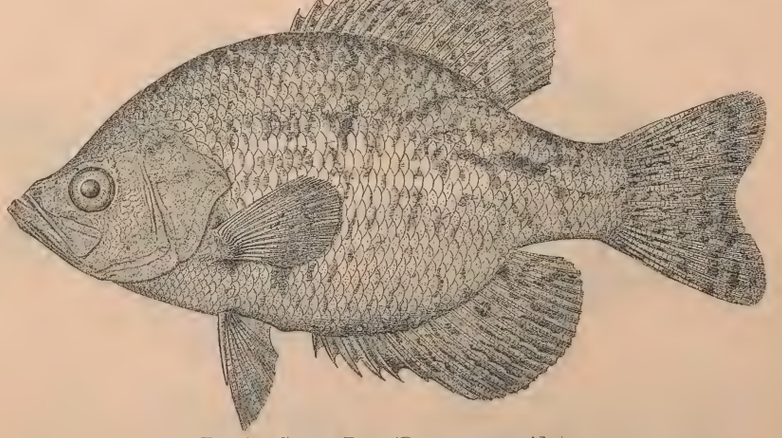

FIG. 9. CALICO BASS (*Pomoxys sparoides*).

THE CRAPPIE (*Pomoxys annularis*), Fig. 10.—The crappie is so well and widely known that it has received a great many names, among which are the following: Bachelor, new light, Campbellite, sac-a-lai, bridge perch, strawberry perch, chinquapin perch, speckled perch, tin perch, goggle-eye, John Demon, shad, white croppie and timber croppie.

Distinguishing Marks.—The crappie usually has only six spines in the dorsal, while the calico bass has seven; the anal fin of the crappie is nearly uniform whitish, while in the calico bass it is reticulated like the soft dorsal. The depth of the crappie is less, also, in proportion to the extreme length of the fish, being usually three-sevenths of the total length without the tail, while the depth of the calico bass is one-half of this length. In size and habits the fish are so nearly alike that they are seldom distinguished by the fishermen.

Distribution.—The crappie is most abundant in the lower Mississippi Valley; it is common also in the Ohio valley, and is rarely taken in Lake Erie. It inhabits by preference still waters and large ponds, seldom occurring in small streams. Like the calico bass it is admirably adapted for pond culture, and multiplies enormously under favorable circumstances, and stands transportation very well. Its range has been greatly extended by artificial introduction. In Lake Pontchartrain, Louisiana, crappie fishing is very productive and furnishes rare sport.

Size.—The maximum size of the crappie is claimed for Murdoch Club Lake near St. Louis, which furnished a specimen weighing over 3lbs. The usual size of the adult fish is about 1ft. in length and weight about 1lb. or slightly more.

Season.—The season usually begins in June and continues until cold weather. Crappies are very abundant in the Ohio, Illinois and Mississippi Rivers, especially so in the lower parts of the Mississippi. They abound in waters of suitable size in these regions. We have seen large numbers of beautiful specimens taken near Quincy, Ill. Prof. Forbes has found them at Peoria in March and April, and in Pistakee Lake in McHenry county, Ill., also at Ottawa. Cedar Lake, Ind., is celebrated for its crappies; King's Lake, Mo., is another famous locality. Some very large private ponds near Covington, Ky., belonging to Joseph Schlosser, contain myriads of crappies and other game fishes, to fish for which a fee is charged.

Food.—The food of the crappie has been carefully investigated by Prof. S. A. Forbes, director of the Illinois Laboratory of Natural History, who finds that the young subsist principally upon entomostraca and small insect larvæ. Even the adults continue to take this food as long as it is abundant, and when it becomes scarce they supply the deficiency in part with other fishes. Some of the fishes which he found in stomachs were small minnows and darters. As already stated the autumnal food of the crappie includes a larger percentage of small fishes, amounting in some cases to nearly two-fifths of the entire stomach contents. Among the larvæ sometimes consumed by the crappie in the fall Prof. Forbes found that of the helgramite (*Corydalus cornutus*). The amount of food taken in cold weather was found to average not more than one-quarter of the quantity consumed in early spring.

Habits.—We have stated that the crappie loves still waters. It is not averse to warm and muddy water since it may be taken in large numbers in midsummer in depths of a few feet. With the approach of cold weather it seeks deeper water, because less active and requires very little food. The spawning habits of the crappie are presumably not different from those of the calico bass, and the young of the two species grow at about an equal rate.

Game Qualities.—The crappie is a ready biter and will take the hook baited with minnows or worms with great avidity. Its endurance is not very great. The spoon bait is a favorite and highly successful implement in trolling for this fish. As an illustration of the abundance and voracity of the crappie it may be stated that two men have taken a thousand crappies in the course of three days' fishing with hook and line. The fish will usually bite at any hour of the day. As its mouth is small the size of the hooks must be regulated accordingly.

"The same methods of angling are employed for both the calico bass, or Northern crappie (*Pomoxys sparoides*), and the newlight or Southern crappie (*Pomoxys annularis*), as the two fishes are very closely allied and their habits are similar. Both species congregate in schools about brush, logs and weed patches in deep holes, and being not at all shy, take the baited hook quite greedily, and on this account are much sought after by the angler who delights in quantity rather than quality.

"While the croppies are excellent pan-fishes, and the best of all percoid fishes for small ponds, their game qualities are the least of their merits, and in order to get any sport at all in fishing for them, only the lightest tackle should be employed.

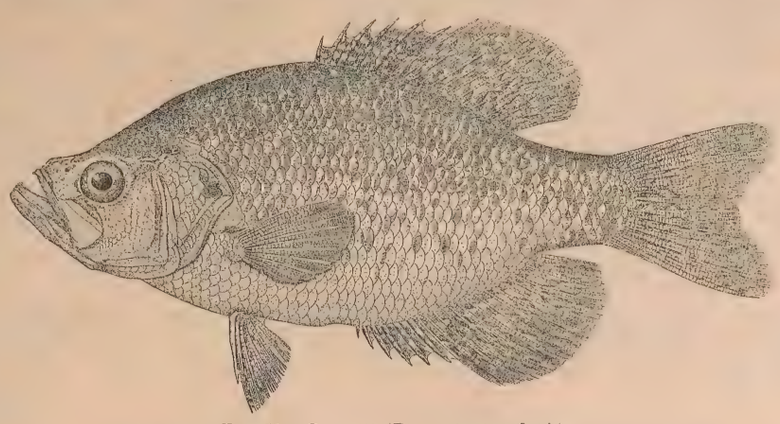

FIG. 10. CRAPPIE (*Pomoxys annularis*).

"Any light rod, as a trout bait-rod, will answer, but if only croppie fishing is expected, the best rod is a natural native cane 10ft. long and weighing from 4 to 6oz., or even less if it can be procured. Such a rod, while being quite light, is strong enough to lift the fish from the water, for the croppie gives very little play, and it is usually desirable to basket as many as possible of the school while they are biting.

"From what has just been said it will be seen that a reel is not essential in croppie fishing. The line should be about as long as the rod, and of the smallest caliber—say No. 1 twisted silk, or so-called sea grass. Should a reel be used, the line should be the smallest braided silk, size H. A fine gut leader about 3ft. long should be used. Sproat hooks, Nos. 4 or 5, tied on the finest gut snells are about right.

"Small minnows, especially 'shiners' are the bait *par excellence* for croppies. They should be hooked through the lips, unless very small, when the hook should be carefully passed under the dorsal fin. The smallest sized sinker should be attached to the leader, a foot above the hook, to keep the minnow in deep water, and, usually, a light float is an advantage to keep the bait at about the right depth.

FIG. 11. STONE CATFISH (*Noturus insignis*).

"The angler rigged as above can get considerable sport out of croppie fishing, though they offer very little resistance and slide out of the water rather too easily—but withal they are beautiful fishes and make a handsome basket, and are at their best on the table.

"The croppies, and especially the Southern croppie or newlight, rise well to the artificial fly, and with the lightest trout tackle afford considerable sport. For this fishing the lightest trout fly-rods of 4 or 5oz. can be utilized to advantage. A very light click reel, and a G or No. 5 enameled silk line should be used with such a rod. Trout flies of neutral or subdued tints, as the gray and brown hackles, gray-drake, stone-fly, blue-dun, etc., are well adapted for this fishing, but by far the best fly for croppies that I know of is the 'Henshall' bass fly, tied on a Sproat hook No. 5, and of the size of an ordinary trout fly. They will rise to this fly when no other will tempt them to the surface. It has a body of peacock herl, hackle of white hairs from deer's tail, gray wings, and tail composed of a fibre or two from the tail feather of a peacock.

"Croppies will be found about dams, and in the deeper and stiller portions of streams and ponds, and especially about logs, brush, drift, etc. In such situations, on a breezy summer afternoon, toward sunset, the angler with light trout tackle will be amply rewarded, for under these conditions fly-fishing for croppies is a sport not to be despised."

THE STONE CATFISH (*Noturus insignis*), Fig. 11.—This fish sometimes grows to nearly a foot in length, but averages much less. The size used for bait for black bass seldom exceeds 3 or 4in. The stone catfish ranges from Pennsylvania to South Carolina in rivers and creeks; it is one of the best known and most successful baits on the Susquehanna River, and its tenacity of life makes it especially desirable. There are several other species of *Noturus* which are also called stone cats, and are used for bait. In many Eastern streams the young of *Noturus flavus* is suitable for the purpose, and *Noturus gyrinus* and other small stone cats are available. These fishes are wonderfully tough and tenacious of life. Little is known of their habits. They hide under stones and logs, the common name being derived from their choice of habitation. They are very sluggish in their movements, and easily captured when found. The common way of catching the stone catfish, or stone roller, is by striking with a stone the flat rock under which it is supposed to be hiding. The blow stuns the fish temporarily and sometimes destroys its usefulness altogether. Mr. George W. Lung, of Wilkesbarre, Pa., informs us that his cousin at Wyalusing, Pa., takes his catfish with a sieve. He lifts the stone carefully, keeping the sieve under it; the fish follow the shadow of the stone and are easily caught in the sieve without injury.

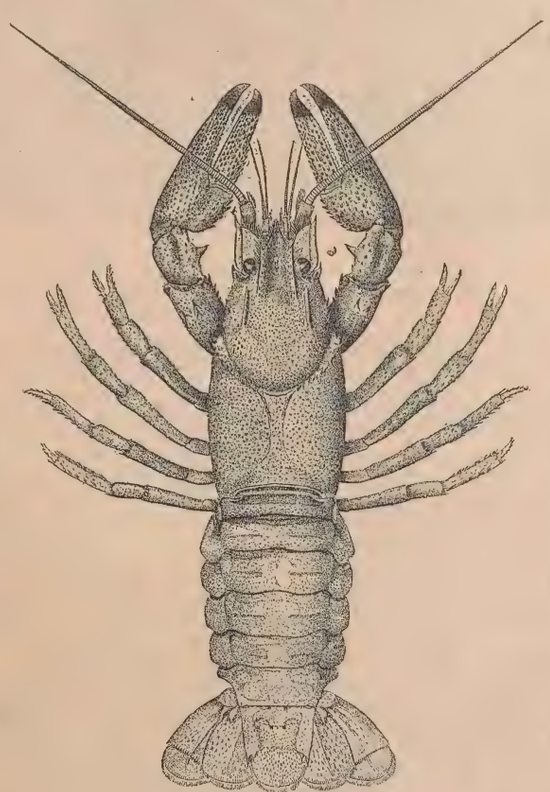

FIG. 12. CRAYFISH (*Cambarus affinis*).

THE PICKEREL FROG (*Rana palustris*).—This handsome species is known also as the marsh frog, tiger frog and leopard frog. It ranges from Maine to Virginia, occurring in salt-marshes and in wet meadows in the vicinity of ponds and streams. The rows of dark quadrate spots on the sides and back and the bright yellow of the under surface of the thighs make it a conspicuous species. Its odor is very strong. The name pickerel frog is derived from its use as a bait.

THE CRAYFISHES (*Cambarus* and *Astacus*), Fig. 12.—The crayfishes or crawfishes resemble the lobster in form, but are much smaller in size and live in fresh-water streams. There are about twenty-nine nominal species of *Cambarus* in the United States, and *Astacus* is represented by six species, all of them confined to the region from California to British Columbia west of the Sierra Nevada Mountains. Th Eastern crayfishes are found in the area east of the Rocky Mountains, being scarce in New England and more or less plentiful in various localities from British America to Texas. In the Middle States and in Maryland and the District of Columbia the subject of our illustration is a common species and reaches a large size. The Potomac and the Susquehanna furnish very fine examples of this crayfish; in the latter river it is particularly abundant early in June, during the shad season. The crayfish is generally found under flat stones in the deeper parts of the stream, but sometimes occurs on muddy bottom. It feeds upon water plants, small fishes and various other vegetable and animal substances, dead or alive. Crayfishes shed their shells and are most desirable for bait in the soft condition. They can be obtained from early spring until late in the fall.

T. H. B.

BASS AND BASS ISLANDS OF LAKE ERIE.

THE SUNSET CLUB.—VI.

SEVERAL weeks ago the president announced that the noted author and black bass angler, Dr. J. A. Henshall, would address the club at the November meeting. In consequence of this "standing room only" was proclaimed long before the opening hour. After the roll call and the usual secret salutations, the president said: "Brethren, we will omit the general order of business as you are aware we have with us two distinguished scientific anglers, whose names are as familiar as the bait you use in fishing for bass. These gentlemen are the true fishermen who find pleasure not merely in well-stocked baskets of spoil, but equally in the attendant charms of the trip, and who study the character and habits of the objects of their sport. Angling has many charms and those whose knowledge of fishing is confined to holding a cane pole and angling for perch and sunfish or like non-game creatures find it dull and uninteresting, but these true disciples of Izaak Walton never know a wearisome hour in the longest day. If the sport is tame and fish not hungry there is to them an exhaustless and ever new source of pleasure and study of the great book of nature temptingly unfolded before them. They are familiar with the natural history of fish, and it is through such men that we learn their secret movements and habits. Brethren, I have the pleasure of introducing Dr. Henshall, of Cincinnati."

After the deafening applause had died down to an echoing sound the genial Doctor stepped to the rostrum, and after thanking the members for the unexpected ovation, said he would talk about the "Bass and Bass Islands of Lake Erie."

Many years ago, said Dr. Henshall, I enjoyed some fine sport in fishing for small-mouthed black bass about the islands of Lake Erie, but at that time I gave no especial thought to the peculiar features of that fishing as compared to that of other portions of the country. Afterward, however, when I began to make a special study of the black bass I could not reconcile some of the habits of the black bass as I remembered them in the western part of Lake Erie with those of the country at large, and resolved that if the opportunity ever presented itself, to give some time and investigation to what I considered the aberrant features of the habits of the black bass of the Bass Islands.

During the past summer and fall I spent four months in yachting, canoeing, fishing and collecting in the waters of the western portion of Lake Erie, and endeavored during this time to form some theory in regard to what I have just called the aberrant features of the habits of its black bass.

It is but the beginning of an attempt, however, and I now venture to address this honorable club on this subject in the hope that some of the veteran anglers here assembled will help me out with it. I desire particularly to hear from my friend, Judge Potter, who has had so many years of experience in these waters.

To begin at the beginning, the surface geology of the western portion of Lake Erie presents some very remarkable, peculiar and interesting features. As you all know, there are several theories regarding the origin of the Great Lakes, but we will confine our remarks to Lake Erie in general and its western portion in particular, and without going into or supporting any theory in reference to its physical peculiarities—whether they are the result of icebergs, glaciers, or the tail of Ignatius Donnelly's comet—we will take the facts as we find them to-day, without troubling ourselves about the remote ages when the skating was better than the fishing.

Lake Erie is the shallowest of the Great Lakes, being but 230ft. deep, while Lake Huron, above it, is 800ft. deep, and Ontario, below, is 450ft. in depth. Now, whether these lakes were originally or aboriginally the channel or bed of a pre-glacial river (whatever that may mean), and Lake Erie has since become silted up with the debris of the waters above, or become filled up with the crumbling and washing away of the Laurentian Hills to its present level, or whether its basin has been excavated from the sedimentary rocks by the advance or retreat of great continental or local glaciers, or whether eroded by the churning or grinding of immense ice fields and ice bergs floating about in a pre-glacial sea, in which the black bass had no existence, are matters that do not concern our present purpose, though they may serve to occupy your minds while waiting for a bite near some of the Bass Islands, of Lake Erie, with the grooves and striations and other evidences of the rocks in plain view.

So dismissing all consideration of the several theories to account for the islands, reefs and shores of Lake Erie, with their concomitant features of drift, blue clay and boulders, we will take them as they exist to-day in defiance of upheavals, glaciers, icebergs and cataclysms which occurred at a time when the only sport seems to have been tobogganing on a grand scale.

At the west end of Lake Erie, which is also its shallowest portion, and in close proximity to the cities of Sandusky, Port Clinton, Toledo and Monroe, lies an extensive group of islands, several of them inclosing the historic waters of Put-in-Bay, one of the most charming and beautiful bays on the continent, dear alike to the tourist, the yachtsman, the canoeist and the angler.

From the observatory in Put-in-Bay Island (South Bass can be seen Pelee and Middle islands) in Canadian waters, and with North, South and Middle Bass, Kelley's, Starve,

Gibraltar, Green, Rattlesnake, Sugar, Ballast, East, West and Middle Sisters, Hen, and Chickens and other islands in American waters, most of them lying within a radius of half a dozen miles from Put-in-Bay. Pelee is the largest of the group, embracing some 10,000 acres, Kelley's is a third as large, North, South and Middle Bass are still smaller, with the rest dwindling in size to the bare rocks called Old Hen and Chickens, outcroppings from the reefs.

These islands are all formed of solid limestone rock, the larger ones being well wooded and overlaid by a rich calcareous soil well adapted to fruit and grape culture, and are covered with orchards and vineyards in a high state of cultivation.

The northerly shores of the islands, being exposed to the fury of the northeast gales, are bluffy, precipitous and water-worn, but slope toward the southern exposures, ending in the sheltered coves in gravelly and sandy beaches.

The channels between these islands are comparatively shallow, the bottom, where exposed to the currents, being rocky, but in sheltered situations is covered with clay. Long rocky reefs and ledges extend from the shores and crop up between the islands, many of them, like the waterline rocks of the Bass Islands, being cavernous; Kelley's Island, however, is composed entirely of corniferous limestone.

The surface and rocks of these islands and reefs exhibit the most remarkable and beautiful examples and evidences of so-called glacial action to be found in the world. And now having cracked off the geological shell of the nut we come to the kernel or meat—black bass fishing.

As you are all aware, the fishing along these reefs in the spring and fall is very fine (and before the days of pound-nets was simply grand), while during the summer months it is *nil*. Have you ever paused to ask why? Have you ever thought how voraciously the bass bite for a couple of weeks in April and May, or in September and October, but cease biting in June, July and August, usually the best bass fishing months in the year in other localities? Well, I have thought about it a good deal, and it puzzled me exceedingly.

I have asked old Lake Erie anglers to account for it. I have questioned the market-fishermen about it, but all in vain. The queries and answers have been something like this:

Q. Why do black bass appear on the reefs in spring? A. To spawn.

Q. Did you ever see a black bass spawning on the reefs? A. Can't say I ever did.

Q. Did you ever see a black bass rest on the reefs? A. Think not.

Q. Do they resort to the reefs in the fall to spawn? A. No, unless they spawn twice a year, which they don't.

Q. Then why do they come to the reefs only in spring and fall? A. Ask me an easy one.

Q. Do you think they resort to the reefs to feed? A. Perhaps they do.

Q. What food do they find on the reefs? A. Don't know.

Q. Did you ever see them feeding on the reefs. A. No.

Q. Then why do they go to the reefs at all? A. Give it up.

Q. Where do they go in summer? A. To deep water.

Q. What for? A. To feed, I guess.

Q. What food do they find in deep water? A. I pass.

Q. Do you know where this deep water is? A. No.

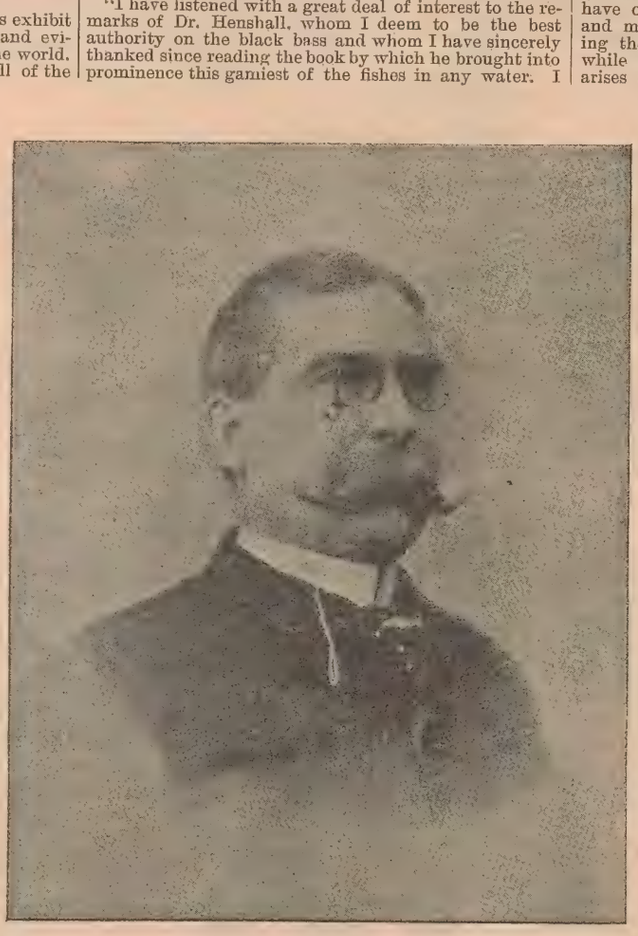
Q. Do you know where they are to be found in summer? A. No.

Q. Do you know where to find them at any season? A. Yes, on the reefs in spring and fall.

And this is all the information I ever got from anglers or fishermen. Then I began to reason it out. First, as to spawning. Lake Erie is a large body of water, quite cold even in summer. The spawning of black bass occurs in the spring or summer, depending on the climate or temperature of the water, and cannot occur in Lake Erie before June or July; but long before this they have disappeared from the reefs, *ergo*, they do not spawn on the reefs.

Next, as to food. Bass caught in the spring on the reefs seemed to have very little food in their stomachs, an occasional crawfish, or perhaps a minnow. From my own observations, and from all I could learn from others, there seemed to be a scarcity of food on the reefs. Then I hauled a collecting seine on all the beaches and available places about the islands, and found that minnows were few in species and scarce in numbers. I also found afterward that during the fishing seasons the minnows for bait were brought from Sandusky and Port Clinton, owing to their scarcity about "the Bay." Crawfish were also scarce; *ergo*, the bass do not go to the reefs to feed. And, as the black bass is not a deep-water fish, and as its food is not found in deep water, therefore it does not go to deep water in summer.

With my collecting seine I took a few young black bass, probably two dozen, hatched the previous summer, and a few two years old. They were taken, or rather found, at but one place, among the grass and weeds of Put-in-Bay harbor. This proved to my mind, conclusively, that only a few stragglers spawned about the beaches or shallow reefs about Put-in-Bay, while the main army went somewhere else to breed and feed during the summer months.



Now, the truth of the matter seems to me to be this: The small-mouthed black bass of western Lake Erie hibernate under the ledges and cavernous reefs about the islands. In the spring, after the first fine weather in April or May, when emerging from their winter quarters, they bite ravenously for a week or two, or may be two or three weeks, until the weather becomes still warmer, when they cease biting suddenly and depart toward their feeding and spawning grounds, wherever that may be.

After the cold northeast storms in September, they again congregate on the reefs, preparatory to going into winter quarters, and bite until cold weather sets in, when they disappear under the ledges and reefs. As I said before, there are a few stragglers from the main army that spawn about "the Bay," and remain there during the summer, and some of these are caught by perch anglers during June, July and Augnst. I killed a few myself about the gravelly bars of Gibraltar in July, but they were poorly nourished.

In conclusion, I will repeat the hope I expressed at the beginning, that some of the veteran anglers here assembled will help me out with my theory, and ascertain, if possible, where the small-mouthed bass of the Bass Islands resort during the summer months for spawning and feeding. They are to be found somewhere, in comparatively shallow water, perhaps at the head of the lake, about the bays, or up some of the streams; probably they follow the bank cashiers to the Canadian shore. At the next meeting of this club I shall expect some information on this subject."

The president made some pertinent remarks touching his knowledge of black bass, but before he concluded loud cries were made for the venerable Judge Potter, and when the noise had partially died out the judge, in his usual quiet way, spoke as follows:

"I have listened with a great deal of interest to the remarks of Dr. Henshall, whom I deem to be the best authority on the black bass and whom I have sincerely thanked since reading the book by which he brought into prominence this gamiest of the fishes in any water. I was raised in a trout country, but since my experience with the black bass I have yielded to him the palm for being the gamiest fish that I have ever encountered. The interest and intense excitement never ceases from the moment he is hooked till he is brought to grass or shakes the hook out of his mouth, which with me frequently happens. Other anglers may boast of never losing a fish, but I think he who never loses one must be entirely devoid of sensibility. There is something more than mechanical manipulations in handling this fish. It is impossible to avoid some anxiety in the operation, which tends to unman a very nervous angler, while the phlegmatic one may be able to carry a steadier hand; you never know what a black bass is going to do after he is hooked. He sulks, he runs, he tries to extricate the hook by rubbing against any substance near at hand; he rushes toward you to see what a slack line will do; failing in this he leaps 2 or 3ft. out of the water, opens his mouth, shakes his head and then, if he gains any slack, is the point of danger against which it is difficult to guard, and there is where I have lost many a fish. I tell you, Mr. President, a 5 or 6lbs. small-mouth bass, well fed upon crayfish in the cold waters of Lake Superior, is an ugly customer to encounter. After employing all his tactics to disengage the hook from his jaws he seems to yield (only playing possum) and may be quietly led to the boat, and when you think it safe to apply the landing net he gives a spring, frequently landing in the boat, but quite as frequently going clear over it and escaping. I often in trout fishing, on the north shore of Lake Superior, have hooked a black bass, though they are not abundant there, and when I did I knew I had half an hour's job on my hands, if not more, as they will fight twice as long as the trout, and with twice the tact and vigor. I feel like the boy who flung back into the water a nice trout, saying he was fishing for eels and not for trout. With an 8oz. rod and a small gnat or midge fly, the chances are in favor of the bass. I have noticed an account somewhere, where black bass have been caught in the winter, but I have never seen them caught at that season of the year in this section. 'Where do the black bass go in summer?' asks my friend Dr. Henshall. They don't go anywhere. They stay about the reefs and the recesses of the broken and rocky coasts of the lake. The old Hen in the Hen and Chicken group, lying northwesterly from Put-in-Bay, is a favorite resort for them in the months of July and August and early September. I have visited these islands, and finally, all the rocky shores in these clusters of islands at the head of Lake Erie, where in the deep waters surrounding them, in a calm day I could see most enticing bait or lure, placed near their noses, not one would open his mouth; they would turn up an eye, wag a ventral fin, as if in scorn of the tempting morsel. Any one who has seen a black bass or a speckled trout and observed the gravity of his countenance when declining to take a fish hook in his mouth, the facial expression of disgust and scorn will unrival that of Meg Merrilies, and he will feel as if he was in the presence of more than animal intelligence. Why doesn't he bite? There is something about fish life that is inexplicable to us. We know their habits, but their inner consciousness no one has yet been able to discover. I have sometimes thought that their indisposition to take the bait in the summer was owing to a certain condition of the water. The lake is surrounded by forests, and the islands are covered with trees. About the first of July I have often observed, floating in the water of the lake, and more especially about the islands, a sediment having the appearance of pollen from the trees; after a while this substance settles to the bottom, from which arises a gas, as seen by bubbles arising to the surface. At these times many dead fish may be seen floating in the water, and they are mostly confined to bottom feeders; the bass seldom die from this cause, not being bottom feeders, but their health and condition must be seriously affected from this cause, depriving them of their appetite, when food becomes repulsive to them. Later, in September and October, when the water has become purified, their appetite returns and they lay in a stock of food preparatory to their hibernation for the winter, and as the nights grow colder and the November frosts appear they retire to deeper water or the caves in the rocks, from which they emerge in April or May and are ready to break their long winter's fast. They breed in May and June, at which time they seldom take any food, and at the close of the breeding season the poisoning of the water occurs with the effects as stated. I only speak of the black bass of Lake Erie, as I have had very little experience with any other. With these I have had a pretty close acquaintance for more than fifty years, commencing at a time when 500 small-mouth bass to two rods in an afternoon among the rocks and reefs around Kelly's Island, Lake Erie, was an every-day occurrence, but since then sad havoc has been played with them by the commercial fishermen, with fyke and pound nets."

DR. JAMES A. HENSHALL.

[From "More About the Black Bass," by courtesy of Messrs. Robert Clarke & Co.]

Three hearty cheers were given for Dr. Henshall and Judge Potter. "We hope," said the president, "often to have the pleasure and honor of your presence in this hall." The club then adjourned to its private parlors, where they feasted upon rock sturgeon and other fresh-water delicacies furnished by the newly initiated passenger agents, Shearman, Brown and Smith.

J. E. GUNCKEL.

NOTES ON BLACK BASS.—The north branch of the Susquehanna River, in the vicinity of Wyalusing, Pa., is a famous stream for small-mouthed black bass. Several years ago their abundance became noteworthy and a gentleman at Ulster had the curiosity to weigh the fish that were carried past his office by anglers during the season. He weighed 1,800lbs. and had reason to believe that three times as many more were taken in other directions. Some of the eddies near Wyalusing have large beds of fine, clean gravel at the lower end and supply very favorable spawning grounds; the bass collect in such localities in large numbers. Black bass will not take the hook in winter, nor will they bite in May when suckers are biting. When crawfish are shedding the bass will take them more greedily than at any other time. At the period when frogs drop their eggs these fish will not bite at anything else. Along some parts of the river where the bottom shoals off gradually a river weed grows luxuriantly in summer. When the water rises slightly it often backs over this grass, and in this biding place the bass collect to prey upon minnows and other food. By skilfully poling a boat along the edge of the grass the fish will run out and try to jump over it, and frequently fall into the boat. One of the expert fishermen of Sugar Run, Bradford Co., Pa., caught 15 one evening by this method. —GEO. W. LUNG (Wilkes-Barre, Pa.).

ST. LAWRENCE RIVER BASS.—Messrs. J. B. Crook & Co. send us a note from a Cape Vincent, N. Y., correspondent under date of July 13: Fishing good on Saturday, July 12, Mr. Weeks, of Brooklyn, got 13 bass weighing 32lbs., total catch 37 weighing 51lbs. Mr. O'Donohue, of New York, got 51 bass weighing 49lbs. Very few fishermen here; patronage all along the river very light so far. Weather while 101° in New York did not get above 85° here. Same day it was 101° in New York I slept at night under a sheet, a double blanket and a coverlid, and was comfortable. The figures and facts I give you are strictly reliable. I give no number or weight of fish unless I count and see the weight myself, so you can rely upon it and not put it in the same category as the fishing of Com. Erhardt, as published in a recent New York *Sun*, which story was a ridiculous lie.—G. C. B.

DELAWARE RIVER BASS FISHING is the best known for years. A report about it next week.

A RHYME OF THE MORNING.

THE mockingbird's delusive note
Sets all the woods a-ringing;
The vireo's ecstatic throat
Is strained with stress of singing;
The passion flower's a-drip with dew
Each bush and shrub adorning,
As I joint my rod by the Calcasieu
At four o'clock in the morning.

That swirl by yonder lily pad
Is plain to an angler's reading:
And my spirit mounts, and my soul grows glad,
For I see that the fish are feeding.
Then, just where the tiny circlet stops,
As though it had "died a-borning,"
My gay-winged "oriole" lightly drops,
As a rose leaf drops in the morning.

There's a darting rush from depths below—
A shock that thrills the marrow;
The rod is bent like a yeoman's bow,
And the line shrills out like an arrow.
A noble strike, and a nobler rush,
All tricks and dodges scorning!
He seeks no aid of log or brush,
This fighter of early morning.

A hissing line and a screaming reel—
An angler, grim and breathless—
A flash in the air—a rainbow of steel—
These memories are deathless!
And I will swear such glorious strife,
In spite of the sluggard's scorning,
Is worth ten years of peaceful life
At home and abed in the morning.

The mockingbird's triumphant note
Exultingly is ringing;
The vireo's ecstatic throat
The stirring strife is singing.
The passion flower, a-drip with dew,
A victor's breast is adorning,
As I sheathe my rod by the Calcasieu,
At five o'clock in the morning.

LAKE CHARLES, Louisiana. H. P. U.

SOME PERSONAL RECOLLECTIONS

Of Difficulties with the Bass Family, with a Few Fishy Remarks.

I.—The Bass of Boyhood.

MY acquaintance with the bass family began on the Wabash River at the little village of P., "risin' o' forty years ago when I was a small boy with a frayed straw hat an' one gallus," and has been followed up with some intervals of rest—to the bass—with keen zest and unalloyed pleasure ever since, and I am now on the other side of the "divide of a century."

The annual bass fever takes a firm grip on me about the time the dogwood blossoms in the spring, and rages with more or less violence till the buds begin to swell again for the blooming time—a sort of perennial, rather than annual malady—that bids fair to abide with me till the Master calls for the final round-up.

For the last twenty-four years I have camped out from ten days to five weeks at a time, once and sometimes twice a year on the Tippecanoe, Kankakee and Wabash rivers, and a good many of the famous lakes of northern Michigan; and as the years grow on apace, the love of the sport of all sports seems to take a deeper root, and I look forward to the next "Camp of the Kingfishers" with more eager anticipations of pleasant communings with the woods and the waters than have been enjoyed in any preceding one.

Of all the fish with which the old rod has had to do battle (a good many of them have been used in all these years as boy and man, but it is always "the old rod"), the bronze warrior with the bristling back stands at the head of the list as a tireless, game fighter, cunning strategist, a "hustler," and the one fruitful in resources and devices to rid himself of the remorseless steel when hooked. Not even the much sought after and over-praised "speckled beauties" (pardon a phrase that has been worn threadbare for a century or more) nor him of the vicious eye and terrible jaw, the mighty maskinonje, show more courage and lasting qualities in a "difficulty," or afford more "pure delight," as Uncle Dan Sloan calls it, on the rod, than the boyhood love—the small-mouthed black bass, though just why he should be called *black* bass is more than I have ever been able to find out.

At the little village mentioned, the Wabash was obstructed by a big dam (a feeder of the Wabash and Erie Canal) about 14ft. high and 600ft. long, and below this in the spring of the year the bass, suckers, buffalo, "red hoss," gars, "blue cats," goggle-eyes, white "pearch," salmon, (pike perch—both the black and golden dappled), an occasional "spoon-bill," with a smart sprinkling of villainous dogfish, swarmed in thousands, all seemingly intent on obeying the instinct of their natures, to seek the upper waters where they might find suitable places for their spawning beds.

Sitting on one of the abutments of the dam, of a clear day, one might see a score of bass, with now and then the flash of a golden-sided salmon, perch or sucker darting up the long incline of the swiftly-flowing sheet of water a foot or more in depth, that slid in unbroken volume to the foam-flecked pool below; but it was a rare sight to see one "make the riffle" and whisk his tail over the comb of the structure and disappear in the slack-water above; and when this did happen, the lucky fish was, as Dick Mac says, "almost always invariably" a bass, the others not seeming to have the staying qualities and power of tail necessary to surmount the top. Many of them would get half-way up, and some within a foot or two of the apex, when they would lose their grip, turn a somersault and be dashed back by the rushing waters, dazed and bewildered into the foaming depths below, only to rest awhile and try it again. Sometimes a dozen or more of them would be in sight at once within a hundred feet of the abutment, and it was rare fun for "us boys" to sit and watch them, making fabulous and windy wagers the while as to whether this one or that one would "make the riffle," or how far he would get up the sloping sheet of water before "somerset time" would overtake him. Why can't we always be boys?

At a distance of from 8 to 30yds. below the dam, a line of great boulders stretched half way across the river from the east, forming a deep and comparatively quiet pool between the riffles and the dam, which was at a certain time in the season, like the Irishman's brook—"sthiff wid fish."

After the annual spring "fresh" had subsided till the water was a foot deep or less on the dam and fairly clear the village anglers would begin to bestir themselves and get their tackle in order, never a great task, as it consisted simply of a wooden pole, line and hook that had been laid away during the winter. Reels, braided lines, jointed rods, flies, patent trollers and the like that go to make up the angler's outfit of nowadays were things utterly unknown to the craft of this sleepy out-of-the-way village, and when old Jess McClellan, the "fishing blacksmith," located in the place, bringing with him an 18ft. American cane pole with a butt the size of a small sapling—the first cane pole we youngsters had ever seen—he was the envy of every fish crank in town. However, an ironwood sprout 10 or 12ft. long cut in the fall when the sap was out, carefully trimmed and hung up with a weight attached, to "set and season" during the winter, was "good enough for the Joneses," and never since has a rod, whatever its cost or qualities, given better satisfaction or afforded more pure delight in handling a fish than did that same tough and trusty "old ironwood saplin' cut in the bresh."

The line was usually twisted linen or cotton of about the size of the E line of to-day, tied near the butt of the rod and wound around in long spirals to the tip, where it was secured by three or four half-hitches and wound on in an oblong bunch till the required length of line was left free of the rod. If at any time more line was needed to troll or fish off one of the abutments the line was unwound to suit the case, a few half-hitches taken and the sport went on with "jest as satisfyin' results" as though equipped with a Leonard split-bamboo, braided silk line and a brand new 4-multiplying Frankfort reel.

We had but four names for the hooks used; the "minner hook," the sunfish, the bass, and the catfish hook, that grew larger in the order named, and we were thereby saved a heap o' trouble making fine distinctions between the merits of the Kirby, Sproat, O'Shaughnessy, Carlisle, salmon trout, Limerick, Sneck-bend, etc., with their various styles of numbering, which go so far in mystifying the angler of the present day unless he has spent more time in studying "hook nomenclature" than would be required to tide him over a Civil Service examination of the highest grade. The hook most used for bass was the Limerick, and it's a mighty good sort of a hook even yet among all its fellows seeking recognition from the brotherhood.

II.—An Artificial "Bob."

The standby for the bait was the minnows, hundreds of which could be scooped out of the eddies in the tail race of the woolen mill with a piece of mosquito bar, or at a pinch, the old straw hat. But when the salamander (helgramite) was ripe, this was the favorite bait till it took unto itself wings and flew away in the shape of a big, dirty white fly. They were ugly customers to handle on account of the sharp, curved pair of "ice tongs" each was provided with at its head, but the results would more than pay for a few severe nips, for they were so leathery and tough that often five and six bass would be taken with one salamander.

The most killing lure, however, for spring fishing when the bass was in the humor was a "bob," introduced by the fishing blacksmith, a sort of nondescript fly that looked like nothing on earth or in the waters. A stout piece of line was first wrapped on the shank of a hook—sometimes two were used, set at a right angle—then two or three white feathers were similarly fastened with the ends protruding an inch beyond the bowl of the hook. Around this as low as the curve of the hook a strip of bright scarlet flannel was wrapped and sewed fast, making a roll a little larger than a lead pencil, the lower end a trifle larger than the upper. A strip of very thin brass a half-inch wide, cut from the label of a sardine box, was rolled around the upper end and securely fastened, and with a split bullet clasped on the snell just above, to give weight in casting, the nameless bug was complete—a gaudy contrivance of about 3in. in length. I have perhaps omitted the most important item in the construction of this bass killer (at least it was one in our eyes at that day and the notion is not thoroughly eradicated yet, so firmly do the angling superstitions of our youth take root), and that was a small piece of gum asafœtida wrapped on the hook shank, before the flannel was fastened to its place. This, or a few drops of oil of anise, was considered irresistible to any bass or pike-perch that might be "nosin' 'round" for an odorous morsel; but if any of the brethren feel like trying one of these flies, or bugs, or "varmints," I think they may safely dispense with the villainous smelling gum and the bass will never know the difference.

The fishing blacksmith initiated me into the mysteries of its construction and thereafter there was a friendly strife between us as to which could take the most bass with it. It was a noted fact that he would never fish with live bait in the spring of the year, he would use only his red bug, and he seemed to know intuitively the days when the bass were in just the right humor to take it, for he never came back empty-handed. His favorite place to fish was just above the riffle, near a lot of great boulders rearing their heads above the water, when the river was at a good fishing stage.

There was a narrow gap in the rocky line, 50 or 60ft. below and a few yards to the west, through which the water ran like a mill race, that the bass appeared to use as a special highway by which to reach the deep water below the dam, and here, anchored out in his boat within easy casting distance of the break in the water, at the head of the chute, he would "thrash the waters industriously" on a good afternoon till the evening shadows fell on the river, and drop back down to the town, a few hundred yards below, with all the way from a dozen to 75 bass, with an occasional pike-perch sandwiched in for variety.

Old Jess was extremely reticent and peculiar in his ways, and was never known to fish with any one, or ask a friend to join him in a day's fishing, but "he was a main hand at fishin'," as they say in Tennessee, and a worthy disciple of "gentle old Ike," whose place he filled as patron saint to all the anglers, old and young, of the village.

One Saturday, a couple of years after the advent of old Jess in the village, when there was a smell of rain in the air I pushed father's little boat up to the riffles, where by dint of hard work I waded and pulled it above at a certain shallow place, and was soon anchored at the coveted spot, with the roar of the dam at the back to furnish the music for the entertainment that followed. That spring father had selected for me a light, tough Mississippi cane pole, from a bundle "imported" by one of the village storekeepers, and with a new bob with two hooks that I had spent some anxious hours over, a "bug" that eclipsed all former efforts, I felt prouder than if I had owned half the town.

The bass seemed to be in unusual numbers above the riffles and around the head of the chute that day, and I wielded the rod until my arms ached, hooking a fish at nearly every cast and very rarely losing one. There was no playing a fish for sport indulged in; no music of the reel to go into ecstacies over, as a reel was an unheard of implement; nor was any time wasted in watching "the glorious bend of the rod." The gaudy bunch of tinsel, flannel and feathers was dropped on the water "k'chunk," with an utter disregard to "delicacy of cast," "feathery lightness," "like a snowflake or a spray of thistle down," and the like flummery beloved of "ye tournament fisher," and drawn with jerky pull across or up the current near the head of the channel, and when a tug was felt the victim was unceremoniously pulled alongside and yanked into the boat before he had time to find out what hit him. That was the way it was done in those days when we were out for count, and before we had learned more sportsmanlike ways and methods.

As youngsters, we are intent only on landing our fish; as we grow older in the gentle art we take more pride in our tools and tackle and skill in handling them, and the performance of a favorite rod affords more "biled down" happiness to the grizzled angler than does his landed fish.

The first two or three dozen were strung over the sides of the boat; but as the afternoon wore on the fun grew so fast and "overpowerin'" that the others that came to grief in rapid order were dropped in the bottom of the boat in an inch or two of leaked-in water, which was kept from further encroaching by a few timely dips now and then with an old battered basin. When evening fell the fish quit biting, and with tired arms but happy heart the anchor was lifted in and the boat guided through the chute and down to the landing at the mill, with a score to my credit that laid old Jess's best catch in the shade.

Father was waiting at the landing to "interview me with a bresh" for staying so late, but at the sight of the fish he forgot all about the time of day and the intended "breshin'" (greatly to my pleasement), for he was an eager sportsman and a skillful handler of the rod himself—of which I got an occasional taste when I would fish or hunt too late of a Saturday and fail to have the "Sunday wood" cut on time—albeit, the rod he used on these occasions was not the one he usually fished with.

To beat the fishing blacksmith with a lure he had taught me to make, was "a leetle too much glory for the Joneses," and the consequence was a well-developed case of enlargement of the cranium that necessitated the purchase of a new hat next day that was a full size larger than the old one. Old Jess seemed as well pleased over the catch that beat his record as I was, and the bond of brotherhood between us, despite the disparity in our years, was more firmly riveted than ever, but he still held to his solitary ways and I never had the coveted pleasure of an invitation to join him in a day out with the bass.

I have never since taken as many fish in one day, not even trout when they "were a bitin' like all possessed," nor will I ever wish to unless I degenerate into a pot fisher—which may the good Lord keep me from.

III.—Large-Mouth and Small-Mouth.

The bass taken below the old dam in the spring time usually ran from half a pound to a pound and a half and two pounds in weight, and rarely was a three-pounder overtaken, although when the neighboring farmer folk came in gangs from miles around and camped, some in tents and some in wagons, for the annual spring "seining spree," dozens of big fellows might be seen jumping the seines as they were drawn up on the sloping, gravelly beach below the riffles that looked to be four or five pounds weight.

At rare intervals, perhaps two or three times in a season, a "big-mouth," called "lake bass," and "Oswego bass," would be taken, but by whichever name they came to grief, they were looked on with disfavor and considered a sort of interloper and "no 'count fighter," and in all of the succeeding years, during the past ten of which I have enjoyed a somewhat intimate acquaintance with them, I have not seen occasion to change the opinion formed of their fighting qualities when a bare-footed boy.

It would be impossible to convince me that the large-mouthed bass can begin to hold up his end with the small-mouth when it comes to a question of strength, endurance, quickness of motion, and all the "hustling" qualities that go to make up a game and tireless fighter at the end of a line, and I hold that no bass fisher who has handled both kinds can maintain to the contrary, unless his head loses its balance and his wrist its power of discrimination during the progress of the difficulty.

I have not imbibed these notions—prejudices, if you will—from specimens of the genus *homo*, whom I have met on stream or lake; they have come to me by the close observation of years, the handling of many of both varieties in the same waters, and a discriminating wrist, and I don't believe with Dr. Henshall "that the large-mouthed bass, all things being equal, displays as much pluck and exhibits as much untiring fighting qualities as its small-mouthed congener." With due deference to the Doctor's superior attainments as a scientist, naturalist and an engaging writer, I venture the opinion that he don't know as much about the fighting qualities of the two varieties as he would like to have us believe; that he has not improved his opportunities to the full extent of his "caliber."

Nor am I alone in the belief in the inferiority of the large-mouthed bass. Not a bass fisher of my acquaintance, who has handled both kinds (and I know a good many), notably my old comrades of the camps in northern Michigan, but will, I believe, bear me out in this "notion" of the decided superiority of the small-mouthed bass as a fighter over his big-headed cousin when it comes to a personal difficulty with the angler. The difference has been so noticeable that on three occasions in the last ten years we have moved the camp from a lake where we could get nothing but big-mouths, to some other lake,

where we could find at least half of the small-mouthed variety.

I had a twelve-year-old boy with me last summer in the camp on Carp Lake (little Ed V., who took to fishing and casting from the reel as naturally as a young duck takes to water), who could and did tell five times out of six when he had on a small-mouthed bass before the fish came in view, and on asking how he could tell he said, "They make my arms tireder." And just that is the briefest and most commonsense reason perhaps ever given for the superiority of the small-mouth—"they make the arm tierder. A whole chapter of wordy argument wouldn't express it as clearly and forcibly as the inexperienced but observant youngster did in five words.

I hold up for the small-mouth against all comers. He is not only the coming game fish, but he is the game fish of our Western and Northern waters, right here with us to stay, and in my humble and carefully considered opinion he has no superior as a fighter with the just possible exception of "him of the gorgeous fin"—the Michigan grayling.*

IV.—An October "Controversy."

The glory of the fishing, however, came with the October days and the soft, hazy Indian summer, when the woods were gorgeous in red and yellow, old gold and russet brown, with here and there a fleck of evergreen clinging along the steep sides of "Ballard's Bluffs," overlooking the river above the mouth of Pleasant Run, a noisy, rocky little stream famous for its wide-mouthed, fine scaled minnows. The fall fishing was above the dam in the slack water, which was a matter of seven miles of almost dead water, with an average width of 200yds. and varying in depth from a few feet at the head to 25ft. in places between that and the dam. This body of deep, quiet water was the home of the big fellows of the bass tribe, the old moss-backs that had lived there and kept the minnows and other small fry from becoming too thick, ever since the dam was built.

Along the western shore, the hilly side of the river, for 5 miles up, several little cold spring branches flowed in at intervals, besides the more pretentious "cricks," and around the mouths of these bass from 2 to 7lbs. could be taken by still-fishing, or "trailing" as we called it, and the tradition yet lingers in the village, I have no doubt, that old Jess once took one that weighed something over 8lbs. However this may be, father and I one October day had a difficulty with one that weighed a little over 7½lbs. on the "store scales," and he was taken without a reel, with a pole and line that in these days of fine tackle would have been laughed out o' sight.

The controversy took place off the mouth of "Troxel's Branch" as we were going in the boat to a strip of bottom land a couple of miles above the dam after pawpaws, walnuts and water grapes, and of course we had taken a pole and line along just to while away the time on the way up and back. Father was at the oars and I sat at the stern with about 40ft. of line trailing behind with a bewildering new bob at the end of it, when a heavy jerk that nearly took pole and boy overboard started the fun. The boat was stopped and for half a minute or so father looked on to see which way the battle was likely to go, but seeing the fish was about to get me he stepped aft and taking the rod from my nervous hands with, "He's too much for a boy of your heft, let me show you how to do it," proceeded with a deliberation that set me on nettles to finish the fight after his own fashion and nearly break my heart with disappointment at the same time, for I would have hung on to the rod even had I been pulled overboard. The struggle was short and furious, but the strong line, tough rod and main strength prevailed, and he was pulled alongside and lifted by the lower jaw (landing nets we knew not) in the boat with a scrap of advice from father that has pulled me out of some tight places since then, "Always keep cool when you've got a big fish on." When he was safely in the boat we saw what was doubtless the reason the difficulty didn't last longer and why he had not left the water, as the small-mouth bass usually does one or more times in open water. Hanging on to him in different places were 5 slippery, slimy, blood-sucking lampry eels, from 5 to 10in. long, the longest one fastened on just behind one of the pectoral fins, although at that time I didn't know the difference between a pectoral fin and an oar blade.

The eels hung on to their victim with a grip that resisted all efforts to pull them loose, and were only removed by severing them with a knife near the head, when the "sucker" would relax and the head drop off, leaving a round raw spot that determined us not to eat the old fellow, but he was hung over the side of the boat and taken home in the evening with some others to get his weight.

I straightway "laid up a skunner agin" father for robbing me of the glory of that fight, but when a few rods further on he let me handle one about half as large, and two or three more before we got to the pawpaw patch, the "skunner" was forgotten; and when we returned in the evening full to the thrapple of grapes and pawpaws, with the bow of the boat filled with them and a bushel or more of black walnuts, I mentally wished the blue October days would last forever.

Some years afterward a good part of the old dam was washed out, doubtless carrying out with the flood hundreds of the old settlers; but in October, 1877, after it had been rebuilt, the "Kingfishers" camped for two weeks at the mouth of Pleasant Run and had some fine sport, taking bass that weighed from 2 to 5½lbs.; but the glory of the boyhood days had departed; the mossbacks of the tribe had sought other waters or died off from sheer old age.

* I would be pleased to see the FOREST AND STREAM publish the opinions of a few bass fishers who have handled a good many of both varieties in the lakes of northern Michigan, as to the merits of each as a fighter, and to this end would suggest that they "interview" by letter such anglers as H. C. Culbertson, Alex. Starbuck, "Old Knots," R. E. Macauley, H. H. Muller, T. H. Foulds, B. K. Brant, a former "Kingfisher," Sam R. Smith, C. C. Furr, Col. S. A. Whitfield, Second Ass't P. M. General, State Fish Commissioner Col. W. T. Dennis (however, I am not quite sure Col. Dennis has had many difficulties with the big-mouths), "Old Bill Schroll," who can tell to a nicety the difference between the movements of a bass and a "suckermoojen," and last and best comrade of them all, "Uncle Dan" T. Sloan, who has had more "pizen diffikilties" with the "open-faced" variety, and done more "plain an' ornamental cussin'" at them than perhaps any of the others. If a clean majority of these brethren will say the big-mouth is the equal of the small-mouth in any particular, I will stand convicted as the obstinate juror, lay down my rod and give up the sport.

V.—A Memory of the Tippecanoe.

Twenty-five or thirty years ago the Tippecanoe River flowing into the Wabash a few miles above Lafayette, Ind., was, without a doubt or exception, the best bass stream in the United States; but of late years giant powder, the fish trap, the jig and seine—ye guileless farmers' favorite weapons of extermination—have depleted the once famous stream, till now it is great luck if a camping party can catch enough fish with rod and line to keep the frying pans in good odor.

In September, 1867, four of us made a camp on an island in this river a few miles above Monticello and a mile above Norway, a small settlement of half a dozen houses, a flouring mill, a woolen mill and sawmill, to fish the slack water above the dam, which my brother, then living in Monticello, had written me was "chuck full o' big bass." The first day was spent in fixing up the camp and seining a couple of hundred young pike (the best bait we ever found for Tippecanoe bass) from Pike Creek, a little cold stream running into the river a hundred yards or so below the dam. One of the party, George V., a young fellow built on the ground plan of a dude—brains in his feet—wore a new pair of $12 boots, which somehow got full of water while we were after minnows, and in the evening after supper he laid them on a log against which we had built the camp-fire, to have them dry for morning. During the night the end of the log on which they lay burned, and all that was found of his prized foot gear in the morning was a fragment of one heel. This calamity so disgusted George that it struck in on him, and two days after he packed his grip and struck out for home, thoroughly satisfied with his first experience in roughing it in a camp, which left Charley L., Col. W. T. Dennis (Old Grizzly), the present zealous and worthy Fish Commissioner of Indiana, and the writer to do the roughing and dry our boots without the precaution of placing them on a burning log over night. A day or two after this Charley gorged himself on water grapes, buttermilk and whisky, a combination that soured on his stomach and made him "sicker'n a hoss with the botts." When the dark red mixture had been laboriously disgorged he was firmly convinced that hemorrhage of the lungs had set in on him bad, got scared, and next morning packed his big valise, got me to take him down to Norway in a boat, caught the mill team going to Monticello, where he took the train for home (Richmond, Ind.), leaving only Col. and "Jeems Mackerel" to run the camp, do the cooking and fishing, and have the best time for five weeks that ever fell to the lot of two ardent disciples "on the face o' this livin' airth."

All this may be set down as introductory to a personal difficulty with a big bass, a mile or more above the camp, the forenoon of the day Charley was taken with the "hemorrhage." We had been fishing a strip of deep water a couple of hundred yards long at the mouth of "Kean's Creek," the better part of the morning with good success, having on the stringer a dozen or more bass that were good for weak eyes, none under 3 and some up to 5lbs., when we found that we had but one minnow left, a big pike that was too long to straighten out in the bucket, and concluded to start back to camp for another supply. Just below Kean's Creek was a shallow rapid a hundred yards long, and at the foot of this more deep water that extended nearly down to the island. More to kill time than anything else, the big pike was hooked on the troll down to the camp, but as we passed a big boulder, partly naked, lying in a couple of feet of water a short distance below the riffle, the place looked so "enticin'" that I stood up in the boat and cast 50 or 60ft. back in the eddy below the big rock, with a request to Charley to "hold the boat just a minute for luck." (I had learned the knack of casting from the reel, "Henshall style" (?), by watching old Joe Goff, a noted angler of Connersville, Ind., who had practiced this style of cast for some years before Doctor Henshall or his style was ever heard of.)

The big pike had barely time to get the kink out of his spine, brought on by long confinement in the bucket, when a swirl in the water gave notice that there was at least one bass in the river that had an eye to quantity rather than quality, when it came to the matter of a square meal; and instantly the line began to run rapidly off the reel up stream past the boulder toward the foot of the riffle. When 8 or 10yds. had run off, the thumb tightened the line and a smart twitch of the rod pulled the pike out of the fish's mouth; I had struck too soon. Instead of reeling up for another cast the bait was allowed to sink to the bottom, and before we had time to make a few "appropriate remarks" the line was running off up stream again. Another strike, after a reasonable time had been given, resulted in another failure to hook him; the pike was too big for him to swallow readily, and the "sag" of the line in the current and a trifle of hurry and eagerness on my part probably had something to do with the second miss.

Again the minnow was left to drift along the rocky bottom, but before Charley could take a "consoler from a convenient wicker contrivance reposing under the seat, the line was again going toward the mouth of Kean's Creek. This time I was determined to allow him ample time to swallow the big pike, tail and all, if it took him a week, and to this end Charley began to back the boat up stream to give me a shorter line when it was time to strike without so much sag to take up. When right up to the foot of the riffle the fish stopped, the line was carefully tightened, and instead of the regulation twitch he was treated to a genuine, old-fashioned "Watterson wipe"—a "sure enough jaw-breaker"—as old Sam Smith calls it—and the hook this time struck something and held, and ye gods and brethren of the rod at large! the fun we had right there for the next twenty or thirty minutes set us to thinking that the average span of life is all too short for them who angle for the love of it.

The instant the hook struck the fish turned and darted down stream past the boulder, which we were now a little above, turned into the eddy below, flashed around it and headed up stream again so suddenly that we were dazed for a moment; but by keeping the rod tip well up, the line had been kept from fouling around the rock, thereby narrowly averting a calamity that would have ended the difficulty before it had well begun. When a yard or two above the boulder he changed his mind and shot off quartering down stream toward the west shore into deep water, the line running out from under the thumb with a velocity that soon heated it to near the sizzling point, although Charley was following up meantime as fast as he could pull the boat. I was using a one piece, close-jointed Japanese cane rod (the best of all rods to trust in a tight place) and with 100yds. of new braided silk line on the reel I felt no fear of the final result if the hook didn't tear out; and yet a second or two later, when the bass went 5ft. in the air over near the shore, with the big pike thrown out and dangling 6 or 8ft. up the line, my heart came up in my throat like old Dave Edwards's in his first battle after he enlisted for the war, "with a thump that knocked the chaw tobacker out o' my mouth."

This was the first sight we had of him, and truly he was a prize worth a whole week's patient angling for; a long, slim, trim-built, green-sided pioneer, agile and wiry, and full of fight as a Tennessee wildcat. Then the difficulty began in earnest. When he struck the water he started with a rush down the river, but the pull of the rod swerved him around till he soon was going for the opposite shore like a stray dog that had been cajoled into the belief that he can outrun an old oyster can when securely fastened to his tail. When half across the river he took a notion to air himself again and get rid of the hook that was worrying the life out of him, but it was there to stay, and the effort only resulted in another failure and a fiercer rush to make up for the time fooled away in the air. This time he struck the water head up stream about 30yds. from the boat, and made a straight wake for the boulder, where a few minutes before the big pike minnow had disturbed his meditations and got him into a "catagory" that had evidently unbalanced his mind; but the trusty rod bent to its work and he was stopped before reaching the eddy. Bewildered and discouraged, he turned and came back past the boat into deep water again, when after the third flying leap in the air he fell back again into the water with still fight enough left in him to nearly double the rod in the effort to hold him away from a patch of long, wavy grass growing up from the bottom over near the west shore.

The relentless pull of the rod at last began to tell, and after a few more aimless rushes he was carefully reeled toward the boat, tugging feebly and rolling from side to side with wide open mouth, when as he came within reach Charley deftly landed him in the boat; and then we let out a combined yell that was heard by the Colonel at the camp below.

Never since have I taken a bass that made a longer or harder fight, and the memory of it is as fresh now as though it happened but yesterday. When he was safely on the stringer and we had celebrated the victory after the fashion of our Kentucky brethren, we made our way down to the island to make glad the heart of Old Grizzly, who had stayed in camp to concoct a toothsome stew from a young goose he said he had "bartered" for that morning; but happily for him our farmer neighbor afterward laid the disappearance of his goase to the "varmints."

The big bass was just 27½in. long and weighed 6lbs. and 12oz., and was the finest specimen of the family I ever saw taken from the Tippecanoe River, although we fished it annually for more than ten years afterward. We tied our fish out along the island, each secured with a piece of cord to a springy twig driven in the sand at the edge of the water, and kept the surplus down by giving them to our neighbors as they would come after them day by day.

After Charley left us, the Colonel and I remained on the island over four weeks, and when we broke camp he nailed a piece of board on a tree near by with the figures "384" cut in it, which stood for the number of bass we had taken, of which the Colonel had kept count from the first day; and four years afterward it greeted us as a "That reminds me," as we passed the island in a boat on our way up to the mouth of Kean's Creek. We have been in many pleasant camps together since, but somehow that old camp of one tent on Grape Island seems the best of all, and the memory of the happy days spent there and the great sport we had will never die out.

VI.—Luck in the Night.

Bass are not usually night feeders, but a few years after the camp on Grape Island I took a 5-pounder at the big dam at Monticello at 10 o'clock on a moonless night, with a dead, dried up frog that had lain in the boat since the night before.

I had occasion to go up to the town that evening to mail some letters, and falling in with some of the "old boys" of my acquaintance, had incidentally "histed on a big jag," which proved somewhat of an impediment in following the path through the woods back to the dam where I had left my boat and rod, a matter of a mile and a half below the town. (In those days beverages in camp ranked as necessities, same as bait and side meat.) When crossing the river to get over to the camp, a notion struck in on me to pull the boat up on the apron of the dam at a spot where no water was running over it and fish for blue cats, but on looking for the minnow bucket I was surprised to find it had mysteriously disappeared—and all the time it was hanging in the water at the stern where I had left it. In the absence of other bait the dead frog lying on the seat was hooked on and dropped at the edge of a line of swift water running over where there was a trifling sag in the dam, and before I had time to get my bearings in the gloom, a difficulty was in progress that called for a clearer head than I was just then possessed of.

At the strike the fish swung out into the swift water and by the way the rod doubled up I was sure I had "hung" at least a 25lbs. catfish. The conditions for standing up in the boat were somewhat unfavorable, owing to certain misgivings I had as to the reliability of my legs, and the battle was fought out sitting.

Three or four times during the controversy the fish would get into the swift water and run off 30 or 40yds. of line down stream, despite the stubborn protest of the rod, before he could be pulled back into the dead water, where the advantage was slightly on my side, and I could reel him at "memorandum" in the darkness back toward the boat, when he would somehow again get in the swift current and swing around the circle till I began to think the performance would last till morning unless one of us gave out. Finally I held him away from the spot where he usually started on his circuit, the strain on the rod eased up and he was pulled near the boat, but it was so dark that I couldn't see the line and had to feel for it. This required a mighty fine job of "balancing" to keep from going head first into the river, but at last I found the line, and running one hand down it—holding the rod in the other—grasped the fish by the lower jaw and lifted him in the boat; a clean built 5lbs. bass, as registered by the pocket scale a few minutes after at the camp, instead of a 25lbs. catfish as at first supposed. Then I

gave a yell of doubtful sobriety to notify the camp of my coming, backed the boat off the apron and was soon ashore, where I was met by one of the boys with a lighted lantern and escorted in triumph to the camp a hundred yards below, when the bass was weighed and I was complimented with the sage remark—heard before and since—"A fool for luck."

In "cogitatin' it all over" afterward, I had a notion that that bass was aware of my happy frame of mind and thought to take advantage of it, but he had miscalculated my capacity for Monticello "festivities" at that time and the mistake resulted in his taking his place with 70 or 80 others of his tribe, and a sprinkling of catfish and pike-perch, in a little pond a couple of rods long, made by throwing a dam across a cold spring branch near the tent, were they were kept alive till we broke camp for home.

I record this little "episode" not to call attention to the use of beverages in camp, but to show what a full-blown fool they will make of one when he most needs a clear head, and after a good many years of nothing but water and coffee in camp or out in the shape of fluids I can vouch for it as the best way, and say to the youngsters of the craft, "Tamper not with the enemy," in any guise, at any time.

In October of the next year we fished the deep water above the dam and had great sport, notably on one day that Col. Dennis christened "Coon's day." We had pulled the boat up on the bank a quarter of a mile above the dam, near a little spring that gushed out of the ground at the foot of the hill, a rod back from the river, and standing in the stern I took eleven bass as fast as they could be handled and taken from the hook and strung by the Colonel, that weighed exactly 44lbs., an average of 4lbs. each—and they were of very even size—which he figured out as "4 11-44," the colored brother's favorite gig when "rasselin' with policy." When the fun began the Colonel was busy on the bank trying to disentangle a snarl in his line, but laid it down to take the first one from the hook and string him, and before he was well into the mysteries of the snarl again another was ready for him at the edge of the water, a performance that was repeated to the neglect of the snarl till the last bass of the school of eleven was safely on the stringer. Ten or fifteen minutes more of persistent casting failing to provoke another bite, the rod was laid down, the Colonel's line patiently "unsnarled" and we took our way back to camp happy as two "coons" that had hit the combination, for we had "been out to see a man" with frequent regularity between acts as long as the performance lasted.

We fished the glorious, rapid, rocky old Tippecanoe for several seasons after that at different points, and although we have not wet a line in its limpid waters for years we will never forget the happy, care-free hours passed in many a pleasant camp along its wooded banks, when hazy Indian summer days made life seem but a dream.

VII.—Kingfisher Days.

In July, 1880, two of the original "Kingfishers," Old Knots" and the writer, with a friend from Hamilton, O., made our first camp in northern Michigan on Lewis's Island in Central Lake, the lower one of the Intermediate Chain, and had such great sport that we had a violent attack of "Michigan fever" ever since, which bids fair to abide with us till Gabriel winds his horn to fall in for the final roll call. I am ashamed to say how many bass we took in the two weeks we were in camp—to say nothing of the pickerel—for it was more like slaughter than sport, and had it not been for our fish-hungry neighbors, we might have been rightfully charged with criminal waste. They, however, relieved our consciences by relieving us of most of our fish, and we felt that while doing some wrong we were at the same time evening things up in a measure by doing a little good. The bass taken while in this camp were about equally divided between the large and small-mouthed varieties, perhaps a few more of the big-mouths than the others, but the small-mouths averaged the largest, many of them weighing 5, 5½, and up to 6½lbs., weighed with an accurate pocket scale, and here we first noted more particularly the decided superiority of the small-mouth over the big-mouth as a game and tireless fighter. We noted, too, that both varieties were not always found in the same waters, although in some localities both were plentiful.

(I may write as a curious feature of the fishing in this chain of lakes—there are ten of them connected by little unobstructed streams—that out of several hundred bass taken in the lakes above the head of Central, we have never found a single one of the small-mouthed variety. If any of the tribe have been taken in the lakes above, brother "Kelpie" of Central Lake—the cleanest-handed sportsman and angler of my acquaintance in the North woods—can probably tell about it.)

In a little bay off the mouth of "Sweeney's Creek" we have taken in the five seasons' camping on this lake at least fifty bass that would certainly average 4½lbs. each, and not one of them was of the large-mouthed tribe. In this bay on our first trip I took the 6½-pounder, and a few days after, with the wind kicking up a sea two feet high and the little boat pitching around like an eggshell, I took one that was 3in. longer and 1in. deeper at the "shoulder," but did not get his weight by reason of "Knots and Jim" having left on a trip for Petoskey and taking with them the only pocket scale in the camp.

Just across the lake from Sweeney's Creek at "Buzaroo Point," in '83 my old comrade Uncle Danny Sloan took a small-mouthed bass while I handled the boat for him, that weighed exactly 7lbs. on two different scales, and which the FOREST AND STREAM took the unauthorized liberty of cutting down to 6lbs. when the account of the capture was published in "Camps of the Kingfishers" in the paper the following year.

VIII.—The "Bull Bass of Michigan."

In the last forty years I have had a good many personal difficulties with big bass, but the largest one I ever saw or hooked came out on top and left me in a "state of mind" that I don't believe I am quite over yet, and whenever I think of the occurrence, I am strongly tempted to fracture one of the Commandments—I forget the number of it, but it mentions something about swearing.

A few days after Uncle Dan took the 7-pounder, Old Ben Renshaw and I were idling along the rush-lined shore in a boat about three miles above the camp, making a pretense of fishing a little, with the afternoon sun beating down on us so fierce and hot that both together hadn't as much energy in us as a green frog in August; we were actually so indolent and lazy that we had put a cork float on our lines 5 or 6ft. above the hook to save the exertion of reeling up for an occasional cast, and when I see a bass fisher using a float, unless the nature of the current and bottom especially require it, I have a notion that he is too lazy to breathe. A thoroughly lazy man, one who waits for the fish to come to him, never makes a successful angler.

I was at the oars, making a stroke now and then to keep from going to sleep, when I was roused by Old Ben with "Great Jehossafat, Hickory, look yonder!" pointing in toward the rushes only an oar length away, "there's a bass bigger 'n a skinned hoss; reel up an' drap yer frog over there an' see ef he'll take it." Looking over my shoulder, all the laziness and indolent feeling left me like a flash, and I was instantly as wide awake as though I had been soused in the lake. There, not ten feet from the boat and just inside the line of sparsely growing bulrushes that marked the "pitch off" into deep water, were three bass close together, two of them looking to be a foot and a half long in the clear water, but the "skinned hoss" was a monster beside which the other two looked small and insignificant. The big fellow was slightly in advance of the others; and none of them paid the slightest attention to the boat, but lay fanning the sandy bottom with their fins, as lazy and sleepy apparently as Ben and I had been a few seconds before. Stopping the boat with a noiseless back stroke, I quickly reeled up the frog and float trailing 40 or 50ft. astern next to the rushes and dropped the kicking frog quietly over in front of the big one, but it didn't seem to "remind him of anything" just then, and with an easy stroke of his tail he went around the stern of the boat and out into deep water, while the other two turned and fanned back among the rushes. Reeling up again, the frog was cast 20ft. outside in the direction the big one had taken; and as the sinker pulled the float to a perpendicular it slipped out of sight under water, and Ben took the oars to give me a fair show when the fight began. Just as I was about to make the strike the frog came to the surface without the hook, and swam off with frantic kicks and disappeared in the bulrushes. This was a turn of affairs that we couldn't understand, but we finally charged it to the hook. I was using a No. 6 barbless hook that day, and the infernal fraud had somehow let the frog slip past the keeper with the result as stated, but we couldn't quite make out how he had escaped from the big bass.

The line was reeled in quicker perhaps than ever before, the bucket nervously opened and another frog hooked on and cast back about where the other one had come up (we couldn't spare the time to tie on another hook), and in less time than it takes to write it the cork was out of sight again and the line running furiously off the reel quartering across the lake. Ten or twelve yards were run off without a sign of the fish stopping, when Ben said, "Hit 'im one in the jaw an' paralyze him." I "hit 'im" as suggested, and such a fight as took place there under the broiling sun—short, sharp and furious—was never witnessed, I reckon, "on the face o' this livin' airth." With the bit in his teeth—to speak "hossy"—the old fellow took at least 15yds. more line from the reel before the blessed old rod—I have it yet—could stop him, and when the pull at last swung him around, he came dashing back by the boat like a locomotive running wild, only a few feet away and heading inshore for the rush belt. Suddenly the strain on the rod eased up, and an instant later, about 30ft. from the boat and only a few yards from the rushes, the largest small-mouthed bass I have ever seen was on a level with my head in the air taking an instantaneous view of the surroundings, while our hearts stopped beating lest he should shake out that "cussed piece o' pianer wire," as Ben called it. The fish was, I honestly believe, more than 30in. long, and so proportionately large that we were afraid to believe it a bass. "The jumpin' Jehossafat, Hickory! (The jumpin' Jehossafat was one of Ben's strongest expressions of astonishment before he reached the profane boundary) "that's the great gran'daddy of all the bass in Michigan," but before he had relieved himself of this sentence in his deliberate way, the bass was in the water again, and as the demon of ill-luck would have it, he was going for the rushes with a pull that threatened to end the usefulness of the trusty old rod that had stood the test of so many hard won battles before.

Yank—tug—pull: the line slipped a little under the thumb; a harder pressure was put on and the rod tip went a little further toward the rush line. If the bass got among the rushes the fight was over; the result rested solely on the strength of rod and line, for he must be held away from the danger line at all hazards. Just as the feel of the rod gave a sign that the old mossback was weakening and I was on the point of giving a shout of exaltation at the prospect of a speedy victory, the rod flew up and the cork went over our heads with a swish into the lake outside, and I wilted down on the seat so full of bitter disappointment that I couldn't utter a word, while Ben held the oars poised in the air, speechless and with a blank expression of "how-did-it-all-happen?" on his bronzed old face that I'll never forget. After staring at each other a while in a meaningless sort of way, the line was reeled slowly in and the cause of the calamity was made apparent. There, hanging at the end of the line, was that "cussed piece o' pianer wire," treacherous, barbless, and worthless, straightened out into about the shape of a sore finger, with the point turned sharply back like a bent pin and nearly half an inch away from the point of the keeper—that didn't keep. Ben examined it in silence for nearly a minute before passing it to me, and when I had studied the case over in all its bearings on the catastrophe, I made a few remarks that would compare favorably with any of Ben's best efforts, and Ben was "a main hand at cussin'" when occasion required.

This duty performed, another hook—with a barb—was tied on and we fished for two hours up and down the rush line but saw no more of the veteran, and as the sun slipped down behind the treetops on the hill back of us, we took our way to camp, sore and out o' sorts over the day's experience. We said nothing to the boys in camp but went back next day, and slipped quietly up to our "land mark"—two bulrushes tied in a loose knot—saw the big fellow, which we knew by his great size, within a rod or two of the place where Ben had first seen him the previous day, accompanied this time by only one of his mates, but at sight of the boat he darted off into deep water and we saw no more of him that day; the prick of the barbless hook the day before was doubtless still fresh in his mind and it made him wary and suspicious. We anchored the boat just inside the rushes and cast at intervals up and down and out in the lake, for an hour but it availed nothing, and we went up the lake and back to camp in the evening, content in a measure with smaller fry.

We went back the next day, and the next, and saw him both days near the same place, but he was shy and wary, and "hied off" into deep water at the approach of the boat, and all the lures we tried on him—frog, minnow, artificial flies and troller—only seemed to drive him into safer hiding, and after two more visits to the place, without getting a sight of him near his usual haunt, we gave up the pursuit and acknowledged ourselves fairly beaten by this veteran warrior of Central Lake, but it was a comfort to know that we had "fit" with him, even though we had got the worst of it.

I have never tied on another barbless hook for an hour's fishing, and have been lamenting ever since that I tried that one. I have kept it in the tackle box from that day as a reminder of that fight and defeat—it is not 10ft. away as I write this—and when I happen to lapse into a reminiscent mood and think of that day's experience with a barbless hook, I unlock the old box, take a look at that "cussed piece o' ill-shaped pianer wire" and straightway give the aforementioned Commandment a few violent wrenches, just by way of a "consoler" for the loss of the "bull bass of Michigan."

IX.—His Name.

Since I began angling for the black bass he has had so many names, each one having a claim on "old priority," that it has been hard work to keep track of them all, but the last one (and perhaps the worst of the lot) will probably stick until some smart French naturalist, that hasn't sense enough to tell half a fish from a whole one, runs across a decayed specimen that has lost two or three fins, when he will no doubt have a new name for him, with a little more "priority" tacked on.

Micropterus (small fin) and *Dolomieu* (a frog eatin' Frenchman) stands about as much for a "small-finned Frenchman," as it would seem to for the American black bass, but we are forced to do with it as the bass does with the frog—swallow it—because "old priority" has got his grip on it. To the devil with priority! Give us an American name for this distinctively American fish, by an American scientist, one who can tell a maimed or deformed fish from a perfect one when he sees it.

I once caught a bass above the dam at Monticello, Ind., (Col. Dennis saw the fish), that had nothing to show for his right eye but a healed up socket, nothing left of the spinous dorsal but two or three short stubs of spines, and a part of the lower lobe of the caudal sliced off, the result, no doubt, of an encounter with the ice when it broke up in the spring, or mayhap of being "sucked" into an interview with one of the turbine wheels at Norway. I wonder what name Mister "Velocipede," of Lacépède, would have bestowed on that badly used up and dilapidated specimen had the misfortune of taking it befallen him. Had his best chum been burdened with the name of William Jones, he would doubtless have dubbed it the "One-eyed, chawed-up Bill Jones-*ieu*," with "one-eyed, chawed-up" Latinized to take off the ragged edge, and at once proclaimed that he had discovered a new species with priority sticking out all over it, and it would have been about as suggestive of a black bass as the present name he sails under, if not quite so euphonious.

But by whatever name he may be called, he is the gamest and most valiant warrior of all the tribes of our Northern waters, and I don't know a more fitting way of reeling up these rambling recollections than by drinking a bumper of his native element to the "American small-mouthed bass," without any French flummery tacked on to him as a misnomer; may he long be with us; may he prosper and propagate to delight the hearts of the rising generation of young anglers by his noble qualities as a game fish when the now grizzled veterans of the gentle craft shall have passed away.

KINGFISHER.

CINCINNATI, O., May 25.

LAKE GEORGE NOTES.—Washington, July 15.—A distinguished party of fishermen has just returned to Washington from Lake George, N. Y. They were a little too early for the black bass and pickerel and too late for the best of the lake trout fishing. The party consisted of Mr. A. J. Halford, brother of the President's private secretary and manager of the Congressional Department of the Associated Press; Mr. E. Morrison, Mr. R. H. Darby, publisher of the *Republic;* Mr. F. S. Presbrey, manager of *Public Opinion*, and Wm. R. Wilder, Esq., of New New York. They were accompanied by Frank Harris, "the best fisherman on Lake George, who recently had 58 bites and landed 36 lake trout, weighing in all 73lbs." Mr. Presbrey states that the lake trout has increased in numbers most wonderfully of late, owing to artificial planting. The size of the fish would indicate their recent introduction, and the increase has been so rapid and remarkable as to show clearly the wonderful success of modern fishcultural methods. The lake trout is not the only trout to be found in the vicinity of Lake George. A party of two caught 110 brook trout (*S. fontinalis*) in Shelving Rock Creek in one day's fishing within three miles of the Kattskill House. One of the crowning glories of Lake George is its pickerel. Thanks to the help of Mr. Presbrey, from whom we have the head of an enormous specimen which he killed on a 12oz. rod last year, we are able to state that the pickerel of Lake George is the pike of other waters (*Esox lucius*). We were misled into the belief that this species is the wall-eyed pike, and are glad of the opportunity to correct the mistake. Mr. Presbrey's fish weighed 16lbs. 2oz., and was the biggest one taken last year. Major H. A. Hall, of Washington, was one of a party that took over 30 pike (or pickerel) last year that averaged over 10lbs. each. The best method of catching pickerel is by still-fishing in water from 35 to 40ft. deep, with live bait, for which purpose the white chub is a universal favorite. The black bass season does not open until Aug. 1. The best part of the lake for this fish is the south end, and here the sport is fast and furious.

NO EXTRA CHARGE for fast time. No transfers. No midnight changes. No missed connections. No appliances but modern ones. No luxuries but the best. No mistake possible if you take the Chicago & Atlantic to Chautauqua, New York, New England and all points East. No trouble to ask your agent for the C. & A. differential rates, which save money to travelers.—*Adv.*

PECULIARITIES OF BASS FISHING.

THE writer is not an angler in the proper sense of the term, and is, therefore, elevated to the necessary plane of disinterestedness and impartiality to present without partisan bias, certain facts observed, relating to the idiosyncrasies of the black bass or of the bass fisherman with regard to bait, leaving the reader to decide as to where the idiosynacrasies belong.

The case may be stated as follows, viz: A, B, C and D, go bass fishing on the same day, but independently. A takes as bait crayfish and minnows; B takes crayfish and helgramites; C takes helgramites, frogs and small catfish; and D takes all of them. The net results of a day's fishing of all of them may be represented by a cipher, or at most by a few small bass weighing a few ounces each. The verdict is that the bass are "played out," or that the bait was not the proper one. It is tried again and again, with the same result. But the catching of a fine bass with a certain bait establishes a "sure lure" until repeated failures with it afterward proclaim that it must have been an accidental success only. And so it often comes to be believed that the bass is capricious and changeful as to his food, requiring crayfish to-day, perhaps, helgramite to-morrow, and frog or minnow next day, a creature of dietetic idiosyncrasies. Is it really true of him?

Perhaps there is nothing more disappointing than black bass fishing in Eastern waters generally. But then the healthfulness and moral discipline of it.

Meanwhile news items continually record fine catches of bass, and these are looked upon by the unsuccessful angler as lures thrown out by the fishing tackle dealers and others interested. Are they?

The writer has been in a position to notice the peculiarities and success of the anglers of a great city and he has observed that among them all there are very few who always bring home a fine bass or two. Of course there are always insinuations that they were caught in the live box of some local pot-hunter. But the writer, noticing the methods of the fishermen, can provide a fair and reasonable hypothesis for such success.

To begin with, the black bass is the most wary of fishes. There is none more cautious and suspicious, and when it is caught it is laboring under a delusion, or is bordering on starvation. Its time of feeding is generally early morning, or late in the afternoon, or evening, and so the general run of bass fishermen arrive after he is gorged to repletion, and leave before he is ready to take his evening meal. Stand by the margin of a river or pond inhabited by bass as the sun sinks behind the horizon. Listen to the splash of the schools of minnows as they rush for the shallows, or among the reeds and splatterdocks, to escape the voracious fellows. And now it is you see the country boy—for he knows it well—with birch and rod and twine line and minnow bait, or perhaps a bob of worms, sneak cautiously behind the reeds and splatters, although it may be twilight, and gently cast his bait out into the clear water beyond the plant line. Now there is no glint of sunshine to show the line, and greedily darting after food, the erstwhile wary fellow, seeing nothing to arouse his suspicion, the bait is taken, and with a rush which bends the supple beech rod like a bow, but which fails its purpose, he meets his doom.

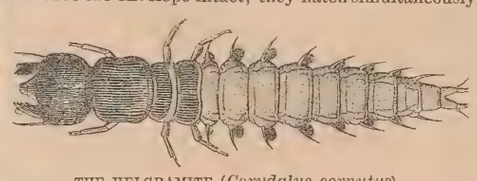
About the break of day, too, while the city man is settling himself for another nap, the wily countryman is beguiling the wary bass from the shadows of the reeds or rocks, and whether with worms, frogs, crawfish or minnow, he is generally rewarded. So much for humoring this apparent idiosyncrasy of the bass—offering him food when he wants it.

The average angler for black bass in Eastern rivers might as well, apparently, drop his hook in the gutter in his back alley but for the glory of the outing, the change of scene, the distribution of wealth, etc. He arrives at his fishing point at 8 o'clock, perhaps, if he is an early bird. The bass have gorged themselves and are lying placidly in the deeper pools among the rocks or plants. Suppose there is a fine clump of rocks in mid stream with a deep pool below, washed out by the swirl of the current around the rocks, and our fisherman makes for it. His boat bumps against the rock, and the chain rattles as he puts the anchor out or makes the boat fast. He stands boldly up on the rock, fixes his minnow pail, lunch-basket, liquid refreshment, and other accessories, and prepares his tackle with perfect disregard of the possible presence of bass, and throwing his line out boldly he proceeds to fish. And he fishes, and fishes, and fishes. And the bass may be imagined down there in the limpid depths, standing on their tails occasionally, with their thumbs to their noses—so to speak—and gracefully wiggling their respects.

But the true angler—the real old "Izaak Walton" of a fisherman—how does he go about it?

Supposing that the morning or evening fishing is impossible to him, his approach to the rock would be with muffled oars. Not a jar, not a clink, not a shadow would disturb the denizens of the depths beneath. With all the arts of a "Pathfinder" in woodcraft, every sound would be subdued, every movement studied. When the long and carefully stained gut leader is dropped into the pool it is in such a way that no shadow of the rod falls on its surface, and so lightly does it drop that it might be a fly alighting on the water. And then should it happen that a large or greedy bass, not yet satiated, espies the tempting lure, hearing or seeing nothing to arouse its suspicions, it becomes an easy prey.

And this is angling. But then how many would be content to sit, like the typical stork, on one leg, patiently waiting for the expectant nibble. One may shout and sing and still catch the "sunnys" and "catties," and the fresh air, the scent of lilies and the woods, the twitter of birds, the clatter of the kingfisher, the buzz of insects, and the many sounds and odors that make life sweet in the open air.



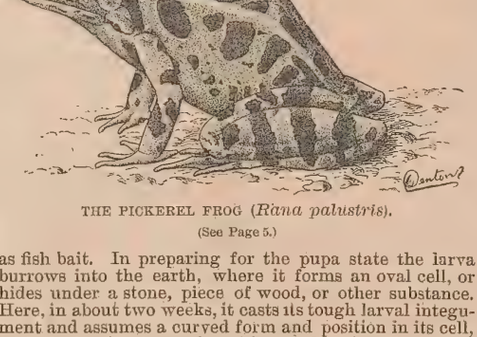
And one may hang idly over the rocks, or the side of a boat, and peering down into the pellucid depths may witness many episodes of life beneath the waters, and may think or dream, and let one's soul loaf, as Walt Whitman puts it.

It should be said that in the pond or lake the conditions are somewhat different from those of the river, in that there are no currents, nor rocks, nor deeper pools where the bass may hide, and so they wander more as their food becomes scarce or shy, or other disturbing influences exist.

The writer will not insist that his interpretation of the observations recorded above is the true one, or will satisfactorily account for the apparent capriciousness of the bass. There are many who will refuse to recognize their lack of patience and skill in angling, and who will always insist that the bass is a creature of prejudices and idiosyncrasies; but, to the writer, the pithy utterance of Williard Nye, regarding the striped bass, in FOREST AND STREAM of July 10, about covers the ground: "You see, a bass after traveling around some, or in other words one that will weigh 20lbs., has got the deceptive ways of the world down to a very fine point, and when you start out to catch him, things have got to be about right, or he shows a lack of interest in hook coverings which is truly discouraging." PHOCA.

THE HELGRAMITE.

THE helgramite fly (*Corydalus cornutus*) is the largest of our nerve-winged insects; the angler is more familiar with its larval condition. The eggs are deposited in early summer on leaves of various trees and vines overhanging running streams. They are covered with a white, albuminous secretion in a mass nearly an inch in length, and containing from 2,000 to 3,000 eggs. The egg is about one-nineteenth of an inch long and one-third as wide. The young crawl from under the mass and leave the envelope intact; they hatch simultaneously



THE HELGRAMITE (*Corydalus cornutus*).

in the night. The young larvæ crawl readily upon dry surfaces and live for a day or more out of the water. The species is supposed to live three years in the larval condition.

Most aquatic larvæ transform to the pupa state within the water; but this larva quits the water when full fed, and crawls about for days seeking a place wherein to transform. It has two rows of nine breathing holes placed along the sides of the body, which enable it to breathe out of water, and two sets of gills for breathing in water. It feeds on other aquatic insects, such as the larvæ of May flies and shad flies. It abounds in rapid flowing streams with rocky bottom, upon which it moves slowly about.

After leaving the water, about the beginning of June, it travels in the night, sometimes to distances of 100ft. from its former habitat. At this season, also, it is used

THE PICKEREL FROG (*Rana palustris*).

(See Page 5.)

as fish bait. In preparing for the pupa state the larva burrows into the earth, where it forms an oval cell, or hides under a stone, piece of wood, or other substance. Here, in about two weeks, it casts its tough larval integument and assumes a curved form and position in its cell, with the head, wing-pads and legs deflexed on the breast. The color is yellow with traces of brown mottling of the larva. The breathing holes are more conspicuous, and the upper jaws stronger and olive green. The pupa state lasts for days and the perfect insect issues during the month of July. It is nocturnal in habit and hides for the most part in obscure places during the day. At this time it is sluggish and if approached will drop sooner than fly, or raise its head and abdomen, and open its jaws threateningly. The foregoing account is derived from the writings of Prof. Riley, particularly his Reports on Missouri Entomology.

Among the many names bestowed upon this favorite bait of the black bass are the following: Alligator, angle dog, bloomer, bogart, clipper, cobbler, crawler, devil catcher, dobson, dragon, go devil, goggle goy, hell driver, hojack, klugmite, stone crab, stone devil and water grampus. The name bogart, Mr. Henry C. Ford tells us, is in use on the headwaters of the Delaware. It is old Dutch for ghost and came with Dutch settlers from New York.

BASS OF THE TIPPECANOE.

IT may be remembered that a few weeks ago I spoke of the bass fishing trip on the Tippecanoe River, Indiana, which had been planned by Mr. Donald and Mr. Levings, of the C. & A., and Mr. Burton, who invited me to go along, when I couldn't go. Behold how all things come around to people who have luck! High water and other causes delayed the trip these gentlemen had planned, and one day last week the writer got a peremptory summons to be on hand that evening for the eastbound Erie express, with rods, creel and the appurtenances thereunto belonging; for that the official car of the Chicago & Atlantic was going fishing. Under the circumstances, I felt that my health required my absence from the city, and I was accordingly on hand that evening.

Now, these railroad men never get to a train until just half a minute before it starts, and on my arrival I found nobody there. The Erie express never carrries any passengers, but is a sealed through train, and therefore does not back kown to the gates at the station, but starts out from the far end of the depot. It only carries through baggage, like diamonds and mail, and officials who are going fishing. I knew all this, but I did not know where that particular train was in the vast and noisy arcade. I waited till I only had about three minutes left and then, thinking the party had perhaps gone aboard the car I hastened down the tracks, and by mere accident stumbled on the car and went aboard, just a moment ahead of time. Meantime the rest of the party were frantically running through the waiting rooms and trying to find that FOREST AND STREAM man. At the last instant they came on board, perspiring and swearing, and disturbed a pleasant conversation I was having with Scott, the colored cook. I was sorry that they came, for the conductor and I had it all fixed up, that if the general passenger agent and the chief engineer did not show up in a couple of hours or so, we would have to go without them; and I wish I may die if I wouldn't have side-tracked the car at the fishing place, and gone fishing by myself in the C. & A. official car, drawn by the Erie express! I shall always regret that as one of the few opportunities of my life that I ever let get away from me. That would have been a fishing trip for you!

"Well, you're a pretty fellow!" said Charlie Burton, as he took a swipe at himself with his scarlet handkerchief.

"That's what I think of you," said I. "You come fooling around here at the last minute and spoil all my fun. Why couldn't you let me go on down with the car?" Then we explained a little and took something cool, and by that time we were flying. The car in question was not the old Fredonia, which at present is at the shops being overhauled, but another special car, which was just lettered plain "112." It was arranged with equal comfort and luxury. "This is the only way on earth to go a fishimg!" sighed Charlie Willard, as he sank into an easy chair and asked for another lemonade; and all present save the hosts murmured "Yea, verily."

The party as now represented comprised Mr. Donald, Mr. Burton, Mr. Willard, superintendent of the Standard Cartridge Co., Mr. C. E. Chapin, musical and dramatic critic of the Chicago *Herald*, and the writer. Mr. Chas. Levings, chief engineer of the C. & A., came aboard at Englewood suburb, and to him as pilot was turned over the chief engineering of the trip, he being familiar with the country in question.

The heat at Chicago had for four days been terrible, but as we began to roll at full speed through the open country a delightful breeze swept through the car and brought forth expressions of a comfort such as had not been felt for days. At midnight we were at anchor at Leiter's Station. It was then raining and the air was pleasant.

In the morning Scott had a breakfast which alone could atone for an hour lost from the morning fishing. The day promised warmth, and no one got in a hurry, but donned his fishing clothes in a leisurely way. And such clothes! Mr. Levings had advised the party that the best way was just to wear old clothing and wade right in. He set the example by appearing in a pair of corduroy trousers—date of the early Renaissance. Mr. Donald wore his celebrated smile and a pair of trousers that were a dead ringer to Mr. Levings's, barring certain irregular apertures torn by the tooth of many years. Charlie Willard rejoiced in a pair of leather shoes and a South Clark street fall suit. Charlie Burton wore overshoes, tied on with white Manilla rope, and also one of those things they call an umbrella hat. On the whole, Charlie Burton attracted more attention than anybody. The little native boys looked at him with awe, and some of them whispered "He's the human parashoot, that feller. He's going to make a 'scursion on the Fourth over to North Judson." Mr. Chapin, whom years of conscientious and successful work at his trying profession had left with the newspaper man's heritage of broken health, and who was still in his physician's hands while in Chicago, now forgot his doctor and appeared on the scene, ready for an all-day submersion, in a plain two-piece Coney Island costume, whose simplicity was its chief recommendation.

In tackle there was also a pleasing variety and much discussion. "Gimme one of them brown cackle flies," said Charlie Willard. "It looks something a mouse, and I've heard that's good for bass."

"Yes," said Charlie Burton, "you just take that, and sort of give a squeal every time you cast it, and you'll fool the bass, sure."

It was finally decided by the majority to begin the day with minnow bait, and to fall back on the fly if the bass were rising at all. For myself, I started out with the fly-rod at once, with the mental reservation that I might possibly fall back on the car for my bait rod if the bass would not take the fly. Mr. Levings sent me higher up the stream, and the rest of the party went below.

The Tippecanoe River we found to be as near an ideal angling stream as any in which an angler ever set foot. Perhaps 200ft. broad, rocky, swift, rippling, murmuring, green-banked and clear as crystal, it was truly a lovely water if ever there was one. Although so wide it was rarely deeper than one could wade, and could be well fished with ordinary hip boots as waders. The bass of this stream were reported to run seldom over a pound, but to be free and gamy fighters. We hoped that they would take the fly, though it was now getting well into the summer, and the weather had of late been oppressively warm.

With all hope that I might at length have what I had long sought, some good fly-fishing at bass, and with a prayer that so perfect a stream might lack no detail to give it any but a pleasant memory, I strode in over the gravelly bottom and looked the water over. Out of the hard and sandy bottom I found a heavy growth of grass growing up, nearly the width of the stream, except where the swifter channels cut through. The whole stream was a vast natural breeding and protection ground, and it was plain there must be bass there. And soon I saw them, running out for the middle of the stream.

Following the canons, I tied on, for this bright water, rather a small and dark cast—Montreal, Gov.-Alvord and March-brown. Hard and faithfully I fished till after ten o'clock, when I came up with the bait party, who had caught their minnows and were at work. Not one of the party had a fish. Again we separated, they going on down and I lingering along a deep and grassy stretch of this beautiful stream. I had tried all the rocky riffles without a rise, though I had seen numbers of bass around old logs or roots where I could not well get at them. At the edge of this grassy stretch I cast, and got a run of what I thought was a rock bass.

"Oho! I'll fix you, Mr. Fish," said I, remembering a discovered fondness for yellow among the small Percidæ. And so I tied on a big and gaudy Ferguson for tail fly, with a small professor next, and then a grizzly-king for luck. I cast twice more and got a very lively and very little rock bass on the big Ferguson, but I noticed several

big river shiners strike for my new cast, and amused myself by taking three or four of these, which made a good deal of fun, as they were very large. Then, as for some reason I let the fly stop as I was again bringing it in, I saw a genuine unmistakable black bass just in the act of taking it. When the fly stopped, he stopped too, and I saw him no more at present.

All this gave me an idea. I stuck to the bright-colored cast, went ashore, and after a little while waded carefully in and made a long clear cast across the grass bed, toward where old Mr. Bass had showed himself a while before. Down dropped Mr. Ferguson, and pop! Mr. Bass had him. And then and there, brethren, was bliss, joy and sweet gratitude. Never were conditions more perfect for all these.

The rod I was using was the lightest and the most beautiful rod I ever owned or ever saw. In length it was only 8ft., and its total weight was just 3½oz. At the tip it was fine as a needle, and the zylonite hand-grasp was not so thick as your thumb. This rod is one of the Spaldings' Kosmics, and I believe they call it their Catskill model. It was designed for work with the smallest of trout. I thought so much of this rod that I always called it my "baby." My friends laughed at me and told me that it was carrying things to an extreme, and it was predicted at the car that morning that I would smash my rod if I ever struck a bass on it. I knew already that the rod had a backbone simply wonderful for such mere threads of joined bamboo, and I had learned that it would carry three bass flies—undue load for it—and handle its line as well as most rods three feet longer; but the question of what it would do with a bass was one which I confess I awaited with only an assumed boldness. But to hang a good bass with such a rod, with the lightest of silk for a line, a 9ft. leader of the finest single gut, with a feathery burr which was beautiful in itself, all on a beautiful stream and in the most beautiful spot imaginable—if that be not the very poetry of angling and the essence of angling happiness, I know not where to seek it.

The bass struck at 40ft. I should think, but after his first rush and high vault out of the water he never got more than 50ft. from the reel. The water was clear and open, and I could see the fish all the time. It was a small-mouthed bass, weighing about three-quarters of a pound, and as game a fellow as ever swam. I always thought these fish gamer than a trout, and far more shy. This fish went out of the water half a dozen times, and every time he went I could not help letting go a yell which brought an answering whoop from the boys around the bend. After the first lunge or two I lost all fear for the rod, and gazed at it with pure admiration and affection. It had a supreme confidence in itself, and in short it just went to work and killed that bass as if it were a bass rod by profession, and not a dainty thing designed for little fishes. Duly I led the bass into the net, and sitting down upon the bank admired him for a time. I was ready at that moment to adjure bait-fishing forever, and to pin my sole allegiance to the fly. And not only this once, but six times during that same day, did I prove the efficacy of my gear against the Tippecanoe bass, although none of the six fish weighed over a pound. I took a dozen or two of the large river shiners, which struck the fly gamely, and also two more rock bass. Of the latter fish this stream does not seem to have a great abundance, and we found no croppies at all. There are more black bass in it than anything else, and of these nearly all are the small-mouthed. They are often taken weighing up to 3lbs. We heard of bass taken here which weighed 7, 8 and even 10lbs., but allowing duly for local imagination, it is probable that there were 3 or 4lbs. big-mouthed bass and taken by bait in the deep holes. The native method of fishing is by throw lines, cast into the deepest water, the bait being minnows, or that country stand-by, plain worms.

When the party rounded up at noon for luncheon at the car, everybody was more or less bedraggled, but everybody was hungry. It appeared that the fly was to be more successful than the minnow as bait, and after lunch the fly was used exclusively, Charlie Burton rather carrying off the honors of the day. Messrs. Donald and Willard ignominiously staid home at the car and went swimming in the evening instead of fishing. Mr. Chapin laboriously and faithfully displayed his Coney Island costume at every likely bend of the river, and Mr. Levings fished hard, like the real angler he is, but nobody did anything startling till along toward evening, when we had a little fun with the bass in a deep pool below a long riffle. That was a little after four o'clock. At half past four the fish quit rising, and at just the time the fishing should have been best, we saw mile after mile of water lying as smooth as a mirror, undimpled by any moving fin. That was a rather singular day of fishing. The bass would not take the minnow, but preferred the fly; they took the fly in the hottest part of a very hot day, and they would have nothing but the brightest flies, in that very bright, shallow, and clear water. This was a plain reversal of all known rules. Ferguson, Donaldson and Seth-Green were the flies that killed the fish, the former doing most of the work. Yellow, or yellow and green, seemed to be the right thing for that stream at the time we were there. The river fairly swarmed with minnows. The bass seemed numerous. Each one of the party thought he must have seen forty or fifty bass that day. The natives say that until the present year there was any amount of seining and spearing done, as well as fyke-netting, the nets being used in the deep pools. Dynamiting has also been carried on to a fearful extreme, although the recent closer watching of the stream has stopped that largely. A certain doctor at Leiter's is accused by residents of thas burg of being a regular netter and spearer. The same informant says that the C. & A. station agent at North Judson is a consistent practicer of the same illicit methods on that stream. I wonder if this will be a bit of news to the C. & A. officials who love fishing, and I wonder if they might, could or would caution that North Judson agent, that he might just as well confine himself to plain fishing, or do his spearing in some capacity other than as a C. & A. agent? If these be not facts, somebody is monkeying sadly with his neighbor's reputation. The residents of that region unite in saying that the fishing in the Tippecanoe is nothing to what it used to be. They accuse the "city folks." The latter are inclined to lay some of the burden upon the country folks.

But in spite of all this, there are bass enough in this lovely stream to offer good fishing to any reasonable man. Our party struck the stream under weather conditions the most unfavorable, but yet we had good sport. In the fall, when the bass are on the riffles again, it is likely that some or all of the party will try the stream another time. Good river fishing is more pleasant than any lake fishing. Barring the Fox River, which is not so beautiful a stream, there is no fly-fishing stream so near Chicago which will compare with the Tippecanoe, so far as the knowledge of any of our party yet extends. There is not much angling done to the south of the city by Chicago anglers. That country seems to be appreciated or known by only a few. Let us put Tippecanoe on record as an easily accessible water where a general angler may have genuine sport amid surroundings simply delightful. Later on this paper will show that the same region also has lake fishing of a sort that a good many are looking for, and which is not surpassed by anything lying within the same distance to the north. The full fishing resources of the regions about Chicago have never yet been exploited by any paper.

But sufficient to our day were the pleasures thereof, and the party that met around the board on "112" that night at dinner gave up all thought of the past or future, and for the time turned all attention to the things of the living present. Scott fairly outdid himself that night and spread a table which elicited groans of satisfaction.

"There's only one way to go fishing," said Charlie Burton, "and that is this way."

"This is Mr. Levings's trip," said Mr. Donald, "and although it beats Charlie Burton's trout and mosquito trip out of sight, it still leaves a lingering void which only a little more fish can fill. Charlie Willard, it's your turn to be head guide and chief promoter the next time, and if you don't take us to where we can all catch fish we're going to throw you in the creek."

"Well, you needn't kick on my trip," said Mr. Levings. "I brought you to where there's plenty of fish, and it isn't my fault if you can't catch them." A point of order was made on this, and it was voted that the next locality must be not only one where there was plenty of fish, but where plenty of fish could be actually taken, it being argued that a fish was not legal tender until taken in hand and ready for proffer upon the spot.

Meantime the faint notes of a distant country brass band practicing for the Fourth of July performance were wafted through the window, predominant the sonorous diapase of the "oom-pah horn," as Mr. Levings dubbed the brass bass piece. "Oom-pah, oom-pah, oom poom-pah ah-hah!" said the big horn all the way through "Columbia, the Gem of the Ocean" and "America," "The Suwanee River" and other Fourth of July literature until by and by it struck "Home, Sweet Home," as all country bands must do, sooner or later. And by and by a fast train came along and snatched us up, and when we awoke it was in the big and busy city of Chicago.

E. HOUGH.

Natural History.

NESTING OF SUNFISHES.

Occasional Observations on the Fishes in the Aquaria of the U. S. Fish Commission.

SOME months ago the breeding habits of the common sunfish "pumpkin-seed," "tobacco-box," etc. (*Lepomis gibbosus*) were discussed in FOREST AND STREAM, and as the evidence was conflicting on some points, Prof. Theodore N. Gill was led to say to the writer that "It is a shame that we know so little of the habits of our commonest fishes." The writer was forced to confess that although familiar with its breeding habits in a general way, from boyhood, his inferences were from analogy principally, and while giving considerable time to observation of the habits of rarer species, he had, from the very commonness of the "pumpkin-seed," failed to observe it closely.

Recently while making observations along the shores of the Potomac below Washington, the writer found great numbers of the nests ("pots" in New Jersey) of this species. They are simply depressions in the mud, sand or gravel, hollowed out by means of rapid motion of the fins, which fans out all the lighter sedimentary deposit, mud or sand, as has heretofore frequently been stated. These nests were from a few inches to several feet apart. In each of them, hovering over or about, was a male fish, and no females were observed immediately about the nests. In the breeding season the male of this species is easily identified by his generally higher coloration, conspicuous red ear-marks, and in the water, from a luminous-like border to the fins.

The marginal coloration of the fins of males during the breeding season is very common among the *Centrarchidæ*, probably all the species of *Enneacanthus* and *Lepomis* being so marked. The large-mouthed black bass has, also, a pale yellow margin, which would most likely have a luminous appearance from above, and the red-eye or rock-bass has a purplish margin to the fins when in breeding coloration. In this way the sex can easily be identified by observing them from above in clear water.

In some of the nests of the pumpkin-seed, the eggs were found attached to small pebbles and tufts of aquatic plants. In the greater number of them, however, there were no eggs, but it is probable from the presence of the male fish that the eggs were hatched and that the young were about the vicinity of the nest and being guarded. The eggs are very small, probably averaging a thirty-second of an inch in diameter. As is the case generally with fishes which protect their eggs or young, the eggs are not very numerous. When hatched they are probably less than a quarter of an inch long and the young are for some time undoubtedly very tiny.

The writer was also fortunate enough to see a pair spawning. The movement of the fish was in a small circle of probably the area of a silver dollar on the top of a stone. They undoubtedly pair as with the sticklebacks, paradise-fish, etc., and unlike the *Cyprinidæ*. It is probable that the character of the nest varies with different species, as is the case with the sticklebacks. It is possible also that the nests of the same species will vary in different localities according to the nature of the bottom, and the character of the enemies to contend with, requiring in some cases more elaborate means of protection, so that the varying descriptions of the nests are possibly all accurate for the localities in which they are observed.

A further confirmation of the fact that it is the male which builds the nest is that in one of the aquaria of the U. S. Fish Commission, a nest was recently built by a male of one species of which there was no female, a number of others, among which was at least one female, being the common pumpkin-seed. On their transfer to another aquarium he immediately hollowed out another "pot." He appeared to claim possession of the female and was undoubted "boss" of the ranch. The female at times shared possession of the nest with him, but was not yet ready to spawn. Unfortunately one morning he was missed and a search discovered him outside dead. Whether the other males had finally asserted the rights of race and forced him to jump cannot be known. It was at all events an unfortunate circumstance, as the progeny would have made interesting hybrids. The fact that the female of one species of fish could accept the attentions of another when there were a number of males of the same species about, points to the possibility of hybridization and consequent variations of species by the accidental introduction of a single fish to a locality.

WM. P. SEAL.

HERMIT THRUSH (*T. pallasii*) IN MARYLAND IN SUMMER.—On July 9, while traversing the woods in Howard county, Md., about fifteen miles southwest of Baltimore, my attention was attracted by a thrush, which at once I saw was not the wood thrush (*Turdus mustelinus*). I shot the bird and was astonished to find it a hermit thrush (*T. pallasii* Cab.). The decided rufescent tail and tail coverts contrasted with the olive brown color of the head and back were sufficient to identify it. Knowing that there is no record of the occurrence of this bird in summer south of Massachusetts on the Atlantic coast, I give some account of its characteristics. Comparing it with the descriptions in Ridgway's "Manual," Coues and Baird, and with a mounted specimen in my collection, shot in fall, I could find no difference except in the bill, which though not as bulky as that of the wood thrush, is longer and broader than in the mounted specimen. The measurements from the nostrils to the tip of the bill were as follows: Mounted specimen of *T. pallasii*, .36in.; the above specimen of the same species, .40in.; *T. mustelinus*, .48in. That this bird was not a young specimen of *T. mustelinus* is shown by the fact that a young bird of that species which I caught with my hands, and which had the tail only half developed, showed the cinnamon color of the head, the spotted sides beneath and the olive brown color of the tail, while in my specimen of *T. pallasii* the colors of the various parts differ in no respect from the mounted specimen in my collection. On dissection this bird proved to be a female. The œsophagus contained the whole of a grasshopper and the larva of œdipoda apparently. Before concluding I desire to speak of the time of arrival and departure of this species in the immediate vicinity of Baltimore. About the first or second week in October it makes it appearance, and is very common through that month, its number diminishing gradually as winter approaches. The last specimen I obtained in fall was Nov. 23. A few remain here throughout the winter, as I have shown in a paper printed in FOREST AND STREAM Vol. XXVIII. No. 6. The earliest date in spring at which I procured a specimen was March 5, but toward the middle or close of the same month it becomes more plentiful. About the close of the following month it disappears entirely.—ARTHUR RESLER (Baltimore, Md., July 17.)

Game Bag and Gun.

LIFE WITH THE OLD HUDSON'S BAY CO.

[*Concluded from Page 513.*]

WE used to live a good deal on pemmican. I have eaten pemmican ten years old, made of meat that never knew any salt. Pemmican was always made of buffalo meat. The great buffalo hunt was then only about forty miles west of Winnipeg, or not further than the Turtle Mountains. The half-breeds went out for this hunt in their old Red River carts, whose wheels were tired with rawhide, and which were tied together with rawhide instead of being fastened with nails. Each cart was drawn by a single ox, and the running ponies were led behind. The hunter used a Hudson's Bay musket. He carried a few bullets in his mouth when on the chase, and his powder he carried in a horn. He loaded "by count" as he rode, *i. e.*, he inverted the powder horn over the barrel and let it run while he counted "one, two, three," on the hour glass principle. Each hunter had his horn gauged so that he knew how long to count. Then he spit a ball out of his mouth into the barrel, kept the muzzle elevated till he got alongside his buffalo, and then threw down and fired. The skins of the cows and young bulls were made into robes, and those of the old bulls were made into pemmican bags. The meat was sorted out into two piles, the lean and the fat. The lean was cut into thin strips, dried and pounded up on the skins. The bag of hide was then sewed up with sinews and stuffed full of the pounded lean meat. The fat was then melted and the bag was run full of the hot fat and then sewed up tight. It was then pemmican, and would keep for years. A piece of pemmican as big as your fist would, when soaked and cooked, form a meal for two men. It was practically a meat extract. A choice variety of pemmican was called "officer's pemmican." It was made of buffalo hump, and the marrow obtained by breaking up the bones, a quantity of service berries being added. The service berry is a small berry much like a huckleberry. We never used our scanty flour in the summer, but kept it for winter, for use with our pemmican. Chopped pemmican, mixed with flour and water and then fried, made what we called "rascho." Boiled with flour to a soup, it was called "robibou," and was then eaten with a spoon.

We caught a great many sturgeon, in heavy gill-nets, and we used to keep these in a "sturgeon pen" in a creek, made by building a fence of poles stuck down in the bottom. An old squaw would take a sturgeon and cut it into a sort of spiral, so it would draw out to twice its length. It would then be smoked and wrapped in bark, perhaps 50lbs. in a package. The Indians caught a great many sturgeon below the falls in a river near there.

The Great Northern pike was always called jack in that country. We got them of 20 and 30lbs. weight. We also had the mooneye, or "golden-eye," and that was

a very good fish, much like a shad, and very bony. There were not many lake trout on the east shore of Winnipeg, but in the deeper water on the west shore we got a great many. There was a plenty of wall-eyed pike of a darkish variety, that rarely ran over 3 or 4lbs. We called these "blue pike." Of the great hump-backed whitefish, weighing 12 to 14lbs., we had any quantity. We fed fish to the dogs in winter, and in the summer they would eat dead and rotten fish that they found along the shores. Of fishing for sport, as we now look at it, we knew little or nothing. Our tackle was of the roughest, and we used nets for the most part.

The dog sledge generally used was the same as a toboggan. It was made of two pieces of white birch, with cross bars every foot or so. These bars were lashed on with sinews or wet deer hide, which, on drying, was very tight. A stout rawhide rope ran along each side of the sledge. There was always a "blanket," made of two deer skins, that was spread over the top of the load. The whole load was then lashed from side to side, to the rawhide side ropes. The tea kettle and frying-pan were hung in front, under the arch or curve of the sledge, as if it were a curved dashboard. The harness consisted of one long trace, with a collar, saddle and belly-band to each dog. There were always two men to each sledge. One went ahead on snowshoes, to beat the track, and the other followed behind, holding on to the "tail line" that each sledge had. This enabled him to guide or keep the sledge from upsetting in time of necessity. The load allowed was 100lbs. to each dog, besides the blankets, provisions, etc., of the men. One gun, with ammunition, was also carried to each sledge. To protect their feet when traveling on the crust in spring the dogs were always shod with leather bags tied above the foot.

No tent was carried, even in the coldest weather, and it was often 40° below with snow 5ft. deep. A hole was dug down in the snow with a snowshoe, which makes an excellent snow shovel. Some poles were then slanted over the hole, thrust into the snow on the sides; against the poles boughs were piled, and the loose snow was heaped over these. A warm hut was thus made, at the bottom of which the fire was made. We usually put the dogs back of us, in the hut, and that kept us warmer. We always carried an extra dog along, to replace any that might be crippled in one of the numerous fights they were always having.

The log houses of that country had floors made of puncheons, and the hinges on the doors were made of rawhide. The logs were usually of spruce, and the chinking was of moss and mud. The chimney was built inside of a frame of four poles. A hay rope, covered thick with mud, was wound round and round and the chimney built up in this way. It dried very hard and made a good chimney. We had no brick and very little iron.

The Indians of that country lived through the winter in bark tepees, with little clothing beyond a blanket, breech-clout and leggins. I have seen Indian children playing in the snow barefooted and barelegged, and they seemed happy, and with the thermometer 40° below. The squaws carried their babies in a sort of bark packing basket, with a hoop across the face to save the baby's nose in case of trouble. They packed the baby in with three or four inches of moss around its blanket, and once in, it was liable to stay in for three or four days.

The Indian women were usually short and uncomely, but among the half-breeds there were some fine-looking women. Morality was undreamed of, and marriage practically not known. Men would trade or sell wives for some such consideration as a steel trap, and that was all the divorce there was to it. The women seemed just as well pleased, and, indeed, all that sort of thing was viewed in a very happy-go-lucky light, so that it was easy to get a squaw for a paddler or wood-chopper on any long journey, pretty much regardless of her age or previous condition of servitude. These squaws used to make a peculiar sort of blanket, very warm. They cut rabbit skins into long strips, and then wove them in together, just as one would bottom a cane seat chair. This made a fur fabric two or three inches thick, but it was not very pleasant on account of the shedding of the hair.

The woodsmen of those old days were of two types—the *coureurs du bois* and the *voyageurs*. The former were landsmen and hunters and trapper; the latter were the boatmen, whose romantic life on the tremendous water journeys of that time is worthy of more celebration than it will ever get in prose or song. These *voyageurs* made the long trips in the great "North canoes," from La Chine on the St. Lawrence, clear through the Great Lakes and so up the waterway to Winnipeg. But that was hardly the beginning of the trail they might still follow. Our *voyageurs* always told us that the chain of lakes north of us, including Great and Lesser Bear Lakes, Great and Lesser Slave, and their connecting links of lakes and streams, required a journey longer by a number of days than the journey through the chain of the five Great Lakes. They said also that the McKenzie is a much larger stream than the St. Lawrence, and near its mouth is split up into a dozen large rivers. Of all that tremendous country in there, remote and inaccessible, it is probable that nine-tenths will always remain unknown. There is valuable mineral in that region, but the expense of getting it out is too great.

We never used to get any deer where we were, as it was too far north for anything but the reindeer. We found no moose east of Lake Winnipeg, but there was a plenty of them on the west side, especially about Manitoba Lake.

One of the worst pests we had to contend with in our trapping was the wolverine, or glutton. One of these animals would tear a camp to pieces, and would tear up and destroy what it could not eat. It would chew a bundle of fine furs all to pieces. We usually swung the furs from the tops of saplings, so that these animals could not get at them. It was very rare to trap a glutton.

Life at the Hudson's Bay Post had its excitements, but also its monotony. The latter grew too much for an American and after two years of it I concluded to desert. In company with an Indian I left Behren's River and ran down to the "Dog's Head," where a half-breed by name of Whitehead had started a free trade post for Norman Kittson, where I trapped and traded for a month. Thence I drove my dog sled to the Stone Fort, on the Red River, and walked 20 miles to Fort Garry, without finding it necessary to inform the Hudson's Bay Co. of these facts, until I arrived. At Fort Garry I watched my chance and skipped over the line. I had lived in the woods most of my life. I was on a railway survey in Canada before I enlisted with the Hudson's Bay Co., and in the latter relation I passed two years before returning. I then went for three months on a survey to Lake Itasca, via Crow Wing agency. Then in 1866 I lived nearly a year in the Adirondacks, as a trapper and a guide, at Meacham's Lake and Paul Smith's. In 1866 we got $6 for mink, $14 for otter and 45 cents for muskrats. We will never see such prices again. In 1867 I came to Chicago and, barring occasional duck trips to the Kankakee, have tried to lead a civilized life. Of the non-civilized portion of my existence, I now value most of all my experience with the fur trade and traders, and the acquaintance it gave me with some of the wild creatures of the woods. Thoughts of those days are reminiscences of a time fast going or gone forever, and of a life which in wild and picturesque features has hardly had an equal upon this or any other continent. GEORGE T. FARMER.

AN ILLINOIS GAME DECISION.

FOLLOWING is the full text of the decision referred to in our last issue, as given in the Chicago *Legal News*. The case was that of the American Express vs. The People, carried up on appeal from the County Court of Effingham county, for decision by the Supreme Court:

SUPREME COURT OF ILLINOIS—CRAIG, J.—This was an action to recover the penalties prescribed for the unlawful transportation of quail, in Section 2 of an act to amend Sections 1, 2 and 6 of "an act to revise and consolidate" the several acts relating to the protection of game, and for "the protection of deer, wildfowl and birds." Laws of 1889, p. 162.

The facts agreed upon by the parties on the trial of the cause were in substance as follows: That the defendant, the American Express Company, is a corporation and carrier of goods for hire. That between Oct. 1 and Oct. 23, 1889, it received for transportation from Redding, Gibbs and others at Mason, in Effingham county, divers quail which had been killed by shooting after Oct. 1, 1889, in this State; and on Oct. 23, 1889, the express company did transport such quail to Chicago and deliver them to Hernse & Lynch Bros., commission merchants. The express company, at the time of such receipt for transportation, by its agent, Sisson, at Mason, had knowledge that the quail had been sold, and were to be sold and offered for sale by said commission merchants.

Section 1 of the act "provides that it shall be unlawful for any person to hunt, kill, trap, net or ensnare or otherwise destroy * * * any ruffed grouse, quail, pheasant or partridge between the first day of December and the first day of October of each succeeding year or any year."

* * * * * * * *

Section 2 provides, "It shall be unlawful for any person to buy, sell or have in possession any of the animals, wildfowl or birds mentioned in Section 1 of this act, at any time, when the trapping, netting or ensnaring of such animals, wildfowl or birds shall be unlawful, which shall have been entrapped, netted or ensnared contrary to the provision of this act; and it shall further be unlawful for any person or persons at any time to sell or expose for sale, or to have in his or their possession for the purpose of selling, any quail, pinnated grouse or prairie chicken, ruffed grouse or pheasant, gray, red, fox or black squirrel or wild turkey that shall have been caught, snared, trapped or killed within the limits of this State; and it shall further be unlawful for any person, corporation or carrier to receive for transportation, to transport, carry or convey any of the aforesaid quail, pinnated grouse or prairie chicken, ruffed grouse or pheasant, squirrel or wild turkey, that shall have been caught, snared, trapped or killed within the limits of this State, knowing the same to have been sold, or to transport, carry or convey the same to any place where it is to be sold or offered for sale, or to any place outside of this State for any purpose."

It is plain, under the facts as agreed upon, the express company received the quail for transportation and transported the same, knowing the quail was sold or transported for the purpose of sale in violation of the terms of the statute, and if the statute is valid the company was liable for the amount of the penalty prescribed by its terms and provisions. But it is insisted by the express company that the statute is invalid, and upon this ground the judgment rendered in the County Court was erroneous. It will be observed that the first section of the act makes it unlawful to hunt or kill quail between the first day of December and the first day of October of each year, but the section is silent as to October and November. It would follow, therefore, that a person might hunt or kill quail during the months of October and November, not, however, for sale, but under the restrictions found in Section 2 of the act. The first clause of Section 2 makes it unlawful for any person to buy, sell or have in possession any of the birds named in Section 1 of the act, at any time when the trapping, etc., of such animals shall be unlawful. The second clause makes it unlawful for any person to sell or expose for sale, or have in possession for the purpose of sale, any quail that shall have been killed within the limits of the State. Under this clause, while a person might lawfully kill quail during the months of October and November for his own use, he would have no right whatever to do so for the purpose of placing such quail on the market as an article of commerce. Then follows the clause making it unlawful for any person, corporation or carrier to transport quail, where the same have been killed in this State for sale, regardless of the time such quail may have been killed.

A bare reference to the terms of sections one and two of the act is sufficient to show that the purpose the Legislature had in view in passing the act was to protect the game in the State. The hunting and killing of game was regulated for its preservation by the common law, and the control was predicated under the police power of the Government: Blackstone, book 4, page 174. Statutes in almost every State in the Union may be found, enacted for the preservation of game. The text writers, in treating of the power to legislate on this subject, place it under the police power inherent in each State. Tiedman, in his Limitations of Police Power, Sec. 122, Chap. 10, page 440, says:

"It is a very common police regulation, to be found in every State, to prohibit the hunting and killing of birds and other wild animals in certain seasons of the year, the object of the regulation being the preservation of these animals from complete extermination, by providing them a period of rest and safety, in which they may procreate and rear their young.

"The animals are those which are adapted to consumption as food, and their preservation is a matter of public interest. The constitutionality of such legislation cannot be questioned."

In Phelps v. Racy, 60 N. Y. 10, the power of the State to legislate for the preservation of game was called in question, and in deciding the case the Court said:

"The protection and preservation of game has been secured by law in all civilized countries, and may be justified on many grounds, one of which is for the purpose of food." The means best adapted to this end are for the Legislature to determine, and courts cannot review its discretion. If the regulations operate in any respect unjustly or oppressively, the proper remedy must be applied by that body. (See also Allen v. Wyckoff, 48 N. J. 93.)

In Magner v. the People, 97 Ill. p. 333, the validity of the game law of 1879, to which the act in dispute is amendatory, was before the Court, and it was then said, "The ownership being in the people of the State—the repository of the sovereign authority—and no individual having any property rights to be affected, it necessarily results that the Legislature as the representatives of the people of the State, may withhold or grant to individuals the right to hunt and kill game, or qualify and restrict it, as in the opinion of its members will best subserve the public welfare."

It is, however, argued, that when quail has been killed the dead animals become property and the taker becomes the absolute owner of such property, and an act to prevent a sale or transportation for sale within the State would be an interference with private right, amounting to a destruction of the right of property without due process of law. The fallacy of the position consists in the supposition that the person who may kill quail has an absolute property in the dead animals. In the Maynor case, *supra*, it was held, as has been seen, that no one had a property in animals and fowls denominated game. The ownership was in the people of the State. This being so it naturally follows that the Legislature had the right to permit persons to kill or take game, upon such terms and condition as its wisdom might dictate, and that the person killing the game might have such property interest in it and such only as the Legislature might confer. The Legislature has never conferred an absolute property in quail upon the person who might kill the same. The killing of quail during the months of October and November was permitted, not for sale, not to go upon the market as an article of commerce, but for the mere use of the person who killed the birds. The person killing quail under this statute has but a qualified property in the birds after they are killed; he may consume them; if a trespasser should take them from him he might maintain an appropriate action to regain the possession. But the law, which authorized him to kill the quail, has withheld the right to sell or the right to ship for the purpose of sale, and when such person undertakes to ship for sale he is undertaking to assert a right not conferred by law. The act, therefore, does not destroy a right of property, because no such right exists.

It will be observed that section two of the act does not prohibit absolutely the transportation of quail which have been killed in the State, but only transportation by persons, corporations and carriers, knowing the same to have been sold or knowing they were to be sold or offered for sale. If the Legislature of the State thought that a statute, preventing a citizen from killing quail for sale in the market and imposing a penalty on a common carrier for shipping or transporting for sale, would result in protecting the game in the State, we perceive no valid reason why a statute of that character might not be enacted. The nature and character of the legislation was a matter resting solely with the Legislature, and so long as no constitutional right of the citizen has been infringed upon, the statute must be sustained.

The judgment of the County Court will be affirmed.
Affirmed.

THE MAN IN THE HOLLOW TREE.—Another sequel to your "bear and man in the hollow tree," or variation rather, is that told by the Southern negroes, in which, instead of a knife, the man uses "a chunk of fire" to hasten the bear's ascent. It has a companion, to which I listened with great glee when a child. Two negroes find a litter of cubs in a hollow log. One crawls in while the other guards the hole. He is so intent that he does not observe mother bear's approach until she makes a dive to go in. In desperation he grabs her tail and plants his feet to hold. From within: "Sambo, what darken de hole?" Without: "Dis tail-holt break yo' see w'at darken de hole!"—AZTEC.

DAYTON, Ohio, July 22.—The best bag of birds brought in last week was by Deputy Sheriff Peter Snyder, 20 woodcock and 21 doves. While John Wood and Ernst Seitner were woodcock hunting Thursday, Mr. Wood was accidentally shot by Seitner. They were but twelve feet apart in a thicket when Seitner, who is 70 years old, and not an expert hunter, fired at a bird. Wood is a young man, and was recently appointed deputy State game warden for several counties of this vicinity. The load tore the top of his hat off, a few shot struck him in the forehead and one entered his left eye, destroying the sight. An operation was performed and the eye taken out on Saturday.—B.

WESTERN WOODCOCK.—Chicago, Ill., July 17.—Mr. George E. Marshall, of this city, is just back from a day after woodcock at Shipsiwanee Creek, as he calls it, just over the Indiana line from White Pigeon, Mich. He bagged 8 fine cock in the day, and reports the birds numerous, but the weather too warm to work in the very dense cover of that locality. Southern Michigan and northern Indiana thereabout abound in good woodcock ground. No reports have come in of any good bags on the Kankakee as yet, though doubtless many have been made.—E. HOUGH.

"NESSMUK."

CAPT. L. S. BEARDSLEE, U. S. N., "Piseco," writes from the U. S. Receiving Ship Vermont: When our mutual friend "Nessmuk" went to the happy hunting grounds, my first impulse was to send a few lines to FOREST AND STREAM to his memory, but I wanted to send with them the accompanying letter on which they were based, and I could not find it. A few days ago my copy of "Woodcraft," which I had loaned, was returned to me, and between its leaves was the missing letter. If not too late please give it space as my tribute to his memory. It was written in response to an urgent invitation to come and visit my "canoe," the old Vermont, and this was his reply:

WELLSBORO, Tioga County, Pa., Sept. 30, 1889.—Capt. L. A. Beardslee. My Dear Captain: Your letter was a long time on the road, but it came safe at last and I was glad to hear from you once more. It found me on the invalid list and unable to camp or hunt, canoe it or fish. I seldom get beyond the front yard, and the gun is of no further use to me, while I have not put the old rod together in two years. Time and "physical disability" will and does beat every mother's son of us, and I do not complain. Few men have had as much of life in the woods as I have, and memory at least cannot be taken away from me while my senses hold good.

I would like of all things to report on board the old Vermont for an old time visit, but it doesn't lay in the pins, more's the pity. Ah, me! how vividly I remember the visit, all too short, that we had at Moose River years ago. *Tempus fugit.* Let him fly; let him flicker. I have been there, and done it, and if I were young again I would do it some more.

No. I have not written much for the press in the last year or so. I cannot get over the inane listlessness and laziness induced by a long tedious siege of malaria, and it seems as though the old time energy and vim would never return. I have lost all ambition.

I have seen very little from your pen lately, for which I am very sorry. Your articles on the salmon of the Northwest coast were most excellent and instructive, the best ever written on the subject, and you always interest me, anyhow. Just now our forests are in their best colors, and you know what that means. It is my favorite time of year, the time of fruition and beauty, also of deer hunting, with grouse shooting, etc. I cannot get there any more. Ah, *culpa mea.* Shall be pleased to hear from you again, and will always answer. And if I were in better condition I would write a better epistle. But this will do to convey the sincere regards of "Nessmuk."—GEO. W. SEARS.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

ANGLING NOTES.

FOR some unknown reason the black bass seem rather shy and backward this season. It was expected from the way the trout season opened that the bass would show up in good shape, but with few exceptions most of the favorite bass waters near New York have disappointed the anglers.

The best catches reported lately were made in the Walkill, and strange to say the best score was made by an angler fishing with a rubber frog.

The upper waters of the Walkill River contain a large number of bass and they take the fly well on the right kind of a day—that is cloudy or showery weather or toward night. The proper way is to wade the stream and use flies dressed on a No. 5 or 6 sproat hook. Galesville Mills is said to be an excellent spot to commence at; this place is a short drive from Walkill. The angler can start in at Galesville Mills and wade and fish to Walkill, where he will find comfortable quarters. The largest bass (big-mouth) so far heard from weighed a trifle over 8lbs. and was caught in Greenwood Lake. W. Holberton took 41 small-mouth bass in an evening's fishing recently. All but 7 were returned to the water. These fish were caught on a 4½oz. 8 section bamboo fly-rod and the flies were the Brandreth, Lottie, Martin, and brown-palmer.

A few fine weakfish and striped bass have been taken in the Hudson River near Sing Sing, but the mainstay of the salt-water anglers has been the bluefish, which continue to run in great numbers.

In sending in reports of catches it would be well for people before they "make up" their reports to do a little figuring. We saw the following published in one of the weekly papers: "Total catch of weakfish, 19; largest, 13lbs.; smallest, 3lbs.; total weight of catch, 50lbs." Now 19 multiplied by the weight of the smallest gives a total of 57lbs.!

The fishing of the Adirondack Club is better now than in the early part of the season. A number of large lake trout have been killed in Lake Henderson. Considerable damage was done by the storms lately, particularly in Hamilton county. Some of the cottages and hotels on Raquette Lake suffered from the violent winds.

SCARLET-IBIS.

NEWPORT STRIPED BASS.—Sachuest Neck, R. I., July 15.—Bass are proving unusually plenty this season, and reports from all of the fishing points here show good catches for the week ending July 12. Graves's Point, Gooseberry Island, West Island, all report fish plenty. At Sachuest Neck 28 were taken during the week, ranging from 5 to 19lbs. At Rough Point one of 41lbs. is reported. Monday West Island reported 14 taken during the morning fishing by one rod. Graves's Point reported 7, one of 33 and one of 37lbs. At Sachuest Neck 11 were taken, one of 37lbs.; Tuesday morning 9, largest 14½lbs. Other points not heard from as yet. Will send you reports as I get them, such as I think are reliable. Flounders are so plenty one tires of catching them.—W. M. HUGHES.

TOWANDA, Pa.—Fishermen are hard at work pulling black bass out of the Susquehanna River at this place. Two persons here make it a business trolling for Susquehanna salmon. Their catch runs from 10 to 13lbs. per day. Occasionally a large one adorns their string. A 7-pounder is the largest one I have seen. J. W. Snider, a prominent sportsman of this place, just presented me with a 3-pound black bass caught below the bridge. Jim knows where they are and how to catch them.—W. F. D.

HELL GATE CAMP.—Dead Diamond River, July 20.—Our party took here yesterday, within 25 rods of the camp, two brook trout weighing 4lbs. and 5lbs. respectively. Also 9 men dined on two baked trout yesterday, each having plenty. Smaller fish are innumerable; the stream is literally alive with them. I have fished for many years and do not hesitate to say this is the finest fishing I have seen. Good fishing continues here until the middle of September.—C. E. SWINERTON.

Fishculture.

PENNSYLVANIA FISH COMMISSION.

THE annual meeting for the election of officers and the transaction of other business was held at Delaware Water Gap, Pa., July 15, 1890. The full board was present. A resolution of considerable public importance was introduced, discussed and passed; it relates to the distribution of trout fry and provides that all applicants shall have trout unless they wish them for personal profit or market purposes. The growth of brook trout work in this State is remarkable. Three years ago the output of fry was only 600,000; in 1889 it amounted to 3,500,000. Last year some adult yellow bass (*Morone interrupta*) were introduced from Lake Erie into the Perkiomen, the Schuylkill, the Delaware and Silver Lake. This year about 250 mature fish were placed in the Delaware, Schuylkill and Susquehanna. A few white bass (*Roccus chrysops*) were planted in the Susquehanna, the Schuylkill and the Delaware, and this fall the number will be increased. Crappie and calico bass (*Pomoxys sparoides* and *annularis*) will be introduced at the same time. The calico bass has already made an impression on the Susquehanna, as announced in FOREST AND STREAM, June 26. The Fish Commission has distributed during the last two weeks 3,000 black bass, generally six or seven inches long and some larger. Hon. H. C. Ford, President of the Commission, to whom we are indebted for the above information, was told by Hon. Simon Cameron that the wall eyed pike was introduced into the North Branch of the Susquehanna, or its tributary, the Chemung, from Seneca Lake, New York, just after the war of 1812 by a French priest and an English gentleman.

THE PROPOSED FISH COMMISSION TRANSFER

THE Pennsylvania Commissioners of Fisheries, at their annual meeting, held at Delaware Water Gap, July 15, 1890, adopted the following resolution concerning the proposed transfer of the U. S. Fish Commission to the Department of Agriculture:

Resolved, That the Pennsylvania Commissioners of Fisheries deprecate the proposed transfer of the United States Fish Commission to the Department of Agriculture, believing that its efficiency and economical administration is best promoted by its continuance as an independent bureau. They at the same time bear witness to the thorough coöperation of its present efficient head, Col. Marshall McDonald, with the Pennsylvania Fish Commission, and attribute much of the expansion of fishcultural work in Pennsylvania to his energetic and systematic methods.

Resolved, That a copy of this resolution be forwarded by the secretary to each Senator and member of Congress from Pennsylvania, and also to the chairman of the U. S. Senate Committee on Fisheries.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 2 to 5.—Dog Show of the Wilmington Fair Association, at Wilmington, Del. F. R. Carswell, Supt., 101 West Sixth street.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. C. H. Corbett, Secretary.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 19.—Second Annual International Dog Show of the Industrial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1653.

FIELD TRIALS.

Sept. 9.—Field Trials of the Manitoba Field Trials Club. Thos. Johnson, Winnipeg, Secretary.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 10.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

AMERICAN KENNEL CLUB AFFAIRS.

Editor Forest and Stream:

Mr. Peshall in attempting to qualify the statements made to me regarding the alleged $1,000 present from Mr. Belmont, and what led up to the supposed necessity for that gift, betrays a lack of memory I did not expect. In the first place, he told me of it at the New York show, and it was during that show and at the annual A. K. C. meeting I asked the question of Mr. Vredenburgh, who went further than I did in his answer and specified the amount with the name of Mr. Belmont. This story was repeated to me on various occasions by Mr. Peshall without any bibulous accompaniments. What was particularly said on the occasion referred to by Mr. Peshall, when Mr. Winslow was present at the Lafayette Hotel, was this: When I showed Mr. Peshall the envelope with the figures in Mr. Vredenburgh's writing, he said that he could now explain the whole business. Whereupon he proceeded to unfold his theory. Mr. Vredenburgh had, according to Mr. Peshall's story, been very anxious to close up the accounts and start for England, and Mr. Peshall said he had a letter from Mr. Vredenburgh urging him to get the matter settled up. That it was on that account the balance was struck on July 12. Two weeks ago I said it was June, but on reference to the original memoranda on the envelope, I found the date to be July 12, and the balance $651.40. Now, said Mr. Peshall, out of this balance we gave Mr. Vredenburgh $500 to go to Europe with. That left $151.40, out of which the half year's rent was paid, Mr. Lewis's contract calling upon him to pay the remaining half of the rent. This with other small payments reduced the balance in the bank to $5 at the beginning of December. To that was added the dues received from clubs at the close of the year, which helped to swell the balance to $228.28, and then came Mr. Belmont's $1,000 to raise it to the $1,228.28.

First of all the story was that the $1,000 was paid in between January 2 and January 11, but after I got Mr. Vredenburgh's figures the date was shifted and I was assured by Mr. Peshall that December 6 to 8 was the actual time of the deposit of the $1,000 at the bank. That it was by check, and that when the time came he would have not only the bank book but the actual check put in evidence.

It will thus be seen that Mr. Peshall has no reason to say that he meant that Mr. Vredenburgh got the $500 in May. His whole argument is based upon the $500 reducing the July 12 balance of $651.40 down to $151.40, and in my letter of two weeks ago I showed that the payments were made in May, two months prior to July 12.

With regard to the second contradiction which involved the "exhaustive" contract with Mr. Lewis, I am amply supported by Mr. Schellhass, Mr. Terry and Mr. Lewis himself. I will admit that their statements are somewhat contradictory and indefinite, but that only makes one point clearer, and that is that they have had no talk or understanding as to what should be said. It must be remembered that it is two years since that agreement was made with Mr. Lewis. It was something that was never brought to the surface until within a few weeks, and we can well understand that the exact terms of a contract which was so very indefinite as to the exact amount to be paid would under such circumstances be apt to be forgot, at least by Messrs. Terry and Schellhass. With regard to Mr. Lewis, there is this important difference. He got the money and his recollection is bound to be clear on that subject. His reply to Mr. Peshall's statements is flatly contradictory just as I said in my letter. Now Mr. Peshall has the denial he craves for; we await the fulfilment of his promise "with equal promptness not only convince your readers, but these two gentlemen themselves by evidence over their own signature of their error."

Skilfully evading all reference to the $1,000 accusation, Mr. Peshall proceeds to discuss the duties of the auditing committee and what he thinks they did and did not do. And here is where he puts his foot in it, right up to his neck. It was my suggestion to have an auditing committee, and that committee was to audit the accounts of 1889. That is to say, *from* the balance of $1,228.28 to the close of 1889, and yet these gentlemen are being dragooned because they did not verify accounts prior to the $1,228.28 balance. Why, they had nothing to do with that at all. Just look at the thing sensibly and see what a ridiculous position Mr. Peshall and his friend Mr. Levesey have placed themselves in. Keep that fact prominently in mind, also this one—the alleged $1,000 present was made before there was any *Kennel Gazette*.

In place of replying to the statement that there was no $1,000 deposited at any time between July, 1888, and January, 1889, Mr. Peshall calls for an itemized statement of accounts for 1888. Well, Dr. Perry in his able letter of last week gives him these figures. The $1,228.28 is made up of $285.39, being the addition received from clubs to the $5 balance of Dec. 5, and from the stud book account comes $942.89. What can be plainer than that? It is not to be expected that these figures will satisfy Mr. Peshall, who is cornered and does not want to acknowledge that he hasn't a leg to stand on. I made him a fair proposition last week to go with me to the A. K. C. office on Monday of this week, or any day he suggested, and have his mind set at rest. No notice of appointment has yet reached me and I feel pretty certain none will, for with it will disappear all this thereotical duplicity, with nothing but the apology by way of a headstone to mark the last resting-place of Peshall's specious specifications.

Mr. Peshall's friend, Mr. Livesey, asks me a question or two. He wishes me to obtain the items of "deposits appearing on the bank book between April 1 and Dec. 31, 1888, or the deposits made during the time Mr. A. D. Lewis was running the Stud Book, as they will tend, I believe, to settle the question relative to Mr. A. D. Lewis's connection with that book."

I fear Mr. Livesey has a theory too. Well, I cannot give the items and I will not go to the trouble of doing so, because they won't settle anything of the kind. I will tell Mr. Livesey this. All deposits were made by Mr. Vredenburgh between the period named, and Mr. Lewis made none during Mr. Vredenburgh's absence in Europe, but within a day or two of Mr. Vredenburgh's return, Mr. Lewis turned over cash enough for Mr. Vredenburgh to deposit $284.50, and that out of a total receipt of $670. Does that look like an exhaustive contract? And here is the account during Mr. Vredenburgh's absence:

Mr. Lewis in account with A. K. C.:

Receipts from Sept. 6 to Dec. 11	$670.00
Expenses	385.50
Balance handed treasurer	$284.50

If that will not settle the matter to Mr. Livesey's satisfaction, then nothing will that I could get for him as he suggests.

In conclusion, I will once more renew my offer to Mr. Peshall that he name a date on which he will meet me, together with the editor of FOREST AND STREAM as umpire, at the office of the A. K. C., and I will then exercise my right as a delegate and answer his questions from the books. He knows in calling upon Mr. Vredenburgh to give him itemized accounts, that he is asking for what he will not get, but he knows also that he can get this information through me, and if he does not accept my offer it is because he does not really want to get the figures he pleads for.

P. S.—The following telegram was received in my office on Sunday evening: "If you are in city to-morrow, will meet you at FOREST AND STREAM office at 12 o'clock. C. J. Peshall." Sunday is my day off at the Philadelphia *Press* office, consequently I did not get the telegram until this (Monday) afternoon. Meanwhile my letter had been received by FOREST AND STREAM. The telegram alters the complexion of affairs to a certain extent, it is a reply to my proposition, but there is no indication at all that it is an acceptance. There is nothing to take me to New York at present, but I shall be pleased to go if I can get matters arranged as I have suggested. I have neither time, nor inclination, nor do I care about being at the expense of going to New York simply to meet Mr. Peshall and talk over matters at FOREST AND STREAM office. Of course Mr. Peshall may have meant to accept the proposition, but he does not say so, and I have written asking him to make his acceptance and the appointment publicly in this week's issue, and I presume he will do so if he is willing to accept the proposition, otherwise not.

J. W.

Editor Forest and Stream:

After reading the many articles on the A.K.C.-Peshall affairs I have come to the conclusion that it is time for every man who is interested in dog affairs to speak his mind on the subject. If Mr. Peshall is right give him credit; if the A.K.C. is right, then give them credit, and whichever of them is wrong should be brought to account.

There is a very old saying and a very true one, that where there is lots of smoke there must be some fire. Now it seems to me as if there had been lots of smoke for the past year on the A.K.C. affair with Mr. Peshall. It seems to me if I was sitting on a jury and some of the witnesses were to swear what they had written in behalf of the A.K.C., it would have little weight, as every one of them seems to contradict each other. After reading each one's statements from the highest official down and summing it all up, it reads like a very hard lesson which all had failed to get correct; and in reciting it all seem to tell a different story. I have been much surprised to see what short memories some of them have; also how differently a committee of three saw the duty they had to perform, as in the report of Messrs. Terry, Schellhass and Lewis in your issue of the 17th. Every one of them gave a different answer to the same question. It reminds me of what I heard an old lawyer say once, that the best witness he ever saw was one that didn't know anything; and it seems to me that every time any of the management of the A. K. C. was asked anything of the club affairs not one of them knew anything, and for that reason no one could find out anything. For these reasons, if I understand it correctly, Mr. Peshall has written a number of very able letters and asked to see the accounts, which, if I understand it rightly, every member has the right to do. But for his pains he has been showered with wrath, from the great mogul down. As I have never happened to see any explanation from any of the Auditing Committee but Mr. Wilmerding, which I think a very weak one, I will say, in order to help his memory out a little, that on February 17, 1890, I happened in New York on business; and in course of the day went to 44 Broadway, the A. K. C. office, to see what news there was in dog matters; and to my surprise I found the Auditing Committee at work on the books of the A. K. C. After passing the time of day with those present, I sat down for an hour or so, and talked with different ones that came in; and to my great surprise the committee finished up its work on the books while I was there. As far as I could learn it found everything all O. K. and Mr. Peshall wrong in every particular.

Now, what I wish to remind the committee of is this: A number of times when they came to something they could not make out they would ask Mr. Vredenburgh what it was or meant, and he would on all occasions explain to them, which seemed to give satisfaction. After I had sat there for half an hour the auditing committee came on to an

account of $1,000 or thereabouts, it may have been more or a little less, but as I remember it was $1,000 that they could not seem to get around or understand. At this Mr. Vredenburgh said, "Now, gentlemen, I will explain that to you," which he readily did. Not being one of the committee, and not being near enough to hear every word said, I will not try to tell all his explanation; but as near as I could understand this was the money that Mr. Peshall had claimed was either borrowed or given to the club by some party or parties unknown. At any rate, to wind up his explanation he said, "This is the money which Peshall claims has been given the club. Now," he said, "gentlemen, if I see fit to borrow $1,000 for the club, it's none of Mr. Peshall's business where I get it or who I get it from, if it is from Mr. Belmont or not, as long as I give an account of it." This is, if my memory serves me right, about what Mr. Vredenburgh said, and it seemed to give the committee perfect satisfaction. In a short time after they got through their work on the books, and about that time Mr. Anthony came in and had a very pleasant talk with the committee, and asked them if they ever saw a finer kept set of books, and if I remember right, they said they never had.

I am not much of an expert on bookkeeping and at that time did not care much about the A. K. C. books: it set me to thinking, after reading over the many letters; and after what I had heard while sitting there, I come to the conclusion that it would take an expert a number of days to look over those books correctly; and if it happened to be a bank official or some bookkeeper for a large concern that had gone wrong and had skipped, the expert or committee would not have had any one to explain when they got to something they could not understand, and I am of the opinion that they would not get along so easily. I think if some of them were allowed to explain they would make their books look very nicely, much better than the experts do when they are not there.

Now, if anything I have written is of any benefit to your many readers, or any light can be thrown on the A. K. C.-Peshall controversy by printing it, please let your readers have it, as I think it about time that the dog men had something to say about it, and I think it will be a good plan to print a blank such as you did for the beagle men, so that all could vote on it, for the A. K. C. or Mr. Peshall, and I think we will see Mr. Peshall come out on top. I hope we shall hear an end to this controversy in the near future and the right man win. T. M. ALDRICH.

PROVIDENCE, R. I., July 19.

Editor Forest and Stream:

A special meeting of the Maryland Kennel Club was held on July 10 to take action on the treatment of our delegate by the American Kennel Club, at their meeting of May 22, and the following resolution was passed:

That the American Kennel Club be censured for refusing to receive our delegate at their meeting of May 22, he being furnished with proper credentials by the Maryland Kennel Club. JAMES THOMPSON, Sec'y pro. tem.

BALTIMORE, July 18.

THE KRILUTT—ELSIE LITTER.

Editor Forest and Stream:

It is said that all things come to him who can wait, which aphorism is proven this week to the Hornell-Harmony-Victor Kennels (Messrs. Fellows, Wixom and Wade) by the arrival at Covert, N. Y., of five of the much-talked-of and long-expected Russian greyhounds or Barzois, after an ocean trip of some twenty days. Six puppies, by the famous Krilutt out of Elsie, were shipped, but only five reached here, one having died aboard ship. The two remaining pups of the litter will be shipped as soon as Elsie is again bred to Krilutt. Considering the long voyage, with transfer at New York, the puppies arrived in very good condition, and now, after a few days of rest, with privilege to roam over a spacious yard where they have access to running spring water, as well as being fed on good, sweet and nutritious food, they are getting into fine form, and show their perfect breeding in their general outline, magnificent heads, grand stature, and perfectly flat, soft and smooth coats. The consignment consisted of three bitches, Princess Irma, Modjeska and Lucca, and two dogs, Valdemir and Count Orloff.

Much has been said by our self-constituted authorities on the breed as to its pugnacity, but it is all denied and refuted by this litter. They are as full of play as any English greyhound ever bred and far more affectionate, being never so pleased as when one is petting and caressing them. They all come to call instantly, and while not being fondled are gamboling all over the place one with another. The markings are very beautiful indeed, the body color being of the purest white with rich lemon markings, except in the case of Lucca and Prince Orloff, whose entire color is whitest white except brindle markings on ears, which greatly enhance their beauty. The grand proportions of the breed, its attractive color and snowy whiteness of coat, which is so long and soft yet devoid of curl, the great fondness to be petted and noticed, will bring it into immediate favor both with the fair sex on account of its aristocratic bearing, perfect outline, and with the sterner sex on account of its traditional courage in being able and willing to cope with the fox and wolf and conquer both. Their powerful jaws and needle-like teeth prove they would be antagonists which any animal however fierce might dread, while their gentleness at home or in kennel commend them to the admiration of all true lovers of a noble dog. If no mishap befalls this present Krilutt—Elsie litter it will make some of our friends hustle about a bit if they expect to win anything but c. cards at our coming spring shows.

H. W. HUNTINGTON.

COURSING NOTES.

CHICAGO, Ill., July 19.—*Editor Forest and Stream:* Mr. Luce and Dr. Royce, of the National Coursing Association, are in the city to-day. They have been trying to make arrangements for a coursing meeting here, but are unable at present to obtain grounds, as the parks are all full, with racing meets and the like. It is not unlikely that some arrangement will be made whereby the National Association will give exhibition contests under the auspices of the Fat Stock Show this fall.

Mr. Allison, manager, is still at Peoria, where a little exhibition meet was held last week.

Dr. Royce has with him Trales, the great winner of last year's American meet, and also Humming Bird, his blue bitch. Trales is looking in fair form even now, barring a couple of nails he lost at Peoria. It is announced that he will not run this fall at Great Bend, but it is to be hoped the visitors of this year will see him duly entered after all. But the gentlemen above named say that the class will be a hot one at Great Bend this fall. There are a lot of fine saplings in the event now, out of the imported strains, and this year will be the best of any yet. During the pleasant visit with Messrs. Royce and Luce they expressed much interest in the big California meet next fall. They may both be there. E. HOUGH.

WILMINGTON DOG SHOW.—*Editor Forest and Stream.*—Will you kindly announce that the Wilmington Fair Association will give a bench show of dogs in connection with their fair September 2, 3, 4, and 5. Our judges are R. F. Mayhew, Esq., and Dr. H. Clay Glover, of New York city. Entry fee $2. Premium list and other information can be obtained from F. R. CARSWELL, Supt., 101 West 6th street, Wilmington, Del.

RAILWAY TRANSPORTATION OF DOGS.

AS the season is approaching when sportsmen from all parts of the country will be migrating with their dogs to the different game sections of the West, we have secured for their benefit the rules and rates for transportation of dogs over some of the important lines. For prompt and full information on the subject our acknowledgments are due to the officers of the several roads who have contributed the same.

Chicago & Alton.—This company will carry, free of extra charge in baggage cars, one or two dogs, the property of hunters traveling on the same train and holding regular tickets. In other words, no extra charge is made for dogs which either hunters or other passengers may desire to transport upon the same train as they take passage upon themselves over this line. It is usual for the hunters to give the baggagemen a small fee to look after their dogs, but this is not compulsory on this line and is at the option and good will of the passenger. Baggagemen are instructed that they must make no charges for the care of dogs, but are at liberty to accept anything which is gratuitously offered them by passengers. There is no special rule requiring hunters to put their dogs in crates. Dogs are, however, transported on this line subject to the passenger taking the chances of any accident en route. It is always safest to put the dog in a small crate, as it will prevent him jumping through the window or door, and hanging himself by his chain, as has happened in one or two cases on other lines.—J. CHARLTON, G. P. and T. A.

Chicago & Atlantic.—It is a rule on this railway that dogs, guns and the usual paraphernalia appertaining to a sportsman shall be carried free of charge, when accompanied by owner, in our baggage cars. Our train baggagemen are under very careful instructions in this connection, and it is our wish that sportsmen shall have this privilege accorded them cordially and that the best possible care be taken of their property. For obvious reasons it is carried at owner's risk, and in view of this reservation no conditions are stipulated as to muzzle, chain or crate.—F. C. DONALD, G. P. A.

Chicago, Burlington & Quincy.—Our employees are instructed to permit the owners of dogs to place same in the baggage car on our trains running locally between Chicago and Aurora, and to collect no charge, or to accept no compensation for the care of dogs between those points. Between all other points our baggagemen are permitted to make a merely nominal charge for the care of the dogs, which in all cases must be carried in the baggage car. It is not necessary that the dog should be boxed up in a crate or muzzled. If he has a chain or rope it will do. The charge which our baggage agents make is not for our benefit, but is simply a perquisite which they get for the care of dogs while in their charge, and which they are allowed by us to retain.—P. S. EUSTIS, G. P. and T. A.

Chicago & Eastern Illinois.—The company makes no charge for the transportation of a dog in baggage car if the owner or person in charge is a passenger on the same train. Train baggagemen are forbidden to ask any fee for the transportation of a dog, and also forbidden to collect any such charges for baggagemen of connecting lines, or to ask baggagemen of connecting lines to collect for them. It is not hereby intended that a passenger can have any number of dogs carried free; a person in charge of several dogs, or one who is in charge of a kennel in transit, should be referred to the express company, except that dogs may be considered as a part of the baggage or properties of theatrical companies. If the person in charge desires to place a dog in the baggage car, to be carried wholly at owner's risk, the company not to be liable for any injury or loss, and a fee for attention to the dog is voluntarily tendered to the train baggageman he may accept it, but he will not be permitted to insist upon or ask any such fee.—WM. HILL, G. P. and T. A.

Chicago & Grand Trunk, Detroit, Grand Haven & Milwaukee, Toledo, Saginaw & Muskegon, Grand Trunk, Michigan System.—Hunting dogs may be carried in baggage cars free of charge and at owner's risk when accompanied by owner holding ticket. Baggagemen may accept a personal fee for care of dogs or guns when tendered them, but are not permitted to ask for such. They are not required to be crated, but we request that they be supplied with a collar, and when convenient with a chain.—J. E. QUICK, G. B. A.

Chicago & Great Western.—Where party is traveling with dog we require that dog be properly tied in baggage car, making no charge for same. We take dog at owner's risk and do not issue checks.—HENRY S. HAWLEY, G. A.

Chicago, Milwaukee & St. Paul.—Dogs will be carried in baggage car free, at owner's risk, for passengers riding on same train. Baggagemen are forbidden to ask any pay or compensation from passengers for carrying dogs and guns, which they must receive and carry in their cars, when requested by owners or parties in charge of them. No check or baggage ticket is required. No crate is necessary unless owner prefers one. No muzzle is necessary. A chain or rope should be provided for tying dogs. These rules apply on our entire 6,000 miles of railway.—F. A. MILLER, A. G. P. A.

Chicago & Northwestern.—Hunters' dogs are carried on this line in baggage cars free, but wholly at owners' risk of loss, damage or delay. It is not required that they be crated, but it would be much better for the dogs and their owners if they be crated. We must take them at our convenience, *i. e.*, that we cannot leave baggage because of want of room on account of crates of dogs. Owners must find leash for them as we cannot be responsible for breaking or unfastening of leash. No check or ticket is required for them, but simply a delivery to the train baggageman.—N. A. PHILLIPS, G. B. A.

Chicago, Rock Island & Pacific.—Dogs tagged and accompanied by passengers will be carried in baggage cars free, at owner's risk of loss and damage, and without checking.—J. D. MARSTON, G. B. A.

Chicago, St. Paul & Kansas City.—This company will carry dogs in baggage cars over their line free of charges, at their owner's risk, when accompanied by the owner holding ticket. Each dog must be provided with rope or chain, so it can be properly secured. Dogs in crates will be accepted for transportation and checked same as baggage at the owner's risk.—JOHN COLLEY, G. B. A.

Canadian Pacific.—We charge for each dog the same as for 100lbs. of excess baggage, each dog to be properly secured with a collar and chain, as a preliminary to the carriage of the animal. Charges should be paid to the station baggageman who issues an excess baggage ticket, no checks are given for dogs. From and to certain stations in Canada, such as between Pembroke and Nepigon inclusive, and between Cavanville and Sharbot Lake inclusive, and to Lake Megantic, Que., we carry one dog free for each sportsman. In each of these cases it is necessary to procure a through excess baggage ticket from the agent.—D. MCNICOLL, G. P. A.

Denver & Rio Grande.—No charge is made whatever where the owner is passenger over our line, and furnishes chain and collar, so that the dog cannot get loose. We accept them and carry in baggage cars free of charge.—S. K. HOOPER.

Elgin, Joliet & Eastern.—When owners have full tickets we will carry dogs free, crated or with muzzle and chain, as owner may prefer, on all trains on our road. This includes E., J. & E., and C., C. & N., and W. & S. W. railways. We will do the best we can to protect the property of hunters on our line, but when no charge is made for camp equipment, dogs, etc., we will not be responsible for loss.—G. O. CLINTON, Supt.

Illinois Central.—One or two dogs in charge of owner will be entitled to free transportation in baggage car. On each dog over and above that number, owned by or in care of one person, the following charge may be made, and retained by train baggageman: For any distance up to 99 miles, 25 cents; for any distance from 100 miles to 240 miles, 50 cents; for distance of 250 miles and over, 75 cents.—A. H. HANSON, G. P. A.

Lake Shore and Michigan Southern.—Dogs will be carried free, in baggage cars of this company, at owner's risk. No dog will be carried without taking release. Dogs must be plainly tagged with owner's name and destination. Dogs intended for shipment must be accompanied by owner or care taker on the same train, who must present his passage ticket to the station baggage agent at the time of shipment. A dog not boxed or crated, unless provided with collar and chain, must not be taken in the car. One dog only will be received and carried for any one shipment; if more than one is presented, you will refer the owner to the express company. Baggage agents and train baggage masters will take the owner's name and destination of dog on their baggage record and train report. Before taking a dog into their car, the train baggage master must become satisfied that the baggage agent has taken the required release from the owner. If the destination of a dog requires it to be placed in charge of another baggage master on a continuous run, the baggage master who delivers it must furnish the name of owner and destination to the baggage master who continues the run, who in turn must take record of it on his train report. If the destination of a dog requires a transfer to other trains of this company, a transfer baggage way-bill must accompany the dog. Baggage agents, when receiving a dog for shipment, will notify the owner that he must claim the dog immediately on its arrival at destination. Baggage agents or train baggage masters must not demand or receive any pay or compensation for carrying or taking charge of dogs.—JOHN L. FREEMAN, G. B. A.

Michigan Central.—Dogs of hunters are carried free in baggage car by this company. We simply require the owners to be *bona fide* passengers and dogs provided with collar and chain; they are taken entirely at owner's risk.—H. P. DEARING, G. B. A.

Milwaukee & Northern.—On presentation of a ticket we accept and carry free in baggage cars dogs, provided they have a strap or rope, so they can be tied in car. We do not allow our train or station baggagemen to demand or receive any compensation for the transportation of same.—W. D. CARRICK, G. B. A.

Monon Route.—Our rules permit the free transportation of two hunting dogs for each passenger, shipped at owner's risk, who must sign release. No check or baggage ticket is required; all that is necessary being to put the dogs in charge of baggage master, who will furnish release blank to be signed.—JAS. BARKER, G. P. A.

Nickel Plate Line.—Our contract with the American Express Co. does not permit us to enter into any contract with passengers for transmission of dogs in our baggage cars either for or without a consideration. The ordinary rule governing the shipment of dogs accompanied by owners on train is observed on the trains of the Nickel Plate, *i. e.*, personal arrangement between passengers and train baggageman for the care of the dogs in the baggage car.—B. F. HORNER, G. P. A.

Northern Michigan Line.—We make no charge for carrying dogs when accompanying passengers with full tickets.—S. S. BURKE, Agent.

Northern Pacific.—Dogs must be carried only in the baggage car and in charge of train baggageman, who will be allowed to collect as his compensation for care of same at the following rates: Twenty-five cents will be charged for the care of a dog for the distance of 150 miles or less, and for distance over 150 miles train baggagemen may collect at the rate of one-sixth of a cent per mile. The above rates must in every case be prepaid to destination and collected before dogs are put in car, except as noted below, viz.: Train baggagemen on main line must not collect charges to points on branch lines; collect to junction point only. Train baggagemen on branch line trains must not collect charges beyond their run; collect to junction point only; and no charges must be collected beyond this company's line. If owner refuses to prepay in accordance with above schedule, decline to accept dog. Train baggagemen must turn over to connecting T. B. M. proper proportion of amount collected for transportation of dogs. Crate is not necessary. We do not check dogs. Owner is not required to provide a muzzle, but should have a chain, as the latter is more secure than rope.—W. H. LOWE, G. B. A.

Pennsylvania Company, Vandalia Line.—Baggage masters will be allowed to collect, retain charges for special care and attention given to dogs in baggage cars at following rates: One to one hundred miles, 25 cents per dog; over one hundred miles, 50 cents, collection only to be made to the end of their respective runs. This whether crated or not.—R. R. BENTLEY, G. B. A.

Santa Fé Route.—As to the rules of the C., S. F. & C. R. Co. for the transportation of dogs in baggage cars, the train baggageman is allowed to collect a fee of ½ cent per mile, but in no case is a sum greater than 50 cents to be collected for any distance on that line. The rules on the A., T. & S. F., Atl. & Pac. and Sou. Cal. lines are that train baggagemen may collect a fee of ½ cent per mile, but in no case will a sum greater than $2 be charged for any distance on either of the above named roads. Dogs will not be taken in baggage cars unless owner is a passenger on the same train. Owners are expected to furnish a secure means of fastening, and have the animal muzzled if vicious.—P. WALSH, G. B. A.

St. Louis & San Francisco.—Dogs with collar and proper chain, strap or rope, will be carried for passengers in our baggage cars at owner's risk, for which the following charges will be made for each dog: For any distance under 50 miles, 25 cents; between 50 and 150 miles, 50 cents; between 150 and 250 miles, 75 cents; any distance over 250 miles, $1. These charges are donated to the train baggagemen and are made only for their own respective runs.—D. WISHART, G. P. A.

St. Paul, Minneapolis & Manitoba.—When owners hold full tickets our baggagemen have the privilege of collecting a fee of 25 cents for each dog carried any distance on their run. This fee goes to the baggageman as his compensation for taking care of and cleaning up after the dog. The company derives no revenue for dogs accompanying hunters, and they are not checked or crated, but it is necessary that they be provided with a chain or rope.—L. W. CAMPBELL, G. A.

Southern Pacific.—The rule regarding dogs as it appears in our rules to baggagemen: "Dogs can be carried in the baggage car only in the care of the train baggageman, who is responsible to the owner for their proper treatment, and is authorized to collect for each one carried fifty miles or

less, fifty cents, and for any distance over fifty miles, at the rate of one-half cent per mile, provided that in no case shall the charge on any one train baggageman's route be over $1.25, and provided further that the charge shall in no case exceed the local ticket rate over the same route." Under this rule you will notice that a crate is not necessary but that the dog should be chained.—F. H. GOODMAN, G. P. & T. A.

Union Pacific.—Twenty-five cents will be charged for the care of a dog for a distance of 100 or less miles, and for distance of over 100 miles baggagemen may collect at rate of one-fourth of a cent per mile. Owners of dogs are required to provide chains.—E. L. LOMAX, G. P. A.

Wabash.—Dogs will not be carried in passenger cars. Train baggagemen are allowed to receive and retain charges for care of dogs in baggage cars at the following rates: 1 to 100 miles, 25 cents; 101 to 250 miles, 50 cents; over 250 miles, 75 cents. Train baggagemen will make this collection only to the end of their respective runs, and inform the owners of dogs that they collect only to the end of their division.—S. H. OVERHOLT, G. B. A.

West Shore.—Dogs, when accompanied on same train by owner or attendant, may be carried at owner's risk in baggage car only, in care of the train baggage master, who is responsible to the owner for their proper treatment. The owners in all cases will be distinctly informed that they must be at the car door ready to receive the same at destination or point where transfer is made. The practice of, turning dogs over to station baggage master to be kept in baggage room will not be allowed. Dogs intended for exhibition, when inclosed in crates and accompanied by owner or attendant, will be carried free.—C. E. LAMBERT, G. P. A.

Wisconsin Central.—Hunting and pet dogs are to be carried free in baggage car at owner's risk, owner accompanying. Performing dogs belonging to theatrical companies will be carried in baggage car, being weighed with regular baggage belonging to the company and included as part thereof. Train baggagemen and other employees of the company are strictly forbidden either to ask or to receive compensation for the care of dogs placed in their custody under any conditions. Owners are, of course, to supply the necessary food.—L. ECKSTEIN, A. G. P. and T. A.

DOG TALK.

I VISITED the Bradford dog show to-day and although it is called a small show in this country, I think if American buyers had a better idea of the size of these shows they would have a better idea of the value of prizes won at such shows and not put too great a value to some and too little to others.

The entries at Bradford number 554, divided as follows: Greyhounds 7, pointers 3. setters 4, spaniels 11, retrievers 6, basset hounds 5, smooth fox-terriers 10, wire-haired fox-terriers 57 (with a mixed local class of 26), Airedale terriers 67, Welsh terriers 9, Irish terriers 6, Scottish and Skye 9, bull terriers 7, white and black and tan terriers 8 St, Bernards 12, mastiff 1, Newfoundlands 2, collies (rough and smooth) 81, schipperkes 3, pugs 35, Yorkshire terriers 23.

The show is held only one day and as benching would be rather expensive for such a few hours, the dogs are tied to stakes and given an ample supply of bedding. There is some little draft under the marquees but as these shows are only held in warm weather, the draft is agreeable rather than otherwise.

The judging is done out in the open air, all well enough in fine weather, but I imagine Mrs. Foster found it rather disagreeable when judging the pugs, for it rained full one half the time she occupied the ring.

The dogs all arrived before 11 A. M., and were doubtless all in their own kennels by 10 o'clock the same night. In fact when the judging finished at 6 P. M. fully one half of the dogs had gone home, rather rough on the public but good for the dogs.

As each exhibitor goes into the ring he is handed a large placard with the number of his dog on it in letters full three inches long. When this placard is attached to the button hole, the visitor can tell at a glance which dog is which by comparison with the catalogue. The prize cards are handed to the exhibitor as he passes out, but as they are not half of them placed over the dogs, the visitor must wait until he gets the paper to know who won.

The only entry in mastiffs was Mr. Crabtree's well known Count Orleans, an excellent all round specimen. In St. Bernard dogs Mr. Sydney Smith's Young Wallace secured an easy victory. In bitches, the winner, Jas. Mellor's Baroness Rothschild, should have been second to Mr. Smith's Lady Florin, the Baroness is weak behind, turned in at the hocks and too long in body, though with excellent head. Lady Florin shows much more character and is straight and sound. The setter and pointer classes were not only small but poor in quality.

Spaniels though a small class were excellent. Mr. Muirhead's team of black fields are about the finest I ever saw, the bitch Sensation is much the best field spaniel I have seen. In Clumbers, Mr. Pratt's Boaz and Boaz II. were the winners. Boaz would beat anything I ever saw in the States quite easily, he has a very good skull, good depth of muzzle, plenty of lip, good sturdy well-made limbs and a good length and depth of body, he is excellent in character and a good mover. As he has been bred to Mr. Mercer's Snow, I took particular notice of him.

Bull-terriers were only a fairish lot. James Thorpe's Bonny II., by Bendigo, and one or two others, showed quite a little merit.

The only entry in Newfoundlands was a son of Lord Nelson and a promising youngster he was. It is a shame that Americans have allowed this excellent breed to deteriorate so in the States.

Mr. Stretch and Mr. Ainscough carried off most of the honors in collies with some very fair specimens.

The schipperkes were a fair lot, of the type of the winner of third at Boston.

Airedale and fox-terriers were large and strong classes.

The gate receipts were something enormous, and I must not close my notes without a word about the lunch given to the judges and press. It was excellent in quality, ample in quantity and was thoroughly enjoyed by all. Mr. Jos. Farwell presi wided, th Col. Tibbett, the American Consul, at his left hand.

It is hardly the proper thing to peach on a friend, especially one that has proved as hospitable as Mr. Sydney Smith but I could never keep a real good thing to myself. Mr. Smith, although a magistrate of the largest borough in England, was up before the court himself a few days back and fined $1.25 for having his St. Bernards Alton and Lady Floris out on the street without muzzles.

Speaking of muzzles I cannot help noticing that full one half I see are a mere farce, the dogs can bite almost as well with them on as with them off.

Just before I left the States, I wrote a short note on that most excellent breed, the Newfoundland. I find that the interest in the breed is full as great as it was last year, there will be 10 classes at the Crystal Palace show with 10 specials.

Spratts Patent have a very dangerous rival in this country in The Sanitary Food Co., manufacturers of the Protean Foods. Dr. Andrews is the promoter of the scheme and Mr. S. Deacon, the well known greyhound man, is the manager at shows. They are talking of establishing a depot in the States shortly. Competition is the life of trade.

Over 7,000 people passed through the turnstiles at the Bradford show. Not bad for a one day show.

The *Stock-Keeper* states that the smooth St. Bernard Ino, the sire of Keeper and brother to Guide, has gone the way of all flesh.

I also notice in the same journal, a call for a greyhound club. The United States with two, and old England just waking up! Yea, verily, the world do move.

I am getting anxious to know what the two English setter clubs have decided upon. I certainly hope they have consolidated, for there is no room for two clubs, and there are plenty of good men in both the club already formed and the new one, that I suppose is under way ere this.

NAMQUOIT.

TORONTO DOG SHOW.

Editor Forest and Stream:

A meeting of the Toronto Industrial Exhibition dog show committee was held this week when arrangements were completed for the show to be held from the 15th to the 19th of September next. There were present Mr. J. Wilson in chair, Messrs J. Massey, John Maughan, J. G. Mitchener, H. B. Donovan, C. H. Nelson, and C. A. Stone, Secretary and Superintendent.

It was decided to add the following extra cash specials to those already published for the best kennel of four or more owned by one exhibitor or kennel: Mastiffs $20, St. Bernards $20, Irish setters $15, greyhounds $15, bloodhounds $25, English setters $15, cockers $15, collies $15, bulldogs $15, pugs $15, fox-terriers $15, great Danes $15, Gordons $15, and a lover of the greyhound has donated a silver cup for the best greyhound dog or bitch owned in Canada, value $10. It was also decided to add $10 in the open dog class for mastiffs.

The premium lists are now ready and can be obtained by any one on dropping a post card to the secretary at Toronto.

C. A. STONE, Secretary.

ENGLISH VS. AMERICAN BEAGLES.

Editor Forest and Stream:

I notice in your last issue that "Hibernia" credits me with having expressed certain opinions of the beagle Blue Belle II., and which opinions he criticises. Please say that I never expressed any such opinion as referred to. I think that if my awards when judging have been criticised more for one thing than another it has been for placing working-sized hounds capable of performing the kind of work required of our beagles in this country over the small or toy ones. I should refer "Hibernia" for my views on beagles to the March, 1890, A. K. C. *Gazette*, and also to articles written by me, copies of which I should be pleased to send him if he desires if he sends me his address. HERMAN F. SCHELLHASS.

LORD RAGLAN—EDRIC.—*Editor Forest and Stream:* I have swapped the mastiff Edric, by Jack Thyr out of Emma, with Dr. Geo. B. Ayres and Clinton N. Powell, Esq., of Omaha, for the mastiff Lord Raglan, younger brother to Orlando. Of course I got the "beat" on Messrs. A. & P. in this deal—otherwise I wouldn't mention it. They have a dog with which they say they are going to hurry all the cracks at dog shows, but I have got the very wisest and best watch I ever saw, with an affectionate reservation in favor of my old Gipsey. What Rag don't know about his business isn't worth knowing, and my pet crank, that show-bred mastiffs are worthless for watchdogs, has got a very big hole through it.—W. WADE (Hulton, Pa., July 19).

THE MARYLAND KENNEL CLUB DELEGATE.—At a recent meeting of the Maryland Kennel Club resolutions were passed condemning the action of the A. K. C. in refusing to accept Mr. C. J. Peshall as their representative, and Mr. Peshall was unanimously elected as delegate of the club.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Dusky Bob. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug dog, whelped May 13, 1890, by champion Cash (champion Bradford Ruby—Lady Cloudy) out of Nun Nicer (Douglass II.—Dot).

BRED.

☞ **Prepared Blanks sent free on application.**

Queen—Leader. R. Merrill's beagle bitch Queen to H. F. Schellhass's Leader, June 18.

Alaska Queen—Beauchamp. H. F. Wilson's (Ballard Vale, Mass.) St. Bernard bitch Alaska Queen (Grimsell—Dell) to Elmwood Kennels' Beauchamp (Beauchief—Berengarid), July 10.

Kara—Lord Hector. W. Stewart Diffenderffer's (Baltimore, Md.) St. Bernard bitch Kara to his Lord Hector, July 11.

Yum—Henmore Shamrock. B. P. Rotherock's (Williamsport, Pa.) Irish setter bitch Yum (Rob—Daisey) to F. L. Cheney's Henmore Shamrock (Muskerry—Avoca), July 18.

Flossie T.—Cherry Boy. G. L. V. Tyler's (West Newton, Mass.) cocker spaniel bitch Flossie T. to C. G. Browning's Cherry Boy (Ebony—Fanchon), July 11.

La Tosca—Cherry Boy. G. H. Whitehead's (Trenton, N. J.) cocker spaniel bitch La Tosca (champion Doc—Lady Pluto) to C. G. Browning's Cherry Boy (Ebony—Fanchon), July 8.

Mirza—Kildare. Dr. Nicol's (Cookstown, Ont.) cocker spaniel bitch Mirza (Robin—Turpin) to his Kildare (champion Brant—Bonita), July 1.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Marguerite II. J. H. Day's (Red Bank, N. J.) pointer bitch Marguerite II., June 24, six (one dog), by S. W. Pentz's Brake.

Lakme. W. Stewart Diffenderffer's (Baltimore, Md.) St. Bernard bitch Lakme, July 1, six (four dogs), by Pilgrim.

Duchess. W. Stewart Diffenderffer's (Baltimore, Md.) St. Bernard bitch Duchess, July 5, eleven (seven dogs), by his Lord Hector.

Blodwin. W. Stewart Diffenderffer's (Baltimore, Md.) St. Bernard bitch Blodwin, July 1, eight (four dogs), by E. B. Sears's champion Hesper.

Duck's Baby. J. M. O'Brien's (Worcester, Mass.) cocker spaniel bitch Duck's Baby (Black Duck—Zozo), June 23, five (three dogs), by C. G. Browning's Cherry Boy (Ebony—Fanchon).

Spright. C. G. Browning's (Worcester, Mass.) cocker spaniel bitch Spright (Ebony—Jessie), July 12, six (two dogs), by his Cherry Boy (Ebony—Fanchon).

Jill. Dr. Nicol's (Cookstown, Ont.) cocker spaniel bitch Jill (Doctor—Lucy), July 10, eleven (six dogs), by his Kildare (champion Brant—Bonita).

Toody. Geo. W. Dixon's (Worcester, Mass.) Yorkshire terrier bitch Toody, July 13, two dogs, by P. H. Coombs's champion Bradford Harry (Crawshaw's Bruce—Beal's Lady).

SALES.

☞ **Prepared Blanks sent free on application.**

Mamie E. Fawn pug bitch, whelped May 3, 1890, by champion Kash out of Lady Thurman, by Eberhart Pug Kennels, Cincinnati, O., to Jas. Bowden, New York.

Zara. Apricot fawn pug bitch, whelped May 3, 1890, by champion Kash out of Lady Thurman, by Eberhart Pug Kennels, Cincinnati, O., to Jas. Bowden, New York.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

C. H., City.—What is the best thing I can do for my dogs; all three have the mange? Ans. Give 5 drops of Fowler's solution of arsenic in the food night and morning and use the following ointment once daily, after washing the parts with castile soap and water:

℞	Ung. zinc oxid.	ʒ ii
	Ung. diachylon	ʒ ss

Mix. Sig., external.

DOGS.—NALDIRES medicated SOAP for washing dogs, destroys all irritating insects, removes doggy smell and leaves the animal refreshed and happy. This prize medal soap, used by all the leading owners in Europe, is now sold by Park & Tilford, McKesson & Robbins, E. Fougera and all Druggists.—*Adv.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

A NEW EXPLOSIVE.

SAINT ETIENNE, France, July 9.—Saint Etienne, near Lyons, is the French Springfield. Here are tried and experimented upon all inventions relating to the armament of French troops, and designed to work for French defence what the first instalments of Springfield guns did for the preservation of the Union. There is a Government manufacture of small arms here as well as many private manufactories of sporting guns. The Chamber of Commerce recently granted to M. Paul Giffard, the inventor of a new gun, a prize of $2,000 and a gold medal, and trials of the new weapon are about to be made in Paris under the direction of the military inspectors. The Giffard gun uses neither fulminate nor gunpowder, not even the so-called "smokeless powder," so much talked about. These are replaced by a single drop of a volatile liquid, which, falling into a closed chamber behind the projectile, develops by vaporizing a great pressure and thus gives impetus to the projectile. The fluid is a liquefied gas, inclosed in a steel cartridge provided with an escaping valve regulated by a movable screw. By pressing on the hammer the valve is opened and the shot discharged.

The cartridge contains 100 grammes of the liquid. One-third of a gramme is a sufficient charge for one shot in an ordinary hunting gun like the one presented by M. Giffard to the Chamber of Commerce of St. Etienne. The same cartridge is good, therefore, for 300 shots. After every shot a new bullet is introduced, but it is certain that a repeating mechanism will soon be added by which the supply of bullets will be continuous. There is no fear of overheating the gun, for the shooting rather cools it, the condensation of the gas absorbing the caloric, just as the ammonia in the ice-making machine. Moreover, the liquefied gas does not evaporize instantaneously, but expands gradually, so that the projectile acquires its greatest velocity only at the moment of leaving the mouth of the weapon. Consequently there is nothing to fear from violent and sudden pressure upon the sides of the gun, and thus the projectile force can be utilized to the maximum.

The detonation is something like that of the uncorking of a champagne bottle, a sharp, short pop, and nothing more. Of course there is no smoke and no fouling of the gun. The liquid by its volatilization gives out no disagreeable odor like that of the smokeless powder of the Austrian army, which asphyxiated some of the soldiers during the trials in rapid firing.

Such is a rough sketch of the new gun. Its real value will soon be determined by the trials ordered by the French Government.—*N. Y. Tribune.*

THE GERMAN-AMERICAN RIFLEMEN.

BERLIN, July 14.—Mr. Philips and Dr. Lartsing left for Bremen Monday morning, while forty Independents started for Cologne Monday night. They complained of the scandalous neglect of the sharpshooters' committee which by incompetent officiousness and red tape failed to deliver the entire lot of trophies. The Schnetzenfest has lost 100,000 marks by niggardly arrangements and bad management. Captain Diehl of the Independents, who is suffering with dropsy, will go to the Manheim baths.

July 17.—The American riflemen arrived at Bingen last night from Oberlohestein. Despite a drenching thunderstorm that was prevailing when they arrived an enthusiastic crowd was awaiting to welcome them. The city was decorated and illuminated in honor of the Americans.

July 18.—The American riflemen visited Niederwald to-day and placed a laurel wreath on the Germania Monument. Mr. Weber delivered an address. In the afternoon the Americans drove to Rudesheim and partook of a kellerfest.

July 19.—The American riflemen arrived at Neustadt, in the Palatine, to-day, and were enthusiastically welcomed. The Burgomaster, surrounded by the local riflemen and the municipal authorities, delivered an address of welcome. The Americans were heartily cheered. Mr. Herman Weber made an address in reply to the Burgomaster's speech. A grand banquet will be given to the visitors to night.

NEUSTADT, Bavaria, July 20.—An immense crowd witnessed the procession here to-day in honor of the New York Independent Shooting Corps. The procession was headed by mounted riflemen, then came a band of music and then the Neustadt Rifles. After these came the American riflemen, Messrs. Weber and Diehl riding in carriages festooned with flowers. The visitors were loudly cheered along the whole route. In the evening a dinner was given at the headquarters of the Neustadt Rifles, and this was followed by a concert, a display of fireworks and a grand ball.

BOSTON, July 19.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day amid all kinds of weather conditions, heavy showers, high winds and bad light making high scores impossible, except in a few cases later in the day, when the conditions were a little better. Following are the best scores made to-day; distance 200yds., standard American target:

Record Pistol Match—50yds.

H L Lee	89	A S Hunt	82
W G Hussey	80	H Severance	88

Champion Off-Hand Match.

J B Fellows	85	H L Lee	81
E F Richardson	72	A S Hunt	81
W G Hussey	78	M T Day	71

Champion Rest Match.

L R Avay	105	A H Ballard	102
F C Towne	83		

All-Comers' Rest Match.

S Wilder	105	L R Avay	101
A S Hunt	9	J N Eames	104
W Peters	101	S D Martin	9
A H Ballard	104	A G Horne	97
J C Hastings	8	F C Towne	102
M T Day	96		

All Comers' Off-Hand Match.

H L Lee	84	S O Merville	75
S D Martin	69	W G Hussey	81
O M Howard	75	M R Barter	67
H Gill	81	D R Ball	73
P Emery	64	S C Sydney	80
J C Hastings	72	A Stevens	62
M T Day	80	A S Hunt	70
F C Towne	60		

Pistol Practice Match—50yds.

W G Hussey	89	S D Martin	85
M R Barter	80	A Stevens	87
A S Hunt	81		

CREEDMOOR, July 19.—The second match of the season by National Guardsmen for marksmen's badges was shot on the 200 and 300yds. ranges at Creedmoor to-day in a gale of wind. The following men won badges: J. Coraic, W. J. Shieffin, A. E. Rauch F. C. Cooper, L. Martin, C. Murray, H. E. Montague, W. E. A. Smith, R. S. Williams, S. P. Lasell. W. H. Edwards, P. J. Fraker, F. Blanchard, T. S. Veitch, C. E. Mitchell, M. Stuart, G. L. Stebbins, C. S. Dodge, H. J. Bates, C. Hyde, C. H. Bouron, E. P. Jessup, I. Radley, W. K. Norris, E. W. Kiernan, J. F. Hobart, W. H. Webb, W. C. Haskell, A. K. Gorski, F. D. Holbrook, H. Bostwick, G. H. Potter, E. V. Harvaad, G. Hadden, F. L. Catlin, D. C. Squires, C. S. M. Hook, I. Radley, jr., W. DuBois, R. Mazet, F. W. Roe, E. F. Austin, F. Wightman, G. A. Wylie, J. W. Stevens, W. C. Semger, C. Sampson, G. R. Martin, J. W. Abell, H. G. McFadden, H. Dalzell, J. T. Harper, S. C. Leonard, S. W. Underhill, G. L. Varker, R. S. Spencer, G. A. S. Wilners, H. W. Fish, W. T. Andrus, E. T. Douglass, S. C. Judson, G. L. Barker, jr., W. F. Wall, W. M. Moore, H. C. Taylor, W. S. Beekman, B. Suydam, W. B. Greeley, J. D. McEwen, J. H. Carter, G. B. Rhoades, N. M. Beckwith, L. De W. Hollob, E. L. Chase, F. E. Cornell, L. E. Waterman, J. Ruppert, H. E. Stevens, jr., T. Guena, C. L. Smith, A. M. Evans, W. H. Folsom, J. Swayne, G. G. Murray, J. J. Gordon, G. C. Arrowsmith, T. E. Stewart, F. G. Landon, E. C. Denison, W. A. Jones and G. Gregory.

SKIRMISH WORK.—In the presence of Gov. Hoard, of Wisconsin, five enlisted men of the Third Regiment of Infantry, United States Army, at Camp Douglas, Wisconsin, recently, made a skirmish run, 200yds. to 200 and back, quick and double time, 40 cartridges per man, ten halts each of 30 seconds' duration in which to shoot. The target for each skirmisher employed was a black piece of paper representing the silhouette outline of a soldier kneeling and in the firing position. The following scores were made:

	Hits.	Score.		Hits.	Score.
Corp Irish, Co H	28	112	Sergt Yotges, Co E	16	64
Sergt Dubbs, Co G	19	76	Sergt Mitchell, Co K	15	60
Pvt Lucas, Co A	16	64			

Ninety-four hits out of 200 shots is, under the conditions, called a wonderful record. Lieut. McCoy, U. S. A., conducted the run.

Capt. Reade, U. S. A., conducted two skirmish runs of 20 cartridges each, the objectives being for each skirmisher a group of silhouette figures placed some yards apart, representing the outline of a soldier in one of three firing positions, standing, kneeling and lying prone. All of the skirmishers were officers in the Wisconsin National Guard. The following scores were made:

Lieut Lynch	62	Maj Auer	31
Capt Swietasche	53	Capt Seaman	26
Maj T J George	40	Lieut Newell	25
Capt Bleuel	38	Capt Fuller	16
Capt Birkhauser	35	Maj Bradley	3

CANADIAN RIFLE LEAGUE, July 12.—The shoot to-day of the league team brings the standing up in the series of contests to the following close series of totals. The Fifty-fourth Battalion, of Windsor Mills, Quebec, still leads the league. The aggregate scores of the twelve first teams are:

Fifty-fourth Battalion	3,224	Ninety-sixth B., Port Arthur	2,954
Halifax Garrison Artillery	3,142	Sixty-third Rifles, Halifax	2,949
Fifty-third Bat., Sherbrooke	3,051	B Battery, Quebec	3,931
Thirteenth Bat., Hamilton	3,025	Forty-fifth, Lindsay	2,919
Forty-fifth B., Bowmanville	2,994	Gov.-Gen.'s Ft. Gds. Ottawa	2,901
Twenty-first B, Essex Centre	2,988	Forty-third Bat., Ottawa	2899

FORT SCHUYLER RIFLE ASSOCIATION.—Utica, N. Y., July 15.—The Fort Schuyler Rifle Association will have a tournament on its range at Riverside Park, Utica, on Wednesday, July 30, 1890. Numerous handsome prizes will be contested for, and there will also be sweepstake shooting. The contests will be open to all riflemen. Full particulars can be obtained of W. C. Williams, secretary, 105 Broad street, Utica, N. Y.—PORTSA.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

July 22-24.—First Annual Tournament of the Central City Sportsmen's Association, at Jackson, Mich. $1,000 guaranteed; $400 extra in merchandise. H. G. Sutton, Manager.

Aug. 5-6.—Tournament Minneapolis Gun Club, Minneapolis, Minn. A. F. Shuler, Sec'y.

Aug. 6-8.—Onondaga County Sportsmen's Tournament, at Syracuse, N. Y. Guaranteed purses, all cash.

Aug. 18-23.—Third Annual Keystone Tournament, at Corry, Pa Sept. 1-2.—Hackettstown, N. J., Gun Club Shoot, Labor Day, Sept. 1, at targets; Sept. 2 at live birds. For programme address E. Richter, Sec'y.

Sept. 9-12.—Cincinnati, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the World. Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purse. Wm. E. Limberg, Sec'y.

THE MCDOWALL GRAND INTERNATIONAL BLUEROCK TOURNAMENT, Toronto, Canada, Aug. 12, 13, 14 and 15. $1,100 in gold in guarantees and donations; held under the auspices of the four gun clubs of Toronto, and under the management of W. McDowall, assisted by an American expert. For programme address W. McDowall, Manager, C. G. Winchell, Secretary, 81 Yonge street, Toronto.—*Adv.*

SARATOGA TOURNAMENT.

THE first tournament of the Saratoga Gun Club was held at Saratoga Springs last week, beginning on Tuesday and continuing for four days. The gathering of sportsmen was one of the largest ever known in this section, and as for the quality of the marksmen assembled, the best I have ever seen. Fully one hundred shooters representing no less than twelve States were in attendance, with an average of about sixty-five entries to each event. With such shooting stars present as Rolla Heikes of Dayton, E. S. Benscotten of Toledo, E. L. Mills of Washington, D. C., H. W. Heflin and J. L. Malone of Baltimore, the Wolstencroft brothers of Philadelphia, E. D. Miller, S. G. Smith, Milt Lindsley, Charley Smith and Ed. Collins of New Jersey, W. H. Skinner and B. F Schumeir ("Hamline") from St. Paul, J. A. Jackson of Austin, Tex., and such cracks from the State as Harvey McMurchy, Harry Whitney, Frank D. Kelsey, Tom Peacock, Ed Hudson, Charley Wagner, H. M. Levengston, W. Crosby, with Dickey, Barrett and Wheeler from Boston, Davis and Bowdish of Worcester, and W. C. Cody from New London, one can well imagine that it was hot company and a hard fight for a place. Saratoga is a delightful place to hold a summer tournament, and everybody agreed that the first tournament of the Saratoga club was a decided success.

The committee, Messrs. Levengston, Coster, Bockus and Ramsdell, did everything in their power to have things run smoothly, but the want of enough efficient help to run the traps was most noticable, particularly good trap pullers. However, this was not the fault of the management, for without previous experience they depended upon the promises of the club members to lend a helping hand and, as usual at club tournaments, they failed to materialize. Mr. W. H. Hobart, of Newark, N. J., who attended the shoot as guest of Mr. Coster, kindly offered his services, and with the help of Horace Derby, of the Albany *Argus*, the second set of traps was kept in constant motion throughout the shoot. The grounds were located on a high sandy plateau, about three-quarters of a mile east of the village, adjoining the race track, and was, with the exception of the background toward the right, a perfect shooting ground. The shooting was done from two sets of five Keystone traps, kingbird targets being used, American Shooting Association rules governing the contests.

First Day, Tuesday, July 15.

Promptly at 9 A. M. the shooters were on hand and the first event was opened. The weather was awfully hot, but the canvas awnings that had been erected protected the shooters from the sun's rays. About 2:30 P. M. a slight shower interrupted the sport for a few moments, followed by a refreshing breeze that blew across the traps, from left to right, making the shooting delightful for the balance of the day. For the cash prize of $15, div. 60 and 40 per cent., for best averages in to-day's guaranteed events, Kelsey, Whitney and Wagner div. first, each breaking 100 out of 105, Levengston taking second. Scores:

Event No. 1, 10 singles, entrance $1, four moneys, 60 entries:

Second Day, Wednesday, July 16.

The heat to-day was even more intense than yesterday, the awnings affording little relief from the glare of the sun. About noon, however, a strong southwesterly wind sprung up that was welcomed, but it sadly upset the calculations of some of the shooters, and miss after miss was scored. Benscotten captured the first average to-day, missing but 3 out of 105 targets, Kelsey taking second with an even 100. Score:

Event No. 1, 10 singles, entrance $1, 4 moneys, 73 entries:

Third Day, Thursday, July 17.

This was a lovely day in every respect, and the conditions for good scores most favorable. The sun kept hidden behind the clouds and there was just enough breeze to carry the smoke from the guns. H. G. Wheeler equalled Benscotten's score of yesterday, 102, and took first average for the day, B. F. Schumeir ("Hamline") getting second with 101. The five best averages for the three days, out of a possible 300 birds, were divided as follows: Kelsey first, $30, with 287; Whitney second, $25, 286; Benscotten third, $20, 285; Heikes fourth, $15, 283; W. Wolstencroft fifth, $10, 282.

Event No. 1, 10 singles, entrance $1, four moneys, 57 entries:

First and fourth div., second shot off and won by C. Smith, third shot off and won by Jackson.

Fourth Day, Friday, July 18.

The attendance to-day was much larger than on any previous day of the tournament and great interest was manifested in the match between W. B. Whitney, of Phelps, and Capt. Tom Peacock, of Westfield, N. Y., a majority of the sportsmen had remained over to witness the match, and had hoped to have some live bird sweeps, but owing to the scarcity of birds this was impossible. At eleven o'clock when Referee Levengston called the contestants to the score there was fully 1,000 spectators upon the grounds, including many ladies. The contest was one of the most interesting I have ever witnessed. The birds were fair for the season, some of them being of the very best, each man made some wonderful stops, and as usual in pigeon matches slipped up on some of the easier ones. The best of feeling prevailed throughout the race, and with the exception of a vexatious delay of two hours when the match was almost finished, occasioned by not having enough birds on the grounds, everything passed off pleasantly. A large amount of money changed hands on the result. Peacock was slightly the favorite at the start, he evidently bulling the market by standing ready to take any bets against his gun; this gave some of the outsiders the tip and a large amount was wagered. Your humble correspondent was the unfortunate stake hold of some $500. I was conceited enough to imagine that I was a fair mathematician, but just the same I paid out $20 more than I had received, and it—changed hands. Whitney rather had the advantage of handlers, as he had those two reliables, Harvey McMurchy and Rolla Heikes, as advisers; Mr. Brockway and Ed. Hudson acting for Peacock. Previous to the main match a practice match at 10 birds was shot, the loser paying for the birds.

Preliminary match, at 10 live birds, loser to pay for the birds:

Whitney..... .....1121110121—9 Peacock.....0112012lo0—6

Match at 100 live birds, $200 a side, winner to pay for the birds, strict American Shooting Association rules governing; referee, H. M Levengston; trap puller, Wash. Coster. Score:

Whitney.. .....1222222111110101002121011122122121212221123122121 2212121121121120011122221222112121121222211221122—91

Peacock.... .....1lo122112111111lo1122211lo1012121121202111111222212 1112111112221122603112211112110111102212021012o—87

Recapitulation: Peacock had 12 left quarterers, 23 right quarterers, 12 drivers, 8 left quartering drivers, 16 right quartering drivers, 2 driving towerers, 1 incoming towerer, 5 hoverers and 21 incomers. His lost birds were his 3d, a left quartering driver; 18th, 27th, 38th, 89th and 94th, all right quarterers; 29th, 68th and 100th, incomers; 69th, 70th and 97th, straight drivers, and the 83d, an incoming towerer, four of these falling dead out of bounds. He used his second barrel 30 times, 10 of which were for safety. He used a 7lb. 14oz. Greener, 45grs. Schultze powder, 1¼oz. 7½ chilled Leroy shot in Kynoch shells in his first barrel, same in his second with the exception of No. 7 shot. His best run was 29 straight. Whitney had 19 left quarterers, 18 right quarterers, 19 incomers, 16 drivers, 4 left quartering drivers, 15 right quartering drivers, 3 driving towerers, 2 incoming towerers and 5 hoverers. His lost birds were the 13th, 15th and 18th, right quarterers; 17th, a straight driver; 23d and 90th, left quarterers; 57th, right quartering driver; 66th and 67th, left quartering drivers. His 57th and 90th fell dead out of bounds. His second barrel was used 46 times, 26 for safety. He shot a 7lb. 12oz. L. C. Smith, 8¼drs. 12-bore American wood, 1⅛oz Tatham chilled 8 shot with first barrel, 8¼drs. Laflin & Rand 3 FG and 1⅛oz. Tatham 7 in the second, both loaded in Climax shells. TEE KAY.

SPRINGFIELD,

SPRINGFIELD, Mass., July 10.—The tournament of the Springfield Shooting Club began yesterday and was concluded to-day. The shooting was at Keystones, and the scores show the character of the work done. Weather fair with strong northwest wind. Ties div. unless noted. The first match was at 6 targets, 18 and 16yds., 6 Keystone traps, 50 cts. entry, sweep:

CHICAGO.

AN interesting five-corners race, 50 birds a corner, will be shot next Saturday, at Mak-saw-ba grounds, between Messrs. W. P. Mussey, John Watson, John Card, Ben Dicks and R. S. Cox. The winner gets clear, and expense of birds is to be div. 10, 20, 30 and 40 per cent. among the next following scores.

Mr. Ben Dicks and Mr. A. T. Loyd are to have another match, Mr. Loyd conceding his opponent 5 bluerocks out of 100, and the match to include other races whose conditions are not now announced.

The Chicago Shooting Club is having some pleasant club events at the trap this year, there being no less than seven valuable medals and jewels up in competition, among others the fine diamond won by the club team at the State shoot of last month. The regular days for this club are, between March and October, second Saturday of each month, remainder of year twice monthly. All our club shoots of any consequence here are now held at John Watson's new park, at Burnside, which is now well along toward completion.

July 19.—The hustling secretary of that live young club, the Grand Calumet Heights, is out this week with a card to each member which reads as follows: "The rifle contest for the Jenny & Graham prize will be opened Saturday and continue until Oct. 1, 1890. It will be shot under the following conditions: For .22cal. rifles, at 75yds., 100 shots, not less than 10 shots per day; for .32, .38 and .45cal. rifles, at 200yds., same conditions; entrance $1; target for .22cal. to be one-half size of regulation 200yds. target. The gold medal has been shot for three times; first winner, Loyd; second, Metcalf; third, Booth. Come and try your hand. A good time guaranteed."

The gold medal referred to is offered by Mr. George W. Marshall, the secretary himself, and is a very tasty affair, well worth shooting for, as is also the rifle prize. E. HOUGH.

NEWARK, July 18.—Shooters gathered in large numbers at Erb's to-day, where the team shoot at live birds between representatives from the Parkway Gun Club, of Brooklyn, and the Newark Gun Club was decided. The Newark team showed up very strong, and it was apparent from the start that the Brooklynites were outclassed. They were beaten by 21 birds. The event was governed by Hurlingham rules, each shooter having 10 birds. The full score follows:

Parkway Gun Club.		Newark Gun Club.	
W Mills	7	C M Hedden	10
J Ochs	5	J Riggott	10
J Savage	9	C Reinhardt	10
R Thistle	7	F Class	8
J Blake	8	J Erb	9
J Bennett	6	Jones	10
Van Wyckoff	7	Wheaton	8
B Lewers	9	Green	9
B Van Winkle	5	Riglio	7
L Hilgans	6—69	O von Lengerke	9—90

Referee, Mr. Albert Heritage; scorer, Mr. Jacob Pentz.

PHILADELPHIA, July 16.—This afternoon the second shoot between the Philadelphia Sportsmen's Gun Club and the Wawasett Gun Club, of Wilmington, was decided on the grounds at Fernwood, and like the first, resulted in a victory for the Sportsmen. The weather was intensely hot, which accounts, perhaps, for the fact that the scores of both teams were below their usual average. Keystone targets, thrown from 5 traps, 15 singles and 5 pairs doubles per man:

Sportsmen's Club.		Wawasett Club.	
H French	18	G S Burroughs	18
J H Stvad	14	J Ryan	15
F McQuade	16	G Miller	18
J W Trenway	16	C Buckmaster	13
E Maher	18	J Ewing	11
H F French	17	W H Hartlove	15
J F Armstrong	17	R Miller	21
Dr A Glass	16	N Siltoe	12
J L Gibson	16—149	A H Stout	14—137

DAVENPORT, Ia., July 12.—The Forester Gun Club held its regular monthly shoot yesterday afternoon. There were but nine shooters, and the only match was at 10 double Keystone targets, with the following result:

Emerson	00 10 00 11 00 00 10 00 00 10— 5
Koos	11 10 10 10 11 10 00 00 10 11—11
C Culins	11 01 10 11 11 00 01 11 00 00—11
F Culins	11 10 10 10 10 00 11 10 10 00—10
Maser	01 10 11 11 11 00 11 10 11 00—13
Kroy	11 11 11 10 01 10 10 11 10 11—15
Davis	10 10 11 10 10 10 10 11 10 10—12
Howard	11 10 11 10 10 10 10 10 10 10—12
Harding	10 10 00 10 00 00 00 00 00 10— 4

At the same time F. O. Davis and E. Emerson shot a 25 live bird match for the championship cup of the club. Davis won, killing 20 birds, while Emerson only killed 15.

CLAREMONT SHOOTING GROUNDS, July 19.—Ten bluerocks, 50 cents entrance:

	1	2	3	4	5	6	7	8	9	10
Sigler	7	7	8	9	6	8	9	8	8	10

Vincent	..	..	..	..	..	..	..	9	7	..

WORCESTER, July 19.—At the meet yesterday of members of the Worcester Sportsmen's Club, at Coal Mine Brook Range, the principal event was the continuation of the merchandise series of contests begun in April last. Each man has a possible 25 clay pigeons at each cantest. The totals yesterday follows: A. B. Burkart 25, M. D. Gilman 23, C. B. Holden 22, W. E. Johnson, O. R. Dickey, Chas. Howe, H. W. Jordan, E. E. Hill and Geo. Adams each 20, Chas. Crompton 19, A. B. F. Kenney, H. W. Webber and H. Gabeler each 18, A. P. Larkin and G. J. Kugg each 17, W. R. Dean, M. A'Delbert, Ripley Burnett and E. F. Whittaker each 16, Henry Colmi 15, W. L. Davis and A. L. Gilmon each 14, C. Forehand, E. S. Knowles and E. F. Snow each 13, — Nichols 12, V. F. Prentice 11.

The club has now had 13 contests in this series. The men who have made a total of 25 at one or more of the meets are: M. D. Gilman, on June 17 and July 1; A. B. Burkart yesterday; E. T. Smith, June 17, June 24 and July 1. The men who have made scores of 24 are: A. R. Bowdish, July 1; C. Crompton, June 3 and June 10; W. L. Davis, June 17; C. E. Howe, June 24; W. E. Johnson, June 10; A. G. Larkin, June 24; E. T. Smith, June 3 and 10, and W. R. Dean, June 24. The men present at every one of the contests thus far are: A. R. Bowdish, whose totals have ranged from 13 to 23; C. Crompton, with totals ranging from 14 to 24; C. Forehand, with totals from 13 to 23; A. L. Gilman, whose totals range from 14 to 23; M. D. Gilman, with totals from 18 to 25; C. E. Howe, with totals from 15 to 24, and E. F. Snow, with totals from 9 to 22.

CLASS VS. BREWER.—Frank Class, the champion of New Jersey at live birds, is out with a challenge against Brewer. He says: I am ready to meet Captain Brewer in a 100-bird match for $250 a side, if he will concede me 2yds. handicap, respective distances being 28 and 30yds. rise, London Gun Club rules to govern the match otherwise. This, I think, is a very fair offer, although I am not in favor of handicaps; but as Captain Brewer has made a tour of the earth, met all comers at handicap distances, and openly acknowledges that Mr. Clark, of Melbourne, is the best man he ever met at the trap, and the wonderful score he made at the 33yds. mark, you would naturally suppose the Captain would concede any reasonable odds to a shooter like myself. If the champion thinks well of this offer, I will name Long Branch, N. J., on the Central Gun Club grounds, for the match to take place; date, July 30, 1890.

DAYTON, O., July 22.—At the regular Kennel Club medal shoot, 30 singles and 5 pair targets, rapid firing, Whealan broke 23, Gus Sander 25, Obmer 24, Winters 27, Kumler 26, Porter 27, McDonald 38, Hannah 22, Brown 24, Cooper 27, Volker 28, Makley 30. McDonald is now in the lead for the medal.—B.

NORTH BALTIMORE, O., July 17.—North Baltimore Gun Club team of 10 men for purse of $25, at 15 bluerocks, 5 traps: Caisse 13, Todd 7, B. H. Peters 8, E. E. Peters 10, Weaver 5, Hamilton 12, C. Pifher 8, L. Pifher 13, Doherity 11, Clark 12; total 99. Findley team—A. Karg 7, Lewis 13, Eggleston 12, Drake 10, Ritter 12, C. Karg 11, Ulley 7, Profane 9, Woodworth 7, Webber 11; total 100.

MARION, N. J., July 17.—Shooters were plentiful on the Jersey City Heights Gun Club grounds at Marion, N. J., this afternoon, when the redoubtable Essex Gun Club, of Newark, held its regular monthly shoot. The targets were live birds. Modified Hurlingham rules governed, and the shooters were divided into three classes, viz., A, B and C, which placed them at 30, 28 and 26yds. respectively. The result follows out of a possible 10 birds: C. M. Hedden 10, S. S. Hedden 10, Hughes 9, Freche 9, Brennuall 8, Morse 8, Nicholas 8, Howland 7, Rabbage 6, Mitchell 6, L. Q. Hedden 6, Stewart 6.

SITE OF THE A. C. A. MEET, AUG. 8-22, JESSUP'S NECK, LONG ISLAND.

OMAHA, Neb., July 4.—John J. Hardin, formerly of this city, now of Napa City, Cal., shot a match with A. Dalgo, the Spanish champion of the Pacific coast, on the Fourth, winning by a margin of two birds. The conditions were 100 live pigeons, 32yds. rise, English rules, for $250 a side: Hardin 96, Dalgo 94.

July 12.—The Winchester Club's weekly shoot was held to-day. 25 bluerocks, 21yds. rise, with the following result: F. Fuller 24, E. Paulson 23, W. C. Paulson 21, H. Paulson 21, Harry Paulson 20, L. Johnson 19, N. Johnson 19, Michael Fogg 18, Ed. Leader 10, George Jones 9, Jack Knowles 22, L. Pickard 22, C. Hunt 25.

CLEVELAND, O., July 17.—Some fall shooting was done out at Blue Rock to-day. Paul North scoring 29 and W. G. King 26 out of a possible 30. Twenty singles and 5 doubles were shot for individual records, and 9 singles and 3 doubles in the team shoot. The score: North 29, Rockway 24, Reynolds 22, King 26, Bloom 13, Story 22, Alexander 19, Turner 15, Barnes 22, Black 23, Haycox 18. Team shoot, No. 1—North 13, Alexander 12, Haycox 11, Brockway 14, Story 10—60. No. 2—King 11, Black 12, Reynolds 11, Barnes 11, Turner 11—56.

BERGEN POINT, N. J., July 19.—Good scores were made in the three clay-pigeon matches shot by the New Jersey Athletic men to-day. A. F. Compson won the twelfth match for the string of gold emblems, defeating Major James M. Taylor on a tie. He broke 16 out of 20 single, Taylor shooting scratch and Compson with 2 allowed. Compson also won a match at 10 singles on a clean score of breaks, and a walking match of 10 singles, only missing 1. Geo. S. Virden won the match at 10 paces, breaking 17.

CONTEST OF THE ALGONQUIN GUN CLUB.—Weehawken, N. J., July 17.—Sweepstakes at 25 live birds each, second barrel counted half bird, 25yds. rise, 10-bore guns handicapped 2yds.:

C Meyer (27).....17	F G Rinn (25) 15	Wm McLean (27).11½
J Hanna (27).....14½	P Tomlin (27) 12	J E Lordley (25)..14½
L Brenner (25)....18	G VanSchaick(25)17	J Robertson (25)..12½
J Male (25).....14½		

L. Brenner won first money, second div. between C. Meyer and G. G. Van Schaick, F. G. Rinn third.—FRANK G. RINN, Sec'y.

CINCINNATI, July 15.—The explosion of two carloads of powder, in all 1,600 kegs, standing on the track at the Peter's Cartridge Co. works, at King's Mills, on the Little Miami railroad, swept the plant of the Cartridge Company out of existence to-day. Several lives were lost.

WELLINGTON, Mass., July 19.—The third of the July Merchandise matches were shot to-day and these scores made: Perry 16, Knowles 14, Moose 13, Hooper 12, Bond, Gore and Bennett 11 each, Cower 10.

HUTCHINSON (KAN.) GUN CLUB SHOOT will be reported in our next.

20. New Jersey Athletic, Bergen Point, Fall.

DAVENPORT BOAT CLUB.—The boat club held its annual meeting on July 11 and elected the following officers: Pres., J. P. Donahue; Vice-Pres., E. H. Van Patten; Sec'y, H. P. Denison; Capt., Chas. Anderson; Treas., Walter A. Freeman; Membership Committee, J. P. Donahue, John Van Patten and Wilse McClelland.

THE A. C. A. MEET.

THE accompanying chart shows the location of the A. C. A. camp at Jessup's Neck. The following notice is issued by the transportation committee:

The transportation committee did not receive in answer to their circular a sufficient number of responses to warrant them in chartering the steamboat which they originally contemplated chartering, but the committee have to-day made arrangements by which they have chartered a freight steamboat that will take up the canoes at all the places stated in the transportation committee's circular, including Yonkers, and will deliver them at the A. C. A. dock at the camp, and at the end of the meet will return them to the places where they were picked up at a charge of $5 for each canoe, duffle to go free. The committee have no doubt they can make arrangements by which shippers can themselves make the trip on this boat without any extra charge. It is not a passenger steamboat, however, and those who take passage on this boat will be obliged to camp out on the boat. The committee have so arranged matters that any members of the Association who did not respond to the circular, may now do so up to the first day of August upon the same terms.

If you know of any of your friends who are likely to come to the meet, will you kindly call their attention to this matter, and notify them so that they may send me a response with the enclosure of $5.

The regular passenger steamer from New York city, stopping at our camp, leaves foot of Beekman street, East River, New York, on Tuesdays and Thursdays at 5 P. M., and on Saturdays at 2 P. M., making the trip in twelve hours.

Yours very truly,
M. T. BENNETT, Jr.,
For the Transportation Committee.

NEW YORK C. C. INTERNATIONAL CUP.

THE following challenge has been received by the New York C. C., the representatives of the challenging club being Mr. Ford Jones, with the canoe Cannuck, winner of the A.C.A. trophy last year:

BROCKVILLE, Ont., July 16.—*Chas. J. Stevens, Esq., Sec'y-Treas. N. Y. C. C.:* DEAR SIR—The Brockville C. C. hereby challenge to a contest for the N. Y. C. C. international challenge cup. Our club will be represented by Mr. Ford Jones, who will be in New York shortly, and can arrange all details with your regatta committee. We hope the New York C. C. will be able to accept this challenge and that everything will be arranged to our mutual satisfaction. Yours truly, BROCKVILLE C. C., by J. J. BELL, Com.

The New York C. C. will hold trial races, open to members of any canoe club, on Aug. 1 and 2, in the afternoon. The cup races will be sailed on New York Bay after the meet.

MOHICAN C. C.

THE famous Mohican C. C. of Albany, but a few years since one of the leading clubs of the country, with such members as Gibson, Oliver, Mix, Thomas, Phil and Will Wackerhagen, Fernow and a host more, has of late suffered from the reaction that seems to fall to the fate of all clubs at times; the men who made the club famous from 1882 to '87 have been drawn away from canoeing to a certain extent by business changes, some have left Albany, and of late the old turtle has not been seen in its accustomed place at the A. C. A. camps and on the sailing courses. Under the captaincy of Mr. C. V. Winne, however, the club has taken a sudden spurt that promises to place it once more in the front, many new members have come in to take the place of those who have retired from active canoeing, and they are now hard at work to live up to the traditions of the club. A very successful regatta was held on July 4 at the handsome down-river club house, the members going down in their canoes or by steam launch on the previous evening. The races included a paddling race in which Messrs. Titus, Wheeler, Smith, Winne, Sipple, Shaw and Anable started, the winner being Mr. Titus.

The race for the Oliver cup for novices was postponed from the morning for the lack of wind, but was sailed in the afternoon, the winner being Mr. Sipple in the Nancy Bell. The single-blade paddling was won by Mr. Wheeler, with Will Wackerhagen second and Hacket third. The main sailing race for the Gibson cup was sailed in a very light wind, Mr. Wheeler winning in Thetis, Mr. Sipple being second in Nancy Bell. The tandem paddling was won by Wheeler and Wackerhagen. The hurry-scurry race was won by Wheeler also. The tournament was most amusing, there being four crews entered. The victors were Messrs. Winne, paddler, and Wheeler, lanceman. In the evening the banjos and maudolins were brought out, the whole party returning to Albany late at night. The regatta was the most successful held in a long time, and is especially encouraging as the contestants were nearly all new men, who are evidently ready to take the places of the old racers of the club. The club is now off on a cruise on the upper Hudson, from Mechanicsville to Albany, under the energetic leadership of Capt. Winne. A meeting was held last week to consider the question of a war canoe, and the club is making arrangements to attend the A. C. A. meet in force. A fall regatta will be held on Labor Day.

POINTE CLAIRE CANOE CREW.—The fourth of the series of races for the Pointe Claire trophy was sailed on July 5 in a strong breeze from north-east, all the boats starting under close reefs. The starting gun was fired at 4:25:55, and Mab, C. Archibald, Aloha, H. McLean, and Isis, D. A. Poe, started in the order named. Isis went around the first buoy with a slight lead on Mab, Aloha, being third, but on the reach of the second buoy Mab recovered her lead. When the close work began Mab simply walked away from the other two. Isis went all to pieces, and was hove to for some time, and when she did get going went very slowly, and Aloha was under too short canvas to hold the leader. On the second round Isis passed Aloha and took second place. The time of the race was as follows:

	Start.	1st round.	2d round.
Isis, D. A. Poe	4 26 00	5 05 00	5 37 00
Mab, C. Archibald	4 25 55	4 44 00	5 07 45
Aloha, H. McLean	4 25 57	5 01 30	5 42 20

The tie for the skiff trophy, presented by the crew, between Gallagher, C. Saunderson, Vagabond, A. Reford, and Jean A, C. Montserrat, was also sailed off, and made a fine race, Vagabond got a lead at the start, Gallager crossing second, and Jean A, third, but Jean A passed the others on the windward work, and won, with Vagabond second. The time was as follows:

	Start.	Finish.
Jean A, C. Montserrat	4 19 45	5 36 30
Vagabond, A. Reford	4 19 45	5 37 50
Gallagher, C. Saunderson		withdrew.

Jean A., therefore, wins the trophy.

PEQUOT Y. AND C. ASSOCIATION.—The following orders for the fifth annual cruise have been sent out: "In view of the fact that the A. C. A. holds its first salt water meet at Jesssup's Neck, Peconic Bay, Long Island Sound, it has been decided by the commodore that the regular camp of the association will be replaced for this year by a club cruise, the destination being the A. C. A. meet. The fleet will rendezvous at Thimble Islands, on Saturday, Aug. 16, and lay over Sunday. On Monday an early start will be made for Plum Gut, with favorable conditions, arriving before noon of that day. If possible, it is the object to arrive at the A. C. A. camp at nightfall, or even earlier. It is hoped that as many club members as can will join in this cruise and thus enable the association to go into camp with a good representation. The Sunday spent at Thimble Islands will be very pleasant to those who have never been at that resort, and the run from thence to Peconic Bay is a very pleasant one. To those who have never attended an A. C. A. meet the cruise will be a delightful experience and well worth taking. It is important that you should notify the fleet captain if you will participate in this cruise. The fleet will break up at Peconic Bay, Aug. 22. Per order of Com. Borden, EDWARD H. EVERITT, Fleet Captain."

A. C. A. MEMBERSHIP.—Eastern Division: S. Willard Bridgham, Dr. Samuel R. Upham, Edward H. Tingley, Chas. E. Shedd, Dr. Edmund Abbott, Providence, R. I.; Fred W. Blanchard, Malden, Mass.; Fred P. Dean, Worcester, Mass. Northern Division: J. W. Sparrow, R. G. Muntz, F. J. Lightbourn, Toronto; G. R. Robertson, Streator White, Chas. H. Routh, Montreal; Julius G. Lay, Ottawa. Central Division: Wilna C. Harris, Rochester, N. Y. Atlantic Division: Chas. H. Twist, Percie W. Hart, New York city; John B. Moffat, Yonkers, N. Y.

Yachting.

ATLANTIC Y. C. CRUISE.

ACCORDING to orders, the fleet of the Atlantic Y. C. met at the rendezvous, New Rochelle, on July 19, being most hospitably entertained by the New Rochelle Y. C. The following orders were issued by Com. Lawton: The fleet will sail in two divisions during the cruise. The schooner classes and classes Nos. 1, 2, 3, 4, 5 and 6 of sloops will comprise the first division, and the other classes the second division. The signals for starting will be given from the flagship as follows: First gun, preparatory signal; second gun, starting signal for second division; third gun, starting signal for first division. There will be an interval of twenty minutes between each signal. To-day the preparatory signal will be fired at 7 o'clock A. M., and on signals to start the fleet will sail to Morris Cove. On Saturday the preparatory signal will be fired at 7 o'clock A. M., and on signals to start the fleet will sail for Deering's Harbor, Shelter Island. The fleet will proceed from Shelter Island to New London or Stonington, thence to Newport or New Bedford, as may be determined at a meeting of captains to be held upon arrival of the fleet at Shelter Island.

Storm in the evening rather dampened the proceedings, but the yachtsmen were happy nevertheless. Next morning the fleet set sail for Morris Cove, Athlon being the first in, Anaconda second. There was a strong breeze all day, reefs and housed topmasts being in order in the smaller craft. Choctaw outsailed Chispa by a few minutes. The fleet included Anaconda, Athlon, Cavalier, Chispa, Choctaw, Polly, Hypatia, Rival, Daisy, Arab and Pastime, Grayling and Venitzia accompanied the fleet this far, but continued on. After the fleet had anchored some excitement was caused by a fire on board the flagship. The steward endeavored to fill a lighted naphtha stove, the boat rolling somewhat at the time, and spilled the naphtha over the fire. An explosion naturally resulted in which his hands were burned. Aid was summoned from the Cavalier, Athlon and other yachts, and the fire was soon extinguished after doing considerable damage to the joinerwork of the forecastle and the fore end of the cabin. The run to Greenport was made on Saturday, the first part, as far as Plum Gut, before the wind, ending with a hard beat in to Greenport, Daisy losing her topmast. Arab lost a man off the bowsprit, but he was picked up as he passed the stern. Mabel lost her main boom and was towed in. The squadron lay at anchor over Sunday, the following vessels being all under the Atlantic flag, the new Ellsworth yacht Tigress joining the fleet here:

Schooners—Cavalier, T. J. Hogan; Grayling, L. A. Fish; Tidal Wave, Dr. A. L. Raney; Agnes, J. N. Winslow. Sloops—Chispa, flagship, Com. Newbury Lawton; Athlon, Vice-Com. F. B. Havens; Polly. Rear-Com. T. L. Arnold; Anaconda, J. G. Prague; Choctaw, C. A. Thayer; Hypatia, J. Weir; Shamrock, J. R. Maxwell; Pastime, Gen. J. Bliss; Ariadne, H. W. Banks; Arab, Edmund Fish; Nepenthe, G. P. Slade; Daisy, W. H. Nichols; Stella, J. L. Marcellus.

The yachts in the harbor, other than those of the Atlantic Club, were Madeline, Romana, Viator, Phantom, Kelpie, Nymph, Nydra, Nirvana and Psyche.

RHODE ISLAND Y. C. ANNUAL—JULY 15.

THE fourth annual regatta of the Rhode Island Y. C. was sailed on July 15 on the Providence River, the prize in each of the three classes being a championship cup. In Class A, 30ft. and over, the Low cup, already won twice by Peri, was offered; in Class B, 24 to 30ft., the Flint cup, won twice by Diamond, and in Class C the Anderson cup won once by Victor. The measurement is that formerly used by the Atlantic and Larchmont clubs, a mean length measured at two per cent. of waterline above the actual waterline. The courses were for classes A and B around stakeboat off Rumstick Point, leaving same on starboard, thence around stakeboat southeast of Warwick light, leaving same on starboard, and return to starting point at club house; 20 miles. For class C, from the club house, passing from north to south, thence around black spar buoy off club house, leaving same on starboard, thence around black spar buoy off club house, leaving same on port, thence around black spar buoy off Green's Island, leaving same on starboard, thence to starting point, 12 miles.

The entries were as follows:

CLASS A—30FT. AND OVER, MEAN LENGTH.

			L.W.L.
Awa	Dr. Hasbrouck et al	Providence	40.00
Mignon	C. G. Bloomer	Pawtucket	34.11
Peri	F. P. Sands	Newport	36.10
Nepenthe	J. J. Allen	Newport	42.00
Kelpie	C. F. Janes	Providence	30.00

CLASS B.

Diamond	L. Tillinghast	Newport	
Muscot	H. S. Capron	Providence	
Mucilage	W. Hodgkinson	Fall River	

CLASS C.

Faust	E. S. Right	Fall River	
Scud		Jameston	
Edna	E. Nicherson	Providence	
Victor	A. L. Sweet		
Olivette	Fabey Bros.	Providence	

Mignon did not start in consequence of some objection to a previous measurement. Olivette was not entered, but was allowed to sail with the small class, her time being taken.

There was a strong breeze, the cats reefing, but the course gave little windward work. Peri kept within her allowance of Awa through the race, finally winning by 1m. She is well-known as one of Alonzo E. Smith's old-time sloops. Awa, the widest of Mr. Burgess's 40ft. fleet, lost a little time by the parting of her jib tack, the jib being set on a stay, but she was fairly beaten by Peri. Both are centerboard boats. Nepenthe did not complete the course. She and Kelpie are both Herreshoff boats, and once considered quite fast. Peri retains the Low cup, having won it three times; Diamond also takes the Flint cup for the third and last time, while Faust wins a leg for the Anderson cup. The full times were:

CLASS A.

	Elapsed.	Corrected.
Awa	2 09 21	2 05 47
Peri	2 13 53	2 04 47
Nepenthe	Did not finish.	
Kelpie	2 59 57	2 40 33

CLASS B.

Diamond	2 41 47	2 40 57
Mucilage	2 44 31	2 44 01
Mascot	2 53 09	2 53 09

CLASS C.

Faust	2 05 52	2 05 52
Scud	2 28 10	2 22 58
Edna	2 10 03	2 07 46
Victor	2 17 31	2 16 24
Olivette	2 10 23	2 08 02

The judges were W. G. Brennen, O. C. Leach, H. S. Tanner and Frank White.

CHESAPEAKE BAY Y. C., JULY 12.

THE annual open regatta of the above club was sailed on Saturday over the club course on Miles River. The course is 12½ statute miles, and the time allowance was the old one of two minutes to the foot in twenty miles; boats measured from inside of stem to inside of sternpost, this antiquated system of allowance being the only one practical under the circumstances, as this being an open event, many of the boats sailing cannot be measured until the morning of the race. Their peculiar rig would also make very complicated any of the present modes of measurement by waterline and sail areas, so the club has adhered to the old rule until we can find something applicable to our boats.

The day opened cloudy, with a light air from S., which settled to light breeze from S.W. by the time the start was made. The race was for two classes of boats, one for our Chesapeake canoes, that have been described in a former article, the other class was made for the Chesapeake skiff, a class of boat being built in this section within the past two years quite extensively and used for oystering. These boats run from 30 to 40ft. long, sharp at both ends, flat-bottomed, but with from three to six or more inches deadrise; no frame except the side timbers, the bottom being made of 3 to 4in. pine plank, dowel-bolted together and fastened to the sides, which are stiffened by a heavy clamp strake running along the lower edge. They are half-decked, with a little cuddy forward.

The canoe class was open to all canoes, but those under 30ft. were rated at 30, and the same rule prevailed in the skiff class. The canoes entered were the Susie B., Lucy Lee, Alice May, Eunice and Mamie, all under 30ft. but rating at 30; Gertie, 30ft. 3in.; Only Son, 31ft. 10in.; Lauretta, 34ft. 10in., and the Island Bird, 35ft. 2in. The latter is the most completely and beautifully fitted canoe on the bay, and is considered by many to be the fastest boat in our waters; but the lightness of the breeze was much against the larger boats in the second race.

The canoes were started as follows: Susie B., Alice May, Mamie, Lucy Lee, and Eunice were started together at 11:45; Susie B. having the windward berth, the time allowance was deducted at the start, causing the Gertie to get off 18½ seconds later. Only Son came next, 1m. 58s. after the Gertie, Lauretta 3m. 45s. after Only Son, and the Island Bride 25s. after the Lauretta.

The boats all started on the starboard tack but after going a short distance all made a hitch to windward and some of them two short tacks, then all had a close reach to Long Point Buoy. The Gertie, handled by the veteran James Plummer of St. Michaels, quickly picked up her time on the boats ahead and soon assumed the lead, the Bride, though not benefitted by the light zephyrs as much as her smaller competitors, commenced to pick up the fleet also. The Gertie rounded Long Point Buoy with a long lead; from this point the boats had the wind on their port quarter and it was a beautiful sight from the club steamer to see these graceful craft coming for the Hill Buoy with everything set; nearly all of them carrying large square topsails on fore and main masts over their other sails. The Gertie passed the Hill Buoy at 12:58:30, Island Bride 1:07, Eunice 1:07:10, Lauretta 1:09, Only Son 1:13, Lucy Lee and Mamie lapped 1:14, and Alice May brought up the rear at 1:14:20.

From this point it was dead off the wind with spinakers to starboard. The wind having freshened a trifle the Bride began to wake up and chased the fleet Gertie hard. At Wye town Buoy the Gertie turned first, the Bride second, the Eunice third, and the others strung out. Now it was a beat dead to windward to the line at Deep Water Point, and the burning question on the point and on the club steamer was: "Can the Bride catch the Gertie?" They stick together afraid to break tacks, working the port shore to avoid the strong ebb tide.

As they near the line the excitement is great, but Gertie has a safe lead, and although the beautiful Bride gained on her she could not close the gap in time, and Gertie crossed the line at 2.41, Bride 3m. later, at 2:44, sailing over the course in 3m. 9s. less time than Gertie, but not able to save her time allowance, Eunice third at 2:47:32, Laurette did not finish, and the times of the others not taken.

In the skiff race the entries were Bateman, Miles River, Two Brothers, Sneak and Lizzie F. Lizzie F. was started at 1:03, Sneak next at 1m. 15s. after Lizzie. Two Brothers allows Sneak 3m, 32s. and starts after that time elapses. Bateman and Miles River, both of the same length, allow Two Brothers 10s. and are off together. They sail the same course as the canoes, and after a very close race between the leading boats come in as follows: Sneak first at 3:33:00, Bateman second at 3:35:20, Brothers third at 3:44:30, times of others not taken. Gertie wins first in canoe class and Island Bride second. Sneak first in the skiff class and Samuel Bateman second. Regatta committee, J. G. Morris, J. H. Wheeler and Capt. Thompson. A large number of the club members with their families and friends were present on the club steamer and a numerous assembly viewed the race from the point.

EASTON, Md. SINKBOAT.

BY NAPHTHA TO NAG'S HEAD.

WINDSOR, N. C., June 17.—I have been fishing around here in the river all this season, catching a few black bass and perch, until it got to be rather poor sport, and thinking that I would find good fishing at Nag's Head, a hundred miles below here, I concluded to make the trip. So last Wednesday Capt. O., Tom, Charlie and the writer put fishing rods, canvas boat and lunch on board my 25ft. naphtha launch Tuscarora, and at 2 o'clock P. M. left here and steamed down the Cashie to Albemarle Sound. We reached the head of the Sound at 5:30 o'clock, making the run of 32 miles in 3½ hours; oiled up and prepared to spend the night on the broad and rough waters of the Albemarle. At 6 o'clock we steamed out and pointed about east for Nag's Head, 70 miles away. We expected to make the run in 8 hours, but found that the Tuscarora could not go as fast in rough water as in the river, where the water is smooth. Everything went well until 1 o'clock when we managed to break our compass and thereby lost the way, going into Currituck Sound instead of Roanoke Sound as we should have done. We ran on the wrong course for about an hour, and therefore had to run back for an hour, losing two hours. Just as the sun rose Thursday morning we dropped anchor at Nag's Head, just in time to have our names in the pot for breakfast, having made the run of a hundred miles in 14 hours. The landlord of the new hotel, Mr. J. M. Whedbee, sent out a boat and took us off, and gave us a good breakfast of fresh spots, etc. We had been up all night, and were of course very sleepy and tired. After dinner we took a stroll along the ocean beach, spending the time very pleasantly until night.

Next morning the wind was blowing very hard and we voted for a trip to the fresh ponds, four miles above Nag's Head, about equal distance from sound and ocean. We arrived at the main pond in about an hour, set up the canvas boat and caught bait with the little hand-seine which we took along. Charlie and myself went in the boat, while Capt. O. and Tom put on their old clothes and waded in. The black bass and perch were in the notion of taking the bait, and in three or four hours we caught a bushel of fish, which was as many as could be consumed by the workmen at the hotel. We therefore quit, went out to a shade tree, ate our lunch and had a smoke, after which we made our way back by way of the ocean beach, taking a plunge in the surf on our way down. Counting our fish we found that we had caught 33 black bass; we did not count the perch, etc.

Next day (Saturday) salt-water fishing was in order, and as we had no spare naphtha we had to hire a sailboat. Sailing four miles across the Sound we dropped anchor just off Roanoke Island, and there caught bluefish, trout, croakers, spots, etc., until all hands were tired of the sport. We returned to the hotel at 4 o'clock, took dinner, and later a bath in the surf. Made ready on Saturday night for an early start home Sunday morning, but at 2 o'clock the wind came out from the northeast and blew a gale. We therefore had to lie over until Monday morning, as we wanted to make the run back by daylight. Monday morning at 5:10 found us steaming up the Sound; wind moderate from N.E. Reached home at 7 o'clock P. M., making the run in fourteen hours, just the time it took to make the run down.

All of us were glad to reach home again and anxious to make another trip to Nag's Head and the fresh ponds. CASHIE.

KEEL VS. BOARD.

THE Boston *Globe* of July 20 speaks as follows of the centerboard in the 40ft. class: "It is interesting to note that Designer Burgess believes that a centerboard 40-footer can be designed which will beat both the Minerva and Gossoon. He reasons from the good results which have been obtained with such centerboard boats as the Nymph, Verena and Choctaw. These boats were all designed as cruising craft; they have heavy and windcatching cabin trunks, and their scantling is much heavier than it would need to be for a yacht intended solely for racing. A flush-decked lightly built 40-footer of the Verena's type, with all weights kept down, and put into low ballast, would be a formidable craft to beat. She would of course be a 'racing machine,' as she would not have head room in the cabin. But when the merits of keel vs. centerboard model are to be considered, it is unfair to the centerboard that she should be compelled to carry a big house on deck, and to practically have no deck room from which to handle sails."

A comparison of the records up to date show that there is very little in the performances of Nymph, Verena, Choctaw or Chiquita to indicate that they can beat Minerva, much less a better keel 40. Beside these is the centerboard Gorilla, a flush-deck racing boat with a very fair record, but not able to head off either Liris or Minerva. We were under the impression that Mr. Burgess already had two flush-decked, lightly built, low ballasted racing craft afloat in Ventura and Mocassin, one of which has been badly beaten by Minerva. If they will not give sufficient evidence by the end of the season, there are the two centerboard racing machines in the 30ft. class, Shark and Hawk, to be heard from alongside of Saladin and Kathleen. These centerboard boats are hardly more than a big deck with a centerboard trunk below it, there is no room for any sort of life aboard, and they are veritable racing machines. At the same time it is likely that Saladin, an excellent boat for cruising and racing, will beat them. Mr. Burgess himself has taught us that the day of the centerboard for small yachts has gone by, and the four boats, Ventura, Mocassin, Shark and Hawk, are likely to give added proof of this fact.

NEWARK Y. C.—The Newark Y. C. will hold it eighth annual sweepstakes regatta on Aug. 16, over the course off the new club, at Bayonne, from line between end of club dock and stakeboat off same, thence to Red Spar Buoy off lighthouse, thence to stakeboat anchored off the west draw of the Central Railroad long bridge, thence to the place of beginning. Sailing twice over the course, keeping all marks of the port side. The time allowance will be one minute to the foot of the waterline, with one-half of the overhang added. An entrance fee of $3 will be made for all classes, two-thirds to go to the winner and one-third to the second, if there are four boats in the class. Entries will be taken by A. F. Adams, of 746 Broad street, Newark, N. J.

NEW YORK Y. R. A. ANNUAL CRUISE.—The programme for the annual cruise, as recommended in the report of committee adopted April 19, is as follows: The cruise will begin on July 28. Yachts will rendezvous off the Harlem Y. C. house, College Point, L. I., on Saturday afternoon, July 26, reporting to the fleet captain and remaining at anchor over Sunday and sail as follows: Monday to Oyster Bay, Tuesday to Roton Point, Norwalk Islands, Wednesday to Black Rock, Thursday to Lloyd's Harbor, Friday to Indian Harbor, Saturday to Sea Cliff and disband. The start will take place at 9 A. M. each day; at 8:30 A. M. a gun will be fired to prepare to start, and all yachts must remain at anchor until the starting gun is fired. The first yacht reaching the destination for the day will take her own time of arrival, anchor in some convenient place, hoist an ensign, and take the time of arrival of all the other yachts, all of which must pass between this yacht and the nearest shore; the record of each day's run shall be delivered to the fleet captain immediately after the arrival of the last yacht. Yachts desiring to leave the fleet must first obtain leave from the admiral. During the cruise the president of the Association shall command the fleet and act as admiral of the fleet, and shall issue such orders as may be necessary. He shall also appoint a fleet captain, who shall see that his orders are executed. The vice-president of the Association shall act as vice-admiral during the cruise, and in the absence of the admiral shall command the fleet. The admiral shall appoint a fleet surgeon, who shall attend to all sickness or accidents to members while on the cruise. The fleet shall be composed of a squadron from each club in the Association, numbered according to date of organization, and each squadron will be commanded by the commodore of the club composing the squadron, who shall receive all orders from the admiral and execute the same. All yachts shall carry the Association flag at the mast head and its club flag on the peak, but yachts may display both flags at the mast head when at anchor. A. J. Prime, Geo. Parkhill and R. Puhlman, Committee. The programme for the union regatta on Sept. 1 has been sent out.

QUAKER CITY Y. C.—Com. Middleton has taken command of the squadron for the annual cruise, and the following general order has been issued: "The vessels of the fleet will rendezvous at Whitestone, Long Island, for the annual squadron cruise on Monday, Aug. 4. Captains will report aboard the flagship at 9 o'clock P. M., at which time the movements for the earlier days of the cruise will be decided upon. The cruise will extend to New London and Newport. There will be two divisions of the fleet during the cruise; the first division comprising all schooners, first and second class sloops and steam yachts. The second division comprising third and fourth class sloops, open yachts and steam launches. The daily runs will be trials of speed for all classes, and the first yacht arriving at the destined port will take its own time and that of the others, and report the result to the commodore. In all races the second division will start thirty minutes in advance of the first division. The signals for starting will be as follows: First gun from the flagship to prepare to sail; ten minutes later, second gun from flagship, for second division to start; thirty minutes later, third gun from flagship, for first division to start. The routine and rules contained in the club manual will be observed during the cruise. Yachts, when in squadron, are earnestly requested to take their ship's time in striking bells from that of the flagship; and in no case to anticipate it. Captains intending to join the squadron are requested to notify the fleet captain at the club house, 911 Walnut street, at as early a date as possible. By order of the Commodore. SAMUEL A. WOOD, Fleet Captain."

INDIAN HARBOR Y. C.—The second annual regatta of this club will be sailed off Greenwich, Conn., on Saturday, Aug. 2, under the rules of the New York Y. R. A. Suitable cups will be given as prizes in each class where two or more boats start. The classes will be as follows: Open jib and mainsail boats over 27ft. and not over 32ft., 23ft. and not over 27ft., 23ft. and under. Open catboats over 27ft. and not over 32ft., 23ft. and not over 27ft., 20ft. and not over 23ft., 17ft. and not over 20ft., 17ft. and under. The measurement will be the mean length, *i. e.*, the load waterline plus half the overhang aft. Crews will be limited to one man to every 5ft. of sailing length or part thereof, in addition to the helmsman. Shifting ballast will be allowed. Time allowance will be figured according to the Herreshoff table. The course will be five nautical miles to windward (or leeward) and return, from stakeboats anchored between Little Captain's Island and Greenwich Point. An entry fee of $1 will be charged all yachts that are not enrolled in clubs belonging to the New York Y. R. A. Owners of yachts in any class desiring to enter for a sweepstake of $25 each, to be sailed for in addition to the regular prizes, are requested to advise the committee to that effect before 9 A. M. of the morning of the regatta. The race will be started at 1 P. M. precisely, provided the conditions are favorable. The club steamer will leave the Greenwich dock at 12:15 P. M. and the Indian Harbor Hotel dock at 12:30 P. M. Entries will close July 31. Regatta Committee—H. E. Doremus, Chairman; Richard Outwater, F. B. Jones. Address, Silleck House, Greenwich, Conn.

NEW YORK Y. C.—It is a long way from the little blue and gold volume published by the New York Y. C. in 1880 to the handsome and shipshape book of the present year, the 46th of the club's existence. The change in bindings is but an index of the great change that has taken place in yachting, there is a good deal more canvas and hard weather, and correspondingly less of the blue and gold than in the past. A look through the two books shows many interesting comparisons; the membership in 1880 was 395, including honorary and life; now it is 770, or nearly double. The fleet in 1880 included 38 schooners, 27 singlestickers and 20 steamers, the latter nearly all small craft. This year it numbers 75 schooners, 75 sloops, cutters and yawls, and 82 steamers, many of them powerful sea-going vessels. In 1880 there were two keel cutters on the list, Muriel and Volante; now they rival the sloops in number. The new book, in addition to the signal code and much other matter not found in the old, contains a reproduction of the Coast Survey chart of the harbor, giving the two courses of the club. It is the handsomest and most complete book the club has yet issued; the covers, of semi-flexible canvas, with rounded corners, make it easily carried in the pocket, the color of the canvas being neat and serviceable. Each member's copy has the name of his yacht stamped on the front cover.

PLEON Y. C., MARBLEHEAD, July 16.—The twenty-second regatta of the Pleon Y. C. was sailed on Wednesday of last week in a fresh N. W. wind. Tantrum lost by a mistake in the course, her crew not being familiar with the waters. The times were:

GREAT SOUTH BAY.—On July 15 a race was sailed over the Great South Bay Y. C. course, for a cup given by Mr. William Arnold. The wind was fresh from S.W. The starters were as follows, the time allowances being made at the start. The course was a 20-mile triangle:

	Length.	Start.
Mistake, Dr. T. G. Talmage	27.00	11 00 00
Nathalie, Dr. Chauncey E. Low	28.03	11 01 03
Evelyn, Josiah Robbins	29.02	11 02 00
Owl, H. M. Brewster	30.04	11 03 43
Parole, E. C. Pechin	30.05	11 03 50
Laura F., Wm. Nelson	33.11	11 08 20
Dionis, H. F. Smith	34.02	11 08 45
Berkeley, Alfred S. Swan	34.03	11 08 52
Patience, S. T. Peters	35.08	11 10 47
Agnes Booth, Bert Rogers	33.11	11 11 36

Each yacht was started from an anchor at the time given in the above table. Evelyn won, with Mistake second and Berkeley third. The judges were Mr. A. T. Enos, Mr. Arthur Dominy and Mr. E. S. Knapp.

SIPPICAN Y. C.—At the annual election of this club on July 7 the following officers were elected: Com., R. S. Ryder; Vice-Com., J. Gorham Palfrey; Sec.-Treas., J. Henry Clark, Jr.; Directors, R. S. Ryder, J. Gorham Palfrey, J. S. Whiting, J. E. DeKay, Eben Holmes; Measr., J. Pegram. Regatta Com., J. Gorham Palfrey, Irving Chapman, W. H. Davis. Ex. Com., J. Henry Clark, Jr., J. S. Whiting, J. E. De De Kay. The club burgee was changed, being now a pointed instead of a swallow-tailed burgee, the colors and device remaining the same.

DETROIT Y. C. PENNANT REGATTA, JULY 14.—The second pennant regatta of the Detroit Y. C. was sailed on July 14 on Lake St. Clair, the course being for all but Class 5 out around the lightship and return, 18 miles, and for Class 5 around Peche Island Buoy, 9 miles. The wind was S.E., but shifted to S.W. in the latter part of the race. When near Peche Island, at 3 P. M., a squall struck the fleet, but did no serious damage. The full times were:

Diadem, L. A. Hayward	18.07	1 53 16	1 24 22
Pet, J. W. McFarland	19.08	2 12 41	1 35 28
Eureka, E. B. Rogers	Withdrew.		

The judges were George Pfaffman and John Sanborn. White Fawn now has a leg for first-class cup with Posy and Mudgekewis, and a sail off will be necessary. Diadem takes the cup in the jib and mainsail class and Madge in second class. Flora Lee, Mirage and Rocket will sail off in third class.

CATBOATS ON BUZZARD'S BAY.—On July 19 an open race for catboats was sailed on Buzzards Bay, off Marion, Mass. The course was around Southeast Ledge Buoy and Nye's Buoy 16 miles, for first class. Mist, the only boat in second class, went up into third. The wind was light S.W. with squalls at times from N.W. The times were:

	Elapsed.	Corrected.
FIRST CLASS—10 MILES.		
Climax, D. C. Spencer	2 18 00	2 02 01
Mist, H. Lyon	2 44 01	2 22 40
Anonyma, F. Bradley	2 58 01	2 41 43

FIFTH CLASS—4½ MILES.		
Worry, H. W. Bellows	0 38 36	0 36 10
Fairy, Coldsfield	0 55 04	0 40 05

Tuzzle capsized after the race.

RACES FOR THE 30FT. CLASS.—It is proposed to get up a race for 30-footers at Newport some time during the New York Y. C. cruise. It may be sailed in connection with the sweepstake race for 40s, to be given by the Corinthian Y. C. of New York, and it may be sailed in connection with a 40ft. race to be given by the New York Y. C., if that club follows its last year's programme and gives a race for 40s. Of Boston 30s, it is probable that the Saladin, Hawk and Shark will go around to Newport for this race. The Shark is sure to go, and owner Prince, too, will probably make a match race with the Kathleen, if no other way of meeting the crack New York 30-footer presents itself. T. C. Zerega is more inclined to bring the Kathleen to Marblehead than he was a few weeks ago, and it is reported that he has already made a match race with the Shona, to be sailed in Eastern waters. The Burgess 30-footers Tomboy and Gladys hail from Newport and will doubtless swell the entries of the proposed race. The race will probably be sailed between Aug. 8 and Aug. 11.—*Boston Globe.*

DORCHESTER Y. C.—The annual cruise will begin on July 21 The squadron will rendezvous off Thompson's Island, and on signal the fleet will pass by the stern of the flagship and proceed to Marblehead. From there the cruise will extend to Provincetown and Duxbury. W. S. Nickerson is fleet captain.

PAVONIA Y. C.—The new house and station of this club at Atlantic Highlands was opened with appropriate ceremonies on July 19, many visitors being present.

CORINTHIAN NAVY.—Owing to the very squally nature of the wind, the strong adverse tide and the heavy sea that ran riot in the Hudson River on July 12, the small boat classes in the Hudson River Squadron regatta were compelled to abandon the race. The cat class qualified, the Uno winning. The regatta committee of this squadron announces that they will resail the regatta later in the fall. On July 26, the East River Squadron will hold its regatta off the Knickerbocker Y. C. house, at Port Morris; entries may be made with A. Dahm-Petersen, 63 East 114th street. The fleet of this organization will assemble at New Rochelle, on Aug. 2, before 9 A. M., to take part in the annual cruise of the Navy. Mr. L. A. Camacho, of New Brighton, has been appointed secretary of the New York Bay Squadron. The first year book of the young Corinthian Navy, founded last winter, is a neat little volume in embossed cloth covers, containing a list of 168 members and 123 boats, mostly small cruisers such as canoe yawls and St. Lawrence River skiffs. The organization thus far has been remarkably successful and has a promising future before it. Proposed for membership: Edward C. Lewis, J. Gardner, Albert W. Hoor, W. F. R. Leigh, J. Lounsbery, H. H. Salmon, B. T. Squier and G. W. Gwilliams.

YACHTING DISASTERS.—The season has been marked by the usual number of capsizes and minor disasters, in all or nearly all cases due to poor boats or ignorance. This week a serious disaster is reported from Lake Michigan, two yachts from Chicago, the Sable and Iago, being caught in a tornado while cruising on the lake, and their crews, James and Joseph Beaupre and John and Abraham Durucher, being lost. The two vessels were hardly more than small centerboard boats, one of 24 and one of 14ft., and utterly unfitted for Lake Michigan. They sailed from St. Joseph, Mich., on July 14, for Chicago. On July 17 they were picked up, lashed together, by the steamer Puritan, but no traces of the men were found. On July 17, at 10 P. M., the steam launch Catharine was struck and sunk by the steamer St. Lawrence, near Alexandria Bay, on the St. Lawrence River, five persons, including three ladies, being drowned. The launch was a party boat, hired by the day to tourists. On July 19 a centerboard boat was struck by a squall off Gloucester, Mass., and one of her crew of three was drowned, the others being rescued by a tug. On the same day a small boat was capsized in Boston Harbor, a boy being drowned, the two men in her being picked up by passing boats.

NEW YORK Y. C.—The fourth general meeting of the New York Y. C. was held on July 17, Vice-Com. Iselin presiding. The following new members were elected: Andrew B. Culver, Allen C. Washington, Henry Papne Whitney, Francis H. Weeks, W. Lewis Boyle, Howard W. Coates, William A. Read, William E. Dupont, Francis L. Leland, William H. Calhoun, John J. Pierrepont, William Rockefeller, J. S. Perkins, J. De Ver Warner, H. Van R. Kennedy, C. Barnum Seeley, Leonard F. Beckwith and Henry T. Sloane. Admiral John L. Worden was elected to honorary membership. Rear Admiral Iselin announced that he would offer a cup valued at $250 to be sailed for during the cruise. The following amendment to the racing rules was finally adopted: "Any yacht violating the racing rules of this club or the Government regulations as to the rules of the road, shall at the discretion of the regatta committee, be debarred from entering in any race of the club or races held under its management for such time as shall in their discretion be deemed advisable."

LARCHMONT Y. C.—In looking over the handsome book of the Larchmont Y. C. for 1890, it is hard to realize that the club has just reached its tenth birthday, in view of the facts that it stands second in point of membership, the total membership now being within 2 or 3 of 600, while it boasts the largest and finest house and the handsomest grounds of all American clubs. That so much has been done is due mainly to the foresight and energy of a few men, who have worked early and late to make the club a success. The fleet now includes 178 siling craft and 50 steamers. The new book, like its predecessor, is small and compact, but quite thick, and contains a great amount of matter relating to the club and to yachting in general. It is bound in the same flexible canvas cover that has been used by the club for several years and has become so well known among yachtsmen.

GREAT HEAD Y. C. CRUISE.—The cruise of the Great Head Y. C. began in a very lively manner on Saturday last, a violent squall sweeping down on the fleet during the review and capsizing the schooner Galena and the sloop Ruby, the two boats being towed ashore and the crews rescued. At 5 P. M. the fleet, including the following yachts, sailed for Marblehead: Widgeon, Com. E. A. Cook; Owl, Vice-Com. Cushing; Almira, Fleet-Capt. T. J. Young; Mayflower, H. H. Litchfield; Katherine, L. B. Smith; Galena, A. P. Bicknell; Nellie, George F. Floyd; Eclipse, D. N. Belcher; Recreation, Frank Ferdinand; Fancy, George L. Cade; Clio, C. B. Belcher; Ideal, L. B. Weston. The fleet will be gone three weeks, and will visit Portland, Boothbay, Rockland, Camden, Belfast, Castine and Mt. Desert.

NO MORE POTLEAD.—The value of a copper bottom has been known to many yachtsmen for a long time, but very few American yachtsmen have adopted it in yachts of 40ft. and under; copper, bronze and potlead still being the favorites. As soon as Gossoon returns from the E. Y. C. cruise she will be coppered at Lawley's preparatory to the New York Y. C. cruise. Fortunately she is well under her class, 39ft. 3 to 39ft. 5 in l.w.l., and she will stand the extra weight of copper very well. She is the first 40 of the Burgess fleet to be coppered. Minerva was coppered when she came here, but the only American 40 or 30 that has thus far tried copper is Helen.

EASTERN Y. C.—The fleet reached Bar Harbor on July 18, having passed Sunday at Portland. On Wednesday the yachts left Camden, but were becalmed in Egmoggin Reach. Pappoose ran on the Ship and Barge Ledge, off Bass Harbor, being fast on the rocks for 10 hours, Sea Fox lying by her, and finally helping her off. The squadron disbanded at Bar Harbor.

LARCHMONT Y. C. CRUISE.—The fleet of the Larchmont Y. C. reached New London early on July 14 in a heavy fog, having left Black Rock on the previous morning with a good breeze, but meeting the fog off Bartlett's Reef. On July 15, in spite of the fog, the fleet ran to Shelter Island, lying there over Wednesday and Thursday.

MASSACHUSETTS Y. C. CRUISE.—The cruise of the Massachusetts Y. C. began on Saturday according to programme, with a review of the fleet off Thompson's Island, in Boston Harbor. After the review a heavy squall struck the fleet, some anchoring while others proceeded on the cruise.

MOSQUITO FLEET Y. C.—Championship pennant sail-off of first class, July 19. Distance 5 miles; weather cloudy; wind, northwest, strong and puffy; ebb tide. Summary:

	Length.	Elapsed.	Corrected.
Tantrum, J. F. Small	15.00	1 26 43	1 26 43
Minnie, James Bertram	14.10	1 24 40	1 24 29
Lucy, W. H. Ransom	14.11	Capsized.	

Minnie wins the pennant for the first class. Judges, James Bertram, S. C. Higgins and M. W. Ransom.

THE NEW LAUNCH HUM.—This odd little craft which was launched on the Harlem River on Saturday last, is but 16ft. 4in. long, but has a complete quadruple expansion engine, the cylinders being 2⅜, 3½, 4½ and 5¾in. by 2½. These are arranged to form a pair of tandem steeple engines, the high and low pressure having one rod and the two intermediate a second. The fuel used is a mixture of kerosene and several other oils, devised by Mr. Archibald Watt, the builder of the engines, the mixture being used to generate a gas which is used in place of steam in the cylinders. It is claimed that the process is very cheap, and that the fuel is carried in a very compact and convenient form. The Hum is of course only an experiment, if successful the engines and fuel will be tried on a larger scale.

HULL Y. C.—The Hull Y. C. starts its second 10 years of life with most promising prospects, having just taken possession of a new and very handsome house at Hull, near Boston, while its roll of members includes 315 names, with a fleet of 111 sailing craft and 19 steamers. The racing of which there has always been plenty, is practically limited to yachts of 40ft. and under, the fleet being specially strong in fast cat and jib and mainsail boats. The racing rule is length on waterline plus ¼ of after overhang.

HARLEM Y. C.—The new house of the Harlem Y. C. at College Point, L. I., was opened on July 19, a large number of guests being present. A ladies' race was on the programme, but the wind was too strong. The house was illuminated in the evening, a dance following the supper. During the afternoon a yacht capsized off the club house, but the crew were rescued.

A NEW AUXILIARY STEAM YACHT.—Messrs Neafie & Levy, of Philadelphia, have taken a contract for a large auxiliary steam yacht designed by Mr. J. Beavor-Webb for an American yachtsman whose name has not been made known. She will be 240ft. over all, 204ft. l.w.l., 27ft. beam and 13ft. draft, and will be ready by spring.

A NOVEL RACE OF NAPHTHA LAUNCHES.—On Tuesday morning a curious race was started off the Corinthian Y. C. house at Staten Island, the contestants being two 25ft. naphtha launches built by the Gas Engine & Power Co., and the course being around Long Island, finishing off the American Y. C. house at Milton's Neck, a distance of some 240 miles.

OYSTER BAY Y. C.—The postponed race for the Commodore's cup, the first of a series of five, was sailed on July 19 in a strong S.W. wind. Sinbad, owned by Thos. Young and sailed by E. T. Underhill, beat Marion, owned by Mr. Underhill. The owners decided by lot who should sail the boat.

A MATCH OFF BRIDGEPORT.—Arrangements are being made for a match between the fast jib and mainsail boat Eureka, of Boston, and the Rival, owned by Com. Burritt of Bridgeport. No date is yet fixed.

ALICE—GOSSIP.—The McVey 40, Alice, has been named Gossip by her new owner. Her mast has been moved aft one foot and nearly 600lbs. of lead have been added to her keel.

SAVIN HILL Y. C.—On July 15 the handsome new house of the Savin Hill Y. C., designed by Fleet Captain W. H. Besarick, was opened with a ball.

TRIXIE—HONORÉ.—A match has been made between Messrs. W. Butler Duncan and C. Oliver Iselin to sail these two cats off Newport.

CEDAR POINT Y. C.—The regatta of July 22 has been postponed to July 30, at which date the fleet of the N. Y. Y. R. A. is expected.

WANDA, steam yacht, has been chartered by Mr. Jas. Stillman to Mr. J. T. Coolidge, of Boston, and is now at Bar Harbor.

GOLDEN FLEECE, steam yacht, sailed from Cowes for New York on July 15.

Answers to Correspondents.

J. D. W.—See notes on Lake George fishing in last issue and today.

C. O. M.—Try Tim Pond or Round Mountain Lakes, reached via Eustis, Me.

J. F. R.—See our angling columns of last week, and an advertisement of a preserving powder in this issue.

O. W. D., Boston.—We believe that there are such law, there is at least one in the District of Columbia. We will examine the other statutes and report next week.

S. Q., Seabright, N. J.—Will you kindly inform me what kind and what size of hook to use for striped bass, ranging from 1 to 5lbs., for river fishing, where there is a swift current, using crabs or eels for bait? Ans. Use Nos. 2-0 to 4-0, highest quality Sproat, snelled on trible loops or double gut, and a 3ft. double leader.

R. P. S., Connecticut.—1. Can you enlighten me through your columns whether or not the experiment of rearing minks in captivity has been tried, and if so, with what result? 2. Can I get any book on the subject, and if so, where? 3. Has the attempt been made with otters, and results? Ans. 1. The attempt to rear minks has been made, but we have never heard of its success. 2. We know of no book on the subject. 3. We believe it to be impossible to breed otters in captivity.

A MODEL RAILWAY.—The Burlington Route, C., B. & Q. R. R., operates 7,000 miles of road, with termini in Chicago, St. Louis, St. Paul, Omaha, Kansas City and Denver. For speed, safety, comfort, equipment, track and efficient service it has no equal. The Burlington gains new patrons, but loses none.—*Adv.*

WHAT "KIT CLARKE" SAYS OF

THE KOSMIC ROD

THE PARADISE FIN AND FEATHER CLUB,
LAC DES GRANDES ISLES, CANADA, July 14, 1890.

Messrs. A. G. Spalding & Bros.:

GENTLEMEN—I have handled some pretty good rods, but none has pleased me better than the 5oz. "Kosmic" which you built for me last May. I labored with it daily during the month of June, and lifted many heavy trout up to 4lbs. each, and then, in order to test its murderous qualities, tried bottom fishing with a 4oz. live perch for bait. The little perch went into the jaws of a 4lb. trout, and in due time the trout went into my boat. This you will concede is a hard test for so light a tool, but it stood it like an old timer, and is worth all the praise I can give it. I like a rod with backbone—one that is tough and stiff in the middle joint, for after all a rod's work is done between the two ferrules, and in this most valuable essential my "Kosmic" is perfection. Besides, the artistic mounting and beauty of finish displayed in the rod won admiration from many accomplished anglers. The man who tries to make a better rod will have to hustle.

Yours respectfully, KIT CLARKE.

The Glittering Gang Trolling Bait.

Best in the world. Try them alongside your best bait and you can see the difference. We refund the money if not satisfactory. For sale by dealers. Prices: 75c., $1.00 and $1.25.

Eight muscalonge were caught in two hours by Geo. Graham, Rice Lake, Can., with the best Canadian spoon alongside without a strike.
Six muscalonge were caught on Rice Lake by Chas. Gilchrist one forenoon.
Forty-three pike were taken by Chas. Smith, Oneida Lake, in three hours.
Wm. Comstock, Alexandria Bay, caught 22 bass and 7 pickerel in one day's fishing on our baits.
J. D. Wilson, Tallahassee, Fla., had 16 strikes and took 13 bass, largest weighing 17lbs. 10oz.

We can show hundreds of testimonials received this season already.

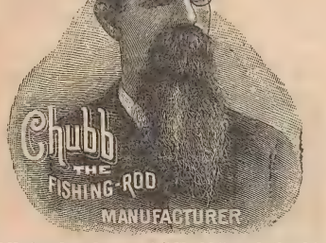
No. 182 SIXTH AVENUE, Near Thirteenth Street, **NEW YORK.**

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND.—It will wind up the line slowly if the angler chooses.
THIRD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other reel.
FIFTH. It will prevent tips, lines and snells from being broken by large fish.
SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.



The reel is manipulated entirely by the hand that holds the rod.

Wakeman Skeleton Bait.

Far ahead of any Artificial Bait in the World.

Made in four sizes: No. 0, speckled trout and black bass; No. 1. black bass; No. 2, bass and pickerel; No. 3, muscallonge, salmon trout and bluefish. It is guaranteed to catch bass when all other baits fail. It effects a great saving in minnows, on account of the protection afforded by its peculiar construction; one minnow having been known to catch twenty-five bass before it was rendered useless. For sale by all dealers and by the manufacturer. Send for circular and price list.

Names and Portraits of Birds

Which Interest Gunners; with descriptions in language understanded of the people.
BY G. TRUMBULL.

Contains the local names in popular use, and eighty-nine illustrations, which, with the clear descriptions in the text, will enable any man who can read to identify the contents of his game bag.

OPINIONS OF THE PRESS:

It is the first, so far as we know, of a class of books of which the need is felt in every department of natural history.—*Troy Press.*

To all dwellers by the water and in the country and especially all who shoot, the book will supply a great need, and every one who is interested in birds will be interested in it.—*Boston Evening Traveller.*

The book should find its way to a choice place in every sportsman's library.—*Chicago Inter-Ocean.*

There is a delightful dearth of dead languages in this book. The sportsman who looks between the covers for a description of some game bird—a description which will enable him to identify the creature should he meet it in the woods or on the water—is not compelled to shut the book, drop a bad word or two upon it and go in search of some Greek and Latin dictionaries to find out what the description means.—*New York Herald.*

ANSWERS TO CORRESPONDENTS.

THE BLUEFISH IN HIS ABUNDANCE.

FISHERMEN with rod and line or line and squid have amply satisfied themselves by this time that bluefish have severely scourged the seacoast from North Carolina to Massachusetts, and doubtless further north. Early in July the waters of New Jersey were the scene of their depredations and their undoing for sport and for profit. Everybody knows that tons and tons of these fish have been dumped into markets of New York and Boston, where they quickly produced a glut—as one would expect from such inveterate gluttons. On July 16, 100bbls. of bluefish arrived in Boston from Cape Cod, and on the 17th the run continued. It seems but yesterday that we heard of the terrible onslaughts of these piratical hordes by which the beach at Atlantic City was lined with helpless masses of fish, struggling to escape from the destructive jaws of their dreaded enemy, the bluefish. There was a report that the victims picked up on the sands or scooped out of shallow depths with nets were menhaden; but we are informed by Mr. T. F. Schneider, of Washington, D. C., who was on the ground soon after the occurrence, that they were weakfish beyond the possibility of a doubt. This goes to verify a statement, more than once repeated in FOREST AND STREAM, that the bluefish is the great destroyer of food fishes and does not limit his savage attentions to the menhaden. Alewives, scup, mackerel and every other fish of suitable size serve to dull the edge of his keen appetite. Anchovies, young herring, silversides and the young of all food fishes in his vicinity, are bolted into his capacious maw, beginning with the period in his career when men call him the snapping mackerel.

We know little about the babyhood of this rapacious species. The U. S. Fish Commission has collected examples of one inch or less in length at sea, well off our Middle States, but the embryonic history of the fish is very imperfectly understood. The adult is pelagic and a rover, coming suddenly with a great wave of disaster to his contemporaries, and going without apparent cause into obscure retreats, which the eye of science has not yet penetrated; but whether in bays and sounds of the Western Atlantic, or on the shores of West Africa, or plunging through Indian Seas, the bluefish never changes his relentless ferocity, however men may change his name. Therefore, when we hear that vessels are creaking with their burdens of bluefish and that successful fishermen like our friend Schneider, during a brief vacation from columns and arches and building lines, have gathered in hundreds of pounds of these animated chopping machines with a clumsy combination of iron and bone, lead and cotton twine, sometimes baited with a piece of rag, we take courage, look more hopefully into the future, and fall upon our broiled bluefish, alias tailor, with renewed relish. Why should not the bluefish be a choice morsel since he appropriates and assimilates the best of the food fishes which the waters contain?

STRAY DOGS AND THE A. K. C.

THE dog question in any large city is a permanent and a pressing one. Year in and year out the care and control of the thousands of these animals resident within city limits engage the attention of a large number of individuals and entail an expenditure of many thousands of dollars. The matter may be looked at from a dozen various standpoints. A chapter might be written upon the care of dogs in town, another upon the various cruelties practiced and the measures for their repression; yet again there is the question of the best breeds of dogs for use as house pets and the characteristics of each. But apart from all these is the ever current problem of disposing of the stray and worthless curs. In past numbers FOREST AND STREAM has gone somewhat into the ways and manners of doing this work in various cities, and from these it is easy to gather the conclusion that there is a woful want of any sort of a systematic, sensible style of disposing of the dog condemned as useless to society.

Here in New York we have daily exhibitions of how not to do it, or rather how to do it in the most brutal and revolting fashion. The dog-catcher is the freebooter of the streets. His presence fills dog owners and dog lovers with dread and disgust; and after all, the work undertaken is only half done and at an expense out of all proportion to the results accomplished. It is enough to know that the evil exists, the practical question is how to remedy the present abuses. We find a hint as to the solution of this problem in the work of a dozen societies, organized for a specific line of endeavor. Instances by the dozen will occur to the mind of any reader, where laws and ordinances remained dead letters on the statute book until some society was brought into being, self-charged with the task of the enforcement of this or that part of the code.

Why not, then, in furtherance of this same plan, have the American Kennel Club take upon itself the task of dog regulation in the metropolis. The plain object of the very proper dog law is the destruction of worthless animals. Who more competent to discriminate upon the fate of a dog than the members and agents of such a club? It is a body of dog lovers, of lovers of good dogs, and able to pick out and condemn those not worthy of life. Then we should hear no more tales of brutal blackmailing, of the persistent worrying of dog admirers which is now going on. The friendless street animal will be removed quietly and effectually, while the really valuable dog, even though for the moment he may be astray, will not be hurried away or held for ransom. Secretary Vredenburgh would find in the control and direction of such a work in such a city as this a fine outlet for his highly esteemed executive talent and managerial ability. Gradually such innovations will be made in the whole system as will bring it up to the proper requirements of this age. Dog lovers will coöperate with the dog catcher, and the general public will be more than satisfied with a plan which puts just the right person to direct a work for which he is, by training and natural tendencies, eminently qualified. The American Kennel Club is possessed of enthusiasm, of knowledge, of means. It has the friends of the dog on its member's list roll and what greater act of friendship could be done to the whole dog world than the decent disposal of dogs deemed unworthy of life. The plain simple issue is: First.—The present method, at least in this city, could not be worse. Second.—The American Kennel Club is eminently qualified to undertake and carry through the work in a fashion satisfactory to all. Third.—Will the American Kennel Club undertake the work and further extent its field in this line of endeavor?

There is need of reform in other cities as well. The police of Pittsburgh, Pa., have been disgracing themselves and humanity by their brutal killing of dogs; little pets were killed almost in children's arms, and the officers, fired by the hope of a paltry reward, ran amuck until stopped by the Humane Society.

FISH FOR PARK WATERS.

FOREST AND STREAM has kept it readers informed of the progress of the great work in fish planting to be undertaken in the National Park. As is well known to those familiar with this region, there are many lakes and streams which, while apparently in every way suited to support trout and other food fish, are now quite destitute of fish life. These waters abound in insect and other fish food.

Soon after reaching the Park, Captain Boutelle, the Superintendent, who is an enthusiastic angler, learned of these barren waters and made up his mind that they could be utilized. He communicated with Colonel McDonald, the U. S. Fish Commissioner, and when the latter learned the facts of the case they interested him so greatly that he made a visit to the Park, and in company with Captain Boutelle went over a good part of the ground. The results of this visit have already been stated. Last fall a few thousand fry of the Eastern brook trout were planted in the Gardiner River, and these have already attained a length of from 4 to 6in. This is very satisfactory evidence of the possibilities of these barren waters.

Preliminary to the work of planting the large shipment of fish in these Yellowstone waters was the visit to the Park made last autumn by Messrs. Jordan and Gilbert for the purpose of studying the waters which it is proposed to stock and their life. Now Prof. S. A. Forbes, whose work on the food of birds and fishes is well known, and Prof. Edwin Linton, of Washington and Jefferson College, Washington, Pa., have gone to the Park to make collections of the invertebrates occurring in its lakes and rivers, particularly those forming the food of fishes. The principal lakes which will be studied are the Yellowstone and Heart in the region now inhabited by trout, and Shoshone and Lewis lakes, which are at present destitute of trout. These two gentlemen will be the only naturalists engaged in that investigation; they will employ such helpers as they require at the scene of operations, and will be occupied there about one month. Another very important feature of their work will be the study of the entozoa and other parasites affecting the fishes of the region. After this work is completed Prof. Forbes will take up the same line of investigation in Lake Michigan, where he will have a rich field of study.

Mr. E. R. Lucas is preparing to start for the Park in advance of the shipment of trout from Northville. He will make arrangements for the movement of the fish promptly upon their arrival at Cinnabar, to which point the car will carry them. Mr. Lucas will also collect whitefish and grayling from the tributaries of the Madison and deposit them in Yellowstone River above the falls, and Yellowstone Lake, near its outlet. Grayling will be planted in the Lava and Tower Creek basins.

The trout will be forwarded by car No. 2 from Northville in charge of Mr. Dunnington. They are all fingerlings, and include lake trout, 100,000; von Behr trout, 25,000; Loch Leven, 25,000, and brook trout, 25,000. Landlocked salmon were to be sent also, but the young of this species held at Northville failed to do well and the introduction of this fish must be deferred for the present. The lake trout and Loch Levens are intended for lakes Shoshone and Lewis. The von Behr (*S. fario*) go to the Fire Hole and the Nez Perces. The brook trout are intended for the Gardiner River Basin, which was stocked with this species last summer. The transfer to lakes Shoshone and Lewis, which are now destitute of trout, will be made by mule packs, and this has involved the construction of special transfer cans, which will be taken out in the car.

This is the most important and extensive transfer of trout ever undertaken, with regard to the number of fish and the vast extent of territory to be stocked. The entire work will be prosecuted with the valuable advice and effective co-operation of Capt. Boutelle, Superintendent of the Park.

The Sportsman Tourist.

ON THE NEPEAGUE SHORE.

INTO every well-developed, vigorous life there comes at times an almost irresistible longing for broader fields and unrestricted breadths of wood or seas, where the eye can look over uninterrupted areas of green, and find perhaps one little iota of this restless feeling soothed by clear blue sky and fresh, untainted winds. Those of us whom fate has made unwilling atoms in this great pulsing throb of life in great cities, where harsh necessity, the tide of unalterable circumstances, keeps them bending over books or desks and behind office bars, have one pleasure left—a delight, quiet and mild, yet none the less deep-seated and intense—the pleasure of visiting again those places, hallowed now by the memory of all the young dreams and happy fancies that these same old scenes were wont to call up when the sun of life was but half-way toward the zenith. Is there not some dim old woodland path, some leafy nook on the edge of the forest, or perhaps a stream bubbling through the moss-bound rocks, dearer to us than any others? Spots where we lingered watching the glory of declining day, where the lovely arbutus or low-nodding violet first called into active being a desire to investigate further into the mysteries surrounding their growth—places associated in the present with days believed to have been the happiest we ever knew. How clearly some scenes and incidents are photographed upon the mind, remaining long distinct and sharp, undimmed by the lapse of years. Time is not so harsh but it allows some peaceful hours to come to all. It is of these rifts I would tell, through which sunlight has gleamed and broken the monotony of life, for one who loves the gun far more because it brings him closer to the secrets of nature's heart than for the birds which fall before its flame.

The first impression of Good Ground is one of disappointment. There is absolutely no suggestion of even a village. The station with its inevitable accompaniment of a miscellaneous country store just across the "street" looks lonely, and a low stretch of dwarf oak covered country, so limitless that the eye circling the horizon for some break rests with a sense of relief upon a thin column of red, visible away to the sou'eastward above the rim of pines. The town itself is laid out upon that generous disregard for the commercial foot value of real estate characteristic of all South Side hamlets.

Late in September toward the close of a warm Saturday afternoon I found room underneath the seat in the springboard for a collection of traps and space enough alongside the driver for myself. The prevalent custom of keeping roads in good repair by compelling every resident to give so many days per year grading and leveling has not been productive of very satisfactory results in this particular village. However, complaint is not quite in order at present, and I am slightly sensible that I would be the first to condemn another gunner for noticing such nothings. A little depression throws your side of the buckboard down a couple of feet. Your arms reach out and grasp the stoical driver with an earnestness and mute expression of affection in their pressure that he actually smiles. Then on the upward movement of the wheels mayhap you are unwise enough to attempt regaining your center of gravity by extending a leg. After the tire has deposited a large section of mud and sand along your trousers you realize your lack of foresight. Fun! why, certainly. What do you care about "them city clothes" now. This is a place where shoes are kept in the same box with "meetin' suit" and hats, "boiled shirts," collars, etc., are at a heavy discount. What difference does it make when the festive horse's hoofs decorate your phiz with various G-sized bits of mud? None at all! Offer your taciturn companion another weed, which he condescendingly tells you is "middlin' fair," and smile, and laugh and joke. So that cigar is "purty good," is it? thought I to myself. Such back-handed, qualified thanks are all I get for it, is it? Why, you old vandal, that was one of the same identical cigars for which I, in the recklessness of my anticipated trip, "blew in" as much "gold dust," as would buy six of the "kill-me-quicks" retailed "up ter ther store."

The first handshake with "Cap'n" Forster makes one feel perfectly at home. He is not a captain by courtesy, like so many South Bay skippers, but comes by the title honestly, for in the old days when the harbors of New London, New Bedford and Providence were alive with whaling craft, the big Petrel sailed under his command. Continual companionship with the broad, free ocean and piping winds leaves its impress upon men whose lives lie within those lines. Fishermen and baymen all have that rugged expression of good nature and sterling honesty widely different from their less fortunate brothers toiling within the narrow walls of cities. Where is there a more genial, open-handed, happy crowd of fellows than the brave boys of our Life-Saving Service.

Activity and enterprise have never been predominant traits in the make-up of the average Long Islander. He takes matters with an even philosophy, slightly aggravating when you want to catch a train, but otherwise tolerable. In fact, it would require no acute observer to deduce this lack of energy from the air of lassitude and desertion pervading the towns. The reorganization of the L. I. R. R., and the enormous increase in values of property following this improved railway service, has stimulated somewhat whatever latent industry there is within them. Summer boarders are not profitable enough to enable a famly to live throughout a winter on the surplus; so the men still follow in the footsteps of their fathers. Winter and summer you can see the oyster sloops making westward through Fire Island Inlet, skirting the shores of Long and Rockaway beaches, bound for the fish markets of New York. Daring, fearless, experienced old sea dogs they are, too, caring as little for the tossing ocean as we do about the broad, level road which we traverse; steering their staunch singlestickers with an infallible certainty born of lifelong acquaintance with the sea and the fluctuating, uncertain breaths that sweep over its surface. Oystering and eeling are the two principal industries on the South Side, and always will be until the time—I hope never—when the power of the broad Atlantic shall crush with its never ceasing blows the thin breakwater of the Great South Bay, mingling the waters and making the South Bay a thing of the past.

The pleasantest charm in the broad pine forests is that atmosphere of peace and tranquillity found only in the dark shadows of their inter-twisting limbs. A subtle witchery broods there—a nameless enchantment, soothing the spirit of those over whom the rolling years pass, but to add to their burden of care—with a hand undefined, yet tangible, the invisible, sympathetic touch of that wondrous mother, to whose heart we all return. Even on bright days, cool shadows continue here, and in the long vistas between upright trunks lingers an air of coolness and content. But it is only when the soft moonlight falls above that the full beauty, the indescribable romance, impresses you most deeply.

I wandered for miles that night through noiseless pathways, checkered with shafts of moonlight sifting downward from the interstellar foliage. Perfect quiet—such a silence as reigned above the entire earth when moonlight was reflected from interminable areas of ice in the dawn of time. Absolutely no sound—not even the echo of a footstep, for on the elastic carpeting of pine needles the foot falls as lightly as upon snow. Later in the evening, the night wind came faintly across the shining stretch of moonlit water. Wandering breaths, searching for hidden paths among the trees call into life their sleeping music. The throb of nature's heart never ceases, even in the tranquillity of a September night, for as I passed along the edge of a meadow, from concealed nooks among the reeds arose the myriad minor voices of the marsh; and at times from the darkness above comes the soft whistle of some bird.

It was late when I returned; and, after getting the rig all laid out and ready to "jump into" and clearing a small space for the watch and matches on the chair, I "turned in." Whatever sleep did come my way came in very short instalments, and this was distorted by a varied assortment of spectacular hallucinations. Awaking from one of these private entertainments I struck a match. "Four o'clock! Come, tumble out!" says I to myself.

Of the rather remarkable fact, that although the room contained but two chairs, both were encountered before the lamp was lit, of the activity of doors coming too with a bang loud enough to rouse the entire house, of the sudden dawning on your mind that your shoes were never made to descend even one flight of stairs in the dark, of these and sundry other little nothings I'll "draw it mild," for I know "you've been there before" yourself. But the end amply repaid all these petty exasperations. The front door lock mystery was undergoing intent consideration, assisted by a "prayer not loud but oh! so deep," when I heard a knob turned at the other end of the hall and the next instant the rays of a lamp gleamed down the passage. I was in the shade of a doorway and, having desisted operations, everything was quiet. Mustering up courage she stepped out into the hall and asked, with a voice in which alarm could not hide the sweet intonation: "Who's there?" I think I shall always remember that pretty picture—so fascinating that my artistic instincts conquered politeness; I remained silent, watching the play of sharp light and shade as she stood there with the lamp held above her head. She discovered that it was not a tramp trying to force an entry, about the same time that she remembered the white and linen nature of her attire. A suppressed scream, a slammed door; and then came blackness, deep, intense, Stygian gloom, with the problem of getting out of that door still before the house.

And now let me ease my spirit of a burden; for it is written that "an honest confession is good for the soul." Ye stoical sportsmen who demand an account of every shell fired; who when you go a-hunting could tell how every minute of time, 'twixt sunrise and sunset, was spent searching the cover or field; considering him who employs the day otherwise as an unworthy brother. Though I disclaim any sympathy with such rigid rules, finding no pleasure in headlong pursuit, still it is before the bar of your decision I stand, knowing that the others, the great majority, would have done even as did I. Every afternoon birds were forgotten, and the Irene carried precious freight (158lbs.) over the rippling waters. So powerful was this attraction that even when the morning's shoot was good and I felt certain it would be still better later in the day, I would gather up stools, hoist the big mainsail and slip away from the "hole in the wall" across the bay in time for dinner. After that the same one who as a vision of loveliness had appeared the first morning would join us, and we were a very merry company—the Mainsail, the Vision and I. Maybe she would take the tiller for a while and amuse herself experimenting how closely the Irene would run into the wind, while I sat alongside explaining some of the principles of sailing, etc. One good point about the Irene's sailing qualities I never appreciated until both of us were afloat. She would lay up into the wind on a course, without a hand on the tiller, and it was a very good virtue, for although there was a crew of two aboard, Irene was sometimes left to herself. Occasionally there would arise within me a feeling of condemnation at my lack of indifference to "the light that lies in woman's eye," when the gun was on the other side of the balance. And having summed up the defense, before you pass judgment, remember—look backward on your own young days—and perhaps you will find a leaf almost similar there.

But enough said—of course, any fool would know there was a catch 2in. above the floor on that door—at least, after he has wasted no insignificant amount of concentrated suppressed vocal energy before discovering the fact.

The moon has set, and the impenetrable darkness preceding the coming dawn lay over field and water. From the grass, covered with its satin-finished coating of hoar frost, arose a cool revivifyng air. The Dipper, Pleiades and kindred constellations have sunk further into the south. Brilliant and sparkling, just above the horizon, shines Venus—another world, our morning star. Beautifully gleams this etherial electric light, shining with her trail of silvery splendor above the dark wide reach of bay, and in its glassy depths, reflected, are mirrored the myriad worlds and suns of which man has no ken. The weirdness and majesty of the starlit, fathomless purple dome throw their influence over the solitary figure standing on the shore, and there comes over me that overpowering penetrating sense of the presence of the night, familiar to all who wander much alone on water or through forest. Is this a dream, or reality? No hum of cities with their eager quest, nothing but a dim memory of their thousands, while I lie looking upward at the stars and the great looming sail amid silence, save from the faint swish of divided water at the bows, telling we are afloat.

The east flushes and grows brighter, flecks of rose-tinted cirrus clouds rise from the bosom of the sea, mount upward and fade away toward the west. Before the sun rose above the sandy domes I saw his rays touch the lighthouse, and give warmer coloring to the far away Shinnecock Hills, while I was still in shadow. With his coming came the wind, increasing steadily, but ever shifting, now east, nor'east, north, finally settling out of the nor'west.

Sitting there upon the sand, my pipe smoke curling off in swirls, the clamorous, steady roar of the sea brought to me a picture of decades ago and tales of the wreckers of this shore. Back, way back in the 40's, before the broad shaft of the "light" threw its cheering glare across the wintery sea, the hardened spirits of this sandy soil practiced dastardly tricks upon unfortunate skippers driven upon a lee. In wild sou'easters, when spray from salt water froze along the sand, in the winter nights, these wreckers led donkeys across the beach with lanterns fastened to their saddle, deceiving sailors by the up and down motion as the animals crossed the hills; they mistaking them for another vessel's lights and shaping a course to destruction. Even now skeletons of these vessels refuse to be buried by shifting sand, remaining mute evidence of half savage times on the Nepeague beach.

Why tell of the birds I killed, or give a detailed account of each shot. There are "reminiscences" enough of that character already, and take it not amiss if I say such descriptions do not interest me very deeply, and maybe it would not be assuming too much to think you are of the same mind. He who sees nothing after a day's outing but the ragged mass of feathers in a bag deserves not sympathy, but pity. What snipe I did drop were nearly all single or double shots, some easy, some not quite so sure; but the result was much more satisfactory than had I filled a basket of the long-legged little fellows. A "high boy" (great blue heron) was unlucky enough to allow me to stalk him, and he with three or four hawks, were all the outside victims I gathered in.

The day that broke so fair ends in clouds. The warm light breaking through gray nimbus in the west grows fainter, the gloom deepens, and gathering night mists shut out the waters. Long rollers break upon wet sand, the twilight darkens, and through all comes the changeless, deepening voice of the waves across the swales and long meadows. Changeless; yes, changeless as eternity. Perhaps long years hence in the sunset of our lives we will travel back to these same climes, listen to the old familiar lonely song and gaze with dimmed eyes over sparkling summer seas, remembering the old memories and longings of these days. Perhaps we shall then understand better this vague sense of the infinite we feel in the presence of the vast expanses of beach and wave. We who have loved the scene from of old, through our years of youth and strength—when we have changed and grown weary and returning again, how will we find the echo of numberless surges driving landward? Still changeless!

REX B.

A PLEA FOR MODERATION.

Editor Forest and Stream:

I have shared the fare, the camps and the tramps of hunters in most of the regions of this country where large game is followed, and oftener still where the game is not very large. I like real hunters, as I do all real out-of-door people, and I would go further to listen to a man who knows things about the ways of birds and beasts from having seen them himself, and not from having read about them in books, than to hear a learned professor explain the phenomenology of Schopenhauer. But I fear we shall soon have to depend altogether on invention and ancient history for our stories of animals. It is queer that while we are exterminating all the most interesting wild creatures as rapidly as possible so many people wish to read stories about them, but do not care enough to try to preserve any of them for material for future stories.

I have a feeling that it is wicked to "make up" stories of the behavior of animals, that is, to circulate false reports about them. I think it would be much better for us if we had a better understanding of the minds and ways of beasts and birds. All true accounts by competent observers are valuable, but I do not care for stories which show that their writers know no more of the habits of the creatures they describe than they do of the conditions of life on the moons of Mars. Fiction or invention regarding the conduct of animals is confusing and misleading, however interesting it may be.

Your remarks on the excessive slaughter of game, and its rapid diminution everywhere, remind me of one thing which I have observed and heard of wherever I have been, and which real hunters everywhere say is true, and that is that the excessive and wanton butchery of game, from mere greed or lust of killing, is not often, if it is ever, the work of the rough, outlandish men of the woods. They are generally more humane and reasonable. The killing of game out of season, and of that which cannot be used, the slaughter without scruple or limit, for the mere sake of slaughter, is, I believe, nearly everywhere the act of men who are supposed to be intelligent, cultivated and refined, and from whom we have a right to expect better things. In the Siskiyou Mountains I once saw an old hunter who went across the plains in '49, and soon took to the wilds with his gun. He said: "Of late years all kinds of men come here to hunt. Those that act the hog the worst of all, and try to butcher everything right away, are the very men that think they know what's right better than anybody else. I've seen some of them kill bears when my sympathy was decidedly with the bears." I have heard the same thing in the Adirondacks and in Maine, in Texas and Arkansas, in the Judith Basin and along the Similkameen River and around the Klamath Lakes.

I wish to ask whether there is not something that can be done to bring the pressure of public sentiment to bear on these butchers. If the public sentiment has yet to be created, let us begin to do that. Of course such men should be punished for all violations of the game laws, but, besides that, they ought to be made to feel, in society at home, that such conduct in the woods is disgraceful. Many things indicate that unless we change our present methods of action and management very decidedly, we are likely to destroy all orders of living things except ourselves and mere vermin. When all game birds are extinct, the song birds which may then remain will be killed for the sake of having something alive to shoot at. Then the planet will be given over to insects, and a battle

to the death between them and man will begin everywhere. Under such conditions the odds would be largely in favor of the bugs. The earth would probably be uninhabitable for man without the aid of his allies, the insect-eating birds. I am glad to read in FOREST AND STREAM of hunters who do not try to kill everything they see. If we were civilized enough, so that nobody could act the hog in the woods, there would always be some game for the hunters of each succeeding generation.

We ought to have a great public game preserve and fishing ground in the Adirondack region of this State, and several others in the West. If we have a proper sense of what is due to ourselves, and to those who shall come after us, the care of public hunting grounds will not be a matter of great expense. All excess and abuse of opportunity in such preserves should be regarded as disgraceful vandalism, like defacement of noble and priceless works of ancient art. J. B. HARRISON.

52 WILLIAM STREET, New York.

A NOTE FROM "PACIFIC."

Editor Forest and Stream:

A year has passed since I was hastily summoned from my tour on the Pacific coast to return to my home—poor, desolate old Johnstown. And what a home-coming it was! One year prior to that time, in company with three friends true and tried, I left home with all the enthusiasm of an ardent sportsman. Our exploits through southern and lower California have appeared in FOREST AND STREAM, and I promised to write up our trip on the Columbia and Williamette rivers; but, alas! The trip was never made. In the midst of our preparations, news of the terrible calamity at Johnstown flashed over the wires, and within three hours we were speeding homeward as fast as steam could carry us. I wired sister and Frank* to meet us at the station in St. Louis, but upon our arrival there they were not visible. We went to their home and found to our chagrin that Frank had gone to Johnstown on the day after the flood, and—"What's that? You say the madam was there at the time of the flood?" "Yes, sir; she was visiting friends there, her and the boy, and we haven't heard a word from her," said the servant. "Great God!" I exclaimed, "I supposed she was safe here in St. Louis." Sadly retracing our steps we returned to the station and boarded the first east-bound train. No need to chronicle my thoughts on that trip. I lived over again my three trips to Florida, each time bringing home a brother or sister—dead; my last trip with my only living sister, who was rapidly failing, but who was restored to health by our extended cruise in a launch on the St. Johns and Oklawaha; our trip next year to Colorado, jolly old Frank always with us; their marriage next year, and the many happy days we have spent together since. Ah, how beautiful she was, and how noble Frank!

I will not harrass your readers with a description of the awful scenes we witnessed when six days after that damnable flood we reached Johnstown. Two days of climbing over debris, searching the different morgues for sister's remains and keeping a sharp lookout for Frank, we finally, in sheer exhaustion, lay down under a tree beside the Conemaugh and fell asleep. I don't know how long we slept, but suddenly I heard a shriek, and looking up I beheld Frank. Poor, haggard, careworn Frank! He, too, had been searching everywhere for our darling, but found her not. On that day hundreds of bodies had been brought to the various morgues, and in the evening we made another tour among them. Reverently raising cover after cover, I finally encountered the face of my own darling sister. With a stifled sob I called Frank, and, well, we fell into each others arms and wept. There she lay, so beautiful even in death. A hand was laid on our shoulders and a gentle voice said, "The Lord giveth and the Lord taketh away." It was the voice of our old minister. We buried the remains of sister, but the body of little Frankie, a wee tot four years old, has never been recovered.

I write this in reply to several inquiries in FOREST AND STREAM concerning my whereabouts, and my reasons for not furnishing the promised letters of our intended cruise in the Northwest.

CRESSON SPRINGS, Pa., July 12. PACIFIC.

*Our readers who have followed "Pacific" in his wanderings in a steam launch will remember that Frank constituted one of the party for two seasons, and that in 1884 he married "Pacific's" sister Lillian.—ED. F. & S.

Natural History.

HABITS OF THE WHITE GOAT.

BY JOHN FANNIN AND GEO. BIRD GRINNELL.

AT first thought it seems not a little remarkable that no adequate account of the habits of the white antelope has ever been written. This animal is quite abundant over a considerable part of northwestern America; and yet it has remained, up to within a few years, almost wholly unknown. The earliest descriptions of the species were given to the world more than seventy years ago, and since then many figures of it have been published; but while the measurements and descriptions taken from skins are often fairly correct, the illustrations of the animal give no more idea of how it looks when alive than do the fables told about its habits a true notion of its mode of life. From the time of its discovery almost down to the present an air of mystery has surrounded it, and almost everything that we have been told about it has been based on error. Few hunters have been aware of its existence, fewer still have seen it alive, and of these not many have had the energy and the nerve that are often called in play to clamber over the rough rocks and scale the stupendous precipices which are the home of this animal. To those of us who are familiar with the habits of this interesting species it is not surprising that it should have remained unknown, nor that erroneous ideas as to its habits should have grown up among hunters who had heard of, but had never seen it.

The white antelope is an alpine animal and makes his home among the loftiest peaks of the high mountains of the western country. Even the pika, or little chief hare, has a lower range than the white antelope, and lives in situations where it is much easier to get about. Not content with this elevated range, this species prefers the roughest, rockiest mountain sides, and is more often seen on some narrow shelf of a vertical precipice than elsewhere. We believe that it is without a peer in this respect, and that it can move about with ease where no other creature unprovided with wings would be safe. This singularly elevated and forbidding habitat removes the animal from the range of almost all white hunters except those who pursue game for sport. There is no inducement for any one to hunt it. No part of it has any commercial value. The hunting is most laborious, for it must be done altogether on foot, and one must usually climb several thousand feet, over steep slide rock and up vertical precipices, before reaching the haunts of the game. The hide is scarcely worth taking off, for it brings only from 25 cents to $1, a sum which would hardly pay for the trouble of skinning and the labor of carrying it down the mountain on one's back. The flesh—though this is largely a matter of individual taste—is at best dry and without character, or else, as in the case of the old males and females, has too much character, being so strongly flavored with musk as to be utterly uneatable unless a man is starving. The kids and the young females under three years old can be eaten, and, indeed, if they have been killed in such situations that they have not fallen and bruised themselves, their flesh is wholly without unpleasant flavor. Still, no one except an Indian is likely to hunt the animal for its flesh, except in case of necessity. Certain tribes of Indians, as will be shown further on, do hunt the white antelope systematically for its flesh and for its hide.

Up to within a few years, as indeed by many people at the present time, the white antelope has been regarded as the very rarest of the larger mammals of North America. Even now it is not common in collections, and naturalists know but little more of its habits than they did fifty years ago. The reason is obvious. The animal is known only to the hunter, and has never fallen under the observation of a hunter who was also a naturalist. Only in recent years, and, as far as we are aware, only in the columns of FOREST AND STREAM, has anything been written about it which is intelligent and true. Except in these accounts there is scarcely anything on record by an original observer since Dr. Harlan's quotation from Major S. H. Long, published in 1825, and it is a curious fact that the two most trustworthy accounts of this animal which we have, though both are general in character, are those of Harlan and Richardson, published fifty years ago. Subsequent accounts have added nothing to theirs, but, by mixing a great deal that is fabulous with a moderate amount of truth, have done much to disseminate erroneous ideas about this species. The fact that it has remained almost unknown to hunters has led writers to descant on its rarity, and above all on its wariness, and has lent an air of probability to such marvelous tales as that it prefers death to capture, and will throw itself over a cliff a thousand feet in height rather than fall into the hunter's hands.

The white antelope is essentially a mountain dweller, and is most at home among the bare rocks. In the southern part of its range—in the United States—the mountains which it inhabits must be high, for, as has been said, it is an arctic animal, and with it, altitude must answer for latitude. It prefers, we believe, a country of great precipitation, and thus we find it more abundant toward the Pacific Coast, on the high mountains whose cold summits, opposing themselves to the warm winds rushing eastward from the western ocean, condense their moisture, which falls almost constantly as mist or rain or snow. His warm coat of mixed wool and hair protects the antelope against wind and rain, and against cold and snow. He has only the heats of summer to fear, and his elevated habitat enables him to escape any great suffering from this cause, besides which, in midsummer at the time of shedding his coat, he becomes almost as naked as a newly shorn sheep. A coat such as that possessed by this antelope is above all others best adapted for protection against wet and cold. In some respects it is like that of the collie dog, which is constantly exposed to the cold rains and mists of the Scottish Highlands. It consists of an outer coat of long coarse hair and an inner one of fine close wool. The long coarse hair of its top coat sheds the water like a thatched roof, so that the under wool is never wet, and this under wool is the best possible protection against the cold. The preference of this animal is unquestionably for a country where the humidity is great. It is found scarcely or not at all in the arid regions of the Central plateau. As we have stated in a previous paper, we have no certain record of its capture in Wyoming, Utah or Nevada, but that it can exist in the high mountains of this arid region is shown by its occurrence in Colorado. Except as a straggler, however, it certainly does not occur to the southeast of western Montana and Idaho. It ought to be found in the Teton Range, but we are unaware of its occurrence there, although these mountains would seem to present all the conditions of climate, altitude and roughness suited to the habits of this singular animal. If found on the Tetons it might well enough occur on the western slope of Mount Sheridan, and perhaps on other mountains in the National Park; but here, as has been said, there is no record of its existence.

When we say that the white antelope is a mountain dweller and is most at home among the bare rocks, it must not be inferred that it is only found on the loftiest pinnacles of the mountains. This animal is a great wanderer, and is sometimes to be met with in situations very unlike those which it commonly prefers. It often makes excursions into low valleys, sometimes descending to the very level of the sea, or traveling from one peak to another across wide stretches of level country, and sometimes even venturing out into the plains far from the rocks, which, usually, it seems to love so well. In fact in many of its habits it is an utter anomaly, and, with our present knowledge, it is quite impossible to account for its vagaries.

It has been suggested that in the past this species was commonly found on the plains, but the evidence in support of such a supposition is far too slight to be entitled to any weight. A statement made by Lewis and Clarke as to the occurrence of "goats" on the Missouri River near where the town of Mandan now stands, and the country assigned to this animal by Hamilton Smith, appear to be the only grounds for suggesting for this animal any such range as the one referred to. We may feel sure that Smith's statement is erroneous, and it is quite uncertain what species Lewis and Clarke intended. We know that they commonly spoke of the prong-horn antelope as the "goat," although antelope are mentioned in the extract referred to, and, what is more to the point, we know that they never spoke of *Mazama* as a "goat," but always called it the Rocky Mountain sheep. If this species was ever in historic time abundant on lower and more level ground than it now inhabits, its unsuspicious nature, its conspicuous color, and its slow and awkward movements would have rendered it an easy prey to its enemies. It would have been killed off in the plain country, and obliged to confine itself to the rough mountains where its powers of climbing would give it every advantage over the hunter. If, however, any such conditions had existed since the white man began to travel backward and forward over the prairies, we should certainly have more satisfactory evidence of it than we have been able to find. An animal which is so striking and so different in all respects from any other species inhabiting the plains would not have escaped notice, and would have been mentioned and that frequently by the early explorers of the Northwest. The earliest and best accounts which we have, however, those of Major Long and of Richardson, already cited, as well as that of Lewis and Clarke, lead us to believe that this species was in their time wholly confined to the mountains.

The physical structure of the animal, too, offers the strongest possible evidence that it has always been, as it is now, a mountain dweller. Its short, stout legs are not formed for swift motion, but for a deliberate progression which requires the exercise of great strength, and thus the gait of the goat is slow and it gets over the rocks not by its speed or activity as does the mountain sheep, but by main strength and awkwardness. It could not have survived in a country where its safety depended on its speed. The color of this animal furnishes additional strong evidence that it was never commonly an inhabitant of the plain country. It cannot be doubted that the coat of this alpine antelope is in a measure protective. Throughout the greater part of its range its home is on mountains perpetually snow covered, and so high up on these mountains that it lives among the snow banks. On snow or on ice, or on mountains dotted with snow banks, it is always difficult and often impossible to detect these animals at any great distance, and after a fall of snow which whitens the mountains we never try to hunt them. It is true that on the southern borders of its range its white color seems to be a positive disadvantage to the species, for against the red or gray of the rocks, the black of the pines, or the green of the grass, the white speck at once catches the eye of the hunter, even at a great distance, while the gray color of the mountain sheep might escape notice and the animal be taken for a fragment of stone or for a weathered tree trunk, but all through the rough peaks, which, snow-crowned and glacier-scored, stretch away from the United States line toward the frozen ocean, the white antelope's color undoubtedly serves as a protection against its enemies. On the green or yellow prairie on the other hand, a snow white animal would be readily seen a long way off, and its destruction would be made certain by its inability either to defend itself against any large carnivor, or to escape by rapid flight. On a level, a bear could readily overtake it, and while it could perhaps defend itself against a single prairie wolf, two of the larger gray or timber wolves would have no difficulty whatever in pulling it down.

It may be said that on the southern border of its range the home of the white antelope is among the very loftiest peaks of the mountains which it inhabits. It changes its altitude somewhat with the seasons, but its habits in this respect vary with locality. In the eastern Rocky Mountains it does not appear at present ever to descend to levels much lower than its summer range, though perhaps after the heavy snows of mid-winter have covered the mountains, it may range somewhat lower than in summer. This, however, is probably not the case, for in this wind-swept region the hurricanes, which blow almost without intermission, carry the snow from off the higher peaks and pile up among the timber and in the valleys drifts so deep that it is difficult to see how the white antelopes could get to the ground to feed. The high bare points and tablelands are always measurably free from snow, and in many cases are swept bare during the entire winter. In confirmation of this belief we may mention that our friend, Mr. J. B. Monroe, in his notes of a hunting trip made during the winter of 1888 and 1889, states that he found the goats on the very loftiest summits of the mountains of the St. Mary's Lake region in December, January and February. At that season of the year they were higher up than in summer and autumn.

We are told, however, by Mr. Hugh Monroe, who has lived in the Blackfoot country for 75 or 80 years, and by old Blackfeet Indians, that many years ago the white antelope ranged in winter much lower than it does now; that then it was not uncommon to find the species in winter among the foothills of these mountains, and that in spring they followed up the melting snows, keeping close to the snow line. The same thing used to be true of the mountain sheep, which were often found out on the plains, on the bare ridges far from the mountains.

On the coast of British Columbia a different set of conditions prevail. Here the mountains are much lower, the timber often reaches quite up to their summits, and the snow falls quietly and lies upon the ground through the winter, often to the depth of ten feet or more. At the sea level, however, but little snow falls, and it remains on the ground but a short time. Here the white antelope is found in winter below the snow and down on the level of the salt water.

Our lamented friend J. C. Hughes has told us of one which was shot while swimming across an arm of the sea—one of the inlets—at that season of the year, and he saw another shot from a canoe, which fell from its rocky perch into the salt water. It is certain, however, that these animals begin to return to the summits very early in the spring, and while the snows are still very deep on the mountain tops.

Our correspondent Mr. W. B. Anderson, long a resident at Fort Simpson, British Columbia, says of this species:

"During the summer months the goats keep up high on the mountains, in fact, on the tops of most of the hills in this vicinity, few of which are over 4,000ft. in height. They appear to feed pretty generally in the daytime, and, I think, rest at night. Their favorite food consists of various plants, and of one species in particular of which I send you a dried specimen. This grows nearly everywhere in this country—on the tops of the mountains, in the low valleys (when not too thickly timbered) and on the sphagnum moss. I am not botanist enough to say to which order of plants it belongs. Where goats are plentiful this plant will be cut off close to the sod. Grass is also eaten.

"Up to this season of the year the old 'billies' keep rather by themselves (leaving the 'nannies' with their kids and year-old offspring in flocks), which is often the fashion of buck deer, isolating themselves early in the year, and like the deer, seeking out their harems in the autumn. As winter comes on they all move on down to the foot of the mountain, and in the depth of winter it is not uncommon to see whole herds within a few hundred feet of some of the inlets of the sea. Indeed, Indians shoot them often from canoes. The Indians state that in the winter, when the mountains are covered with snow, the goats seek strongholds part way up the mountain sides, among the great slabs and blocks of trap and granite, which in falling have arranged themselves into natural roofs and sheds, generally at the foot of some crag. Huddled together for warmth, they pass the winter in these places; not moving in boisterous weather, on more genial days descending, as I have stated, nearly to the foot of the mountains, to browse and nibble the

bushes and lichens. As the spring advances they follow the snow up the mountain sides until the summits are reached, or, if the snow be perpetual, to the very edge of it, where the herbage is kept green by the constant moisture.

"The young are brought forth about the month of June, possibly late in May. Though awkward looking, they in a short time become so agile as to scale places whither their poor dams scarce dare follow."

On the eastern slopes of the Rocky Mountains these animals in early autumn, and probably at other seasons, often descend during the night to the valleys of the streams which flow among the rocky fastnesses which they commonly inhabit, and it is not unusual in the early morning to see them on their return journey begin their ascent of the mountains, often only a few hundred yards above the stream bottom. We have frequently observed this, and their presence in the valley during the night has been made certain by fresh tracks and droppings. In fact, we believe that in this part of the Rocky Mountains, if any one will take the trouble to watch these animals day after day, he will observe among them a tendency to descend the slopes in the afternoon and to reascend them in the morning. We say a tendency, for we do not intend to imply that the habit is universal. We are inclined to believe that this results from their seeking the highest, coldest peaks of the mountains during the hottest portion of the day. It is certain that heat causes them great suffering.

Although these animals are at times great wanderers, and make long journeys without any apparent purpose, yet, as a rule, so far as our observation goes, they are disinclined to move much. Often a little group may be seen for twenty-four hours in nearly the same spot, scarcely changing their position a hundred yards. We recall one occasion when we studied a pair of goats for two days on the same ledge of rocks, near a little mountain rivulet where the grass was fresh and green, and on the third morning, after watching them until they had lain down after feeding, we clambered to their resting place and killed one of them. Other hunters have had similar experiences, and it is often the case that these animals will for days remain almost in one place.

On the other hand, they sometimes wander long distances, and make journeys of considerable length, appearing in situations not at all suited to their habits. In the remarks on the range of this species we have spoken of the killing by Heavy Runner, a Piegan Indian, of one of these animals on the Medicine Rock hill on the Marias River, and of another capture made near the crossing of Two Medicine Lodge Creek, at the place where they "jumped the buffalo." The first named of these points is about seventy miles from the main range of the Rocky Mountains and thirty from the Sweet Grass Hills, and the second about thirty miles from the range. Among the high mountains nearest to these points the white antelope is fairly abundant on the highest peaks, and it is wholly probable that these animals came from there, as it is not known that they have ever been taken in the Sweet Grass Hills. Mr. Willis, in the letter already referred to in the chapter on the range of this animal, speaks of its tendency to wander. He says: "They seem to be great animals to travel. I have seen several bands since I have been in this country [Montana] which were traveling where they must have come a long ways, as there were no suitable places [for them to live] near where I saw them. They are great to go to licks, like deer. They go miles to get to a good lick, stay a couple of days, and then go back in the mountains again." The individuals reported as having been killed in the Bull Mountains in Montana must have traveled, if they were really taken there, a long distance over the prairie to reach that ridge. As has been stated, however, the evidence on which this possible record is based is not quite satisfactory.

The notion which is quite generally entertained that the white antelope is found only above timber line is, as will have been gathered from the statements already made, quite erroneous. Where these animals are abundant they are frequently seen among the timber, and flocks of wool and hair, torn from their skins, are often seen caught on the dead pines up among the mountains.

In respect to its movements, the white antelope presents, as has been said, a curious mixture of character. It seems to be erratic in many ways, a creature of impulse. At one time it is sluggish, scarcely moving a mile a day; at another it starts off with energy to make long journeys. Sometimes when it has finished feeding in the morning it lies down and remains quiet until a little before sunset; at others it is restless, lying down and in half an hour getting up again, eating a few bites, walking a short distance and again lying down, only to get up again in a few moments to feed again, and again to lie down.

This characteristic has been observed also by Mr. J. W. Schultz and Mr. Kipp in the St. Mary's Lake country. Speaking of a band of these animals which he watched for some time, the former gentleman says: "They seem to be very restless animals. They would feed a few minutes, paw a bed in the shade, lie down, get up again in a few minutes and go to feeding."

The rule that these animals are at rest for the greater part of the day finds many exceptions, as suggested by what has been said above. Although they may often be seen perfectly motionless for six or eight hours, it sometimes happens that after composing themselves to rest and lying for an hour or two, they either act as stated above by Mr. Schultz, or will suddenly get up and almost without pause start off on their slow walk, continuing without a halt or even a pause until they have passed out of sight. I have seen a band of six which were lying down, apparently asleep, act in this way. An old female was the first to stand up, but the others rose at once, and when she turned, followed by her kid, and walked off along the rough mountain side, the others followed in single file, the rear being brought up by a male who seemed loth to move, often stopping to take a bite of grass and then trotting to catch up again. They gave no evidence of having been disturbed, did not hurry at all, but just marched steadily on until the inequalities of the mountain side hid them from view. They were probably in sight while they were going a mile or two.

It may be said that, as a rule, these animals are quiet during the middle of the day. We believe that they feed and move about a good deal during the night, and they are usually to be seen feeding in the early morning for a couple of hours, and again just before night. During the rest of the day they are most often to be found lying down in some shaded spot, usually a narrow shelf on the face of the precipice or the cleft of a rock where they are well protected from the rays of the sun. Often when hunting in the Rocky Mountains in November in bitter cold weather, when the ice would collect rapidly on the face and beard, and only heavy clothing and the constant and violent exercise of climbing the mountains protected us from severe suffering from the cold, we have been astonished to see the white antelope seek out the coldest spots that it could find and lie down in the shade, perhaps close to, or even on, the ice formed by some trickling rill whose waters issuing from a crevice in the rock were congealed as soon as they reached the outer air. At a time when other animals try to find the warmest places they can, these seek the coldest.

POISON OAK OR POISON IVY.

Editor Forest and Stream:

Every year just before spring puts on her greenery and the trout begins to leap in the pool for winged dainties, and the man announces that he is going fishing, and packs rod and creel, and starts for the hills and the brooks, FOREST AND STREAM should publish all known cures for the distressing poisoning of the family to which the poison tree, bushes or vine belong. One is likely to meet with these plants nearly everywhere in this great big country of ours, for they nearly all belong to the genus *Rhus*, the sumac family.

This is a genus of many species, with a habitat world wide, and, as is not generally known, nearly every species will poison some persons cruelly; and if they do not soon get relief they will suffer terribly. Other people may handle nearly every species with impunity, and then strike one, harmless to most persons, but capable of giving them a dose long to be remembered. Some persons are poisoned by all except the white, or stag horn, sumac. This is the only species of the genus that I have not known to be poisonous.

Of the genus in North America the swamp sumac, *Rhus venenata*, the climbing sumac, *R. toxicodendron*, and its variety or so called species, dwarf sumac, *R. pumela*, and its variety on this California coast, *R. toxicodendron* var. *californica*, are the most to be dreaded. These last three are vulgarly called "poison oak" or "poison ivy," and the first is known in the Eastern States as "mercury."

As severe and sudden case of poisoning as I ever saw was caused by the pretty little shrub, *Rhus aromatica*.

While living in the East up to the age of thirty years our "poison oak" there was a fearful terror to me, and caused me a great amount of suffering. Then on until I was fifty it was innoxious. The variety on this coast is exceedingly plentiful on nearly all uplands, and is very closely allied to ours, but is injurious to very many more persons. The first time I went among it, it poisoned me from head to foot, and so it did a friend who was with me; also a newcomer here, who could handle without harm both it and *venenata* East. It laid him upon his back in great suffering for a week. Pioneers here say that after a time the system becomes inured to it, and it does not injure them. But it does just rap it to the thin-skinned city dudes.

The poison *Rhus* East causes intense itching of the skin, followed by watery pimples, which eventually run together, forming wide inflamed sores. Here, so far as I have observed, it causes intense biting itching, with red and swollen surface. Both forms run their course in about a week.

Now for the cures. Many simple things will relieve and cure all forms of this poisoning, such as sugar of lead, sulphate of zinc, saltpeter, and muriate of zinc in solution with water. I do not know but I have discovered the best, handiest and cleanliest of these, to wit a saturated solution of saltpeter. I asked an old hunter what he used to cure poison oak with. He answered, "I wet some gunpowder and rub it on, and it kills it on me every time, if I put it on as soon as I feel it." Thinking that the only thing in the gunpowder that would do any good was the saltpeter, the next time I got a touch, all over my face, I tried it, and sure enough I felt the pain no more, when, in a few hours, if I had not got relief, my eyes would have been swollen shut. Now I keep a strong solution of saltpeter handy in my office all the time. Saltpeter is, of course, the nitrate of potash of the drug store. Nitrate of soda would probably be just as good or better, and borax, or borate of soda, should have the same effect. But the best thing of all is a certain simple preventive; this we have, I think, in the carbonate of soda, or common baking soda. By washing the person in a solution of this before entering the "bresh," or directly on returning, no injury will result from an exposure by the most sensitive. At least an old physician of fifty years' practice where these plants were common so informed me.

I have known men who through their whole life dared not go into the woods in summer for fear of this plant, and others who were driven from comfortable homes by it. Therefore I have undertaken the labor of this writing, for, as before said, any one may get cruelly poisoned by it when away off in the woods, far from medicaments, and if he knows all the simple remedies, he may save himself great suffering; for this reason every remedy and palliative should be yearly published.

The poison oak of this coast region is a very neat, pretty shrub, most abundant nearly everywhere. Its flowers are very rich in choice nectar for the honey bee; the honey from it is fine and wholesome, yet it poisons me and many others when riding along the road near the bushes.

BYRNE.

PETALUMA, Cal.

MASSACHUSETTS WILD TURKEYS.—Seeing something in FOREST AND STREAM in regard to wild turkeys being formerly known as far east as Mt. Tom, on the Connecticut, I would say that the country hereabouts, sixty miles further east, was formerly known as Turkey Hills because of the number of wild turkeys to be found. Though this part of the country is less subject to the incursions of "varmints" than that to the west of the Connecticut, there still remain a few coons, partridges and trout.—*.

A MODERN PIPER OF HAMELIN.—Northwood, N. Y.—I have caught several mice by "charming" them with a music box that played "Peek-a-boo" when you turn the crank. The mice would run up and around and over the person who was playing, so it was an easy matter to grab them. The mice always run up and down the wall when the piano is played.—RAY SPEARS.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents;

CLABROUGH 12, May 1, '80.	PARKER 10, hammer, June 6, '89.
COLT 12, July 25, '89.	PARKER 12, ham'rless, June 6, '89.
COLT 10 and 12, Oct. 24, '89.	REMINGTON 16, May 30, '89.
FOLSOM 10 and 12, Sept. 26, '89.	REMINGTON 12, Dec 5, '89, Feb 6, '90
FRANCOTTE 12, Dec. 12, '89.	REMINGTON 10, Dec. 26, '89.
GREENER 12, Aug. 1, '89.	SCOTT 10, Sept. 6, '89.
GREENER 10, Sept. 12-19, '89.	L. C. SMITH 12, Oct. 10, '89.
HOLLIS 10, Nov. 7, '89.	WHITNEY SAFETY 12, M'ch 6, '90.
LEFEVER 12, March 13, '90.	WINCHESTER 10 & 12, Oct. 3, '89.

CHINESE PHEASANTS IN AMERICA.

IT is well known to the general public that one or more species of Asiatic pheasants have been introduced on the Pacific coast and have done well there. The so-called English pheasant has also been introduced in at least two localities on the Atlantic, and, when protected has flourished. Of the colonies of introduced pheasants on the Pacific there are four. The northernmost of these is at Victoria, Vancouver Island, where in 1882, we believe, nineteen of these birds were turned out. These were protected by law for five years, but at the end of three the birds had so increased that many of them were killed by poachers, as well as by market gardeners who claimed that their crops were destroyed by the pheasants. When the five year law was up the birds were vigorously pursued, and it was estimated that during the first shooting season not less than 1,000 of them were killed near Victoria alone. These birds appear to be all the ring pheasant (*P. torquatus*).

At about the same time with this importation were the plantings in Washington and Oregon which have been from time to time noted in FOREST AND STREAM. American sportsmen owe the introduction of these birds to Judge O. N. Denny, sometime U. S. Consul General at Shanghai. The species imported by Judge Denny were the golden pheasant (*Chrysolophus pictus*), green pheasant (*Phasianus versicolor*), ring pheasant (*P. torquatus*), and perhaps other species as tragopan pheasant (*Ceriornis sp.*), silver pheasant (*Euplocamus*), and copper pheasant *P. soemmeringii*. Of these the ring pheasants proved themselves by far the most hardy and best adapted to the climate of the Northwest, but the golden pheasants have done well on Protection Island in Puget Sound and are now abundant and tame. The birds sent to this country by Judge Denny were consigned to Mr. A. H. Morgan of Portland, Oregon, who liberated them.

There are at present on Protection Island in Puget Sound three species of pheasant, the ringneck, golden and silver. Of these, the last named are much the least numerous, and do not seem to be increasing, but the ring pheasants have multiplied and are abundant and wild. It is said by Dr. Merriam, who has personally investigated the subject, that the crows have learned the nesting habits of the pheasants, and are likely to act as a check on the birds, as they devour the eggs.

In 1881 or 1882 a number of ring pheasants—about fifteen in all—were liberated near the mouth of the Williamette River about twelve miles from Portland. They bred the first summer and increased until they are now common. In 1882 between thirty and forty ring pheasants were received at Portland and were set free near Washington Butte, about twelve miles east of Albany in the Williamette Valley. They have done well and are now abundant in Polk, Linn and Marion counties in Oregon.

It is said that golden pheasants turned out on the Clatsop Plains near Astoria, Oregon, have increased rapidly. They are hardy, but do not appear to be as prolific as the ring pheasants. The opinion is expressed by persons who have observed these birds that they will eventually overrun the United States, at least all but the heavily timbered portions. In Oregon among the farmers there is quite a strong feeling against the pheasants on the ground that they destroy the young crops.

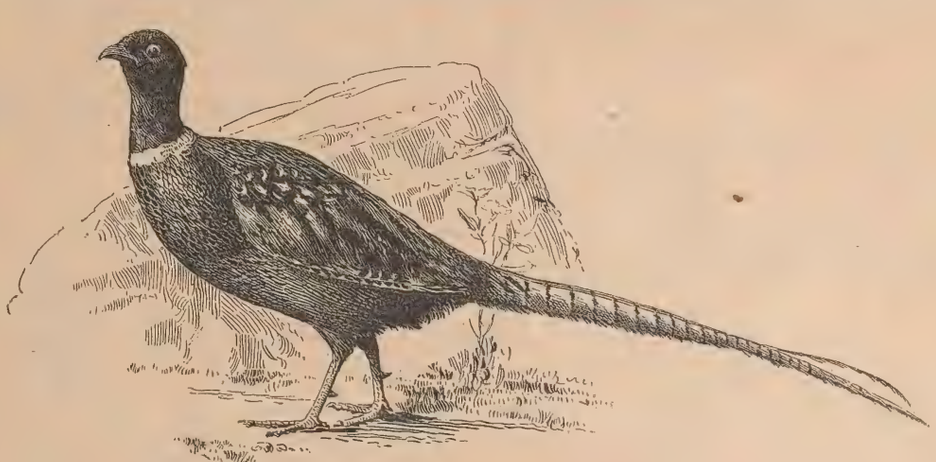
So far as experimented with in California, the Asiatic pheasants do not appear to have done well. A flock of "English pheasants" turned out in Santa Cruz county are said to have disappeared. Recently Mr. W. O. Blaisdell, of Lacomb, Illinois, brought from the Pacific coast and turned out a pair of ring pheasants. It is, of course, uncertain how these birds will endure the climate of Illinois, but it is certainly worth while to try them. If they can stand the cold and snow and are accorded protection, the addition to the fauna of that State may have unexpected results. Mr. Blaisdell also sent a pair of these birds to Georgia to be turned out there.

The illustration given above is that of a ring pheasant, the species brought east by Mr. Blaisdell. It is a graceful bird of bright and beautiful colors, and in many respects resembles the so-called English pheasant. The weight of the male is about 5lbs., that of the female about 4lbs.

CHICAGO AND THE WEST.

CHICAGO, July 20.—You print the argument of the Supreme Court of Illinois handed down in confirmation of the decision of the lower court in the now celebrated case involving the constitutionality of the law prohibiting the sale or transportation for sale of game killed within this State. The decision is plain and simple reading, whose meaning it is impossible to misunderstand, and in view of the formerly existing fears as to the outcome of this phase of game legislation in this section, it is matter for high felicitation among the sportsmen of the State. The latter have as yet, however, no cause to think that they have reached Nirvana. The decision is important to the point of uniqueness, but it does not cover everything. It does not touch the case of game legally killed in another State and shipped into this State for sale. That is a matter for the other States to decide. If the law were uniform for all the neighboring States, we should then have the question in a nutshell, but as it is, many more complications are ahead. It is a pity that the Legislature cannot give us sensible laws for such a sensible Supreme Court to weigh. For instance, under the present law it is only the game warden who can have legal eyes to search for illicit game. That is manifestly an absurd injurifactive feature of the game law, and the next Legislature should correct it. Our game warden here is an ignorant foreigner, appointed as a bait to a certain

Polish-Bohemian element. He has repeatedly refused to come down and seize batches of illegal game, and this even when a justice of the peace had requested he be procured for that purpose. He is a pebble in the cog-wheel of the law's machinery, insignificant and contemptible, it is true, but effective in full negativeness. The governor who will appoint and maintain in office such a man deserves to lose the votes of the intelligent citizens interested in his action, and to be confined to the society and support of the Polacks and Bohemians whom he seemingly loves more than he does gentlemen. The Governor's action in this case was deliberate, and it is easily remediable by himself. The action of the Legislature may have been hasty or not fully advised when this search warrant clause went through. Let it be corrected, so that the game warden system will not be an absolute farce in this State and city, as it is now, and we shall find in the clear decision now at hand ample backing for some sort of action against offenders, who of late have done quite as they saw fit, regardless altogether of the law. The common carriers of illegal game have been reached herein. Reach now the purchasers of illegal game, by means of a law which has at least some possibility of execution, and it may be held certain that the inducements for market shooting will be materially curtailed.



July 25.—Any one having a good dog could have fine woodcock shooting on Mak-saw-ba club grounds now. It does not appear that there is a good dog in the club, so much has the old sport of upland shooting fallen into decay hereabouts. There was a little trap shoot down at Mak-saw-ba the other day, whose results are given in another column. On the morning following, just before taking the train for the city, Mr. Mussey, one of the participants in the trap shoot, killed four woodcock hardly 100yds. from the club house and saw nearly a dozen more. "I could have got half a dozen more," said Billy, 'if I only had a dog to indicate their presence." "Indicate their presence" is good. I think Billy must be going to write a book, or a syndicate article on field sports.

Speaking of books reminds one that our industrious fellow townsman, Mr. G. O. Shields, has just gotten out another book, this one on the big game of North America. As Mr. Shields has enlisted twenty-six privates under his command herein, each of whom is official in a way, this book may fairly be said to be a corker. Chicago leads the world.

There will be good chicken shooting in Illinois this fall, barring the usual illegal shooting before the season opens. There are unusually large numbers of chickens all through the West this year, for some reason or other. The country below Aurora, thirty-eight miles from here, has plenty of birds, and at Yorkville the same report is made. Yorkville is 12 miles further down the Fox Valley. Different points along the Alton road report young birds abundant. Alternating years of open and close season would keep prairie chickens plenty in this State. There were prairie chickens hatched within six miles of Chicago this spring. It is the country shooters who kill off most of the chickens. Chicago hunters have almost forgotten there ever was such a bird, and have fallen out of the way of going after it.

A reader of FOREST AND STREAM writes me from Elmira, N.Y., asking where he and two friends can have good fair sport at shooting and fishing from Aug. 20 to Oct. 1. I have advised him to go out to the Park or lake region of Minnesota. There is a very delightful combination of ducks, chickens and bass out there in the fall. One of my Chicago friends, whose name has figured in so many recent escapades that I suppress it now, has gone out in that country every fall for the past ten years. One time—it was some years ago, but such a story never grows old—two members of the party of which he made one went out bass fishing, and such was their luck that they unloaded their boat on a point and went out for more. Enter thereupon my friend B. and his companion, who stole twenty-one of the finest bass out of the pile. The joke of it was the other fellows had so many bass they didn't miss the paltry twenty-one until they were told of it. Then they swore revenge. That night they got into the chief miscreant's cartridge box, removed the shot from all his shells and replaced them with buckshot. The next day everybody went out hunting. Someway, everybody seemed willing to hold back and let my friend B. do the shooting. A little bunch of snipe was marked down, and B. made an elegant sneak on them, but the buckshot failed to stop a snipe. Then they got into one covey after another of chickens, and everybody courteously stopped back and allowed B. to take the points. He blazed away right and left, and shot till his gun was hot, but couldn't hit a bird. A troubled look came over his face, perspiration stood on his brow, and he faintly vowed that he wasn't going to touch another drop of it as long as he lived. He took one more shot after that, missed his bird, and then came back and climbed into the wagon, looking pale and anxious. "Come on, boys, let's go home," said he, "I aint feeling very well, and I believe I'm going to have a spell of sickness." And he pretty near did have when the boys told him the reason he couldn't hit anything. That happened years ago, but it is something that remains green in the minds of B.'s friends even to-day, and they are always ready to suggest it way to break a man of stealing bass.

All the way from Lexington, Ky., comes an invitation to be present at the first meet of the season of the Iroquois Hunting and Riding Club of that city, Friday at 5 P. M., July 25, the rendezvous being at Gratz Park. This is a wicked, tantalizing and sinful world, for that no one therein can have all the fun there is. Certainly there are few pleasures which can equal even the briefest visit to the Blue Grass country of Kentucky. There is a charm about that region which, like the color or the perfume of a flower, baffles analysis. It is the only part of America which is American. If one could paint a picture of the Iroquois meet he would make his fortune at a stroke and so be able to quit work and live as I am persuaded it was originally intended all men should live—like the lilies of the field. I have an idea I would take to that lily business mighty handily; only, I should insist on being located in Kentucky. They know how to live and enjoy life down there. E. HOUGH.

RING PHEASANT (*Phasianus torquatus*).

NEW ENGLAND GAME.

BOSTON, July 20.—In the first place it is worthy of mention that the State of Maine has lately been visited by the most terrible cyclone on record in that State. This has to do with the shooting prospects there, in that it is probable that a great body of trees is prostrated and many a good hunting section ruined, so far as getting through it is concerned. Nearly the entire northern part of the State was visited by the tempest, with numerous trees uprooted and forests blown down. In the region of the Rangeley Lakes the storm was particularly severe. It came at a time of the day when the little steamers that run up and down those lakes were generally at their moorings, and hence there were no lives lost, so far as heard from, though the lakes were disturbed to an extent never before witnessed by those who have been acquainted with their borders for years. Trees were prostrated, and roadways blockaded, though few of the permanent camps were injured. The work of the gale will interest the sportsmen only in so much as it will render his progress through the Maine woods more difficult than ever, though the lumber people will lose heavily in prostrated timber.

But the prospects for game are very bright. In Massachusetts it is declared by all who have been out that there were never nearly so many quail. One sportsman, who went out with his dogs on July 4, but without any gun, declares that he never saw as many quail in one day before. He also started a good many grouse. In Maine the reports of grouse are very good indeed. The old birds wintered remarkably well, the mild winter being favorable. Then the young birds are reported very plenty, even where but few were seen last year. At one farmhouse in Hebron, in Oxford county, in that State, the cat, a good mouser, has brought in five young partridges. This is something unheard of by the people in that section. The cat would have been stopped in her career after the game birds only she is too valuable a mouser to lose, and at each depredation it was expected that it would be her last, from the fact that the partridge chicks were nearly half grown. How the cat got them is a mystery to those acquainted with the habits of the ruffed grouse. In the same neighborhood a farm boy caught nearly a whole litter of the partridges a few weeks before. In this case the little chicks were unable to fly. They were kept for a short time and then allowed to escape.

Trout fishermen report the grouse very plenty, where they have been into the woods, and the chances are that they have summered well. The season has been wet, especially in northern New England, but the rains have not been very cold ones since June came in, though rather cold previous to that month. It is probable that the young grouse were not generally hatched till the weather was warm. The prospects for berries in the woods are excellent, and hence the birds will be in good condition. Nothing but a very extended drought can hinder an abundant crop of wild berries, indeed such a crop is already ripening in southern New England. Blueberry pickers report seeing a good many grouse and quail. The record of deer seen in the Maine woods this season is also a good one. The light winter was favorable to them as well as to the birds. The snows were so light that they were able to find better feed, while it was next to impossible to crust them, since there was very little snow and very little crust. Dogging was done in some sections, at least hounds were heard in the woods in the region of the Magallaway Upper Settlement, and the owner of the dogs has very probably a case to settle with the Game Commissioners. But generally there is not much complaint of illegal hunting deer in that State. The fall shooting promises to be good, if the timber is not too badly prostrated by the wind storm of Tuesday, July 8, as mentioned above. Perhaps it will be well for the large game if the woods are pretty badly blown down, since it will possibly give it a respite from the hunters. But later reports will tell how extensively the hunting is hurt by fallen trees. SPECIAL.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

A MODEL RAILWAY.—The Burlington Route, C., B. & Q. R. R., operates 7,000 miles of road, with termini in Chicago, St. Louis, St. Paul, Omaha, Kansas City and Denver. For speed, safety, comfort, equipment, track and efficient service it has no equal. The Burlington gains new patrons, but loses none.—*Adv.*

JACKING DEER IN MAINE.

Editor Forest and Stream:

If reports in the Maine papers and from private sources are to be believed deer are more plenty than ever in many parts of that State. They are seen very frequently, as they come out into the openings to feed. They evidently wintered well, and were crusted but little for the want of deep snows and crusts. The October and November shooting ought to be good. Indeed, it will be good, if there is anything left of it. Now, I do not like to scold, but I would like to ask the meaning of all the jibes and sneers, and banters at jack shooting in the Maine papers that are not particularly noted for their love of the little of protection that hangs about the big game in that State. Many of these papers contain dark hints as to what is going on. They do not actually state, in so many words, that jacking deer in July and August is tolerated in certain localities, but they hint at as much and admit that the jack lights are there and that parties go out with them. If they go out with a guide and a jack lamp, what is it for? It certainly cannot be for the amusement of the guide, and those fellows that will do such a thing can hardly have an idea that it will be a good thing to go out now and then during the summer in order to get the deer accustomed to the light and the boat, that they may be the more easily approached and shot when the open season comes on. No. Those fellows have only one idea; that is to kill a deer, no matter if it is in the summer, when the deer is poor and thin, and ten to one it is a doe with a couple of fawns back in the woods that must starve, since their mother and their only source of sustenance is shot. Such is dastardly business. It is cruel. It is illegal, and more is the surprise that men who claim to be respectable law-abiding citizens at home must take a gun on their vacation trip into the Maine woods in July and August. But they do it. They not only take a gun, but they take a jack light. They silence their consciences by the argument that their vacation comes in the illegal season for such game, and they much desire to kill a deer—just one deer, and that one can make no particular difference in regard to the supply. They lose sight of the fact that there are hundreds of other men in just their plight, and that there are not deer enough in Maine to go half way round. They are encouraged by guides and hotel keepers, or at least they are not discouraged. They are not told that to kill a deer out of season is to steal it from the sportsman who is willing to keep the law.

I fear that jack shooting in July and August is being done to a greater extent than usual this season in the Maine woods. I know of several improved jack lights that have gone into camp of late. If the Maine game protectors desire to know where to watch for these jack lights they can address me care of the FOREST AND STREAM, and I will inform them where the lights have gone, and in one or two cases give them the names of the parties who have taken the lights into camp, though I do not intend to work in the position of a detective. But I am indignant that such jack shooting and jack hunting after deer in the summer months should go unpunished. I desire to legally shoot deer in the open season, and, unless this illegal hunting is stopped, I stand little chance of being rewarded for my trouble in visiting Maine each year in the month of October, rather to find some of the marks of jack shooting than game to be shot. Last October I tramped through the forest six miles to a pond where very few sportsmen go, thinking my chances for a deer were good there. What did I find? An old boat, fixed to hold a jack light, and the bones and hair of a deer on the shore. The deer had evidently been killed more than a month previous, for the flesh had so completely gone to decay as to give out no smell, and the bones were considerably bleached. The carcass was doubtless too poor in flesh to be of the slightest use to the thief after he had stolen it. Now, I only ask that more pains be taken by the authorities in Maine to stop this illegal jacking of deer by so many sportsmen and vacationists who go there in the close season. If a warden in a certain locality has proved himself incompetent to grapple with it, after so many years of service, then he should yield his place to some one else.

STATE OF MAINE.

OMAHA, Neb., July 28.—John Ellis, an old-time member of the Omaha Gun Club and one of the best trap and field shots in the country, has returned after a long hunting expedition in Texas. He has had some remarkably interesting experiences, and declares that the Southwest is the hunter's paradise, with the abundanec of large and small game and countless varieties of fish. Bass fishing at Honeycreek and Manawa has been fair during the past week, and some good catches have been made; the fish running larger than any caught before this season. The gun clubs of this city, at their recent meeting, resolved to appoint a number of game wardens of their own, to be stationed at different parts throughout the State, to "keep tab on" and report the names of all persons detected in killing prairie chickens before the law is up. These wardens will be paid by the gun clubs jointly, and every violator reported will be prosecuted to the fullest extent of the law. This action will result in incalculable good. The Omaha Gun Club also decided to urge the next Legislature to pass a law abolishing spring wildfowl shooting, something the writer has been urging upon this body for three years or more.—SANDY GRISWOLD.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

OPEN GAME SEASONS.

THE following dates designate the beginning and end of the seasons during which the game named may lawfully be taken. A compilation of the full text of the game and fish law of North America is in course of preparation in this office, and its publication will soon be announced:

Arizona.

Elk, deer, antelope, mountain sheep, mountain goat, ibex, Oct. 1 to Feb. 1. Partridge, wild turkey, wildfowl, rail, plover, Sept. 1 to March 1.

Arkansas.

Deer, Aug. 1 to Feb. 1. Wild turkey, Sept. 1 to May 1. Pinnated grouse, prairie chicken, Sept. 1 to Feb. 1. Quail, Virginia partridge, Oct. 1 to March 1. *Yell County.*—Partridges or quail, Sept. 15 to March 15. Wild turkey, Aug. 15 to April 15. Deer, Aug. 1 to Feb. 1.

British Columbia.

Deer, elk, reindeer, caribou, mountain goat, mountain sheep, hare, Aug. 15 to Dec. 20. Grouse, partridge, prairie fowl, quail, robin, meadow lark, Sept. 1 to Feb. 1. Wild ducks, Sept. 1 to March 1. Cock pheasants, Oct. 1 to Feb. 1. Cow elk and hen pheasants protected at all times. Cock pheasants and quail on Mainland protected to 1894.

California.

Quail, partridge, grouse, rail, Sept. 10 to March 1. Doves, June 1 to Jan. 1. Male antelope, deer, mountain sheep, July 1 to Dec. 15. Wildfowl, Sept. 15 to March 15. Wild turkey, prairie chicken, Bob White, quail, pheasant, grouse, skylark, protected to 1895. [There are special county laws.]

Colorado.

Partride, pheasant, prairie chicken, prairie hen, grouse, Oct. 1 to Nov. 15. (Bison, buffalo, mountain sheep, ibex, Rocky Mountain goat, no open season.) Deer and elk with horns may be killed for food only, July 1 to Dec. 1.

Connecticut.

Woodcock, quail, ruffed grouse, partridge, gray squirrel, Oct. 1 to Jan. 1. Sora, rail, Sept. 1 to Jan. 1 [according to law of 1886, but General Statutes, 1888, give it Aug. 20 to Jan. 1 for New Haven, Litchfield and Fairfield counties]. Wildfowl, Sept. 1 to April 30.

Delaware.

Partridge, grouse, quail, woodcock, rabbit, hare, in New Castle county, Nov. 15 to Jan. 1; in Kent and Sussex counties, Nov. 15 to Feb. 1. Rail, ortolan, reed bird, Sept. 1 to Feb. 1. Wild goose, swan, brant, wild duck, Oct. 1 to April 15. [Summer or wood duck unprotected at all seasons.]

District of Columbia.

Quail, or partridge, Nov. 1 to Feb. 1. Ruffed grouse, or pheasant, Aug. 1 to Feb. 1. Woodcock, July 1 to Feb. 1. Pinnated grouse, or prairie chickens, Sept. 1 to Feb. 1. Snipe, plover, Sept. 1 to May 1. Wildfowl, Sept. 1 to April 1. Rail, ortolan, reed bird, rice bird, Sept. 1 to Feb. 1. Venison, Aug. 15 to Jan. 1.

Florida.

Florida has no game law with respect to seasons.

Idaho.

Buffalo, elk, deer, antelope, mountain sheep, Sept. 1 to Jan. 1. Quail, Oct. 1 to Dec. 15. (Mongolian pheasant, no open season.) Pheasant, grouse, prairie chicken, July 15 to Feb. 1. Wildfowl, Aug. 1 to April 15.

Illinois.

Deer, wild turkey, Sept. 1 to Jan. 15. Pinnated grouse, prairie chicken, Sept. 15 to Nov. 1. Ruffed grouse, quail, pheasant, partridge, Oct. 1 to Dec. 1. Woodcock, July 15 to Sept. 15. Gray, red fox or black squirrel, June 1 to Dec. 15. Wildfowl, Sept. 15 to April 15.

Indiana.

Deer, Oct. 1 to Jan. 1. Quail, pheasant, Oct. 15 to Dec. 20. Wild turkey, Nov. 1 to Feb. 1. Prairie chicken, Sept. 1 to Feb. 1. Woodcock, July 1 to Jan. 1. Wild duck, Sept. 1 to April 15. Squirrel, June 1 to Sept. 20.

Iowa.

Pinnated grouse, prairie chicken, Aug. 15 to Dec. 1. Woodcock, July 10 to Jan. 1. Ruffed grouse, pheasant, wild turkey, quail, Oct. 1 to Jan. 1. Wildfowl, Aug. 15 to May 1. Deer, elk, Sept. 1 to Jan. 1. Beaver, mink, otter, muskrat, Nov. 1 to April 1.

Kansas.

Prairie chicken, pinnated grouse, Sept. 1 to Jan. 1. Quail, Nov. 1 to Jan. 1.

Louisiana.

Deer, Oct. 1 to March 1. Wild turkey, Oct. 1 to April 15. Quail, partridge, pheasant, Oct. 1 to April 1. [Many parishes have special seasons.]

Maine.

Moose, deer, caribou, Oct. 1 to Jan. 1. Mink, beaver, sable, otter, fisher, muskrat, Oct. 1 to May 1. Woodduck, dusky duck, black duck, teal, gray duck, Sept. 1 to April 1. Ruffed grouse, partridge, woodcock, Sept. 1 to Dec. 1. Quail, Oct. 1 to Dec. 1. Plover, Aug. 1 to May 1.

Manitoba.

Moose, deer, cabri, antelope, elk, wapiti, reindeer, caribou, Oct. 1 to Dec. 1. Grouse, prairie chicken, pheasant, partridge, Sept. 1 to Dec. 1. Woodcock, plover, snipe, sandpipers, Aug. 1 to Jan. 1. Wild ducks, swan, geese, Sept. 1 to May 1. Otter, fisher, pekan, beaver, muskrat, sable, Oct. 1 to May 15. Marten, Nov. to April 15.

Maryland.

The Maryland law is so complicated that we shall present the seasons for the several counties in tabular form in a later issue.

Massachusetts.

Woodcock, ruffed grouse, quail, Sept. 15 to Dec. 15. Wild ducks, Sept. 1 to April 15. Plover, snipe, shore birds, rail, July 15 to May 1. Wild pigeon, tern, gull, Oct. 1 to May 1. Gray squirrel, hare, rabbit, Sept. 1 to March 1. [Deer protected at all times.]

Michigan.

Deer, Nov. 1 to Dec. 1 (but in Upper Peninsula Sept. 25 to Nov. 15). Wild turkey, Oct. 1 to Nov. 30. Woodcock, partridge, ruffed grouse, Sept. 1 to Jan. 1. Wildfowl, snipe, Sept. 1 to Jan. 1 (jack snipe, red-headed, bluebill, canvasback, widgeon, pintail ducks and wild geese to May 1). (Colin, quail, Virginia partridge, pinnated grouse, prairie chicken, protected to 1894.)

Minnesota.

Woodcock, July 4 to Nov. 1. Prairie chicken, pinnated grouse, sharp-tailed grouse, white-breasted grouse, Aug. 15 to Dec. 1. Ruffed grouse, pheasant, Sept. 1 to Dec. 1. [Quail protected to 1893.] Wildfowl, Aug. 20 to Jan. 10. Elk, moose, deer, Nov. 1 to Dec. 1.

Mississippi.

Deer, dove, starling, Sept. 1 to March 1. Wild turkey, quail, partridge, Oct. 1 to May 1. *Yazoo County.*—Doves, Aug. 1 to March 1. Deer, Sept. 15 to March 1. Wild turkey, Oct. 1 to May 1. Quail, partridge, Oct. 15 to April 15. [Other counties have special seasons.]

Missouri.

Coon, mink, otter, beaver, muskrat, Nov. 1 to April 1. Deer, Oct. 1 to Feb. 1. Wild turkey, Sept. 15 to March 1. Pinnated grouse, prairie chicken, Aug. 15 to Feb. 1. Ruffed grouse, pheasant, partridge, quail, Virginia partridge, Oct. 1 to Jan. 1. Woodcock, July 1 to Jan. 10. Turtle dove, meadow lark, plover, Aug. 1 to Feb. 1.

Montana.

[Bison, buffalo, moose, elk, beaver, quail protected at all times.] Deer, mountain sheep, mountain goat, antelope, Sept. 15 to Jan. 1. Wildfowl, Aug. 10 to May 15. Prairie chicken, grouse, pheasant, fool hen, sage hen, Aug. 15 to Nov. 15.

New Brunswick.

Moose, deer, caribou, Aug. 31 to Jan. 15. Mink, otter, sable, fisher, beaver, Sept. 1 to May 1. Partridge, Sept. 20 to Dec. 1. Woodcock, Sept. 1 to Dec. 1. Snipe, Sept. 15 to March 1.

Newfoundland.

Caribou, Oct. 1 to Feb. 15. Ptarmigan, willow grouse, partridge, grouse, Sept. 15 to Jan. 15. (Black game, capercailzie, protected at all times. Moose, elk, protected at all times.) Rabbit, hare, Sept. 1 to March 1. Otter, beaver, Oct. 1 to April 1.

New Hampshire.

Plover, yellowlegs, sandpipers, ducks, rails, Aug. 1 to Feb. 1. Woodcock, ruffed grouse, quail, Sept. 1 to Jan. 1. Deer, moose, caribou, Sept. 1 to Jan. 1. Mink, beaver, otter, sable, fisher, Oct. 15 to April 1. Raccoon, coon, gray squirrel, Sept. 1 to Jan. 1. Hare, rabbit, muskrat, Sept. 1 to April 1

New Jersey.

Deer, month of November. Quail, partridge, ruffed grouse, pheasant, rabbit, Nov. 1 to Dec. 15. Gray squirrel in Bergen, Essex, Hudson, Hunterdon, Middlesex, Morris, Passaic, Somerset, Sussex, Union and Warren counties, Nov. 1 to Dec. 15; elsewhere, Nov. 15 to Dec. 25. Wildfowl, Oct. 15 to May 1. [English hares and European partridges protected.] Woodcock, month of July and Oct. 1 to Dec. 15.

New York.

Deer, Aug. 15 to Nov. 1; use of dogs permitted Sept. 1 to Oct. 20 (but on Long Island only first 10 days of October; and never in St. Lawrence and Delaware counties). Hare and rabbit, Nov. 1 to Feb. 1. Black and gray squirrel, Aug. 1 to Feb. 1; in Cortland county, Sept. 1 to Jan. 1. Bay snipe, sandpiper, shore birds and plover, on Long Island, July 10 to Jan. 1; no law elsewhere. Ruffed grouse and partridge, Sept. 1 to Jan. 1; in Queens and Suffolk counties, Nov. 1 to Jan. 1. Quail, Nov. 1 to Jan 1. Rail and meadow hen, on Long Island, Sept. 1 to Jan. 1. Robin, on Long Island only, Nov. 1 to Jan. 1. Wild ducks, geese and brant, Sept. 1 to May 1; on Long Island Sound, Oct. 1 to May 1; in Chautauqua county, Sept. 1 to Feb. 1. Woodcock, Sept. 1 to Jan 1. *Columbia County* —Woodcock, rail, ruffed grouse September, October and November; quail in November only. *Duchess County.*—Squirrel season opens Sept. 1. *Rockland County.*—Squirrels, Sept. 1 to Jan. 1. *Westchester County* forbids taking partridge, grouse, quail, snipe, woodcock or grey squirrel in November.

North Dakota.

Buffalo, elk, deer, mountain sheep, prairie chicken, pinnated grouse, sharp-tailed grouse, ruffed grouse, Sept. 1 to Jan. 1. Wildfowl, snipe, plover, curlew, Sept. 1 to May 15.

Nova Scotia.

Moose, caribou, Sept. 15 to Jan. 31. Beaver, Nov. 1 to April 1. Hare, rabbit, Oct. 1 to March 1. Grouse, partridge, Sept. 15 to Jan. 1. Woodcock, snipe, teal, Aug. 20 to March 1. Blue-winged duck, Aug. 1 to April 1.

Ohio.

Muskrat, mink, otter, March 1 to April 15. Quail, Nov. 10 to Dec. 15. Gray, fox and black squirrel, July 1 to Dec. 15. Woodcock, July 15 to Nov. 1. Ruffed grouse, pheasant, prairie chicken, Sept. 1 to Dec. 15. Wild duck, Sept. 1 to April 10, but no ducks may be killed on Sunday, Monday and Tuesdays. Wild turkey, Oct. 1 to Dec. 15. Deer, Oct. 15 to Nov. 20. Rabbits unprotected as to season.

Ontario.

[Caribou, moose, elk, no open season.] Deer, Oct. 15 to Nov. 20. Grouse, pheasants, prairie fowl, partridge, Sept. 1 to Jan. 1. Geese, swans, Sept. 1 to May 1. Wild ducks, snipe, rail, golden plover, Sept. 1 to Jan. 1. Woodcock, Aug. 15 to Jan. 1. Quail, wild turkey, Oct. 15 to Dec. 15. Hares, Sept. 1 to March 15. Beaver, mink, muskrat, sable, martin, otter, fisher, Nov. 1 to May 1.

Pennsylvania.

Deer, Oct. 1 to Dec. 15. Gray, black or fox squirrel, Sept. 1 to Jan. 1. Hare, rabbit, Nov. 1 to Jan. 1. Wild duck and goose, Sept. 1 to May 1. Wild turkey, Oct. 15 to Jan. 1. Upland or grass plover, July 15 to Jan. 1. Woodcock, July 4 to Jan. 1. Quail, Virginia partridge, Nov. 1 to Dec. 15. Ruffed grouse, pheasant, Oct. 1 to Jan. 1. Rail, reed bird, Sept. 1 to Nov. 30.

Quebec.

Deer, Oct. 1 to Jan. 1. Moose, caribou, Sept. 1 to Feb. 1. Beaver, mink, otter, martin, pekan, Nov. 1 to April 1. Hare, Nov. 1 to Feb. 1. Woodcock, snipe, partridge, Sept. 1 to Feb. 1. Wild ducks, Sept. 1 to May 1.

Rhode Island.

Grouse or heath hen, Nov. 1 to Jan. 1. Woodcock, Sept. 1 to Jan. 1. Ruffed grouse, partridge, Sept. 1 to Jan. 1. Quail, Oct. 1 to Jan. 1. Bartram's tattler, upland plover, Rhode Island or grass plover, Aug. 1 to April 1. Dusky or black duck, Sept. 1 to March 1. Woodduck, summer duck, Sept. 1 to March 1. Blue or green-winged teal, Sept. 1 to March 1.

Tennessee.

Deer, Aug. 1 to Jan. 1. Quail, partridge, Nov. 1 to March 1. [Many counties are exempt.]

Texas.

Deer, Aug. 1 to Jan. 20. Wild turkey, Sept. 1 to May 15. Pinnated grouse, prairie chicken, Aug. 1 to March 1. Quail, partridge, Oct. 1 to April 1. In many counties an open season on all game runs through the year.

Utah.

Elk, deer, buffalo, bison, antelope, mountain sheep, Sept. 1 to Dec. 1. Quail, partridge, pheasant, prairie chicken, sage hen, grouse, Aug. 15 to March 15. (California quail protected.) Wild goose, wild duck, snipe, Sept. 1 to April 1.

Vermont.

(Deer protected to Nov. 1, 1890, and will probably be protected beyond that date by next Legislature.) Mink, beaver, otter, fisher, Nov. 1 to April 1. Quail, woodcock or ruffed grouse, partridge, Sept. 1 to Feb. 1. Woodcock, Aug. 15 to Feb. 1. Wild goose, wild duck, Sept. 1 to May 1,

Wisconsin.

Woodcock, Aug. 1 to Dec. 15. Quail, partridge, pheasant, ruffed grouse, prairie chicken, grouse of every variety, snipe, plover, wild duck, goose, brant, squirrel, Aug. 1 to Dec. 15. Deer, Oct. 15 to Dec. 1.

Wyoming.

Partridge, pheasant, prairie chicken or grouse, Aug. 15 to Nov. 1. Sage hen, July 15 to Sept. 15. Wild ducks, Aug. 1 to May 1. Deer, elk, moose, mountain sheep, mountain goat, antelope may be killed by *bona fide* residents only and for food. [Bison, buffalo and beaver protected at all times.]

OHIO QUAIL SUPPLY.—Columbus, O.—I have not known quail so plentiful in Ohio since the days of my boyhood. I have means of hearing from nearly every part of the State, and from every locality comes the same report. The particular cause for this abundance was the past phenomenally warm winter. Another pregnant reason is that the farmers, especially in the vicinity of the cities, have very generally united in the formation of game protective societies, and prohibit the intrusion of "game hogs" upon their premises. For many years past they have been overrun with gunners from the cities, quite generally members of so-called game protective societies, and always with trained dogs, who, upon striking a covey of quail, would follow them until the last one was killed. In this way entire regions in the vicinity of cities have been entirely cleaned out by these unprincipled hogs. The farmers have put a stop to this, and an abundance of breeders are left over, with the result here reported. On the glorious Fourth, some friends on angling bent, took me out a few miles for a ride. As usual on such occasions, I wiped the cosmoline out of my old, reliable, muzzleloading, telescope-sighted rifle, and with a view to the burning of some gunpowder, a practice which I have indulged in on the "Fourth" ever since I was large enough, I went duly prepared. Before we were fairly out of the city we were greeted with the old familiar whistle of "Bob White," and there was scarcely a minute during the day that we did not hear it on every side. Every few minutes we also saw villainous little privateer hawks after the quail. During the day I got two shots at these little rascals; one at more than 150 and the other at more than 200yds. distant, killing in each case. How is that for a man of 64 years, almost without practice? I think at the present time that these hawks are the principal enemies of quail in this State.—M. P. P.

GAME IN THE NEW STATE.—Kent, King county, Washington.—Several parties have explored the Olympic Mountains west of here this summer, hitherto an unknown country. Many new places of interest have been opened up, and game in large quantities is reported. Good quantities of elk, deer, and black bear have been run across. Five small coons were shot on the 6th near Des Moines; a large black bear was also stirred up at that place. A hunter brought into Kent a few days ago a bear with coat partly shed, upper coat brown and lower half black. The black bears are fond of salmon berries, and can be generally found where they grow. Two wild cats are reported west of Kent. A young man was badly shot by pulling his gun out of the wagon by the muzzle on Green River. They were just going to pitch camp. While this is not a sportsman's paradise, a good hunter and fisherman can have lots of enjoyment. Five black bear were routed out by a party of surveyors on Lake Washington, near Seattle, a city of 40,000 population. Any sportsman or naturalist will be answered who writes for information concerning the Puget Sound country.—N. L. H.

WHATCOM, July 15.—Black bears are captured here nearly every day by berry pickers or by those who have pigs running at large.—J. Y. C.

ADIRONDACK DEER.—Ellenburgh Center, N. Y.—I inclose you some printed matter relating to deer hounding. I mailed copies to every Senator and Member of Assembly during the last session of our Legislature. It is a thing to be profoundly regretted that our Legislature can not stop playing the game of politics long enough to consider a subject that has no politics in it. I am in debted to Mr. J. B. Harrison of Franklin Falls, N. H., Chas. Fenton of No. 4, C. H. Smith of Petries Corners, Lewis Co., John D. Collins of Utica and H. A. Pride of Holland Patent for words of cheer in our efforts to get a better law to protect deer. I would like to suggest to the members of the Codification Committee that they take in the Adirondack mountains during the season beginning Sept. 1 and ending Nov. 1.—WM. H. GORDON.

THE MAGALLOWAY RIVER DISTRICT.—Reports are current in Boston, and probably other cities, that sportsmen will not be allowed to hunt and fish on the upper Magalloway River, Maine, above a point known as "The Narrows;" that the whole country above that place is controlled by a club, formed the past winter, with headquarters at Parmachnee Lake. It may be interesting to some of the old visitors to the region about the Magalloway River to know that the river, and brooks and lake as well, are as free as ever to any who wish to fish in them, and there are plenty of public lots upon which they can camp without any fear of molestation from any club or anything of the kind in existence.—SEWES.

THE CATSKILL DEER PARK.—Rondout, N.Y., July 23.—State Forest Commissioner Townsend Cox, during his recent visit to the deer park in the Ulster Catskills, made a personal inspection of the high wire fence surrounding the inclosure. This will furnish browsing for at least 150 deer. There are twenty-one deer, old and young, in the park. A doe is so careful in hiding its young that it is almost impossible to find them. It is reported that there are three wild deer in the woods near the park, and an effort will be made to capture them.—*New York Times.*

PENNSYLVANIA GAME.—Towanda, Pa.—Reports given me by farmers in this neighborhood allow me to say that quail will be plentier than for years. One reported finding three nests and all in time hatched out safely. Grouse also doing nicely; coveys large and growing fast. Woodcock occasionally seen in the swales and swamps back in the hills, and a bag of eight was made from one small swamp by two sportsmen on July 4, first day of the season in this State. Said the birds were full grown and plump. —M. F. D.

THEY DID NOT KNOW THE BIRDS.—Chicago.—Last fall I was passing the Saratoga Restaurant on Dearborn street in this city, where quite a crowd of people had collected. I elbowed my way through until the object of their curiosity was seen. To my surprise (though a welcome sight to a sportsman's eyes at all times), it was only a covey of quail. To listen to the remarks of the city-bred, middle-aged and young men, was amusing. They did not know "what kind of chickens" they were, and disputes would arise on the variety of the birds; some contended they were pheasants, and others young prairie chickens. Really it was amusing to see people whom one would naturally look to for information display so much ignorance on things so common.—AH LOOK.

QUAIL IN OHIO.—Toledo. O., July 25.—Three years ago, about the middle of July, Mrs. Beebe and myself drove from Toledo across country down into Central Ohio, a matter of a hundred miles. During that drive we saw and heard just one solitary quail. Last week I duplicated the trip, and, during the greater part of it, was scarcely out of sight or sound of our friend "Bob White." Mild winters and a short shooting season have worked wonders. Seneca, Wyandot, Marion and Delaware counties all promise good sport when the quail season opens again next November.—JAY BEEBE.

BUFFALO IN THE PARK.—Yellowstone National Park, July 17.—Buffalo have been seen several times recently, and a short time ago two crossed the wagon road at Mary's Hill, head of Nez Perce Creek, passing between two coaches, frightening the horses. The wagon-tongue was broken and the passengers much excited, but no one was seriously injured.—H.

NORTHWOOD, N. Y., July 18.—A few days ago John Pardy shot a crane, which was 6ft. 2in. across the wings. The bird had a hole in its neck, between the windpipe and neck bone, which had apparently been made by a .38 or .40cal. bullet some days before it was killed. A man could easily put the end of his little finger through the hole in the neck.—RAY SPEARS.

MINNESOTA.—Detroit Lake, July 17.—The chicken season will open up the middle of next month, and the outlook is good for the sportsmen. The Indians are killing deer now. Two weeks ago two Indians north of Island Lake killed fourteen or fifteen in a week.—MYRON COOLEY.

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

"JUMPING" BASS.

Editor Forest and Stream:

It is easily seen that your correspondent, Mr. E. Hough, lives and has had his piscatorial education in such a backwoods town as Chicago, when he shows his surprise on learning that black bass will jump into a boat. That fact has been known to many others for years. I never sent any account of it to the papers because I knew that if it was made known to the general public there are many who would take advantage of it to catch bass in that way when they should be left in the water until taken in the only legitimate way—with hook and line. But now that he has "let the cat out of the bag," a fuller statement may be made.

Under ordinary circumstances there is not much chance for "jumping" bass into a boat; but it is when a stream is rapidly rising, and they seek shelter out of the rapid current by coming in near the shore, that they may be taken in large numbers in that way. The first large catch that I knew of being made in this way occurred several years ago at Saltsburg, Pa., on the Conemaugh River. There is a dam built across the river just above its junction with the Loyalhanna to form the Kisikiminetas. The Conemaugh is the river on which occurred the great flood which was so disastrous to the city of Johnstown. It is subject to very sudden floods. On the occasion referred to, a man was rowing a boat up the stream, in the back-water above the dam, and to avoid the stiff current, was keeping about an oar's length from the bank. After rowing a short distance he was surprised to see a bass jump from between the bank and boat and land in the boat at his feet. After examining his prize he started again when another, and then another bass jumped into the boat. By the time he reached the head of the slack-water he had a fine string of these beautiful fish. He then returned to town and told others of what had occurred, and other boats tried the experiment. To make a long story short, during that rise in the river, and in that dam, from eighty to a hundred fine bass were "jumped."

While coming down the St. John's River, in Florida, last March, on the steamer Plant, I was much interested in the leaping of the bass along the shore as the steamer passed. When the suction of the steamer would draw the water from the shore, especially where there were lily-pads, the bass would leap clear out of the water, and break for the deeper water of the river. This would continue until the steamer had passed. Some of the bass would leap two feet above the surface of the water, and go five or six feet before they would enter it again.

Of course no true sportsman would resort to this method for catching bass, any more than he would to seining.

HOMERUS.

CLEVELAND, O.

Editor Forest and Stream:

The article by Mr. Hough, in issue of July 10, in regard to jumping bass, is rather amusing for an old-timer to read. I venture to say that the practice of jumping bass is an ancient one; and if old Izaak were alive he could give pointers on the "method" the boys would take advantage of when the fish would not bite. I was born and reared in the country (a "hoosier"), and in a sportsman's paradise, with a richer variety of game than was to be found elsewhere in these United States. We had all from the bear to the chipmunk and the wild turkey to the wild pigeon. The practice of jumping bass we boys would invariably indulge in when the fish would not bite, and when we thought we had an insufficient string to make a creditable showing for our day's fishing. The way we would proceed to business, was to doff our clothing and all take a hand. We had an old square-built flat-bottom rowboat about 3ft. wide, and we waded in the stream, pushing the boat before us down stream, as the fish always head up stream. We would kick and splash, and make all the noise possible, and many a time we would get a "biff" in the breast or face from the leap of a bass. Once, I remember quite well, a young fellow by the name of Weaver was completely upset, and would no doubt have been drowned had it not been for his companions, by a bass striking him in the temple. They can leap with great force and can jump several feet clear of water.

Mr. Hough speaks of the $5 trips to good bass fishing from this point that are possible. I would like to learn of such places, as well as a good many others I venture. Perhaps Mr. Hough is a railroad man and his fare costs him nothing. We may not be so fortunate in that respect.

CHICAGO, Ill. AH LOOK.

MAINE WATERS.

THE newspapers that have the interest of the fishing resorts at heart are booming the season for all it is worth, although it is a fact that the summer travel in this direction has been rather short since the actual spring season for trout closed. These papers tell all the old fish stories they can find. They hold over some of the accounts of big trout caught and bring them out late in the season, only omitting the dates, and the incautious reader, especially if he be a novice at trout fishing, reads the account with the idea that the big trout was caught since the hot weather begun. The object is accomplished. The novice resolves that he will take his vacation in July or August and will visit the scene of the big trout. The result is a disappointment, as indeed it ought to be. But there are still a few fishermen at the celebrated resorts, summering there, in some cases accompanied by wives and daughters. The Houghton & Dutton Camp, at Cupsuptic Lake in Maine, is occupied by its proprietors—or part of them—the celebrated dry goods men of Boston. Mr. John Richards, of Boston, is on record as having taken a 11½lbs. lake trout from Clear Water Pond, in Franklin county, one day last week. There is, however, more of fishing and camping on the far-away lakes and ponds than usual, and these ponds are rapidly becoming accessible and open to the public. They are known only to the few more enterprising sportsmen for a year or two, then some guide or backwoodsman cuts out a road and establishes conveyance for the public, be the conveyance ever so crude, and the jewel, dear to the sportsman's heart who first knew it in its natural state, is a thing of the public and no longer attractive. Quite a party from Waltham, Mass., have lately been visiting Tim and Seven Ponds with good results in the way of trout caught. The party consisted of Dr. J. F. Hudley, W. H. Flagg, G. H. Lawrence, F. A. Larcom, W. P. Smith, of Waltham, and A. H. Rolins and wife, of Cambridge. Mr. C. P. Stevens, of Boston, well known to nearly every printer in New England as he of printers' roller fame, starts for Camp Vive Vale at the Narrows, Richardson Lake, to-morrow. He is to be accompanied by Mrs. Stevens this time, and her sister, and they are to remain till the 1st of September. Mrs. Stevens has been trying for four years to get the strength to make this trip, she being an invalid, and has great expectations of regained health and pleasure. The chances are that she will be satisfied, for their camp is in the jewel of a spot and Mr. Stevens is a pioneer fisherman on those waters, and if good trouting pleasure is to be had, he knows where to find it. By the way, I hear that the sportsmen in that section of the country have been few this season. Early the fishing was good, but later the waters have been deserted.

The fisher for count is abroad again, and worse than ever, if we are to believe the Maine local papers. The accounts of Mr. ———, with ——— for guide, catching up among the hundreds of trout from such a pond or stream, are simply sickening to the real lover of the rod and line. If the number of trout were really taken, it is a fact that the paper telling the story ought to be ashamed of, as well as the doer of the deed. To the initiated the story simply means that the paper lies and lies about that which hurts itself and its town to make, or else some trout hog has been taking fingerlings in a way that he ought to be ashamed of, and would not make public were he anything of a true sportsman. It is one thing to kill trout and another thing to fish for the trout that are actually needed in camp; but the very papers the most interested in the question are doing much of harm by making what ought to be branded as a shame rather honorable than otherwise. SPECIAL.

NEVERSINK POACHERS.—Those interested in the preservation of fish and game in New York State will be glad to hear that Mr. Clarence M. Roof, of this city, on the 23d inst. convicted three men who wilfully and persistently violated the law by fishing in the private waters of the Neversink River, Frost Valley, N. Y., owned and preserved by him. Three suits have been instituted by Mr. Roof in all. The first, in 1888, was tried before a local justice and jury, and the laws being imperfectly understood, the jury refused to convict. The present suit was brought at Saugerties, N. Y., before Justice Maclane. Mr. Roof was represented by Mr. H. M. Soop, counsel for the Ulster & Delaware R. R., and Mr. Chas. Davis, of Saugerties. The prisoners were convicted. The fine with costs amounting to $70 being promptly paid, the additional punishment of imprisonment was waived. The suit was brought in pursuance of Chapter 534 of the Laws of the State of New York for the year 1879. The section of the country through which this part of the Neversink River flows, is near Slide Mountain, the highest peak of the Catskill Range, and thence through the wild and beautiful Frost Valley. There are but few farmers along the stream, it is densely wooded and few spots are more primitive. Although the sentiment of the respectable citizens of this section is in sympathy with the enforcement of the game laws, there is a small band of reckless irresponsible persons, who not only persistently poach and otherwise violate the laws, but threaten violence as well. It is believed throughout Ulster county that the prompt and fearless action taken by Mr. Roof will break up the gang and do much toward the preservation of game in that section.

HABITS OF BLACK BASS.

OCCASIONAL OBSERVATIONS ON THE AQUARIA OF THE U. S. FISH COMMISSION.

THE character and depth of the waters usually inhabited by the black bass and the wary nature of the fish make it almost impossible to learn anything of it in a natural condition, and on the other hand, an adult bass in an aquarium is much like a lion in a cage as a rule, a sulky, unhappy creature. Until aquaria of sufficient size are afforded, no very satisfactory observations can be made upon them. The same may be said of the adults of many other fresh-water species and of most of the salt-water fishes. The young of fishes no doubt to some extent reflect the habits of the adults, but they lack, in the case of the black bass at least, that element of cautiousness so characteristic of it. The black bass is the most wary of fishes, and though it be starving it can only be caught on a hook by deception.

It is undoubtedly a fact that many adult fish in aquaria will deliberately starve while surrounded by their natural food, and, as has been stated by Prof. Henry C. Chapman, regarding carnivorous animals in captivity, the greater number of them die of heart-disease, induced no doubt by grief—literally broken hearted. This is universally known concerning many of our wild birds. The late Prof. Spencer F. Baird frequently suggested to the writer the making of experiments of herring and mackerel in aquaria. Being convinced that the limited size of the tanks is the cause of the fright manifested by the fish, which, as in the case of wild birds, caused them to dart around violently and wear themselves out with nervous excitement, the making of some larger aquaria was advised. In these, when constructed, although only three feet wide by six feet long and three feet deep (the largest now in use in the U. S. F. C.), herring and mackerel moved about quietly and normally and took food.

To return to the black bass, the adult, in the ordinary sized aquarium, is a sulky creature. Crayfish, shiners, catfish, sunfish, minnows, all may wander around it with impunity. This is not its true nature; wary and suspicious it is, but it is not the creature to sulk. Thus, as at present equipped for observation, the young of fishes (not over 5 or 6in. long) are best fitted for captivity, and afford us the only clue to the natural habits and instincts. The young black bass is very much in habits like its cousins, the sunfishes. In a depressed condition, with its fins closed and its abdomen shrunken, it is as unsightly in appearance as a mangy lion, and gives one an unfavorable impression. The young bass, however, with its fins erect, its abdomen distended with food, sleek and fat, is a picture of content and satisfaction, an ideal fish. The young bass will eat with avidity worms, minnows, crayfish, almost anything alive, but it will immediately spit out a piece of beef which it has been beguiled into taking through hunger. Its food must be alive and wriggling. The amount it can stow away is simply astonishing.

W. P. SEAL.

BLACK BASS IN DELAWARE RIVER.

HON. HENRY C. FORD, president of the Pennsylvania Fish Commission, has given us the following notes on his recent experience with black bass in the headwaters of the Delaware:

The black bass fishing in the Delaware is the best known for years. Mr. Ford fished four days about the middle of July and caught one weighing 5½lbs., one of 5lbs., one of 4½lbs., four weighing 4lbs. each, eight of 3lbs. each, besides a great many smaller ones. He never keeps any less than 1lb. The largest bass was landed after a fight lasting 25 minutes on a 7oz. rod. Live bait was used altogether. Some bass have been caught in those waters with artificial flies. The "Epting" is the best and the Baltimore-oriole is good. Sometimes a lead-winged coachman is successful. Mr. Epting took 18 fine bass on a fly a year ago while fishing down the riffles at Dingman's Ferry. In warm weather the bass are on the riffles and in cooler weather in deep water. When the water is muddy and the river high they are found in eddies along shore. In all the thousands of black bass Mr. Ford has examined he has seen only two young shad, and this is to be expected, for bass feed near the shore while shad swim in the channel. The striped bass kills young shad in large numbers, following them and destroying them without cessation. Mr. Ford has several times cast bait into the swirl made by a fish chasing shad and has had strikes from striped bass every time. The young shad are running down the Delaware now, although it is early for naturally-spawned fish, and these may be from artificial introduction. The helgramite is one of the very successful black bass baits in this region. Mr. Ford takes them in the orthodox way in the shoal water of the riffles by means of a fine-meshed landing net held below the stone while the current sweeps the larva into the net. The helgramite rolls itself up into a ball. The stone catfish of the Delaware is one of the finest of all baits. It is darker in color than the stone cat of the Susquehanna. The bass will not take the young of the common yellow cat of the Delaware; sometimes it will take hold of its tail and pull a little and then let go. The stone cat is always taken head first, and this is rendered easy because it is sluggish and does not raise its spines. The yellow cat, however, keeps its spines erect and ready for business. Lampreys are excellent for bass bait also, and they are rather plentiful now along the headwaters of the Delaware in sand bars near the mouths of brooks tributary to the river. One man collected 800 and kept them in a little spring brook. The lampreys are in the sand from 2 to 6ins. under the surface of the water. They go down into the sand head first and will burrow out of sight very quickly in wet sand.

KILLING HERONS TO SAVE FISH.—Whatcom, Wash., July 15.—Mr. Adams, who lives on a farm some eight miles north of this city, with a friend on June 26, killed 140 blue herons, together with the crested heron, in a heron rookery near a small lake on Ten-Mile Creek; and there are several hundred there yet. The reason for killing them is that they keep the small trout all killed out, and those ranchers object to the herons monopolizing the trout business.—J. Y. C.

ILLINOIS. Hamlet.—We have had no good fishing since early spring, and then only for a short time, the water has been too high. Reports from different parties working in hay fields are that there are large droves of prairie chickens.—P. W. D.

CHICAGO BASS WATERS.

BASS fishing in the waters of this region has been unusually good this season. The bait-casters have had good luck in the Fox Lake system, and the fly-fishing for the small-mouths on the Fox River has been part of the time at least very good, as mentioned in earlier reports. Mr. Loeb, with A. G. Spalding & Bro., was back yesterday from a short trip on the Fox River below Montgomery, and says that his party got very good bass on the artificial fly. Not very much fly-fishing for bass has ever been done by the angless of this city—more this year than ever before—but it is hoped that there will be a steady growth in this form of sport, which is certainly the prettiest way possible to fish for bass, if not the most killing.

It is a pleasure to give definite testimony which may bring to the notice of some hitherto ignorant thereof another very accessible and extremely good bass water—Cedar Lake, Indiana, on the Chicago & Atlantic Railway. This should not be confounded with the Cedar Lake lying closer to Chicago upon another line. It may be remembered that the little party which went down on the Tippecanoe in the special car a few weeks ago did not have very great luck with the fish. Indeed, I should have stated that the total catch was so small that in the evening Mr. Donald emptied the minnow cans and made the cook serve up every last bait minnow cooked for dinner—a proceeding which it seems to me is one of the most singular ever recorded of a party of anglers. "We've got to have a fish dinner of some sort," said Mr. Donald, "and as we've had a lot of trouble getting those shiners, we might as well eat them, if we can't catch any bass on them. You've all got to eat shiners now, and like 'em, too." So we all did, though it did look rather hard, seeing we had come after bass. It was then that we fell talking of the bass at Cedar Lake, and one result of this conversation was that last Fourth of July saw my friend, Mr. Harryman, and myself down in that country again. The Tippecanoe was boiling full of muddy water this time, and we got no fly-fishing, barring two bass which we took early in the morning, so we gladly set forth for Cedar Lake. The entrance point for Cedar Lake is Ora, a little huckleberry station, at which the only north bound stopping train is the afternoon local. After a six-mile ride over a sandy wood road, we reached the head of the lake, whose shores we found sprinkled with little cottages. There are three hotels here, Shoup's, Tanner's and Varns's. We went clear on round to the head of the lake and stopped with Ed. Varns, and were glad of it later, for we found him the only man around the lake who thoroughly knows the bars and other bass grounds. Mr. Varns rowed us, and it was owing to his knowledge of the lake that we had such good sport. On the midnight frog hunting excursions which we found necessary in order to get bait, our host also proved himself an adept. I do not know that I should weary readers by a long account of our trip, but when I say that we brought back with us 16 fine bass, averaging over 2¼lbs., only a part of the sport has been indicated, for we lost three fish to every one we got. We could not get good bait frogs, and were forced to use large bullfrogs. In striking so large a frog, the bass does not swallow it at once, and the angler must wait a few moments for the "second run" before fastening his fish. By that time we found that our bass were usually so far down among the big "tobacco weeds" that the chance of getting them out, without their tearing something loose, was by no means an even one. We, however, caught all the bass we cared for, and we "discovered" a splendid lake for bait-casting for large-mouthed bass. The lake is full of bass. The frog is the proper bait. It seems that this water is not much fished by skillful anglers. A great many bass are "jayhawked" out on long cane poles, but Mr. Varns told us that we were the first men he had ever seen cast the bait with the short rod and free reel, and I noticed that the operations of the latter gear attracted attention as we passed some of the "cottages." Mr. Varns told us that the residents about the lake were trying to prevent destructive methods of fishing, such as netting, spearing and fishing through the ice. Surely it is to be hoped that all such work may be stopped, for, as it is now, there are few better stocked bass waters around here than this same lake. Mr. Varns says the bass are increasing. We saw the shallows fairly swarming with young bass fry. We were told that not much illegal work had been done this year. The gill-net and spearing light which we found by chance in a certain farmer's woodshed did not look that way, but we hope this fellow will use them with cautious infrequency hereafter.

Cedar Lake is a pretty body of water, timbered on all its shores, with low banks and a broken and irregular outline. It is about three miles by two miles in extent, and has an elbow or angle at its lower end, so that the whole sheet of water cannot be seen at once. It is prettier than any of the lakes like Grass Lake, Loon Lake, Silver Lake, etc., etc., which lie in lower Wisconsin or upper Illinois, and are much patronized by Chicago anglers. Indeed the fact that this water was apparently little known and little visited made the chief charm for us. The trip to Cedar Lake is a very cheap one. The hack ride is 50 cents each way. Hotel rates are $1 a day, the charge for boatman and boat being $1.50 additional. We were very comfortable and I don't know when I have had a pleasanter little trip. And we got the bass, too, and didn't absolutely have to eat our bait, though we did eat a few frogs' legs for breakfast.

Two things our host at the quiet little hotel taught us. One was how to catch frogs. These he hunted after dark with a lantern. A frog, which in the daytime is very wild, will at night let you "shine" him and get so close that you can net or pick him up. The best way to catch the very large bullfrogs is by lantern-light. Mr. Varns hooked twenty-eight in one night that way. The other "pointer" we got was about winding off a line from a reel preparatory to winding it back on again. If you will try winding the line around the crown of your hat, you will be surprised to see how much more quickly and neatly it will work than if you roll it around your hand or about a crotch or bit of wood. That is a good way to dry a line, too, as good as any. I recommend this to "Big Reel" for his practical philosophy.

July 16.—Mr. A. C. Ely is outfitting for a little camping trip in the North Woods, and will take his family with him. Dr. Shayne will camp with his family on Loon Lake.

In the issue of July 10 I am made by the types to say, "When I was a boy down in Indiana we used to be ignorant enough to go seining," etc. This was the statement of Mr. A. H. Harryman, not of myself, and should have been so printed. I think also that Mr. Hirth's conscience would trouble him less over his remarkable fish story had the intelligent compositor permitted him to say he had "laid his rod down" instead of "lain" it down. And so on.

E. HOUGH.

ANGLING NOTES.

THERE is considerable difference of opinion about the proper color of lines and leaders. After trying all kinds and colors, we think a neutral tint, commonly known as "mist" color, the best. Yet some prefer white, while other anglers insist upon black leaders. What the trout think of them we do not know. Mr. Henry P. Wells made some elaborate experiments in that line, but as the eyes of trout and bass differ entirely from those of the human race, it is a question if such experiments are of any practical value. There is no doubt that the finest leaders show the least, and that cheap, flat and uneven gut shows the most. As to the proper color of lines for fresh-water fishing, we think that a dingy green would be less apt to be noticed than any other color. Fish are used to seeing stems of weeds and blades of grass floating down the streams. In England it is not unusual for anglers to fasten a bit of grass to their leaders in order to deceive the trout. Therefore we think that color the best. On clear shallow streams, when the sun shines bright, the shadow made by the line and leader looks like a black streak on the bed of the stream. And trout or bass will dart away in terror when they see it shoot out toward them. The remedy for this is to fish up stream; then the first thing they see is a tempting fly overhead. The angler is easily enabled to locate the fish by their shadows.

Encouraging reports of salmon having been seen and caught in the various rivers that have been restocked continue to come in. The latest is that Mr. Wm. C. Clarke of Plymouth, N. H., has killed five salmon this season with rod and line in the famous Pemigawassett, the upper part of which river Mr. Prime so beautifully describes in his book "I Go a-Fishing." The introduction of the various fishways in this river has undoubtedly much to do with this happy state of affairs. It is also reported that a gentleman killed an 8lbs. salmon in the "Aroostook" just below Caribou.

Mr. Walter Aiken, President of the Mount Washington R. R., has had the good fortune to kill a landlocked salmon in Sunapee Lake that weighed 14¾lbs. A royal specimen, and probably one of the largest of its kind on record.

The following is an authentic score of trout caught by two gentlemen in Canadian waters, all fish under 1lb. were returned to the water. It represents two days' fishing, and the total catch was over 200. Twenty-two of these fish weighed over 2lbs. each, and the largest were as follows: one of 5¼, one of 4¾, one 4¼, one 4lbs., one 3lbs. 14oz., and so on down to 2lbs.

The great run of bluefish still continues, and these elegant fish can hardly be given away along the coast, yet in the city we have to pay 10 cents per pound for them just the same, and the dealers will let them rot rather than let the price break. Large weakfish are being caught in considerable numbers by those engaged in bluefish trolling outside. They take the ordinary large tin squid, but not after the manner of bluefish. The boat must be brought up to the wind, so as to let the squid sink to the bottom, they are then hauled in hand over hand and the weakfish then seize them.

The Hon. Geo. S. Brandreth, the champion salt-water angler of Rockaway Beach, has discovered a new fishing ground off of Rockaway. A gentleman who returned from a trip down there, and who was out with him, says he never saw such fishing in his life. The fish caught were mostly large sea bass, and they hauled them in as fast almost as they would tomcods in the fall. Porgies of 1lb. weight were so abundant that they were a nuisance, taking the bait before the bass got a chance.

In regard to the black bass fishing in the Walkill mentioned in last week's angling notes, two gentlemen tried it after reading the article and report that they caught ninety bass in two days' fishing—mostly on helgramites.

Mr. Taylor of the New York *Times* says that he had a great experience recently catching a 7¼lbs. eel while black bass fishing one evening up the Delaware. He could not imagine at first what he had on, and then when he managed to get him near the boat he had some doubts about taking him in, as he was rather an ugly looking customer; but, being well posted, he knocked him over the head, and was well repaid for it. It was simply superb on the table next day.

ILLINOIS WATERS.—Quincy, Ill., July 18.—The Mississippi River has, for the first time in two years, been out of its banks above the mouth of the Missouri River, and as a consequence all of the inland lakes tributary to the river have been amply restocked and good bass fishing is almost sure to follow later on in the season. On the Illinois River the fishing has been fair, fine catches being reported from several places. The river has been very high, also, which has made an unsatisfactory spring for angling at favorite haunts. The white bass have been taken very freely at Meridosia Bay, a hundred to the rod being not an unusual catch. The black bass and pickerel have not taken the spoon this season as readily as in former seasons, owing, I think, to the muddy condition of the water during the best months. There is an abundance of black bass, however, in both streams, and with the water within the banks I feel very sure that the Illinois River and adjacent lakes will prove to be this season the best waters for fishing in the Union.—S. P. BARTLETT.

LOWER POTOMAC FISHING.—Mr. Chas. Woltz has just returned from a fishing trip to Piney Point, Maryland. He found small croakers, ranging from 6 to 12oz. in weight, very plentiful. With a companion he caught 175 in about two hours, using sea clams and hard crabs for bait.

CHICAGO AND THE WEST.

CHICAGO, Ill., July 15.—A number of Chicago people are absent at this date, among the lakes and summer resorts of Minnesota, but so far as is now known none of them were overtaken in the great calamity which overwhelmed Red Wing and her sister cities near fateful Lake Pepin. There will long linger in the seared memories of the survivors of that great storm a full sense of the blind fury which the smiling skies can at times assume. Perhaps in it all there is a lesson to those who go pleasuring on inland lakes, which are always more or less dangerous to small and poorly-managed vessels in time of sudden storm. Records of such fatalities are full enough, but the death of over 100 persons upon one pleasure craft—history has no parallel for that in this region.

The fishing and semi-fishing resorts more directly in the course of Chicago summer travel are unusually crowded this summer. There are more than 250 Chicagoans scattered around Oconomowoc this week, and perhaps more about Mackinac Island. Waukesha, Wis., is crowded to the utmost. At Devil's Lake about 75 Chicago people are registered. Two or three dozen names are sent down from Minnetoka, Minn., registers. Twin Lakes, Wis., has about 80 Chicago guests at present, and half that many are attributed daily to St. Joseph, Mich. Closer at home, and in a country whose attractions are more purely sportsmanlike, are Fox Lake, Lake Villa, Antioch, and a number of other villages much frequented by half camping and half visiting summer parties whose main idea is fish. On Fox Lake, Ed Howard's, The Lakeside, Lippincotts's, Harry Dunnell's and all the other public places are crowded, and the clubs are also pretty full most of the time.

By the way, a new club house must be added to those already owning the Fox Lake country as their home. The Northwestern Pleasure Club, of Chicago, an organization only about a year old, has formally opened its new club house on Pistaqua Bay. The new house is a pleasant structure, two stories, basement and attic, and points west from a very commanding and well chosen site. There are 30 rooms in the house, and the interior is tastefully finished in Georgia pine. The total cost was $8,000, and the building is a worthy and suitable one in every way. Mr. Ostrander will manage the house. The festivities on July 12 consisted of a flag-raising, a shooting tournament, a banquet, a reception and a ball. The members were represented almost in full, and many guests were present from the Mineola, Fox Lake and other clubs. The officers of the Northwestern Pleasure Club are: President, Thos. Webb; Vice-President, Henry Wolff; Secretary, J. W. Brenckle; Treasurer, L. E. Weich; Directors, John J. Weber, William Erby, P. O'Malley, Theodore Wilkins, George D. Eddy, Charles Peatern, Charles Gastfield, W. H. Gray and H. Riderberg. Its membership includes among others Judge Murphy, Coroner Hertz, David Bayha, Joseph O'Malley, Henry Smith, Charles Etterman, Isadore Aid, John Puhle, Thomas Sweenie, August Wilkens, Erick Stone, J. Fletcher, T. Glassbrook, George Weber, T. Rheil, Henry Slick, Dr. Wickersheim, G. Kimball, Henry Zitt, Gus Broberg, R. Knight and John Stephens.

July 17.—Mr. Charles F. Hills and Mr. Charles E. Hyde, of the Fox Lake Club, on last Thursday and Friday found some excellent bass water in the little fished lake known as Duck Lake, one of the lakes of the Fox Lake system. On Thursday Mr. Hills took 26 bass alone in this lake, and on the day following he and Mr. Hyde together took 22. None of the bass were below 2lbs., and one reached 4¼lbs. Mr. Hills says that these bass were as gamy as any small-mouths he ever saw. They were large-mouths and were all taken by frog-casting.

In the report of the little Yorkville trip, last week, I had occasion to mention Mr. J. E. Reddock, of that village, a very ardent fly-fisherman, who did what he could to show us some fishing while we were. To-day Mr. Reddock sent up to Mr. Hirth, at Spaldings', a magnificent small-mouthed bass, which weighs 3¾lbs. Modesty prevents my saying very much about it, because this particular bass was caught on the fly whose pattern I devised myself this spring—a Professor body, Montreal wing, red and ginger hackle. This fish was taken at Yorkville. It is a pleasure to add that since our visit to this village a sportsmen's club has been organized, which will try to prevent illegal methods of fishing and so preserve to its rightful uses what is naturally a very good bass water indeed.

Mr. Hills informs me that the "jumping" of bass as practiced along the lower Fox, will be noticed as one of the destructive illegal methods described in the circular synopsis about to be issued by the Fox River Association.

Mr. W. W. Tabberner, general agent of the Milwaukee and Northern railway, says that trout fishing has been backward this season on account of the singularly prolonged high waters. Mr. Tabberner informs me that his company has this year planted over 1,000,000 trout in the streams along their lines. Himself and Mr. Rollins, president of the Wausaukee Club, have superintended the planting of numbers of the rainbow trout, but they do not think the latter have done well.

The Wausaukee Club, of which Mr. Tabberner is secretary, mention of which was promised earlier in the season, will hold its formal opening of the club house on Saturday, July 26, which event will be celebrated by a trout dinner, among other things. An attendance of the entire membership is expected, and there will be many guests; FOREST AND STREAM among others. A full report will be made duly.

July 18.—Governor Fifer, on the 8th of this month, appointed Thomas B. Mullens, of Anna, and James P. Campbell, of Browning, as fish wardens. It is to be hoped that in these appointments his excellency has been more fortunate than in that of the dead and alive creature, Brunsewitz, he lately inflicted on this city as a "warden." The latter was supposed to have some trifling "influence" with a class of ignorant foreigners. Thus it may be seen that politics may affect fishing.

Mr. W. H. Comstock, who is the guest of Mr. Ely, at his cottage on the north shore of Lake Superior, has departed with his host for the scene of hostilities. The point to which they go affords some of the finest lake fishing for big brook trout to be had anywhere. This is, of course, understood to be the fly-fishing along the rocks and riffles of the shore. There is no fly-fishing that surpasses it, in the minds of those who have tried it, and doubtless these gentlemen will have delightful sport.

July 19.—Mr. Joel Kinney and Mr. Chas. E. Petrie,

both of whom have grown warm from sitting in the city Fire Department so long, will cool off this week at Brown's Lake, near Burlington, Wis. They have been taking any quantity of white bass, silver bass, croppies, perch, etc., there, with some black bass, though they do not enthuse over the prospect for the latter at Brown's Lake. The Fox River, from Burlington on down, is a screaming black bass water. E. HOUGH.

THE NEW IOWA FISH LAW.

Editor Forest and Stream:

It may be of interest to many readers of FOREST AND STREAM to know that we have a new fish law in Iowa. The new law went into effect April 4. The following is a synopsis:

Section 1 repeals all other acts.

Sec. 2. It shall be unlawful for any person to take from any of the waters of the State any fish in any manner except by hook and line; except that it shall be lawful for any person to take minnows for bait with a seine that does not exceed five yards in length. Also that it shall be lawful to take buffalo and suckers by spearing between the first day of November and the first day of March following. The word minnows as used herein does not include or apply to young bass, pike, croppies, trout, salmon, or fry of any game fish, either native or foreign, and all such fish, either young or adult, so taken shall be immediately returned to the waters from whence taken. * * *

Sec. 3. It shall be unlawful for any person to catch or take from any of the waters of the State any salmon or trout between the 1st day of November and the 1st day of April following, or any bass, pike, croppies or any other game fish between the 1st day of November and the 15th day of May following in each year, in any manner whatsoever.

Sec. 4. No person shall sell nor have fish with intent to sell, which have been caught unlawfully.

Sec. 5. Any person found guilty of a violation of the preceding sections of this act, shall, upon conviction before any justice of the peace, mayor of any incorporated town or city, or any court of record within the county in which such offense is committed, be fined not less than ten nor more than fifty dollars and stand committed until such fine and costs are paid.

Sec. 6. No person shall do any act that shall hinder the passage of fish up, down or through a water way.

Sec. 7. No person shall place in any of the waters of the State any lime, ashes, or medicated bait, or shoot any gun, or use any dynamite, gun cotton, giant powder or other explosive, or any electrical machine or device with the intent thereby to kill, injure, poison, stupify or catch fish.

Sec. 8. Any person found guilty of a violation of section 6 or 7 of this act shall, upon conviction before any justice of the peace, mayor of any incorporated town or city, or any court of record in the county in which such offense is committed, be fined not less than twenty-five dollars, nor more than one hundred dollars, and stand committed until such fine is paid. And any seine, net, trap or other device used in violation of section 6 or 7 of this act may be seized and destroyed by order of the court before whom such action may be brought.

Sec. 9. In case of violation, person filing the information shall have in some cases $5 and in some $10 for filing the same.

I consider the law a good one down to Sec. 9, and here it is lame. This seems to be the only provision our State makes for the enforcement of her game and fish laws, and instead of helping to enforce them it is a stumbling block preventing them being enforced. First, "what is everybody's business is nobody's business." If a man attempts to enforce it every one in the community will say he did it for the paltry five or ten dollars. This will keep the better class of law-abiding citizens from having anything to do with it.

Third, the vagabond class, who might enter complaint for the small money consideration, in nine cases out of ten dare not do it, for the reason that they have probably broken the same law hundreds of times themselves, and they are afraid of retaliation. I have seen the practical workings of this class of laws fifteen years, and know the above to be facts. Our game and fish laws are a dead letter unless we have some different means of enforcing them. WILLIAM H. STEELE.

FOREST CITY, Iowa.

BIG-MOUTH AND SMALL-MOUTH.

Editor Forest and Stream:

I think the majority of anglers are yet revelling in the good things of last week's "Bass Number." At least I will vouch for one very small portion of a shadow of Walton.

I have read with interest the very positive and conflicting opinions of your correspondents, "T. H. B." and "Kingfisher," regarding the large-mouthed bass, and while perhaps the former states the best case, to my mind the latter offers the most convincing evidence.

As far as my own personal experience goes I must side with "Kingfisher." I have angled in a great many different waters in the New England and Middle States and have yet to hook an average large-mouth with anywhere near the game quality of the average small-mouth. This may be the state of affairs in this section only, and I do not doubt but that in some waters the conditions may be so different from ours as to cause big difference in the fighting qualities of this fish. Why then is not this a solution to this much discussed question? That the large-mouth bass of this section are sluggish compared to the small-mouth variety my experience leads me to affirm, and the experience of my brother anglers will go as proof. That in other sections the one variety is just as much of a fighter as the other I am not at all prepared to discuss, and hence with a qualification as to location would have no reason to question the correctness of the several authorities quoted by "T. H. B."

ALBANY, N. Y. SPLIT BAMBOO.

FISH PRESERVATIVES.—Boston, July 20.—I notice an article by "Kit Clarke" in the number of July 17, about "Preservaline." Some four or five years since I spent my vacation at Kennebago Lake, Franklin county, Maine. I received while there a box of "Rex Magnus." There were plenty of trout there and we always had some in the "car," which was moored out in the lake in front of the cabin. I followed the directions on the canister strictly. I took just two dozen trout, not one of them less than half a pound, and soaked them in the solution, one pound of "Rex Magnus" to four gallons of water, for about two hours. I then packed them in a box with bog moss and started home the same day (a journey of forty-eight hours by buckboard, stage and rail). I opened the box immediately after my arrival, and the fish were just as handsome as when taken from the water. The eyes, spots and gills were in perfect condition and the flesh hard. I distributed the fish around, keeping a couple for myself, which were cooked the next morning for breakfast, and there was no more taste to them than there is to a sugar pine chip. The powder undoubtedly preserved them, but destroyed the flavor thoroughly. All the parties to whom I had given them had the same experience, and I got the "grand guy." I wonder if Mr. Clarke's experience was similar.—PARSON.

MUDFISH OR LAWYER.—Weedsport, N. Y.—*Editor Forest and Stream:* Inclosed please find photograph of a fish taken from the Seneca River, near this place. As no one here has any knowledge of the species, how he came here, etc., except that he is known as the "lawyer," I write you for something definite in the matter. The fish is 16in. long and weighs 1½lbs., color on back dark greenish tinge, light on belly, scales small and set very tight, almost impossible to remove them. When first taken the back shows diagonal checks, and is quite handsome. The head in shape resembles that of the bullhead, and has a row of sharp teeth on both jaws. Will live a long time out of water, and weighs from 1 to 10lbs. This fish is very gamy and will fight every second after being hooked, and go out of the water like the black bass. He appeared five or six years ago, and last year a number were taken. This year he is numerous.—D. V. M. [The lawyer is described in ichthyological works under the name of *Amia calva*. It is better known as the mudfish, but has many other common names, most of which are quite local in their application. Dogfish is one of its well known names; grindle fish or John A. Grindle are Mississippi terms for this species. Sometimes the "Grindle" is omitted and the fish figures simply as "John A." The male, with a roundish black spot surrounded by a pale orange color at the root of the tail, is styled spotted grindle. Bowfin and brindle fish are other names for this high-spirited but utterly worthless relic of the old *ganoid* or bony-scaled fishes. The fish has a very wide range, extending from the Great Lakes to Texas and from New York to Florida. It is a lover of sluggish waters and is capable of living out of water for half a day at a time. Its air bladder being lung-like enables it to breathe air as long as the gills are kept moistened. As a food fish the lawyer is a flat failure, and nothing but its game qualities recommend it to the notice of the angler.]

THE IDEAL FISHERMAN.—Rochester, July 25.—Inclosed please find a clipping which may interest our mutual friend, "Kingfisher," whose article by the bye was exceedingly interesting. I can relate a similar experience with a barbless hook, but it was a pickerel this time.—GENESEE. [The inclosure is from the Albany *Journal*, and reads: "Years ago he was thought to be the man who was the laziest fellow of the town, good for nothing else but fishing. Later on it was the man who knew where the fish were, and, regardless of means, managed to secure a large number of them. Then came a period when one having quite a variety of tackle, enabling him to put on an endless number of lines from his boat, thereby being always reasonably sure of success, was looked upon as the angler of the period. Following this the number of lines decreased to a long, heavy one, with a large reel and heavy rod. Then did the times change and all the material grow lighter and lighter. Through all these periods, however, with the varying kinds of tackle used, the true angler, by the judgment of the people, must show catches large in numbers. But the true angler of the present day has divested himself of every trait inherent to the past, and now he stands simply on the merit of skill. His rod, reel and lines are of the lightest possible weight, he does not care a rap for numbers in his catch—only weight—and if he can successfully bring to creel a 2½lbs. trout or a 5lbs. bass his angling friends know that all the science of his art had to be used to successfully capture the big fellow and save his tackle."]

THE OTSEGO BASS.—Governor De Witt Clinton, of New York, is credited with the publication of a description of the Otsego bass in the *Medical and Philosophical Register*, about 1815. We have not seen the first edition of the volume in which this account is to be found, and the reprint does not contain the article; but a separate pamphlet on this bass, which is really a whitefish, was printed at New York in 1822. In this paper Clinton incidentally mentions the "white pike of the Susquehanna River," which we believe to be the wall-eyed pike of our day. Great are the mysteries of common names of fishes. In 1842 Dr. De Kay called the wall-eyed pike the yellow pike-perch, and recorded the additional names, glass-eye, American sandre, okow or horn-fish, salmon of the Ohio, pike of the Lake, common pike, pickerel, pickering and yellow pike. The name pickerel was ascribed to this fish in streams and inland lakes of the western parts of New York, as it is now in the region of the Great Lakes. Misled by this account and others of a similar character, we supposed the pickerel of Lake George to be the wall-eyed pike, until Mr. Presbrey sent us a head of a specimen which he caught in that lake last year, and which proved to belong to the common pike (*Esox lucius*). So much for the confusion of common names, in framing which the rules of priority are seldom or never considered.

CHARLESTON, Ill., July 17.—Angling has not been very good for the past three weeks; the weather has been too hot. On the 5th inst. Francis M. Parker, Edward Chilton and Thomas Threlkeld, at the Embarras River, caught ten black bass and four channel catfish. On 6th inst. Otto Weiss and Francis M. Parker, in the Ambraw River, three miles east of the city, the temperature up to 92° at 2 P. M., took four bass and five channel catfish. On 11th inst. Frank Parker, in the Embarras River at the mouth of Polecat Creek, caught six bass and four channel catfish. The largest bass and largest catfish weighed 2lbs. each. On the 10th Thomas Threlkeld, in the Embarras River, took six black bass and two catfish. On the 12th, Otto Weiss, at the Embarras River, three miles east of here, creeled two black bass. The largest weighed 2lbs., and was the hardest fighter Mr. Weiss ever caught for the size. On June 1 Francis M. Parker caught twenty-eight channel catfish; it was the best day's angling of his life.—J. B. D.

A HORSE MACKEREL of large size (560lbs.) found its way into Gloucester, Mass., Harbor July 14, and was captured off Pavilion beach. It attracted a great deal of notice while on exhibition at one of the fish markets. A trap near Rockport, Cape Ann, has taken a score of these monsters in a single season. Young ones are not found in our waters. The species breeds in the Mediterranean, where it is an important food fish.

A LARGE SALMON.—The heaviest salmon that has been taken in British waters for years was captured this season at the mouth of the River Esk, near Montrose. In 1883 the British Museum secured a specimen weighing more than 50lbs. in the Billingsgate market, London.

BROOK TROUT IN PIKE COUNTY.—Hon. Henry C. Ford, of Philadelphia, informs us that the take of brook trout in Pennsylvania this year is the largest for twenty years. The headwaters of Broadhead's Creek contain plenty of trout. Henryville and Canadensis are the chief starting points for the fishing. The Tobyhanna, rising in Pocono Mountain and running into the upper Lehigh, has the biggest brook trout in the State; it has long reaches of still water in which large trout live. Mr. C. W. Walton, of Philadelphia, is thoroughly familiar with the Tobyhanna and its inhabitants. Last year he had a creel of 13 trout from that stream running from 1lb. to 3½lbs., and also one of 8¾lbs. which was taken by another angler. A 6lb. brook trout was caught in the Tobyhanna at one time. Numerous trout weighing from 1½ to 2lbs. have been captured in Pike county. There the season lasts from to May 1 Aug. 1, while in other parts of the State the time is from April 15 to July 15. The streams are very low on account of the dry weather. At such times the trout gather in deep pools and will not rise readily to a fly. The clear water is a hindrance to successful fishing. Under these circumstances the poacher with his nets gets in his deadly work; but public sentiment in Pike county is in favor of enforcing the law, and poachers carry on their nefarious business at their own peril.

MINNESOTA NOTES.—Detroit City, Minn., July 17.—This has been the best season we have had for a long time. The catches of bass and pike have been unusually large, and this in spite of the netting that is so largely practiced in nearly all the lakes. A sturgeon was caught in Detroit Lake in the early summer, the first one ever taken. Length 6ft. 8in., weight 106lbs. The first trout was taken from a brook that flows into Detroit Lake this spring, and two men went from here and fished the stream and were rewarded by six or eight fingerlings. These trout were placed in here five or six years ago, and it is a shame that they are not left alone. The Park Region Game and Fish Protective Association was organized here last spring. Soon after its organization one man was arrested for using a net in Floyd Lake and fined, but nothing more has been done, yet it is said that nets and dynamite are being used. "I've caught lots of bass this year," said Mr. C. W. Dix to me the other day, "even I on my little Bethabara rod." "How many?" I asked. "Over two hundred," he replied. The other day at Island Lake a man said to me, "I have not got many fish this year; have only sent off four ton. Last year I sent off many more." "How were these fish caught?' The answer to this will explain why so many of our lakes are being drained of the fish.—MYRON COOLEY.

NOMINI CREEK NOTES.—Washington, D. C.—Our 4th of July, 1890, outing was to Nomini Creek, Virginia. This creek is in Westmoreland county and flows into the Potomac River near its mouth. It furnishes good salt-water fishing and sailing. We spent two days here and found fish plentiful, but at present of small size. The fish average much better later in the season. Croakers, striped bass, spots, catfish and eels were abundant. The striped bass run from ¼lb. to 1lb. in weight. We had no intention of fishing in salt water when we went to Mt. Holly. Our destination was a small lake, three-quarters of a mile long by one-quarter of a mile wide, at Montrose, six miles distant from Mt. Holly P. O. (Nomini Creek). This body of fresh water is well stocked with large-mouthed black bass, and our hopes ran high for a good time with that fine fish; but we were disappointed, as the water was very muddy and could not be fished. Nomini Creek and vicinity is one of the good fishing places along the Potomac. W. W. Palmer, Plain View Hotel, Mt. Holly P. O., Va., took us in charge and proved himself a first-class host. Hotel accommodations and boats are to be had at very reasonable rates. Reached from Washington by steamboat tri-weekly.—D. G. MOHLER.

STRIPED BASS IN UPPER DELAWARE RIVER.—On July 23 I caught in the Delaware River, opposite Milford, Pa., a striped sea bass weighing 2¼lbs. Several other similar cases have been reported along the river. Can you explain their presence so far from their natural home?—R. I. B. [By reference to an account of black bass fishing in the upper Delaware, published in this number of FOREST AND STREAM, you will learn that the striped bass are in pursuit of young fish, notably the shad, which is now migrating seaward. It is a matter of frequent occurrence for this species to ascend streams almost to their sources.]

GREAT EGG HARBOR BAY FISHING.—Somers Point, N. J., July 20.—Fishing is not very good at present, and has not been this season. There are some weakfish, flounders and kingfish, but not very many. Sea bass are in the bay in great numbers, but they are very small. There are more bluefish on the coast than I ever knew before, and mossbunkers, or menhaden, are also plentiful. Sheepshead are absent from these waters and have been for three seasons. I have seen several kinds of fish that were not in the collection made by Dr. Bean in the summer of 1887.—B. E. S.

MR. HENRY LOFTIE, manager of the Syracuse Bamboo Furniture Co., sent to the FOREST AND STREAM the other day two plump muscalonge, which had been taken by Mr. Chas. Gilchrist, the wild rice man, at Rice Lake, Ontario. They were two of six taken in two hours and a half on Mr. Loftie's glittering gang trolling bait. Canadian muscalonge appear to have taken a shine to this lure; and Mr. Loftie claims for it not only that it is an attractive bait, but that it also has the merit of hooking big fish and letting the no-accounts go.

COLUMBUS ANGLERS.—Columbus, O.—I am inclined to think that Columbus has more expert anglers than any other city in the country, in proportion to her population. One small party recently took a brief trip to northern Michigan, and caught and brought home over 200lbs. of fine, large brook trout. They go to the same region every season and always feel well repaid for their trips. They avoid the so-called "stocked" streams, preferring those stocked by nature.—M. P. P.

WISCONSIN.—Coolidge, July 24.—Muskallonge fishing is excellent. I was out three days last week and got four that weighed over 20lbs., the largest weighing 28¼lbs.; and smaller muskallonge, pike and bass are in abundance.—H. F. H.

Fishculture.

THE ARTIFICIAL BREEDING OF FISH.

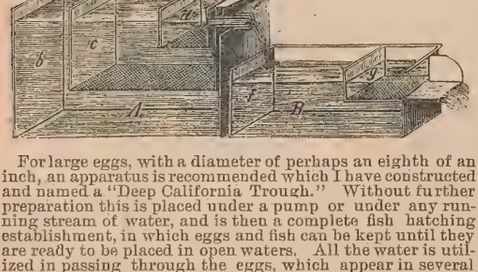
BY MAX VON DEM BORNE, DEUTSCHER FISCHEREI VEREIN OF GERMANY.

Translated by C. H. M. Rose.

FOR those friends who have neither the time nor the inclination to read existing books on pisciculture, I will briefly describe a simple method of artificially breeding fish. By this we understand the artificial impregnation and hatching of fish eggs in hatching troughs as opposed to fish breeding in lakes or ponds where the fish themselves are permitted to deposit their eggs.

Artificial breeding has the following advantages: A much larger percentage of the eggs are hatched than would be the case if left to nature, and it is possible to protect them and the young against many dangers that threaten them in free and open waters.

For breeding artificially the following kinds would do well: Salmon, trout, pike, etc., also shad, sturgeon, smelts and other sea fish.



Many kinds of fish, among which may be mentioned the trout, can be kept in ponds until they are ready to deposit their eggs. Where this is not feasible, as in the case of shad, sturgeon, etc., the fish must be caught when they have reached the necessary development, and when they are captured in great quantities, as are the shad in spring, ample opportunity is afforded for getting an unlimited supply of eggs and impregnating them. As by doing this the value of the fish is not decreased, and the impregnated eggs are readily bought, it will be to the advantage of fishermen to impregnate the ripe eggs and sell them to breeders.

But the roe, as well as the milt, is fruitful only when ripe. This can easily be determined by stroking the fish from its head backward under the stomach, with a gentle pressure. If the roe and milt are ripe they flow freely. When they flow with difficulty, further experiment is useless.

Trout and salmon in captivity may be examined weekly to ascertain their condition. The ripe fish should be placed in two separate vessels of water, according to sex. It will be well to take an equal number of males and females, but in case of necessity the milt from one male will be sufficient for the roe from two females.

When impregnating the fish, a glass or earthenware basin should be used. Into this is stroked first the milt and then the roe, in sufficient quantity to cover the bottom of the dish. The milt and roe are then mixed by carefully shaking the vessel, after which water is gently poured down the edge until the eggs are covered. The water is renewed until the eggs are quite clean and the milt entirely removed. Impregnation follows at the moment that eggs, milt and water come together. The eggs are then placed on the wire cloth bottom *c* of the California trough, and water is permitted to flow through without interruption.

When impregnated eggs are to be sent from a distant hatchery, word as to the time of their arrival should precede them by forty-eight hours, so that the receiver may have ample time to be prepared for them, and care should be taken that the forwarding company is instructed to send the eggs promptly in warm compartments. On their arrival the cover is removed in a cold room and the contents of the box repeatedly dampened with the same water in which it is intened to place the eggs. When this has been done, and the eggs are of the same temperature as the water that will flow over them in the hatching apparatus, they are transferred into a larger vessel filled with water and removed from the packing material. After the eggs have been thoroughly cleansed and the dead ones removed, they are placed in the breeeding trough by means of a ladle.

For large eggs, with a diameter of perhaps an eighth of an inch, an apparatus is recommended which I have constructed and named a "Deep California Trough." Without further preparation this is placed under a pump or under any running stream of water, and is then a complete fish hatching establishment, in which eggs and fish can be kept until they are ready to be placed in open waters. All the water is utilized in passing through the eggs, which appear in several layers upon each other. Therefore the trough may, when of suitable size, contain a great many fish.

Box *A* is constructed of zinc and consists of three parts that can be separated from each other. Compartment *b*, into which the water flows, is 16in. long, 10in. wide and 10in. deep; *c*, with wire-cloth bottom is 12in. long, 10in. wide and 6in. deep. The front compartment *d*, which seals the trough, is 4in. long, 10in. wide, 4in. deep. The seal is effected by pressing the three overflow tubes *e* into each other.

When water flows into compartment *b* from faucet *a*, it reaches the trough from the bottom through sieves *c* and *d*, and passes off through the overflow *e*. The wire cloth is so fine that neither fish nor eggs can pass through it, there being fifteen threads to the inch. As the bottoms consist of copper wire, they must be thoroughly coated with the best Syrian asphalt wax to guard against poisoning by oxidation.

The catch basin *B* is sealed by sieve *g*, with the object of detaining any fish that may have escaped from the trough when the seive *d* is removed.

The breeding trough and catch basin together form a complete fish hatchery on a small scale. With trout and similar fish one quart of water per 20 to 40 seconds is required, while with other fish one quart of water for every 150 to 180 seconds will be sufficient.

The warmer the water the more of it must flow through the trough and the fewer fish should be kept in it. A large flow reduces the danger of warm water. With the water at 50deg. Fahrenheit it is not advisable to keep more than 5,000 fish in the apparatus, and with warmer water the number should be lessened. When the fish are observed it will easily be noticeable whether or not they are too crowded.

When, as mentioned, 5,000 trout eggs are placed in one trough they must lie in several layers on top of each other, but this is not objectionable, as the water permeating them from the bottom prevents heavy pressure upon the lower layers.

At first, before the eyes of the fish are visible through the outer covering of the egg, every unnecessary disturbance is to be avoided, as at that period the eggs are very sensitive and easily killed. The dead eggs become opaque and white, and are removed daily with a pair of pincers.

After the dead eggs have been taken from the top layer, it will be necessary to alter the position of the eggs in order to remove the dead ones that lie beneath. To do this box *c* s slowly lifted and then quickly pressed down again. The inflowing water through the sieve bottom will change the position of the eggs, and possibly all the dead ones may appear on the surface.

To remove all the water from the trough a rubber tube is used as a syphon at compartment *b*. If any dirt becomes lodged among the eggs the water is first removed from the trough, and the eggs then deluged with a gentle spray of water from the top. Should this become necessary before the eyes are visible the greatest care must be exercised in doing it.

To exclude light and vermin a wooden cover is used, which has a sieve-covered opening at the place where the water enters.

As soon as the fish begin to hatch, the catch basin, *B*, is placed in its position to catch any escaping fish, and these are daily returned to the trough. At first but few pass through the overflow, but later on they escape in great numbers, and the breeding trough becomes filled with egg shells, which gradually pass through the overflow into the box beneath. From here they are removed. All dead eggs and fish are also removed daily.

When all the egg shells have disappeared and the young fish begin to move about freely, it is best to retain them in the breeding trough, as the rising water in it is better for them than that in the box beneath the overflow. The trough is therefore sealed with the front sieve. This has a large surface to prevent the water from flowing against it with force and thus kill the fish. A horizontal sieve is better for this purpose than either a perpendicular or a slanting one, because it is entirely submerged in the water and its whole surface utilized.

It is best to place the young fish in open water as soon as they become thoroughly lively and before they begin to feed. They are preferably placed in a situation that would be selected by the parents for depositing the eggs. For instance, in the case of trout, a shallow place in a brook (from 1 to 2ft. deep) where the water flows rapidly and the bottom is to a large extent covered with large stones.

In any event the brood should be divided among a number of places distant from each other, to avoid attracting the attention of large fish and other enemies.

In late years it is being attempted to keep the young fish for weeks and feed them, but information regarding this is found at length in various works on the subject.

TROUT CULTURE AGAIN.

DENVER, Colo., July 20.—*Editor Forest and Stream:* As Mr. Milton P. Peirce continues to advertise himself as a gigantic failure in fishculture (a fact well known, I am told, where he is known, and as well in other things) and to assail every one differing from him regarding trout culture as in some way interested in deluding their fellows, perhaps, as he states in one sentence that he "has given more attention to inland fishculture, including trout culture, than any other," and in another sentence that he "has never raised a trout," it would be well to ask him, for the benefit of the deluded trout culturists of Europe and America, to place upon record, in a plain statement of facts, the many valuable experiments he has made, or observed, in trout culture, and when and where; to state the date of his great discovery that trout culture is impracticable and unprofitable, and what really opened his eyes to the fact, and, "honest injun," had he any interested motive in the matter whatever; whether there is anything in this beautiful world of any value, *except the carp*, and whether he has noticed any failure in the commercial or agricultural world from time to time, and if so, whether for that reason he would assume that they are useless branches of human effort, and whether the uniform failure of one individual in all the affairs of life is evidence of good judgment and critical ability; also, whether such failure of the one individual shall be taken as proof of failure by the entire human race? He might also pertinently be asked whether abuse is argument, and whether he thinks that his periodical wails or tirades really arrest, or are likely to, the progressive development of trout culture as a part of fishcultural evolution? Of course he must see that the delusion is spreading from year to year notwithstanding his frantic protests. True, he says there are not a "baker's dozen" (13) of trout culturists in the country to-day, but he does not believe any such stuff.

He might be asked further, whether the other fellows are not in the position of the eleven deluded jurymen, and lastly, as he has dropped out of the procession, should he not drop gracefully out of sight? At all events, and seriously, should not fishculturists allow him to do so, since his distress and morbid disinterestedness are so very painful to behold?

There are many skeptics as to Mr. Peirce's self-assumed exalted position in fishculture—taking the "Wenonah Ponds" in New Jersey as his latest, and, no doubt, supremest effort, although not so very recent—who will await with bated breath an exposition of what Mr. Milton P. Peirce has accomplished in fishculture, outside of the newspapers, but who think that the constant repetition of his failures and beliefs, abuse and insinuations, are monotonous to the extreme. WM. N. BYERS.

STOCKING THE YELLOWSTONE.—Yellowstone National Park, July 17.—*Editor Forest and Stream:* Prof. S. A. Forbes, of Champaign, Ill., and Prof. Edwin Linton, of Washington, Pa., are here in charge of an expedition for the U. S. Fish Commission. The object of the expedition is to investigate the life of the streams with especial reference to the food of the fishes in those streams where fish occur, and also to determine the nature and abundance of the life in those streams where fishes are not found, preparatory to stocking the latter streams with different kinds of fish. The parasites of the fishes, especially those which infest the trout and suckers, will also be studied. The Eastern brook trout (fingerling) which were planted last fall in Glen Creek, have been seen this season, and are now from 5 to 7in. long. This plant was experimental, and thus far has proved very successful.—H.

FISH DYING IN PENNSYLVANIA.—Advices from Huntingdon, Pa., under date of July 23, announces a sudden mortality among the black bass and other fish in the Raystown branch of the Juniata river. Thousands of bass have been found along the banks of the stream or floating on its surface. The waters affected are several miles in extent and the total destruction of bass in this magnificent stream is feared, as a consequence of this unexpected mortality. Prompt measures should be taken to investigate the cause of these sudden epidemics among fishes, with a view of preventing their recurrance if possible.

BLACK BASS FOR PLANTING.—We are often asked where parties can obtain black bass for planting, and as the season for collecting them is rapidly drawing to a close we repeat the information previously published as to the opportunity at Sandusky, Ohio. At the present time Mr. George W. Littleton can furnish young bass, but before the middle of August they will probably go into deep water where they cannot be taken. June and July are the best months for collecting them at Sandusky. The Pennsylvania Fish Commission obtained 2,000 through Mr. Littleton's help.

NO EXTRA CHARGE for fast time. No transfers. No midnight changes. No missed connections. No appliances but modern ones. No luxuries but the best. No mistake possible if you take the Chicago & Atlantic to Chautauqua, New York, New England and all points East. No trouble to ask your agent for the C. & A. differential rates, which save money to travelers.—*Adv.*

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 2 to 5.—Dog Show of the Wilmington Fair Association, at Wilmington, Del. F. R. Carswell, Supt., 101 West Sixth street.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. C. H. Corbett, Secretary.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 19.—Second Annual International Dog Show of the Industial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

FIELD TRIALS.

Sept. 9.—Field Trials of the Manitoba Field Trials Club. Thos. Johnson, Winnipeg, Secretary.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 10.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

DOGS OF THE DAY.

THE safe arrival of Mr. Moore's new St. Bernard Alton is announced from Boston, and according to all accounts he should prove a very valuable acquisition to his owner and St. Bernard breeders in general. "Namquoit" lets the cat out of the bag as to Mr. Sydney Smith's letting Alton go to Mr. Moore and Mayor of Leeds and Young Plinlimmon to English buyers. Sydney Smith is as shrewd a seller as he is a buyer, and he never lets anything go unless he has as good if not better in his kennel. When "Namquoit" told the readers of the 13-months-old marvel Scottish Prince, he answered, before it was asked, the *Stock-Keeper's* query, "Where are the St. Bernard giants coming from to fill their places?"

Mr. Shillcock's dog Lord Bute is claimed to be the largest dog in the world, and it does not seem to be disputed abroad. This gentleman has six St. Bernards in his kennels, the weights of which are: Lord Bute, 223lbs.; Young Plinlimmon, 217lbs.; Lord Calthorpe, 208lbs.; Sabrina (dam of Lord Bute), 160lbs.; Forget Me Not, 170lbs.; Baroness Cardiff, 186lbs.

The correspondence betweet Mr. Everett Millais and Prof. C. T. Kingzett, anent the "New Treatment for Distemper," is not progressing far toward yielding much information. What the doggy public at large wishes to know is, can dogs be inoculated to prevent distemper, upon the same principle as people are vaccinated to prevent smallpox? Mr. Kingzett wrote a very temperate criticism of Mr. Millais's "new treatment," whereupon the latter rushes off to his lawyer to find out whether somewhere in the letter there was not a libel. All of which is very childish, particularly because Mr. Millais has allowed his paper to be the vehicle for very dastardly anonymous attacks upon such honorable men as Messrs. Astley and Raper.

A gentleman, for whose opinion I have a very high respect, says on a postal card received this week, "Don't be hard on Millais, he means well." I have no desire to be hard on him at all, and if the opinion I once held of him has changed, he has but himself to thank. A man who asks me to do a dishonorable thing, as Mr. Millais did, cannot expect one to retain a good opinion of him. His last letter to me remains unanswered for that reason, and I would not now refer to it but that I have heard that Mr. Millais has written to this side of the Atlantic regarding my not replying. He will know the reason now if it has not dawned upon him before.

But to return to the distemper treatment, it must be acknowledged even by Mr. Millais that he has given us nothing new. Inoculation by distemper virus is an old thing. What Mr. Millais did seem to get new was the separation of the bacilli and which of the two was the active agent in spreading the disease. But that, while interesting, is immaterial, for if the discharges which convey distemper from one dog to another contain other matter which is not infectious, the dog that gets the whole dose doesn't know it. It is to be hoped that Professor Kingzett and Mr. Millais will cease arguing about things half of us cannot follow them in, and drop fishing for libel suits in favor of carrying on the so far crude experiments to something tangible and that will benefit dog owners.

"Hibernia" several years ago, in company with Dr. Glass, if I remember correctly, experimented quite extensively in treatment by attenuated virus. The fact that he has long since given it up, though still much interested in discussions on the subject, demonstrates that he at least lost faith in getting the successful antidote. Might I suggest his giving FOREST AND STREAM readers the history of his experiments?

On Sunday the barn at the Associated Fanciers Farm, Berlin, N. J., was burned down. It was presumably the work of a discharged employee, and in addition to quite a large quantity of hay and wheat, one horse was burned to death. The local space writer got in his work and in graphic language described the scene he did not see. When the Philadelphia owners of dogs boarding at the farm read of how the dogs had suffered (in the reports) they pushed to the city office of the farm, only to meet with the assurance that the dogs were nowhere near the fire and were all safe. Three large oaks which grew between the barn and Mr. Ireland's residence alone saved the latter from destruction.

An oil painting of Mr. Mitchell Harrison's collie Christopher has been on exhibition in a window on Chestnut street, Philadelphia, during the past week. That dog must be possessed of wonderful vitality, for after having been bred to about eighty bitches last year I note in the *Stock-Keeper* kennel registry the following births of puppies: March 19, Ormskirk Gem, 8 puppies; March 23, Sweet Valentine, 11 puppies; March 26, Plead, 8 puppies; March 28, Walton Las-

sie, 14 puppies. Mr. Stretch was, of course, very careful of his dog and he restricted the bitches to one service only, and the misses were very few indeed.

A Yorkshire terrier has been purchased in England for shipment to this side. It is Royal George, owned by Mr. John Taylor, of Bradford.

A gentleman who signs "Espan" to the communications which appear in a contemporary, professes inability to understand what I meant by saying that Mr. Anthony could have carried his motion against Mr. Peshall's credentials as against that gentleman himself. I'll give "Espan" a Scottish answer. I was going to the races last week at Belmont Park, and being in no great hurry walked from the station to the track, perusing FOREST AND STREAM as I strolled along. I suddenly came across a little group standing around a small table on a tall tripod. On this were three walnut shells, and there were loud offers to bet as to the whereabouts of a little pea. The gentleman who was manipulating the walnut shells glanced at me, and then with all possible contempt exclaimed, "Say, what's you fellows given me, don't yu'se know him?"

"Espan" thinks my propositions for changing the A. K. C. constitution will never be adopted. Perhaps not, but that does not say that they ought not to be adopted. I like to keep a little bit ahead of the times if I can. My captious friend can do more good to the cause by criticising the suggestions, and I would like him to do so.

Mr. Chas. D. Cugle, who figured so prominently in helping to make things run smoothly at Baltimore dog show, has given over dabbling in St. Bernards. Back to the old love is the story. Ah! old loves are binding, whether of humans or animals. My friend Cugle, and I particularly call him friend because at one time, and before we knew one another by little more than name, we had a rough and tumble pen fight. Cugle is in the bantam-weight class, but he is a fearful punisher, and I now and then got in a pretty good sockdologer. The result was that after we resumed the attitude and manners of gentlemen we had quite a different opinion of each other and are always good friends. When at Baltimore Mr. Cugle told me about his wishing to get a few bulldogs together again and made a little note regarding one of his proposed deals without revealing the identity of the purchaser. Well, that deal did not go through, but there was quite an importation of bulldogs at Baltimore a week ago by the steamship Queensmore consigned to Mr. Chas. D. Cugle.

From the Rideau Kennels (Mr. P. G. Keyes), of Ottawa, I have stud card of Bob Obo and Obo, Jr. The latter is one of the best sires we have had in the States, among his winners being such good ones as champion Black Pete, Othello, Capt. Obo, Ko-Ko, Freda and a lot of others. He was out in the days of Obo II. and Young Obo, hard nuts to crack when they graced the show bench, but he beat them all for the stud dog prize at Newark four years ago. Obo, Jr., was bred by Mr. Farrow, of Ipswich, England, and was imported by Mr. Geo. W. Leavitt, of Boston, Mass.

Mr. Leavitt is now flying at higher game than spaniels. I met him a few weeks ago and he said: "I own more horses worth $5,000 now than I ever owned spaniels worth $100." Among other good things he has in the horse line is the fast young mare Fannie Swope, four years old, with a record of 2.24¼. Mr. Leavitt bought Fannie Swope for less than $700 at one of the Lexington auction sales last fall, and he has refused $15,000 for her, having set his mind on beating the four-year-old record of 2.16 with her this year.

Mr. Mather of the Radnor Hunt, which had its entire pack destroyed on account of rabies, has already purchased 28 couples of young hounds in England. They will be brought here and entered under the guidance of a few old American hounds so as to learn our style of work.

Premium lists for Detroit, Ottawa, Kingston and Toronto shows are out, and will prove interesting reading for exhibitors after the dull months of May, June and July. From Philadelphia Ben Lewis will go to Detroit, Frank Smith will look after Wilmington entries, and Fred. Kirby will, if the trip looks profitable, wend his way to where the red rag waves across Niagara River.

A gentleman who has seen the new bulldogs has favored me with the following particulars: Bombardes is a 16 months old dog, by British Monarch out of Gentle Gertrude, a prize winner each time shown. He will make up into a big dog, being now in the 45lbs. class. Color white, with fawn-marked head. This is undoubtedly the best developed dog for his age we have had in this country. His skull as good, and he shows a really wonderful stop and layback. He stands on his front legs at present, but he will likely spring a bit there, and when he does he will be a hard dog to beat. With the dog came two bitches and two bitch puppies. These are Derby Nancy, 2 years, by Reeves' Crib out of Derby Queen, in whelp to Bagpipes. This is a 35lbs. bitch, all white. Derby Hebe, 2½ years old, is also by Reeves' Crib and out of champion Hebe, a few pounds lighter than Derby Queen, and her white is broken by fawn head markings. She is to be bred to Bombardes this week. The puppies are Rosa de Mayo, by The Skipper out of Derby Hebe, 5 months old, brindle and white, and her litter sister Derby Mag, also a brindle.

I am very glad Mr. Cugle has rejoined the fancy, for Mr. Thayer's giving up bulldogs for deerhounds caused a bad break in the gradually increasing ranks.

By the way, it would be well to note the case of Derby Queen showing in season a few days after arrival. I drew attention to the case of Mr. Sawyer's Dolly Tester being bred within two weeks of her arrival here as being quite out of the run of my experience and knowledge of bitches crossing the Atlantic. Here we have two bitches practically coming in heat on the voyage, while in my experience and also in all cases that I know of bitches going to England, is that the voyage causes a delay of three months in the return of the period. The last and best known case is that of Dr. Foote's black and tan terrier Meersbrook Maiden.

Mr. Frank Dole, in a P. S. to a note received a few days ago, says he has a lot of stuff coming over for self and friends. He will please send particulars of "stuff" and oblige J. W.

THE KINGSTON DOG SHOW.—*Editor Forest and Stream:* It has been decided by the management of the Kingston, Ont., Kennel Club bench show to add to the liberal premium list already published extra cash specials of $10 each for the best kennel of four or more in the following breeds, owned by one kennel or exhibitor: Mastiffs, St. Bernards, English setters, Irish setters and cocker spaniels. Arrangements have been made with the Custom House authorities to admit all dogs to this show free of duty. Entries are coming in fast and everything points to a most successful show. Entries close positively on the 15th August.—C. H. CORBETT, Secretary and Superintendent.

NEW YORK DOG SHOW.—July 28.—The Westminster Kennel Club's fifteenth annual bench show will be held on Feb. 24, 25, 26 and 27.—JAS. MORTIMER, Supt.

DETROIT DOG SHOW.

WE have received the premium list of the second dog show of the Michigan Kennel Club, to be held at Detroit, Mich., Sept. 2 to 5. The show will be held in connection with the Detroit International Fair and Exposition. The judges announced are: Miss Anna H. Whitney, Newfoundlands, St. Bernards and pugs; Major J. M. Taylor, pointers, setters, American foxhounds and beagles; Mr. Jas. Mortimer, mastiffs, great Danes, bulldogs, bull-terriers, fox-terriers, collies, greyhounds, deerhounds, English foxhounds and Chesapeake Bay dogs; Mr. C. M. Nelles, field and cocker spaniels; Mr. J. F. Kirk the remaining classes. The St. Bernard Club offers the club medals for American-bred St. Bernards, rough and smooth, dogs and bitches, both over and under 18 months old, and other specialty clubs are expected to offer specials for the different breeds. The prizes offered are $15 and $10 in the challenge, $15, $10 and $5 in open, and $10, $5 and medal in the puppy classes in the important breeds, and $10 and $5 in challenge, $10, $5 and medal in open, and $5 and medal in puppy classes in the other breeds. The show will be held in a new building 40 by 400ft., connected with which are large outdoor exercising rings. In addition to the premium list a large number of valuable specials have been promised, including kennel prizes for the more important breeds. Entries close Aug. 18. The address of the secretary is Dr. M. V. B. Saunders, 230 Woodward avenue, Detroit, Mich.

DETROIT, Mich., July 25.—*Editor Forest and Stream:* The premium list of the Michigan Kennel Club, as sent out, contains an error in the light-weight pointer classes. Instead of reading $10, $5 and medal in Classes 45 and 46, the list should be the same as in heavy-weight pointers, $15, $10 and $5. Please make these corrections through your columns and oblige—M. V. B. SAUNDERS, Sec'y.

ENGLISH VS. AMERICAN BEAGLES.

Editor Forest and Stream:

In your issue of July 17 I notice the article written by "Hibernia" on the beagle hound. In the controversy now existing between beagle breeders of the country as to which is the correct type of dog, I will (if you will allow me a space in your columns) express my opinion on the subject. A great deal has been said about beagles being miniature foxhounds, while others have gone so far as to say that a beagle should represent the type of a Southern bloodhound. Now, if your readers will look back to when the beagle was first introduced into this country they will see that he did not resemble either the foxhound or bloodhound; in fact they did not resemble any of our beagles of to-day, without it was champion Bannerman. It is my opinion that Ringwood is the true type of dog and the type that breeders should breed. Compare Ringwood with our beagles of to-day: where is the likeness between the two? I should say Little Duke resembles what they call a harrier.

Probably the finest importation of the true type of the beagle is Bannerman. I consider him the finest beagle hound in America, and our beagles of to-day who have met him have stood no chance with him. Breeders will notice that Ringwood and Bannerman are very much the same type, and both dogs have not only shown themselves on the bench, but have given to their offspring the beautiful form which these old dogs possess. It is safe to say that a majority of our leading beagles of to-day have the blood of Ringwood and Bannerman; this alone ought to be enough to convince breeders that there is something in the old type.

Beagle breeders will notice that the coming dogs of the day resemble the old type. Why then should they come out and say that the true type of beagle should represent the miniature foxhound or a Southern bloodhound? Ringwood was undoubtedly the finest beagle of his day, and those who are fortunate enough to own his offspring, can congratulate themselves. We now have in Blue Belle II. one of the finest (if not the finest bitch in America); she is the perfect likeness of the old champion himself. Beagle breeders are aware that she is not only a fine bitch, but one that will be seldom beaten. Now if your breeders will compare the two types, and then consider them, I think they will be convinced that Ringwood was the correct type, and the only type breeders should consider. Let your readers throw forth their opinion as to what is the true type of the beagle, for many are in the dark and are wholly unaware of what they are breeding. LOUTRE.

FLEAS,

AND HOW TO GET RID OF THEM.

NOW is the season for fleas. At this time man's most faithful friend is compelled to follow the example of the hen and scratch to live. Of all insects fleas are the cutest. They don't rear their families on the dog's back where they live, but make a nice nest in some pile of sand. They are not, however, over particular, and if there is no sand handy they will use dirt or even the dust under a carpet. There is where their shrewdness comes in. You can scrub a flea-infested dog with deadly lotions, or lather him with all sorts of anti-vermin soaps, and while all the fleas in his hair turn up their toes and die, there are plenty of their descendants left to immediately take their places. So after congratulating yourself that your dog is entirely flea-ridden, you go to bed with a clear conscience of having done your duty, only to find next morning that there are more fleas than ever on your canine friend.

What's to be done?

I know a plan simple and cheap that will keep a dog free from these vermin, and it is not patented.

Buy a second-hand bathtub, but be sure to get one which is not copper-lined. Why, I will tell you later on. Get some carbolic sheep dip. There are a dozen different kinds, all, so far as I can discover, made from the same general formula. Add thirty gallons of warm water to each gallon of dip, and souse in your dog. Don't be afraid of its getting in his eyes, as it will only smart a little and do no permanent injury. Keep the dog in this bath for a couple of minutes, and if he is too large to be entirely covered throw the mixture over his back and head with your hand. After he is taken out and rubbed dry there will not be a live flea on him. The next day, however, he will have a few, and the day after seemingly as many as ever. Put him in the bath again, and by repeating three times a week in a fortnight the fleas on your dogs will be as hard to find as the proverbial needle in the haystack.

There is nothing offensive in this bath. The water and dip forms an emulsion the color of milk, and it does not injure the hair or skin, and used in proper proportions is a sure and speedy cure for mange.

The reason I warned against a copper-lined tub is that the carbolic acid in the dip unites with the metal and forms carbolate of copper, one of the most deadly skin irritants there is. I have seen cases of dogs thus affected which failed to respond to any known remedy and were positively incurable. The skin thickened and took on a pinkish hue, the hair dropped entirely out, and the victims looked like Mexican hairless dogs. They never got better.

For a kennel where a large number of dogs are kept, and where a bathtub dipping would be too troublesome and take too much time, I recommend the following plan, which has been in successful use for the last four years at my own kennels, as a quick and satisfactory remedy for both fleas and mange:

Dig in the ground an oblong hole (the size depending on the number of dogs kept) and line the sides and bottom with stone or brick laid in Rosedale cement. Then coat this with Portland cement to a thickness of 1in. One-quarter (in bulk) of clean white sand should be added to the cement. This tank should be not less than 5ft. deep. When the cement has thoroughly hardened (in from three to ten days, according to the weather), fill it three-quarters full of sheep dip and water in the proportion of one to thirty.

A V-shaped pen should be built at one end of the tank and a slanting water-tight raised platform, which will drain into the tank, at the other. Both of these should be fenced in with wire netting to keep the dogs from escaping. At the end of the slanting platform, which I call the "dripping pen," construct a bridge on hinges to lower and raise from the tank. You also want a lid made for the tank when not in use, and a wooden walk built around it to prevent dirt from being kicked into the bath. It is also advisable to have an open shed erected over the entire arrangement to keep off the rain.

Now, the dipping process is very simple, but it requires two people to do it. The dogs are put into the V-shaped pen, and one man takes a dog by the collar, and pushes him into the tank. If to rid the animal from fleas is the object, then allow him to remain two minutes, when the man takes a forked pole, places it on the dog's neck, back of the head, and pushes him under. In the meantime the other man has lowered the bridge, and when the dog comes to the surface he walks up on the bridge to the dripping pen, where he will lie quietly enough until all the surplus fluid has drained off his coat and run back into the tank. He then can be rubbed dry, but in warm weather even this is unnecessary. By this means very little of the dip is lost, and a tank filled in the spring will last until fall. It will never lose its strength or spoil.

If a dog is to be treated for mange, then he should be kept in the tank four or five minutes, and when in the dripping pen the bad places on him "spotted" with a sponge. For this purpose the mixture should be of the strength of one to twenty, and as hot as the hand can bear.

So far as I know, the idea of a dipping tank for dogs is original with myself, although it was suggested to me by seeing plans of the tanks for dipping sheep used in Australia. HIBERNIA.

IS THIS DUMB RABIES?

LONDON, Canada, July 14.—*Editor Forest and Stream:* About March last, when the "grip" had commenced to loose its hold upon the human animal, a disease of as obscure an origin began to affect the dogs of this vicinity. For want of a better name it is called by the vets. here atmospheric rabies, dumb rabies, etc. It certainly appears to be atmospheric, and not contagious, as one or two dogs in a kennel will be attacked and the rest escape, although they have freely mixed together. Also from the distribution of the disease, which appears to be confined to no particular part of the city, but has extended westward as far, at least, as the Detroit River. Whatever the disease is it is of a very fatal character; I have not heard of one instance of a dog recovering. As the malady is not likely to confine itself to this locality, I think it a pity that some competent vet. making a specialty of diseases of dogs has not given it his attention, so that in the event of its recurrence or appearance in some other quarter some rational treatment might be meted out, and the lives perhaps of many dogs saved. The general symptoms of the disease, or diseases, for all are not affected alike, may be described as in one case as general languor for a day or two, or even less, the dog refusing food and an indisposition to move, followed by apparent paralysis of the lower jaw, great thirst and difficulty in drinking, a ropy matter exuding from the mouth, and at intervals, fits, in one of which the animal dies. In other instances a dog in apparently good health and spirits is suddenly seized, rushes off crying as if in pain, falls down shortly in a fit, stiffens out and dies; the last symptoms are like those of strychnine poisoning, but cases have occurred making it most unlikely. I was present a few days ago when a vet. opened a young bitch that had just died with above symptoms, and he found no trace of poison in her stomach, which appeared to have been in a healthy condition, also the liver, but the bowels were twisted up and hardened, although showing no signs of inflammation, and relaxing a few minutes after opening the bitch. She was playing with a rag ball a few minutes before being seized. Among the many valuable dogs that have died here, is one familiar to most breeders of dogs and sportsmen; namely London, the winner of the field trials at High Point, N. C., in 1882, and at many bench shows. This grand old dog has left as a legacy many a flyer that for staunchness, speed, hunting sense and beauty will be found hard to beat, as their numerous owners, both in Canada and the United States, can attest. He was owned by Mr. Walter Humpidge, who had the misfortune to lose three others besides. Any sportsman or veterinarian who will throw any light upon the nature of the disease, or suggest any precaution that might be taken to prevent those dogs that are left from falling victims to it, will confer a great favor upon dog owners here. GRIP.

PEDIGREE OF THE MASTIFF MONTGOMERY.

Editor Forest and Stream:

As the blood of the above dog exists in this country (in Vistala, Lady Coleus, Phædra, Persephone, etc.) his pedigree may be of interest. As stated in the English stud book it is "By Crown Prince out of Queen by Colonel" no dam of Queen being given. The dog is owned by T. W. Allen, Esq., the oldest mastiff man now in harness in England, who was able to add only that the dam of Queen was a Vesta owned by a Mr. Naylor, and that the late Mr. Jas. Morris, the breeder of Montgomery, said that Mr. Naylor did not know the bitch's pedigree. This looked very hopeless, but experience has taught me that a pedigree is never hopeless; at any moment the clue needed may turn up. To cut a long story short, Mr. Christopher J. Naylor, of Kerry, Montgomeryshire, Wales, writes that there never was any doubt of Vesta's pedigree, that she is recorded in Vol IV. of the English stud book at number 6408, that he bred and sold Queen, that he saw and handled her litter by Crown Prince, and nearly purchased Montgomery for himself and that he now owns two daughters of Montgomery, great, grand daughters of his Old Vesta. I do not give Vesta's pedigree here, but will send it to any who may need it and will write me. Let me say that I do not lay claim to any merit for this discovery, it being due to the extensive acquaintance of Mr. M. B. Wynn among mastiff men of 15 to 20 years since. My experience in this hunt and that after the pedigree of Idalia and Brenda Secunda, again impresses me with the great unreliability of all official stud books. Their plan of annual issue, and their being a mere collection of entries, perpetuate errors and obscurities, there being no provision for corrections other than one in a succeeding volume where it will hardly be noticed, and there is no way of attaching a note where it will be seen in consulting the original entry. The *American Kennel Register* was infinitely ahead of any other stud book that I ever saw, in that if a pedigree was entered wrongly, and corrected within the year, the correction was noted in the indexing of the dog, and its reading matter insured that correcting notices would be seen and read. I see the English correspondent in a Western paper of July 19, dwells on the trouble ensuing from owners taking names for their dogs which are delusive, such as Young Plinlimmon for some dog in no way related to the original. A. K. R. effectually barred this at its outstart by providing that the name of no dog should be used as a component part of the name of another not closely related to the original. In English mastiff names we have Bosco, Bosco II., and Bosco III., and the relationships of the three dogs are the remotest, probably requiring 15 to 20 years to reach a common ancestor. W. WADE.

HULTON, Pa., July 19.

AMERICAN KENNEL CLUB AFFAIRS.

Editor Forest and Stream:

Some people are saying they have had enough of Mr. Peshall and the A. K. C. I don't think we have. We haven't quite got Mr. Peshall into the hole dug for himself. He is gradually enlarging it and making it more comfortable, but he isn't in yet.

Since I wrote last week I have had from Mr. Peshall three letters marked confidential. I shall certainly respect that safeguard to silence as to their contents, except in one respect—that is the reply to my proposition for him to go with the editor of FOREST AND STREAM and myself to the A.K.C. rooms and I would then from the books "give the items" he has been so plaintively pleading for from a source he knew would not respond. I think all will bear me out that the simple reply to the public invitation or challenge is not a communication coming under the head of the purely "confidential." Mr. Peshall declines to meet me to examine books that are faked.

I was convinced Mr. Peshall would shift his ground. The sands were washing away below his theoretical edifice, and to save the few relics of his vivid imagination he has to move house. Unfortunately he has only pitched on another sand pile, well within reach of the incoming tide, and flings to the breeze the motto, "The books are faked." Let us patch together the remnants of some of his former pennants which the gales of public exposure ond opinion shredded into ribbons:

"Mr. Vredenburgh won't give you the figures." He did.

"He won't let you see the books." He did.

"Mr. Belmont put in $1,000 between Jan. 1 and Jan. 7." Disproved.

"Mr. Belmont loaned the club $500." Disproved.

"Mr. Belmont's loan was made Dec. 6 to 8." Disproved.

"The loan was by check and the bank book will show it." Disproved.

"Mr. Vredenburgh left for England when the books were balanced July 12, 1888." He didn't go till September.

"We paid him $500 out of the July 12 balance of $651.40." The $500 was paid in two instalments in May.

"Mr. Lewis's contract was an exhaustive one." Denied by Mr. Lewis and Mr. Peshall's brother committeemen.

Just here let me call attention to the position of Mr. Peshall and his supporters on the question of the contract. It is this: "You see they all disagree and therefore I must be right." Here is the right way to look at it. "They all disagree upon the terms except in one respect, and that is that Mr. Peshall's statement as to an exhaustive contract is incorrect." Hence that particular statement by the majority of witnesses holds good. Further than this. Mr. Peshall some weeks ago challenged Messrs. Terry, Schellhass and Lewis to contradict his statement, in the event of which he would at once show by letters in his possession that he was right. An issue of the FOREST AND STREAM has passed and the documentary evidence is not forthcoming. In place of that we are referred to discrepancies between the three gentlemen named as proof that Mr. Peshall is right. That won't wash. Let us have the documentary evidence or come right out and acknowledge it was bluff.

Finally, just as the sergeant of the Peshall guard is unloosing the halyards for the purpose of hauling down the flag, the forlorn hope cry arises, "The books are faked, the books are faked."

Let us quietly examine this charge. There is no hurry; the enemy is in the last trench, all ammunition gone, no water, no food, no anything, not even hope.

The books are faked. These books, or rather this book, for it is the journal or day book that is faked, if anything is, was kept by Mr. Lewis. Mr. Peshall acknowledges to the correctness of the July 12, 1888, balance of $651.40, so we needn't go back of that. This book is a daily transcript of all transactions, a day book I think it used to be called when I was book-keeping. On page 34 of this day book appears the striking of the balance of $651.40, and it is continued to page 96 when another balance is struck of $1,228.28. It was kept by Mr. Lewis, and the striking of the balances is in Mr. Vredenburgh's figures.

Now, note this. Mr. Lewis was the employee of the stud book committee, was engaged by Mr. Peshall and his fellow committeemen under their direction and control. As such he kept this day book, or daily cash record. The presumption is that Mr. Peshall examined this book. At least it was his bounden duty to do so, and unless he chooses to impale himself upon the horn of negligence we must presume he did so. Eighteen months afterward he springs upon us the story, "The Lewis book was faked." He hasn't seen the book, bear in mind, since he resigned from the committee in December, 1888. Well, Mr. Peshall, you know no more about that book now than you did on Dec. 5, 1888. If you know now that it was faked you knew it was so when you were chairman of the committee responsible for its correctness. If at that time you knew it to be correct, you still know it to be so. There is no wriggling off that hook.

Having now pinned Mr. Peshall down to his final claim we will just look at it fairly.

As I have said, the July 12 balance appears on page 34 of the day book, or Lewis book, and on page 96 comes the Jan. 12 "gig" of $1,228.28, and it is one Mr. Peshall can't "straddle." There are sixty-two pages of items before you reach this gig, made up almost entirely of entries of stud book receipts. Page 40 contains about the largest receipts on any one page, and that amounts to $160, including as it does the receipts for registration from one of the fall shows. From that sum the page totals drop down as low as $30. I have not the total receipts from July 12 to Sept. 6, the date of Mr. Vredenburgh's departure for Europe, but from Sept 6 to Dec. 11 the total receipts were $670. From that date until Jan. 3 there was a further addition (in much larger proportions on account of the rush to get entries into the stud book before the close of the year), but I have not the figures except approximately as shown by the bank book deposits of $807.40. Making allowance for leaving a small balance on hand we may say that from Sept. 6 to Jan. 3 the club receipts were $1,500. July and August may be guessed as yielding $250 (based on a lower scale than September, October or November), thus increasing the receipts to say $1,750, to which must be added the July 12 balance of $651.40, making in round figures say $2,400. If then the day book on Jan. 11 shows a balance of $1,228.28, we find that the expenses for the six months were $1,200.

Now where would Mr. Peshall's theory land us? He said Mr. Belmont had to put in $1,000 to make the fictitious balance of $1,228.28, and that therefor the stud book committee, of which Mr. Peshall was chairman, remember, up to Dec. 6, spent or allowed to be expended during the last six months of 1888 the sum of $2,200. It allowed Mr. Lewis, according to Mr. Peshall's theory, and he himself is responsible for what was done, to use the receipts of $670 (Sept. 6 to Dec. 11), the balance of $641 (July 12), the receipts during July and August, say $250—over $1,500. Then after Mr. Peshall resigned in December and Mr. Lewis himself took his place, Mr. Terry, Mr. Schellhass and Mr. Vredenburgh looked complacently on while Mr. Lewis filched another $700 from the club during the month of December, and later on in 1889 drew between $200 and $300 more—the exact figures of which appear in the 1889 statement of account. Mr. Peshall fails to see how in what he has alleged he practically charges himself with concocting a swindle upon the club, and that for partners he had Mr. Thos. H. Terry, Mr. Schellhass, Mr. Lewis and Mr. Vredenburgh.

Fortunately the book that cannot be faked proves that Mr. Peshall is less of an accessory to a swindle than he desires to make himself out to be. The bank book shows that Mr. Lewis handed to Mr. Vredenburgh for deposit, on December 11, $284.50; it further shows that he transferred to Mr. Vredenburgh between that date and January 3 an additional $807.40, there being some half-dozen deposits during that period. If Mr. Lewis had had this exhaustive contract we are told about, would he have turned over to Mr. Vredenburgh this $1,100, when less than $300 of it belonged to the club for club members' annual dues? Well, hardly. Do tell us something we can swallow, for we are not all marines.

In conclusion, I beg all to understand that this is no personal fight between Mr. Peshall and myself. We are just as good friends as ever we were and are likely to remain so. He writes and tells me he "never read such rot" as my last to FOREST AND STREAM, and adds, "When are you coming over to see me?" And I respond by telling him that I'll be over as soon as I have an opportunity; but meantime I must bring him right down on his marrowbones. I am on the side I firmly believe is right, and he understands my position exactly, only he is sorry I am so blind. I am like the Canadian editor who had been giving the opposite political party fits, and the election going in their favor he wrote for some of the Government pap in the way of advertising. The answer came to the effect that if he wanted that he would have to change the tone of his paper and support the Government. He didn't wait to write, but telegraphed in reply, "It's a d—d sharp curve, but I'll take it." Now, if Mr. Peshall can give me facts, not theories or assumptions, which will prove that Messrs. Belmont, Terry, Vredenburgh, Schellhass and Lewis were all mixed up in a swindle, there is no turn too sharp that I can't take. To paraphrase Dean Swift's celebrated charity sermon, "If you like the stipulation, down with the proofs," Mr. Peshall. J. W.

Editor Forest and Stream:

Your correspondent, "J. W.," in answering the question I asked of him evidently lost sight of what the question was. I repeat it. "Will 'J. W.' tell his readers the deposits appearing in the bank book he examined between April 1 and Dec. 31, 1888, or the deposits made during the time Mr. A. D. Lewis was running the stud book, as they will tend, I believe, to settle the question relative to Mr. A. D. Lewis's connection with that book?" As "J. W." calls attention to the ridiculous position in which I have placed myself, will he oblige me by stating wherein I have done so.

L. LIVESEY.

JERSEY CITY, N. J., July 28.

Editor Forest and Stream:

Will you permit one of the onlookers to tell you how this A. K. C.-Peshall rumpus appears to us? I am sure neither Dr. Perry's nor Mr. Watson's letter throws the least light on the subject, though they were evidently intended to do so. The $1,000 business is still a colored gentleman in the fence, and if Tom Aldrich's statement as to what occurred at the meeting regarding that amount is to be at all relied upon, it certainly changes the complexion of things in Peshall's favor. It is strange that they have acted as they have, if all is O. K. Treasurer Vredenburgh's statement that if they wanted to borrow $1,000 it was none of Peshall's business does not in any way help the A. K. C.'s side, but in my opinion rather damages it. Perhaps I'm off a bit, but I feel sure the whole business will never be cleared up satisfactorily to the dog fanciers till the club appoints three delegates to employ two public accountants to aid them in going over the accounts from 1887 to date, and making a public report of same. It is very evident the auditing committee did not half do their work or they each would have had data to refer to. Said a man to me the other day, "I have been a cashier-in-chief for over 16 years, and my accounts have been audited at least three times a year, while I have every month gone over my assistant's accounts, yet never did I see my auditors nor did I retire from auditing without a full memorandum of all work gone over, with all data obtainable, all balance sheets and figuring being preserved. No other auditing is worth a cent." Let the A. K. C. do as I suggest, and then peace will reign or the devil be to pay.

MEPHISTO.

Mr. Peshall being asked by the FOREST AND STREAM to send in his apology in time for this week, replies as follows: "I have no apology to make. I consider that the letters and statements made by Messrs. Schellhass and Terry, as published in the FOREST AND STREAM, prove conclusively that the contract with Mr. Lewis to publish the Stud Book was substantially as I stated it. And I will within a very few days prove to the satisfaction of all dog men and even to the 'Combine' that the major portion of the $1,228.28 in question was not earned by the Club, but it was either money received from outside parties, or else it was money which under that contract belonged to Mr. Lewis. This I will do in a legal proceeding, where the books and accounts can be examined to the entire satisfaction of all. The late Gazing Committee will be invited to attend."

DOG TALK.

HANLEY, Eng., July 14.—I dislike to break open old sores, but the Meersbrook Maiden affair created so much talk at the time, that when at Leeds last week I could not resist the temptation to ask Mr. Ashton for his version of the affair. He seemed pleased to be able to explain, and requested me to publish it. I will repeat his story verbatim:

"About two years ago last Christmas I received a letter from Scotland from Mr. Robert Chapman, saying that Mr. Baillie wanted to buy some black and tans, and that he had told him that I could supply him. He came to Sheffield about Christmas and purchased Meersbrook Maiden for £40 of Mr. Hill. As Mr. Baillie had spoken of purchasing more, Mr. Hill, thinking to please him and give him an incentive to come again, made him a present of another bitch with a bit of white on her breast called Meersbrook Girl. Mr. Baillie told me that he would buy a dog if he could buy it right, and I went to Mr. Bolters with him and purchased a dog. I bought him as if for myself, and paid £5 out of my own pocket for him. When he took the three dogs he asked for another reduction of £5 and Mr. Hill finally consented and let him have the lot for £40." I do not think it necessary to make any comments on the above, but Mr. Baillie will find it quite a difficult matter to make out that he didn't know t'other from which.

Mr. Trickett requested me not to say anything about his purchase of Lady Livingstone for Mr. E. H. Moore: but I notice that the English papers all have the news and I don't want to be the last to send the news to the States. Lady Livingstone was whelped June 27, 1889, she is by champion Hesper ex Lady Abbess, and promises to make one of the best bitches we have. She is an orange bitch with excellent markings, good shadings and great character; skull very good for her age, ears too much like her sire's to be perfect, a good eye, good bone, good coat of good color, and a good mover; stands 31½in. at shoulder, and will weigh 150lbs. now. She won first, novice; first, under 12mos. class, and cup for best in either class at Leeds. She will be bred to Sir Bedivere before she is shipped to the States. Mr. Moore evidently means that Mr. Sears shall not have a clean sweep next spring. With Alton, Lady Livingstone and those that he has already, Mr. Moore can make the best showing of any kennel in America.

Mr. S. W. Smith has doubtless made the greatest number of sales for the largest sum of money in the shortest time on record. Alton and Lady Livingstone to Mr. Moore; Mayor of Leeds to Mr. Collard, of Liverpool; Young Pliulimmon and Forget-Me-Not to Mr. Shillcock, of Birmingham; and now it is rumored that Young Wallace is spoken for for the States. I am not at liberty to state the name of the would-be purchaser, but there is 99 to 1 that he crosses the pond soon. Young Wallace is by Pilgrim and out of Bessie II., a full brother to champion Pliulimmon, and with a good bit of a Plinlimmon head and muzzle; trifle long in muzzle, but with great depth, and good expression, good blaze, broad collar, great depth of chest and length of body, good bone, and very rich orange coat. He has won 18 cups and prizes, and will prove of great value to us as a stud dog.

We Americans might follow in the path of the English in regard to the use of foster mothers to our advantage. Even with our best kennels the use of the foster is the exception rather than the rule. Here, the demand is so great that several men make good livings by furnishing fosters at 30s. ($7.50) each, if you purchase outright, or 15s. ($3.75) for the use of one until the puppies are weaned. Instead of waiting until the puppies are all dead, as our people do, the Englishman has the foster ready before the bitch whelps, and then if she hasn't any milk or proves a bad mother the foster is ready; or if the litter is large, instead of drowning half of them, by the foster's assistance you can rear the lot. A demand will soon create a supply, and some enterprising Yankee might do worse than to take this hint.

A couple of cases of rabies have been developed near Hanly, and the Board of Agriculture are agitating the question of enforcing the muzzling order throughout North Staffordshire. If enforced in the same manner that it is in Manchester it surely don't do the dogs much harm.

Mr. Jas. F. Hall's (Philadelphia) St. Bernard bitch Lady Lowden (champion Plinlimmon—Lady Linton) was bred to the well-known champion Pouf on May 31. Mr. Hall will bring over the bitch and litter with him on his return Sept. 10.

I was rather amused when the June 26 issue of FOREST AND STREAM reached me at Leeds to read the article of Mr. Mayhew *re* the English vs. American beagles, and notice the direct contradiction of my own remarks in same issue. Mr. Mayhew may possibly be right regarding the type of beagle bred here. In fact the cut of Ringwood and the fact that he is an English champion would indicate that I was wrong in stating that the English beagles resembled miniature foxhounds. Mr. Mayhew has doubtless seen a hundred to my one in this country, but the fact remains that last year I had a commission to purchase a beagle and could not find one that I cared to bring home at any price, and this year, though I have already spent two weeks visiting kennels, I have not seen one beagle yet. I mean to though, before I return, and then will have another word or two to say regarding type. Mr. Mayhew gets rather mixed. He states that the American beagle "may" resemble the foxhound, etc. I admire his pluck in rising to the defense of his native country. Its a grand old country and I have quite a cousinly love for it myself, but he should not let his enthusiasm run away with his pen. If the American beagle, as "Hibernia" says, does resemble the foxhound, and Mr. Mayhew acknowledges that it does, how is it that his Blue Belle has done so much winning? No, friend Mayhew, Ringwood and Little Royal Krueger are much the same, and your Blue Belle will continue to win because she is much the same type as the American ideal.

NAMQUOIT.

TORONTO DOG SHOW.—Toronto, July 25.—*Editor Forest and Stream:* At the second grand international bench show of dogs of the Industrial Exhibition of Toronto, to be held at the city of Toronto, Canada, Sept. 15 to 19, Mr. John Davidson, of Monroe, Mich., will judge setters, pointers, collies, bloodhounds, beagles, foxhounds and dachshunde. Mr. C. H. Mason, of New York, will judge deerhounds, greyhounds, great Danes, Newfoundlands, pugs, terriers, mastiffs, St. Bernards, bulldogs, foreign and miscellaneous breeds, and Mr. E. M. Oldham, of Mamaroneck, N. Y., will judge all the spaniel classes. Entries close Sept. 3. Premium lists can be procured by writing the secretary.—C. A. STONE, Secretary and Superintendent.

HESPER AS A SIRE.—Wyoming Kennels, Melrose, Mass., July 25.—*Editor Forest and Stream:* Having been asked many times "Is Hesper a stock getter?" I can only say, since Feb. 6, 1890, he has been bred to sixteen bitches. Thirteen have been heard from, and of this number two only have missed, the aggregate of six litters being eighty-seven puppies.—E. B. SEARS.

THE BEAGLE FIELD TRIALS.—Boston, Mass., July 28.—*Editor Forest and Stream:* The first field trials of the National Beagle Club will be held the first Tuesday in November, 1890, and remainder of the week. Particulars and running rules will be sent later.—F. W. CHAPMAN, Sec'y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Rex Carolin. By C. E. Greenman, Troy, N. Y., for brindle mastiff dog, whelped June 2, 1890, by Boss (Zulu—Monmouth Meg) out of Molly Stark (Ben Adam—Lady Zara).

The Lady Godiva. By Seymour Van Santvoord, Troy, N. Y., for fawn mastiff bitch, whelped June 2, 1890, by Boss (Zulu—Monmouth Meg) out of Molly Stark (Ben Adam—Lady Zara).

Dusky Bob. By Eberhart Pug Kennels, Cincinnati, O., for silver fawn pug dog, whelped May 13, 1890, by champion Kash (champion Bradford Ruby—Lady Cloudy) out of Nun Nicer (Douglass III.—Dot).

BRED.

☞ **Prepared Blanks sent free on application.**

Lou—Fitz Hugh Lee. Clark & Rutter's (Lawrence, Mass.) beagle bitch champion Lou (Kenc—Fly) to their champion Fitz Hugh Lee (Lee—Juliette), May 11.

Mollie—Fitz Hugh Lee. Clark & Rutter's (Lawrence, Mass.) beagle bitch Mollie (Cumeroe—Nell) to their champion Fitz Hugh Lee (Lee—Juliette), July 4.

Daisy—Fitz Hugh Lee. F. Eihel's (Lancaster, Pa.) beagle bitch Daisy (Cameron's Racket—June) to Clark & Rutter's champion Fitz Hugh Lee (Lee—Juliette), April 28.

Lady Tippins—The Squire. Dr. Wm. Crawford Johnson's (Frederick, Md.) collie bitch Lady Tippin to Chestnut Hill Kennels' The Squire, July 12.

Boski—Duke of Vernon. C. H. Winship's (Bar Harbor, Me.) pointer bitch Boski to L. Gardner,s Duke of Vernon (Glendale—Spotless), July 26.

Miss Freedom—Duke of Vernon. L. Gardner's (Mt. Vernon, N. Y.) pointer bitch Miss Freedom (imported Pilate—Fairy II.) to his Duke of Vernon (Glendale—Spotless), June 26.

Taffy—Duke of Vernon. L. Gardner's (Mt. Vernon, N. Y.) pointer bitch Taffy (imported Pilate—Fairy II.) to his Duke of Vernon (Glendale—Spotless), July 5.

Pearl—Bradford Ruby II. A. Hasselmier's (Covington, Ky.) pug bitch Pearl (Bob—Viola) to Eberhart Pug Kennels' Bradford Ruby II. (champion Bradford Ruby—Puss B.), July 24.

Kurrency—John Bull. Mrs. E. Tyler's (St. Paul, Minn.) pug bitch Kurrency (champion Kash— ——) to Eberhart Pug Kennels' John Bull (champion Loris—May Queen), July 6.

Heatbee—Dundee. L. Timpson's (Red Hook, N. Y.) Skye terrier bitch Heatbee (Donald—Romach) to J. L. Banks's Dundee (Donald—Romach), July 20.

Merry Duchess—Bradford Harry. P. H. Coombs's (Bangor, Me.) Yorkshire terrier bitch Merry Duchess (Young Royal—Juno) to his champion Bradford Harry (Crawshaw's Bruce—Beal's Lady), July 11.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Bettina. Major Reichardt's (Scranton, Pa.) bull bitch Bettina (Calaban— ——), July 21, two dogs, by J. H. Matthews's Portswood Tiger (Paul Clifford—Hussey).

Psyche. Galaxy Kennels' (Malden, Mass.) St. Bernard bitch Psyche, July 14, ten (four dogs), by E. B. Sears's Plinlimmon, Jr.

Princess Alma. Galaxy Kennels' (Malden, Mass.) St. Bernard bitch Princess Alma, June 28, sixteen (eight dogs), by E. B. Sears's Hesper (Sailor—Belloua).

Victoria of Southfield. Macgram Coxe's (New York) St. Bernard bitch Victoria of Southfield, July 2, fifteen (ten dogs), by E. B. Sears's Plinlimmon, Jr. (Plinlimmon—Princess Beatrice).

Duchess of Heathfield C. H. Spring's (Newton Lower Falls, Mass.) St. Bernard bitch Duchess of Heathfield (Rip Van Winkle—Recluse), July 12, ten (five dogs), by E. B. Sears's Hesper (Sailor—Bellona).

SALES.

☞ **Prepared Blanks sent free on application.**

Queen Loris. Silver fawn pug bitch, whelped April 3, 1890, by Sir Loris out of East Lake Virgie), by Eberhart Pug Kennels, Cincinnati, O., to Jas. Bowden, New York.

Zaya. Apricot fawn pug bitch, whelped May 3, 1890, by champion Kash out of Lady Thurman, by Eberhart Pug Kennels, Cincinnati, O., to Jas. Bowden, New York.

Mamie E. Silver fawn pug bitch, whelped May 3, 1890, by champion Kash out of Lady Thurman, by Eberhart Pug Kennels, Cincinnati, O., to Jas. Bowden, New York.

DEATHS.

Sparkle. Irish setter bitch, whelped April 30, 1889 (Desmond II.—Lorraine), owned by G. G. Davis, Philadelphia, Pa.

Mealby. Liver and white pointer bitch, whelped July 12, 1881 (Pax—Climax), owned by Chas. Heath, Newark, N. J.

Chief of Yonkers. Sable and white collie dog, whelped Oct. 6, 1889 (Clipper—Glen Bella), owned by C. L. Schember, Yonkers, N. Y.; killed by the cars.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

T. B. B., N. Y.—I have two valuable dogs suffering from St. Vitus dance. I have had four doctors for them who have not been successful in relieving them. Possibly in your wide experience you may know of some treatment that has been successful; if so, and if you will kindly indicate it, I will be greatly indebted. Ans. Chorea or St. Vitus dance is a common sequel to distemper. It is very obstinate. The treatment must be regular and systematic and cover a long period of time. The bowels should be kept regular with doses of syrup of buckthorn, dessert spoonful doses daily. Get the following:

℞ Fraser's triturates.

Arsenic and strychnine ..... No. 50.

Sig. One three times daily concealed in a bit of meat. Electricity would benefit.

VIPERS AND THEIR YOUNG.—Writing to *Rod and Gun* from Cambus, Aberdeen, Mr. H. T. Broadhurst says: "When shooting on the Highmoor at Springkell, Dumfriesshire, some years ago, I came upon a viper basking in the sun with her young ones—I think six or seven in number. As they were not disturbed at my approach, I watched them for some little time, and called my keeper to see them. They were disturbed by my calling to the man, and I distinctly saw all the young ones run to the old viper, enter her mouth, and entirely disappear inside her. I was standing within a very few yards—my impression is, not further than three or four yards—away, and could clearly see everything. I killed the old viper with a stick, and in doing so she burst, and out of the burst came all the little vipers, which also I killed. The keeper who was with me at the time is still in my service and can confirm what I have said."—*Glasgow (Scot.) Mail.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE NEW GAS GUN.

AT headquarters of the London Scottish Rifles yesterday afternoon some interesting experiments were conducted with M. Paul Giffard's appliance for the employment of liquefied gas as an explosive—or, to be more strictly accurate, one should say as a means of propelling projectiles—in place of gunpowder. M. Paul Giffard's scientific reputation as inventor of the pneumatic tube, and of the "Giffard injector," so largely used in connection with steam power, stands so high that any invention to which his name was attached would be worthy of attentive consideration.

The weapon now introduced by him, however, is something more than an ingenious appliance: it is a discovery which not only promises to revolutionize the gunmaker's art, but is applicable also to many other purposes as a motive power. Those who are interested in the Giffard gun claim that it is the military weapon of the future. The idea of using liquefied carbonic acid gas as a propulsive power is not new, but M. Giffard is the first who has turned it to practical account.

The gas gun is a model of simplicity, so far as one can judge without examination of the discharging mechanism, in which much of the merit of M. Giffard's invention lies. A small cylinder, called a cartouche, is attached to the barrel of a rifle or smooth-bore gun. This cylinder contains liquefied gas enough to discharge 220 shots, equal to about 50 bullets of an ordinary service rifle, with a velocity to kill at 600yds. There is no other explosive. The pellet is simply dropped into an aperture of the barrel, which is hermetically closed by pressing a small lever, and the loading is complete.

When the trigger is pressed a small quantity of liquefied gas becomes released and expands in the breech chamber. There is no louder report than the drawing of a champagne cork makes; no smoke, and no fouling of the barrel. In all these respects M. Giffard s gas gun seems to fulfill the requirements of an ideal weapon for warfare; but whether in other respects liquefied gas has advantages over ordinary explosives for military purposes remains to be proved. The inventor says there would be no difficulty in refilling the cylinders with gas on the battlefield; but it is obvious, even if that be the case, that reserve cylinders would have to be supplied to each man, in order to make up the number of rounds now thought to be necessary; and, as bullets would of necessity be carried in addition, the ammunition for a gas gun would weigh just as much as ordinary cartridges, weight for weight.—*London Daily News.*

The charge of liquid liberated for each round is regulated by a milled screw, and each charge, as liberated, is contained in a special chamber, from which it is released by the pulling of a trigger. The bullet is dropped separately into an orifice in the breech-lock. In the rifles shown the bullets were round, but elongated bullets can be used. When the guns were discharged a rush of vapor was seen issuing from the muzzles. But it instantly faded away, and the bullets flew with strict precision to the targets. Barrels which had been repeatedly discharged in the past two months were shown to have suffered no corrosion. The pressure of the gas and fluid in the above magazines was 500lbs. on the square inch, and this pressure is maintained up to the last drop of fluid. The preparation of the liquefied gas involves no mechanical power; but the needful pressure is got entirely by the chemical manipulation of ordinary substances, such as carbonate of soda.—*St. James Gazette.*

THE E. C. POWDER.—The great annual international pigeon shoot of the world came off in London, Eng., during the last week in June. A great feature of this meeting has been the large proportion of wins (9 prizes out of 12 shot for) made by the new E. C. powder. We hear that this powder is already being largely imported into this country by Messrs. Von Lengerke & Detmold, and that large works, with all the best appliances and ample capital to work with, will shortly be erected for the manufacture of this powder in New Jersey. Altogether E. C. powder was credited during this week with winning £2,500.

CREEDMOOR.

CREEDMOOR, July 23.—Free practice day at Creedmoor to-day for marksmen and sharpshooters' medals drew big crowds of guardsmen to the place. The day was fair with a light wind. The names of those who made thirty points and over on the 200 and 300yd. ranges, entitling them to marksman's badges, are: John Corrie, D. McCarthy, R. McRobbie, G. H. Fiseken, G. J. Dagner, J. H. C. Tietjen, W. S. Gleason, J. H. Fallon, W. E. Downs, L. Schmidt, R. B. Currie, C. McKinney, E. Merle, F. R. Serena, D. Moore, J. Gannon, W. P. Coughlan, J. W. Hall, E. H. Hayes, W. D. Gaige, P. L. Asten, S. S. Richmond, I. S. Whitney, J. B. Ward, F. L. Finn, J. Jennings, F. W. Brown, C. Filchue, P. O. Mahone, R. Boyd, G. Heeley, E. D. Holland, J. Day, J. H. Whittle, W. C. Garthwaite, C. Abrams, C. B. Jackson, F. E. Chase, J. Muller, J. Millon, Jr., H. Alten, Jr., M. J. Howard, F. K. Kane, W. T. Albers, N. J. Frye, J. Jonasson, H. S. Martin, D. A. Quinn, J. Snamenazky, M. D. Guire, R. H. Ketcham, E. J. Seward, J. E. Coogan, W. H. Eddy, H. L. Smith, B. Wiendrick, W. J. Landers, H. A. Greenberg, H. Goodin, J. M. Steinhaur, G. W. Smith, A. R. Hibson, T. Richardson, and J. F. Pickinger.

July 26.—The second sharpshooters' match of the season was shot on the 500 and 600yd. ranges at Creedmoor to-day. None but National Guardsmen participated. The rain interfered with the shooting, and the match did not begin until the afternoon. Following are the scores of those who won sharpshooters' badges:

	500yds.	600yds.	Total.
F. Stewart, N. C. S., 69th Regt.	22	24	46
H. C. Taylor, Staff, 9th Regt.	23	21	44
C. W. Simmons, Co. A, 23rd Regt.	21	22	43
A. G. Findlay, Jr., Co. G, 23rd Regt	23	20	43
E. S. Spink, Co. F, 23rd Regt.	23	20	43
W. J. Underwood, Co. H, 7th Regt.	21	22	43
J. B. Frothingham, Staff, 2nd Brig.	22	22	44
R. Findlay, Co. G, 23rd Regt	22	20	42
A. M. Evans, Co. E, 22nd Regt.	20	25	45
A. McDongall, Co. C, 7th Regt.	22	20	42
H. C. Owen, Staff, 23rd Regt.	24	18	42
G. L. Hoffman, Co. H, 7th Regt.	24	21	45
J. Corrie, Co. B, 12th Regt.	24	21	45
J. T. Hull, Co. F, 23rd Regt	21	23	44
H. M. Field, Co. F, 23rd Regt.	21	22	43

The Creedmoor meeting, says the New York *Times*, this year will derive a greatly increased interest from the presence of a full Canadian team, under the charge of Capt. Hood. An international competition has always proved a popular attraction at the fall prize meeting of the National Rifle Association, but, unfortunately, such a competition has not been secured for it during many years. The prospects of renewing the old contest between British and American riflemen at Creedmoor are also rather faint, and, indeed, the prizes offered on this side of the water are too small to attract marksmen accustomed to the liberal rewards of Wimbledon, or rather, as we must now say, of Bisley. The time and cost of the ocean voyage and the subsequent days required for practice are items of importance, coming so soon after the annual meeting at the Bisley range. But our friends across the border are near at hand, and they have plenty of skillful riflemen. Their team, which has been competing as usual at the July meeting in England, will soon have returned, and that, or a portion of it, would be available for Creedmoor. It contains plenty of good shots, although it did not succeed this year in retaining the Kolapore Cup, which it won last year. At any rate, the Canadians who come will no doubt prove worthy competitors for the Hilton trophy, which has always been open to them, and it is to be hoped that their presence this year will only be the first of a long series of annual visits.

RENSSELAERWYCK.—Albany, N. Y., July 23.—A meeting of the committee of the Third Brigade Rifle Association was held at the office of Buel C. Andrews last evening and the following programme arranged for the meeting of the Third Brigade Rifle Association, to be held at Rensselaerwyck, between Albany and Troy, Oct. 2 and 3:

1. Short range continuous military match. Open to all comers; 200yds.; number of shots, 5; the aggregate of the best two scores to count; standing and off-hand; weapon, any military rifle.

2. Standard American target re-entry match. Open to all comers; 200yds.; 5 shots: off-hand, with any rifle; the best three scores to count for first three places; the best two for all below.

3. Mid-range continuous military match. Open to all comers; distance, 500yds.; any military rifle and any position without artificial rest; the aggregate of the best three scores to count for first three places; the best two scores to count for all below.

4. Rest match. Conditions same as No. 2, allowing artificial rest.

5. Pistol match; 5 shots at 30yds. on reduced target.

6. Revolver match. Conditions same as No. 5.

7. Team match, for teams composed of commissed officers or regularly enlisted soldiers from any battalion or separate company in the Third Brigade, N. G. S. N. Y.; teams to appear in uniform; distance, 200 and 500yds.; Remington rifle, New York State model.

The prizes will be equal to those given in former years by the Third Brigade Rifle Association, which have always been liberal. Mr. Slingerland, the surveyor, is preparing a map of the rifle range to submit to the State committee appointed by the Legislature last winter to purchase the property for a State range.

YOUNG RIFLEMEN.—The Empire Rifle Club, the youngest organization of the kind in New York, promises to become in time a valuable recruiting ground for the older clubs. The organization is composed of a number of young men, the eldest of whom has not yet reached his twenty-third year. Nevertheless the youngsters manage to put up some very good scores in gallery shooting, and their two best marksmen, Buff Rosenbaum and J. Grimm, form a team which can measure itself with any team of the same age in the United States. An individual challenge, issued by J. Grimm for a series of 100-shot matches, best two out of three, off-hand, 100ft. distance, .22cal. rifle, to any shooter in New York and vicinity who is 21 years or less of age, has not found any takers, and Rosenbaum and Grimm are willing to shoot a team match under similar conditions. The first regular contest of the club, which began in January, was concluded this week, the handsome gold badge presented by Mr. Henry Oehl, of the Zettler Rifle Club, going to Rosenbaum, who won the greatest number of times and made also the highest individual score, 115 out of a possible 120, on July 15, 112 having been highest until then. The club holds its meetings at 12 St. Mark's place, where they will shoot again this fall the new contest beginning in the second week in September. The averages for the last six months are as follows:

	Number of Shots.	Total.	Average.	Percentage.
W Rosenbaum	240	2,023	10.65	88.73
J Grimm	180	1,826	10.14	84.54
Wm Muller	140	1,325	9.46	78.87
C Zettler, Jr.	190	1,788	9.41	78.42
A Stahl, Jr.	180	1,685	9.36	78.01
W Maizenholder	190	1,761	9.27	77.24
J Zettler	170	1,345	7.91	65.93
J H Peters	90	677	7.62	62.69
E Smith	60	407	6.78	56.53
Wm Koenig	4	223	5.56	46.46
H Metzendorf, Jr.	4	198	4.95	41.25

The distance was 100ft., the target the Massachusetts 12-ring target, reduced, with 1⅜in. bullseye.

NEW YORK, July 28.—The prize shoot of the Germania Schuetzen Bund No. 1, Washington Rifles, was brought to a successful issue at the old Washington Park grounds yesterday. The shooting took place on the 200yds. range, 3 twenty-five German ring targets and a point target being used. On the first of the ring targets the members contested for the honor and glory of becoming "king" for the ensuing year, a handsome gold medal going to the winner. The successful shooter yesterday was T. Lindkloster, who has acquired his marksmanship as a member of the Zettler Rifle Club, with 59 out of a possible 75. On the next target the members of the organization competed for a handsome gold-headed cane, which fell to Helbig, Co. 4, on 59. The third ring target was open to all, no limit to number of ticket, the prizes consisting of medals and cash. The winners and their scores were: Filg 67, Lindkloster 62, Feltner 62, J. Meyer 57, Horney 57, Blank 56, Helbig 53, Heine 49, Scherler 49, Euerkent 48, Hummel 47, Sarbin 46, O. Schier 44, Neditz 43, Domeier 42, Lambertus 41, Hickle 41, Katz 40, Hund 40, Himmel 40, Rosenthal 38, Saur 37. The winners on the point target were Horney, Limmer, Benzie, Blank, Benigs, Helbig, Schulenberg, Ruetkert, Blank, Schier, Lindkloster, Schener, Himmel, Sauer, Deibner and Apt.

BRITISH NATIONAL RIFLE ASSOCIATION.—London, July 22.—In the rifle contests at the Bisley Range to-day Sergeant Bates, of the 1st Warwick Regiment, won the Queen's prize. Sergeant Bates's score was 278.

LONDON, July 23.—The contest for the Kolopore Cup took place to-day at the Bisley Range. The English team won the cup with a score of 704 points. The Canadian team made 676 points.

ST. LOUIS, Mo., July 25.—Owing to the hot weather the St. Louis Pistol Club had a small attendance of members at its shoot July 18. The medal was taken by Mr. McBean, with the very respectable score of 90 out of a possible 100. A .22cal. pistol, and 12½yds. standard American target:

A McBean	10	7	10	9	9	10	9	8	9	9—90
E Mohrstadt	9	9	7	10	10	10	10	10	7	7—89
G Alexander	10	10	7	8	7	10	7	10	7	10—87
W Bauer	7	7	9	10	7	8	9	8	10	9—84
A E Bengel	9	5	7	8	8	9	10	9	10	8—83
H Stussell	9	5	6	8	10	7	10	7	10	10—82
M Billmeyer	2	7	10	8	9	7	10	10	7	10—80
D Barker	3	7	10	8	7	7	7	5	7	9—72
W Mackwitz	6	6	6	10	8	8	8	8	8	7—70

E. Mohrstadt made the top score at the last shoot of the St. Louis Pistol Club, and the trophy will be held by him for the coming week. But a few more shoots remain of the present tourney, and the prospects are that the above gentleman will be the ultimate winner of the club's medal, as he is the top man at present on the straight average.

E Mohrstadt	10	8	9	10	10	10	10	9	9	8—93
L V D Perrett	10	8	8	9	10	10	9	10	10	7—91
Sam Dorman	9	10	10	9	6	10	10	10	8	8—90
M Summerfield	9	8	9	10	7	10	10	8	8	10—89
W Bauer	8	8	10	7	10	9	8	7	10	9—86
A McBean	7	9	10	10	6	8	8	8	10	8—84
M C Billmeyer	6	8	7	10	10	7	7	10	9	9—83
G Alexander	6	7	7	8	8	9	9	9	10	10—83
A E Bengel	10	7	5	8	7	10	7	8	10	10—82
J A Lee	8	8	6	10	9	7	10	7	4	7—76
W C Mackwitz	10	5	7	7	7	6	8	7	7	8—73

UNSER FRITZ.

WORCESTER, Mass., July 25.—At the regular meet this week of the Worcester Sportsmen's Club, at Coal Mine Brook Range, the principal event was the continuation of the merchandise contest which began last spring. Each man has a possible 25 clay pigeons. The work of each man in the last contest follows: M. D. Gilman, C. B. Holden, Geo. Adams and G. J. Rugg, each 21; A. L. Gilman and E. B. Burbank, each 20; W. L. Davis, A. R. Bowdish and E. E. Hill, each 19; W. E. Johnson, C. E. Forehand and C. Crompton, each 18; C. A. Parker, E. Whittaker, W. R. Dean and A. B. F. Kinney, each 17; H. W. Webber and C. H. Howe, each 16; M. A'Delbert, 15; E. S. Knowles, V. F. Prentice and C. R. Burnett, each 14; E. F. Swan and J. B. Goodell, each 14; H. D. Jourdan, 12; C. H. Colvin, 11; E. James, 9; W. Brown, 4. The meet this week completes one-half of the series, and out of a possible 125 the following is the present standing of the men:

E T Smith	123	C R B Claflin	100
M D Gilman	119	E James	100
Chas Crompton	118	M A Linfield	100
W L Davis	115	E Welch	100
E B Burbank	113	A G Larkin	99
A R Bowdish	112	A B F Kinney	99
C H Howe	111	F M Harris	99
G J Rugg	110	E Whittaker	97
E E Hill	110	E S Knowles	96
W R Dean	109	C H Colvin	95
C E Forehand	108	V F Prentice	89
A L Gilman	108	F Forehand	88
Geo Sampson	107	T P Wilkinson	87
H D Jourdan	106	C S Day	82
H W Webber	105	F M Houghton	81
E F Swan	103	J B Garland	78
W E Johnson	102		

BOSTON, July 26.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day. Some good scores were made between showers. Following are the best scores made to-day, distance 200yds., Standard American target:

All-Comers' Rest Match.

S Wilder	111	F C Downer	103 J F Hobbs 97
J N Eames	110	R A Long	103 E I Blount 96
L R Avay	107	M T Day	102 H S Poor 96
A H Ballard	104	A S Hunt	99 M R Barter 89

All Comers' Off-Hand Match.

H L Lee	82	S O Merville	74 D Bailey 66
J A Frye	82	H S Poor	73 W L Gunn 64
W Charles	77	F W Chester	72 W R Barter 62
W O Burnite, Mil.	77	W Simmons	72 E Comey 60
W A Ballard	67	E H Foote	67

Pistol Practice Match—50yds.

W Charles	93	H L Lee	88 A Stevens 87

EPHRATA, Pa., July 25.—The members of the North End Rifle Club met on their range near Ephrata this afternoon, for practice at 200yds. off hand, standard American target. The day was cloudy, with little wind toward the face of target. Four scores of 10 shots each, to each shooter, were made, resulting as follows:

W D Winters	54	63	61	57	Chas Konigmacher	33	28	35	36
J A Stober	49	51	49	46	D B Lefever	17	..	24	30
L M Wiest	57	55	57	56	S S Wenger	68	71	66	65
J M Sheaffer	61	55	51	W L Carpenter	62	56	60	51

The club decided to hold its annual shoot, for gold and silver medals, on the last Thursday of August, in which all rifle teams in Lancaster county may participate, and are to be invited. The next shoot will be on Friday afternoon, August 8.—D. B. LEFEVER, Sec'y.

BERLIN, July 26.—Gus Zimmermann, the well-known rifle shooter, of New York, and a member of the Zettler Rifle Club, the Independent and Central Schuetzen Corps, and Captain of Lutzaw Company, German-American Shooting Society, met with a very unfortunate mishap during the quick-firing contest for the ten golden pocols of honor on July 8. On the fourth shot Zimmerman's target broke down and a delay of two minutes ensued, thus robbing the American of first honors. Even under this handicap Zimmermann was third man to finish the necessary 180 points. Other members of the Zettler Rifle Club have been equally unfortunate. Mr. B. Walther, the popular president of the organization, who shot for the New York Schuetzen Corps in the concurenz shoot, was unable to obtain a cup, as he was greatly hindered by a swollen foot. Mr. Max Engle, who would have represented the Zettler Club proper, could not take part in this match on account of ill health, but won silver cups on the point and ring targets, as did also F. Fabarius, the oldest American shooter who took part in the different events at Berlin.

BERLIN, July 22.—Herr Buhl, a member of the German Reichstag, will give a banquet on Wednesday to the American riflemen who are now visiting Neustadt, Bavaria. The Americans will afterwards visit the Deidesheim wine cellars. President B. Walther, of the Zettler Rifle Club, has been suffering from the gout since his arrival in Berlin, and was, therefore, unable to obtain any of the larger prizes on the target of honor. Gus Zimmermann, the well-known member of the New York Central Schuetzen Corps, will take part in the great shooting festival held by the Schweitzer Schuetzen Bund at Frauenfeld, as will also Alex. Stein, the crack shot of the 7th Regiment. Over 400,000 francs have been put up in prizes for competion, open to the world.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Aug. 5-6.—Tournament Minneapolis Gun Club, Minneapolis, Minn. A. F. Shuler, Sec'y.

Aug. 6-8.—Onondaga County Sportsmen's Tournament, at Syracuse, N. Y. Guaranteed purses, all cash.

Aug. 18-23.—Third Annual Keystone Tournament, at Corry, Pa. Sept. 1-2.—Hackettstown, N. J., Gun Club Shoot, Labor Day, Sept. 1, at targets; Sept. 2 at live birds. For programme address E. Richter, Sec'y.

Sept. 3-4.—Beeville, Tex., Gun Club Tournament. T. J. Skaggs, Secretary.

Sept. 9-12.—Cincinnati, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the World. Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purse. Wm. E. Limberg, Sec'y.

THE MCDOWALL GRAND INTERNATIONAL BLUEROCK TOURNAMENT, Toronto, Canada, Aug. 12, 13, 14 and 15. $1,100 in gold in guarantees and donations; held under the auspices of the four gun clubs of Toronto, and under the management of W. McDowall, assisted by an American expert. For programme address W. McDowall, Manager, C. G. Winchell, Secretary, 81 Yonge street, Toronto.—*Adv.*

OMAHA.

OMAHA, Neb., July 28.—The Omaha Gun Club's weekly shoot was held yesterday, 25 bluerocks, 21yds. rise, 5 unknown traps. The result:

Fogg	1111011011111101011011	21	25
Townsend	1110111101110011111111	21	
Brewer	0111110101000111011111	19	
Kennedy	1111111011111111111111	24	
Brucker	1111110100100100101011	16	
Gray	0011111100011010101000	14	
Field	1111111111110011111111	22	
Hughes	1111011111101110111001	20	
Corey, E J	1110101101110111111011	20	
Corey, W F	1110111110111100111111	21	

A sweepstakes, at 10 bluerocks, $2 entrance, same conditions, followed the main event, and proved a tight and interesting chase:

Fogg	1111111111	10	
Gray	0011111111	8	
Townsend	1111111011	9	
Hughes	1011111011	8	
Fuller	1011111011	8	
Field	1101101111	8	
Hummel	1110001111	7	
Brewer	0011111100	6	
Borland	1111111111	10	
Jones	1000101111	6	

Fogg and Boreland div. first, Townsend took third.

The Winchester club, a new organization, dedicated their new grounds yesterday with their regular weekly shoot, 25 bluerocks, 21yds. rise. The score:

F Fuller	1111111111111011111111	24	
Scu Paulsen	1111111111111111111111	25

The South Omaha Gun Club is making elaborate preparations for a big trap shoot to take place at Sarpey Mills on Sunday next. They have already secured 800 pigeons and expect to get as many more, in addition to a large invoice of live blackbirds and English sparrows. S. G.

KANSAS.

HUTCHINSON, Kan.—The fourth annual tournament of the Hutchinson Gun Club was a fair success, although there was not as large a crowd as was expected. Among those from out of the city were Wm. Stancer and Stancer, Jr., D. Bump and Clark, from Wichita; Andy Swiggert, Towanda; A. C. Hegglund, T. A. Blacker, McPherson; H. A. Abercrombie and G. W. Hanna, Galva, and J. L. Wright and T. A. Bavington, Lyons. The tournament was managed by Will Allen, the efficient club secretary. The fun began the first day with a match at 9 singles:

Stancer	10111111	8	
Allen	1111111101	8	
Swiggett	1001111101	7	
Young	011111110	7	
Bump	0100111001	4	

Second match, 12 singles:

Stancer	101111111101	10	
Bump	110111111101	10	
Allen	110111111011	10	
Swiggett	011010111011	8	
Young	000101111101	7	
George	100100011100	5	

Third match, 3 singles and 3 pairs:

George	111 11 10 10	7	
Swiggett	111 10 11 10	7	
Stancer	111 11 10 00	6	
Bump	011 01 10 10	5	
Young	001 11 11 00	5	

Fourth match, 15 singles:

Swiggett	111111111101101	13	
Allen	101111111011110	12	
Stancer	101111101100111	11	
Young	011111111011110	11	
George	011110100101110	9	
Bump	111111111100111	11	

Fifth match, 5 pairs:

Stancer	11 11 11 11 10	9	
George	11 11 11 00 10	7	
Swiggett	11 10 10 11 00	6	
Young	10 11 10 10 10	6	
Bump	11 11 11 01 00	6	

Sixth match, 9 singles:

Swiggett	111011110	7	
Young	111011101	7	
Blackler	010111111	7	
Bump	101111010	6	
Stancer	011101101	6	
Hegglund	100110111	6	
Dodds	011111000	5	
Allen	001101101	5	
Ithaca	000001010	2	

Seventh match, walking match, 9 singles:

Winters	101111111	8	
Swiggett	101111111	8	
Young	010111111	7	
Bump	010111101	6	
Stancer	001010111	5	
Blackler	001111100	5	
Hegglund	101100011	5	
Allen	010111000	4	
Dodds	010010010	3	

Eighth match, 12 singles:

Swiggett	101111111111	11	
Hegglund	111111111110	11	
Allen	011111111110	10	
Young	111100011111	9	
Stancer	111111101001	9	
Blackler	111101011101	9	
Winters	000110011111	7	
Bump	101010111101	8	
Dodds	110000011100	5	

Ninth match, 12 singles:

Young	111111111112	12	
Stancer	111111110111	11	
Allen	011111111110	10	
Swigett	011011010000	6	
Bump	101100010110	6	
Hegglund	100010011011	6	
Dodds	000011110011	6	
Winters	010100101001	5	
Blackler	010101100000	4	

Tenth match, 9 singles:

Swiggett	011111111	8	
Hegglund	111110011	7	
Young	111011010	6	
George	001111011	6	
Bump	101011011	6	
Blackler	101011011	5	
Allen	010001110	5	
Winters	110101100	5	
Stancer	010001100	3	
Dodds	100010000	2	

Eleventh match, 5 pairs:

Swiggett	11 11 11 11 10	9	
George	11 11 10 11 01	8	
Young	10 11 11 11 10	8	
Blackler	01 11 10 10 10	6	
Winters	11 10 00 10 01	5	
Hegglund	101110101	6	
Stancer	101101011	6	
Bump	101101111	7	
Allen	010111110	6	
Dodds	100100000	2	

Twelfth match, 9 singles:

Young	111111111	9	
Swiggett	111111111	9	
Blackler	111111110	8	
George	001011111	6	
Bump	101111111	8	
Stancer	101101111	8	
Allen	011111110	7	
Winters	010111100	5	
Hegglund	101110101	6	
Dodds	001011100	4	

Second Day.—Nine singles: Allen 7, Young 7, Dodds 7, Bower 7, Bump 6, Swiggett 5, Stancer 5. Bower first, Stancer third.

Nine singles: Swiggett 8, Bower 8, Young 7, Allen 7, Stancer 7, Dodds 6, Bump 4. Swiggett and Bower first, Stancer second, Bump third.

Twelve singles: Young 12, Stancer, Jr., 11, Swiggett 11, Bower 10, Bump 10, Wright 10, Stancer 9, Allen 8, Dodds 7, Bavington 8.

Six singles and 3 pairs: Young 12, Allen 10, Stancer, Jr., 10, George 10, Stancer 9, Swiggett 9, Bavington 8.

Nine singles: Young 8, Stancer 8, Wright 8, Bavington 8, Swiggett 8, Bower 7, Stancer, Jr., 7, George 7, Allen 6, Bump 6.

Nine singles: Stancer 9, Allen 8, Bower 7, Young 7, Wright 7, Stancer, Jr., 6, Bavington 6, Swiggett 5.

Twelve singles: Young 11, Stancer 10, Wright 10, Bower 9, Swiggett 9, Stancer, Jr., 9, Bavington 10, Allen 8, Bump 7.

Team match, 10 singles per man:

Young	1111110011	8	
Allen	1111110113	9	
George	0101111111	8	
Clark	1101111111	9

The Compton Hill Gun Club held a tournament last Monday, which was favored with a large attendance of trap-shooters. The weather was pleasant and the scores made were as a rule very good. Bluerock targets were used for all events, and the rules of the A. S. A. applied to the affair.

Following are the scores:

Shoot No. 1, at 10 single targets: S. Prendergast 7, King 9, Hill 10, C. Spencer 8, J. Hagerty 6, Weaver 6, J. Lineharth 9, Morgan 7, Fink 4, Harris 9, Keller 6, Selzer 9, E. Prendergast 9, E. L. Spencer 9, Dick 6, Harris 3, Rawlings 8, Steffen 4, Reed 7.

Shoot No. 2, at 15 singles: Hagerty 13, Steffen 11, Hill 12, G. Prendergast 10, E. Prendergast 12, Weaver 12, D. Jones 7, Seltzer 9, E. Spencer 13, J. Meer 8, J. Prendergast 13, G. Rawlings 13, King 14, Harris 12, Keller 12, Weathers 14, C. Spencer 15, Dick 10, Lewis 11, Lineharth 15, Weber 5, J. Longsworth 11, Morgan 10, C. Longsworth 7.

Shoot No. 3, at 10 singles: Hagerty 10, Lewis 7, Seltzer 6, Weber 6, C. Spencer 9, Hill 9, Roy 7, Steffen 7, E. Spencer 10, C. Longworth 4, G. Prendergast 8, Jones 5, King 8, E. Prendergast 10, Harris 8, Westhus 7, Keller 6, Weaver 5, Lineharth 9, J. Longsworth 7.

Shoot No. 4, at 15 singles: Weber 11, S. Rawlings 8, Morgan 10, J. Prendergast 9, Ross 9, Schomberg 6, Cicardi 12, Jones 9, P. Weber 9, G. Hill 11, Moser 4, C. Longsworth 6, Stroth 12, A. Rawlings 7.

Shoot No. 5, at 15 singles: Hagerty 11, Westhus 12, G. Prendergast 12, King 12, E. Prendergast 12, C. Spencer 13, Roy 13, Steffen 11, Seltzer 11, Hill 14, Jones 7, Lewis 7, Weaver 10, Lenharth 13, Harris 13, Keller 13, E. Spencer 12, J. Longsworth 10.

Shoot No. 6, at 6 pairs targets: Hagerty 6, King 8, Seltzer 6, C. Spencer 10, Schomberz 4, Fink, Jr., 7, P. Wilber 6, Lenharth 7, E. L. Spencer 8, Keller 7, G. Rawlings 2, Westhus 8, Harris 8, Prendergast 8, Lewis 3, Brown 5, Stroth 6, Ray 7, Flynn 2, Weaver 3, Cicardi 7.

Shoot No. 7, 10 single targets: G. Prendergast 9, Schomberg 6, Steffen 7, Keller 10, C. Webber 8, King 10, Westhus 8, P. Weber 6, Lewis 5, C. Spencer 5, Cicardi 6, Weaver 8, Stroth 9, Fink 4, A. Rawlings 5, J. Prendergast 4, Lenharth 9, Harris 9, E. Prendergast 9, Brown 9, Seltzer 7.

Shoot No. 8, for Harrington & Richardson hammerless gun, 20 single targets: Hagerty 16, King 18, E. L. Spencer 17, Keller 18, P. Weber 15, Lenharth 13, E. Prendergast 16, Westhus 14, Roy 14, J. Long 16, C. Spencer 19, Steffen 16.

A sweepstake at 25 live birds, $10 entrance, was shot at Compton Avenue Park last Wednesday morning between five gentlemen. J. Meade grassed all of his birds and took the entire pot. The other scores were: J. H. Hagerty 23, Sam Hill 22, Dr. Pitts 22, Fred. Frischer 20. UNSER FRITZ.

BROOKLYN.

July 23.—The Diana Sportsmen's Club, of Brooklyn, met to-day at Bay View Park, Bay Ridge, for their regular monthly shoot. Owing to some split in the club but few members were present, Vice-President Hartmann wishing to have the shoot at Dexter Park. C. Koch won in first class for clay-pigeons and M. Koch won in first class for glass balls. In second class F. Goboulet won. First class, 5 glass balls: J. Koch 4, C. Koch 3 and M. Koch 5. Second class: F. Goboulet 4, P. Steen 3 and C. Bourne 4. Sweepstake shoot at 9 clay-pigeons—First class: J. Koch 7, C. Koch 8, and M. Koch 7. Second class: F. Goboulet 7, P. Steen 6 and C. Bourne 6. Scorer and referee, J. Koch.

The regular monthly bluerock shoot of the Kings County Gun Club was held at Dexter Park to-day. The medal was won by T. Short, who broke 13 out of a possible 20. Second prize was won by J. Link with 11. In the sweepstake match, which followed the regular shoot, a bird killed with the second barrel counted a half bird. The first money went to Gremer, who killed 8½; second was divided between Thort, Zirkel and Linstedt. The scores are as follows: Regular shoot at 20 bluerocks each: Zirkel 9, Gremer 3, Thiel 7, Short 13, Roehn 3, Linstedt 10, Boegel 4, Neuman 4, Keller 3 and Link 11. Sweepstake shoot at 10 live birds, second barrel to count half a bird: Zirkel 8, Gremer 8½, Thiel 6, Short 8, Roehn 5½, Linstedt 8, Boegel 7, Neuman 7, Keller 6½, Link 7.

July 24.—The regular monthly shoot of the Hillside Gun Club took place on the Dexter Park shooting grounds this afternoon. The prize was a handsome gold medal given by Mr. Miller, the club medal having been captured by H. Knebel, Jr., who had won it three times, the badge thus becoming his property. J. Link was again successful, breaking 10 out of 20 standard bluerocks at 20yds. rise and winning the new medal for the second time; second prize went to Freeson, 17. The other scores were: Dethloff 15, Burger 11, Cunningham 12, Rauch 14, Bork 13, Hyer 14, Bach 15. A number of sweepstakes at 5 bluerocks each followed the regular event.

July 25.—The Crescent Gun Club held their regular monthly shoot at Dexter Park to-day. The rain prevented a large number from putting in an appearance at the ground, only five members being present. The medal was won by J. Gilman, who killed 6 out of a possible 7. For second prize J. Hopkins and H. Hillman were tied, and in the shoot-off at 3 birds Hopkins killed 3 straight and won. The scores were: J. Gilman 6, H. Hillman 5, J. Hopkins 5, C. Whalen 4, Dickinson 3.

BROOKLYN ACME GUN CLUB.—Regular monthly shoot at Dexter Park, Long Island, two gold medals, 20 bluerocks, 16yds.:

Short first medal, Link second on shoot-off.

HAVERSTRAW, N. Y., July 22.—The match between the two expert pigeon shots, W. L. Davenport of the Fountain Gun Club of Brooklyn, and Theodore Peck of the Rockland Gun Club of Haverstraw, was decided to-day in the presence of a large crowd of lovers of the sport. The Brooklyn men went to Haverstraw with their pockets full of money, and they found no difficulty in placing it. It is said that they are still collecting their winnings, as Davenport had no difficulty in outshooting his opponent. The match was under Monaco rules, 50yds. boundary. Davenport used a 12-bore gun and shot at 28yds.; Peck using a 10-bore and shooting at 30yds. Davenport was in magnificent form, and after missing only 4 birds in his first 25, he killed 63 in succession, and won the match by 13 birds. Peck killed 71 and missed 17. The match was a return one, Davenport having won the previous contest by 5 birds.

IRVINGTON, N. Y., July 26.—Match at bluerocks, American Association rules. Match for $10 a side, loser to pay for bluerocks, 10 singles and 5 pair:

Menzies	1010001100	01 10 00 10 11	9

WALNUT HILL, July 23.—The pleasant weather of to-day undoubtedly would have attracted more of the members of the Massachusetts Rifle Association to the range had it not been for the fact that so many are now away upon their vacations. However, a fair number was on hand to enter the various events, and the shooting was of creditable order. In the main event of the meeting, the diamond pin match, Mr. White won top place. He will hold the champion badge until the next meeting. Diamond pin match, 20 single Keystone targets, squad firing system, and 5 pairs standard targets:

White	11100101111111111110	16	10 11 11 11 11—9—25

THE PETERS CARTRIDGE CO. have issued this circular to the trade: We desire by this circular letter to express our hearty thanks for the scores of messages of sympathy and encouragement, and for the liberal offers of aid received from the trade throughout the country, since the calamity which visited our works July 15. These have been so numerous and our hands have been so full of other matters that individual acknowledgments have been impossible. You have doubtless read many of the terrible details in the daily papers, hence we need not recount them here further than to say that our entire paper shell manufacturing and loading plants and warehouses were destroyed, nothing of value being left. Deeply as we regret the fearful loss of life and property, which came through no fault or neglect of ours, we are by no means discouraged. Indeed, with all these words of cheer and assurance of support before us, we cannot be otherwise than try again. We have, therefore, already made arrangements for rebuilding on a much more extensive scale than before. Fortunately we had placed contracts some two or three months ago for new shell-loading machinery, with a view to doubling our production. By hard work we expect to have this machinery and turning out Peters cartridges within thirty days. We are able to control a good lot of "Prize" shells, which we will load and supply to the trade as long as they last. Our shell-making machinery is expected to be in operation in six or eight weeks, as it is being constructed under our supervision in probably a dozen different machine shops. Of course we cannot at present quote prices or accept orders for either empty or loaded shells, but will advise you when we are ready to do so. We thank you for your kindness in the past, and trust that within a few weeks we may again have your orders. Yours, very truly, THE PETERS CARTRIDGE CO.

LAFAYETTE, Ind., July 21.—Fred Erb, who has been twice defeated by Geo. C. Beck, of Indianapolis, in contest for the American Cup, this afternoon easily defeated Beck in a 50-bird shoot for $100 a side. Dr. J. M. Smith was referee and Capt. Behrn and T. J. Harvey were judges. Erb used a new Parker gun. The birds were very game. The day was bright and a large crowd was present.

BOSTON, July 24.—The Jamaica Plain Gun Club held its weekly shoot at Clarendon Hills this afternoon. Many members of the club were present. Some thirty sweeps were shot. The prizes won in the Merchandise match were awarded yesterday. The match was opened the 1st of May last, and the conditions were the best six average scores out of ten. Appended are the names of the winners, their scores out of a possible 120 birds and what each selected as a prize: Barrett, total 110, $10 in gold; Bennett, total 99, $5 in gold; Bradbury, total 98, gold badge; Woodruff, total 96, guncase; Charles, total 95, album; Cilley, total 88, 500 loaded shells; Herbert, total 80, walking cane; Needham, total 73, large sportiug picture. The Rounds silver cup was also won by Barrett, and he is now sole owner of it. The cup was presented by A. W. Rounds, a member of the club.

PENCOYD, Pa., July 29.—The Penncoyd Gun Club held their annual meeting on July 26, and the following officers were elected to serve for one year: Geo. Rich, Prest.; Elman Vandersloot, Vice-Prest.; Joseph Taggart, Captain; Richard Morgan, Sec.-Treas.; Joseph Lindsay, Referee; Joseph Campbell, Director; Odnell Ravenjahn and Albert Stubbs, Judges.

SYRACUSE, N. Y.—The opening of the new grounds and club house of the ever-young Onondaga County Club will be marked by a three-days' shoot, Aug. 6-8. The elegant new club house and grounds located at Maple Bay, on Onondaga Lake, seven miles from the city of Syracuse, are reached by steamboat on the lake or by the Delaware, Lackawana and Western Railroad.

TORONTO.—The McDowall tourney, with $1,100 up in guarantees, opens at Stark Athletic grounds on Aug. 13, and closes on the 16th, giving four days of lively shooting. It is the first attempt to get up a big shoot and promises to be a complete success.

BEEVILLE, Texas, July 21.—The first annual tournament of the Beeville Gun Club will be held Sept. 3 and 4 next, and all clubs of southwest Texas are invited to participate. Full programmes and information can be had by addressing T. J. Skaggs, Sec'y, Beeville, Texas.

CLASS VS. BREWER.—Frank Class, of Pine Brook, N. J., has agreed to meet Brewer in the $1,000 match at live birds. Full details have not yet been agreed upon.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

FIXTURES.

30. Monatiquot, Sail-off Cham., Weymouth.

YACHT RACING IN JAPAN.

THE Yokohama Sailing Club, composed of British and American residents of Yokohama, Japan, is an active and energetic little organization that is doing good work for the advancement of yacht racing under somewhat disadvantageous surroundings. The club numbers 88 members with a fleet of 18 yachts and boats, but this small fleet is made up of so many sizes and types that it has proved a difficult matter to class them properly and to keep up a constant interest in the racing. At the same time the club is fortunate in the possession of a committee that, from its reports, is evidently of more than average ability, and that has undertaken the work of classifying and building up the fleet in a thorough and systematic manner. The report of the last season's work shows a total of 13 matches sailed between May 11 and October 12, in which 58 prizes were given. The average number of entries in each race was 12, and of starters 10. The fleet is made up of the following boats: Maid Marion, designed by Mr. Burgess, a compromise, 31ft. l.w.l., 11ft. beam; Molly Bawn, 22ft. l.w.l., 6ft. 6in. beam, designed by an amateur, a shoal bodied boat with a deep lead fin; Lady Louise, 25ft. l.w.l., 4ft. 9in. beam, a cutter from the Clyde, well cut away and of rather light displacement; Princess Maude, 22ft. l.w.l., 4ft. beam, a cutter; Exchange, 28ft. l.w.l., a ship's boat fitted up with a wooden keel and shifting ballast; Daimyo, 25ft. l.w.l., 7ft. 6in. beam, a cutter of amateur design. The canoes are 16 x 32, small yachts in model, with 300lbs. of lead on keel, and more than a match for La Belle in light weather, she being a catboat 15ft. long and 6ft. beam. Maid Marion is too large and too good for the rest of her class and, as a matter of course, won practically all the races. The report says:

"In the A Class the Maid Marion had everything her own way, being altogether too fast for the others in her class, and rating too high to allow of her being fairly placed in competition with any of the boats in the other classes. The Aborigine, which was so successful until the appearance of the Maid Marion, made several starts against her, but finding it useless eventually dropped out of the racing. Toward the end of the season an accession was made to this class by the arrival of the Avon (formerly known here as the Tantivy) from Kobe. She started in several races, but not being in racing trim, and with old sails, she was not in it. Perhaps, as she has the advantage of several feet in length over the Maid Marion, when she has a thorough overhaul and a new suit of canvas she may yet be an interested party when prizes are distributed."

The wind in the 13 races is given as once fresh, once strong, and twice moderate, the other days being light. The report gives the following interesting comparison of speeds:

"The total distance sailed was about 152 knots by the chart, and the average speed made by the Record Prize winners in each class, over the distances given, was as follows:

Class.	Knots.	Speed per hour in knots.
A. Maid Marion	142	3.75
B. Molly Bawn	152	3.13
B. La Belle	44	2.18
D. Exchange	76	3.32

"Owing to the courses sailed not being the same in each case the above figures are of but little value for purposes of comparison, but those who take an interest in such matters may like to know that the above represent for the Maid Marion 54 per cent., Molly Bawn 53 per cent., La Belle 43 per cent. and Exchange 52 per cent. of the theoretical highest speeds usually attributed to boats of their respective lengths, and when the average amount of wind experienced during the season's racing is taken into account, perhaps the speed attained may be considered not altogether unsatisfactory."

Up to the end of last season the club had a classification by waterline length, with a length and sail area rule, the formula, devised by Prof. West, of Tokio University, being $\sqrt[3]{L+S}\,A$ the sail area being measured by the Y. R. A. rule. The working of this system was not satisfactory, and last year we had some correspondence with members of the club over the difficulties they had met and the advisability of a heavier tax on sail, or of a change of classification, which latter course we recommended. On this subject the report continues:

"Owing to the above and other important reasons, which were fully discussed at an extraordinary general meeting which was held on Oct. 28, it was decided to alter the classification of the boats from a classification by waterline length alone to one by length and sail area rating, and in place of the classes A, B, C and D, we now have 39, 32, 26, 21 and 17-raters. At the same time it was settled to adopt the method of measuring the sail area which is in use in England.

"It is to be hoped this change will lead to the building of new racers, and to renewed interest among the old boats. With the classes as now constituted the proverbial 'expense of yachting' will hardly be sufficient to deter any one wishing to take part in this exhilarating pastime. Already signs may be seen of sharp and exciting competition during the coming season among the 26 and 17-raters, and we have reason to believe that a wholesome little boat, which would have a good chance in the latter class, may actually be built and fitted out for about $50. It has always been the policy of the club to keep in view the object for which it was formed, viz., 'the promotion of sailing and sailing races only,' and this opportunity may serve to point out that while great attention is no doubt secured by a large craft capable of leading the fleet, still tastes differ as to the most desirable size of boat, and those who do not care for or are not able to afford the larger craft, but still seek the excitement of a tussle with the elements and the keen competition and friendly rivalry of racing, may find it in the smallest craft, and receive equal recognition and encouragement from this club. In dividing the club's general fund of prize money it has been the practice of your committee to apportion it as nearly as possible in proportion to the number of entries and competitors in each class. This seems the fairest method, as by so doing the class having the greatest number of entries and the keenest competition will receive the largest share of prize money, no matter what the size of the boats may be, and your committee wish to call the attention of each owner, whether of small or large craft, to the desirability of securing all possible entries in his class, as the importance of the class, and to a very great extent the amount of interest taken in the sport of yachting is decided by the number of entries and the keenness and closeness of competition aside from the size of the craft."

The ridiculously low price of labor makes the cost of native-built boats very low, and such a craft as the Mersey centerboard boat Zinnia, described in Kemp's "Yacht and Boat Sailing," can be built for $75 Mexican. This boat is 18ft. over all, 17ft. 9in. l.w.l., 6ft. beam, and but 1ft. draft without board, carrying some 200ft. in a lug mainsail and a jib. These boats will come in the 17 rating class, and some six or eight were expected to be ready for this season. This fleet will make good racing and should be of immense benefit to the club in encouraging a general interest that will increase its membership and lead in time to more of the larger craft.

As we have pointed out before, the merits of a corrected length classification cannot be determined by a single season's racing and two or three new boats; but for a thorough test several seasons of racing, and a fleet that shall include a fair number of yachts in one or more classes built especially for the rule are necessary. At the same time, the experiment of the Yokohama Sailing Club in the use of this system of classification as the foundation on which to build up its fleet, is a most interesting one, and if the report for the present season is as thorough and sensible as the one from which we have quoted above, it should throw some valuable light on the subject.

NEW YORK Y. C. CRUISE.

ON Wednesday morning the flagship Electra, with Com. Gerry and his staff on board, left the anchorage at Twenty-sixth street, New York, for New London, where the fleet was in waiting. The programme for the cruise, which was to be made up at a meeting of captains on board the flagship on Wednesday night, will probably include a race to Newport on Thursday, where the Goelet cup will be sailed for on the following day, and after this the regular runs to Martha's Vineyard and New Bedford, returning to Newport, where the fleet will disband. Vessels desiring to do so may enter for the races on each run, the rest of the fleet making the passages at their will. The following general regulations will govern the cruise:

Directions for the following "runs," should they be made, are: From New London to Newport, 40 nautical miles; start off Sarah's Ledge and finish off the Dumplings.

From Newport to Vineyard Haven, 37 nautical miles; start off Brenton's Reef Lightship and finish at Red Buoy No. 2, off West Chop, Vineyard Sound Lightship to be left on the port hand.

From Vineyard Haven to New Bedford, 34 nautical miles; start off Bluffs, in front of the Sea View House, and finish off Clark's Point Light, leaving Sow and Pigs Reef Buoy on the starboard hand.

From New Bedford to Newport, 27 nautical miles; start off Clark's Point Light and finish at Brenton's Reef Lightship, leaving Hen and Chickens Lightship on the starboard hand.

For other runs that may be made sailing directions will be given.

The start and finish will be made over imaginary lines drawn from the Electra to the points or objects mentioned.

Special prizes will be offered during the cruise, the dates of which will be announced by the Commodore, as stated in General Order No. 2.

Rear-Commodore Iselin has offered a $250 cup, date and conditions to be given at the rendezvous.

The Gamecock colors will be for four-oared gigs pulling sweeps.

The Owl colors for cutters pulling two sweeps or two pairs of sculls.

For other boat races entries $2 an oar, made by yacht owners, and boats will be classified according to the number of oars they pull.

Coxwains must be carried in all boats but dinghies.

There will be a race for steam and naphtha launches, details to be announced at New London.

For winning boats, the committee will add $5 for each man carried; for launches, $20 to winners, with $10 for second, if four or more start.

The date of these events will be determined during the cruise.

For the runs from port to port the committee will submit the following proposition: The Electra will establish start and finish lines for each run, and give the corrected time of all yachts crossing with their private signals at the peak and their racing numbers displayed.

A prize will be given in each class where two or more start; with a second prize if four or more start.

In cruising trim will mean anchors on the bow and cables stowed; cruising complement of boat carried, and cruising deck, cabin and galley fittings in place; topsails extending above the truck or beyond the end of gaff are barred

Water can be taken into the tanks until the preparatory signal is made.

With these exceptions racing rules are to govern.

These conditions are subject to alteration in any class, or others imposed, on a request of a majority of its contestants on any run.

Vessels that do not wish to be timed will not cross the line, nor carry their private signals at the peak, nor display their racing numbers. They will be at liberty to get under way and proceed to the squadron's destination with the gun announcing the harbor start.

There is little likelihood that the fleet will go round the Cape, though Eastern yachtsmen have been desirous that it should visit Marblehead. The number of yachts will probably be as great as last season, but the prospects are rather poor for the racing. Neither Grayling nor Titania will race, and as Shamrock is likely to be absent, it reduces the 70ft. class to Katrina and Gracie. Volunteer will have a sail over, in all probability, for the Goelet cup. In the schooner class will be Sea Fox, Merlin, Mayflower, Marguerite, Œnone and Quickstep, which lot should give some very good racing. The forties will, as usual, be a leading attraction, and the races between Minerva and Gossoon are likely to be the most interesting of the cruise. After the fleet disbands some special races for the 40 and 30ft. classes will be sailed off Newport, including the Corinthian sweepstakes.

THE MARBLEHEAD RACES.—The clubs about Marblehead are arranging for some excellent racing in the smaller classes immediately after the New York Y. C. cruise, and some of the best racing of the year is likely to be seen there. The Beverly Y. C. will hold an open race off Marblehead, on Aug. 16, if possible, with prizes for the 40, 30 and 21ft. boats. The 40ft. prize will be a $150 cup, given on condition that Minerva shall be one of the starters. A $100 cup is offered in the 30ft. class, and two of $50 each, for keels and centerboards, in the 21ft. class. The course for thirties and forties will be 10 miles to windward and return; for the other 5 miles. This race and others to take place soon after are likely to attract most of the New York forties to prolong their cruise around Cape Cod, and Kathleen and Tom Boy are also expected at Marblehead.

BEVERLY Y. C.

162D REGATTA, 2D BUZZARD'S BAY CHAMPIONSHIP, MONUMENT BEACH, JULY 26.

THE race was one of the hardest and best that the club has ever sailed; all day Friday it blew a close-reef sou'wester, and Saturday it was piping from S.S.W., increasing during the morning. First and second classes were sent to Scraggy Neck, Bond Island, and return. In first class Mattie had a walkover, starting with three reefs. In second class Gymnote and Lestris carried three reefs, Widgeon and Anonyma four reefs. The start was a beauty, all crossing line together within 10 seconds of the gun, Anonyma to windward.

Just before the start the wind lightened a little, and boats with four reefs had not enough sail. Mist took first place, then Anonyma and Widgeon close together, followed by Gymnote and Lestris, the latter sailing very well.

Under Wing's Neck, Anonyma shook out one reef and at once began to leave Widgeon, who was close to her, and pick up on Mist. At Pines Buoy Gymnote almost caught Widgeon, who then shook out a reef and left her, while Lestris was coming up fast

About this time Mist shook out a reef and Anonyma caught her and forced her round, but Mist got a trifle ahead on the next tack. By this time boats were off the Neck and for the rest of the windward work had very rough water, a pouring rain and all the wind they could stand. Here Widgeon did very well, picking up on the leaders considerably and doing excellent work, though under very disadvantageous circumstances.

Mattie rounded windward buoy first, then Mist and Anonyma close together, then Widgeon some 3 min. astern, but much nearer than she had been; Lestris and Gymnote some way astern.

In the meantime the third class had started all together over the short course, twice around Pines Buoy and back. Parole carried three reefs while the others had come out with every reef turned in, but Cayuse and Puzzle shook out one just before start. Eina kept hers in and it lost her any chance of a place. At the end of first round they had shaken out a reef all round, Cayuse led by 30sec., then Puzzle, then Parole with the same intervals between them, Eina far astern. On second round Parole sailed very fast, as wind breezed up, and passed Cayuse; Puzzle held further out into the bay and took first place. On the run home it blew very hard indeed, giving them all they could swing to. They finished: Puzzle, Parole, Cayuse, Eina.

In fourth class Rip started with four reefs, Kitten with two reefs in her small sail. It was Rip's race from the start in any event, though Kitten would have gained by shaking out reefs earlier than she did.

In the meantime the large boats were getting it hot in the run to Bird Island. They jibed round buoy, Mattie first, then Mist and Anonyma almost together, then Widgeon, who had held her own, Lestris and Gymnote far astern.

The run home was made in a pelting rain and the hardest blow the club has had for years, the water being feather white, and strain on tillers so great it took two or three men to steer the boats.

Mattie, of course, increased her lead, Widgeon shook out her third reef all but the pennant and hoisted up the throat, gaining a good deal on Mist and Anonyma; had latter done the same she would have got the prize, as it was she passed Mist a mile short of the finish, taking pennant and losing prize by half a second only.

Just as Widgeon, a minute and a quarter astern of Mist, reached line a very severe squall struck in, the wind blowing a full gale and the rain being blinding; sails were doused all round and boats had a lively time catching their moorings, Mist being blown ashore. The judge's boat was jumping half her length out of water, and it was more than an hour before she could run into the beach under six reefs. Gymnote gave up the race. Lestris crossed line during squall, way astern, but was not made out by judges till after she had crossed. Summary as follows:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Mattie, Howard Stockton	28.10	1 58 05	1 50 00
SECOND CLASS.			
Anonyma, F. L. Dabney	26.10	1 54 50	1 44 20
Mist, G. H. Lyman, Jr.	26.08	1 55 00	1 44 19½
Widgeon, M. Williams, Jr.	26.10	1 56 18	1 45 48
Lestris, J. Crane, Jr.	24.02	Not timed.	
Gymnote, W. E. C. Eustis	26.10	Withdrawn.	
THIRD CLASS.			
Puzzle, Wm. Amory, 2d	22.09	1 13 45	1 06 29
Parole, W. H. Davis	22.08	1 14 15	1 06 56
Cayuse, F. W. Sargent	22.09	1 15 30	1 08 14
Eina, John Parkinson	22.10	1 17 18	1 10 05
FOURTH CLASS.			
Rip, C. B. Jefferson	19.01	41 07	36 13
Kitten, Geo. H. Richards, et als	20.00	42 35	38 01

Winner first prize: Class 1, Mattie; Class 2, Mist; Class 3, Puzzle; Class 4, Rip. Winner second prize: Class 2, Anonyma; Class 3, Parole. First Class champion pennant won and held by Mattie. Third Class champion pennant won and held by Puzzle. Second Class champion pennant won by Anonyma, tieing Mist. Third Class champion pennant won by Rip, tieing Edith. Judge, T. S. Edmunds.

Owing to the fact that the Goelet Cup race will take place Aug. 1 or 2, and at the request of several yacht owners, the second championship race at Marblehead will be postponed to Aug. 16. The club will offer cups for an outside race about Aug. 22—exact date not yet decided on. Race to be open to the 30-foot, 21-foot, and probably to the 40-foot classes of any recognized yacht club. Courses to be to windward or leeward and back from Marblehead Rock, ten miles and return for larger classes, five miles for 21-foot class.

THE AMERICAN CANOE ASSOCIATION MEET.

THE annual meet of the American Canoe Association has become one of the important events of the aquatic world, ranking second only to such great yachting features as the New York Yacht Club cruise and the Goelet Cup race. Attended by men from every section of the country; with races which bring out the crack sailors of the United States and Canada, and in boats no whit inferior in excellence of model and equipment to the finest yachts; free from any taint of professionalism; and with its many unique features of camp life, camp fires, amateur circus or impromptu ball; the meet exceeds by far in variety and attractiveness the rowing regattas and similar events of sister sports. The ten meets thus far held have been in localities in a measure isolated, and the races have been witnessed mainly by the canoeists themselves. This year, however, the meet for the first time has come to the coast, and to the very heart of the yachting world. No place on the coast is better known or more popular than the east end of Long Island, and the A. C. A. burgee will be hoisted in the center of its broad waters, on the peninsula between Gardiner's and Peconic Bays. During the races, which will be held on August 18 to 21, and on other special occasions during the two weeks, the camp will be open to visitors; and among these none will be more welcome than yachtsmen. Those who wish to see what canoeing and canoe racing really is will find a hearty welcome from their brother skippers of the diminutive craft; and though the races can be seen from start to finish without a glass, and the spinaker of a 40-footer would be big enough to gather up the whole fleet in, the racing is as keen, and the display of seamanship as good as in the largest class of yachts.

CORINTHIAN Y. C. MIDSUMMER SERIES.—The Corinthian Y. C., of Marblehead, has issued its circulars for the midsummer series for 40 and 30-footers. The dates have been changed to Aug. 18, 19 and 20, to suit the dates of the New York Y. C. cruise. The cup for the 40-footers is of the value of $300, and that for 30-footers $125, two wins being necessary to take the cup. Starts will be made at 10 o'clock. The courses are as follows: The line for start and finish will be between Marblehead Rock and judges' steamer. Course 1—From starting line, 8 miles S.E. three-fourths S., leaving sailboat flying the Corinthian Y. C. flag on starboard, then 8 miles W. one-half S., leaving the Whistling Buoy off the Graves on starboard, thence 8 miles N.N.E. to the finish line; 24 nautical miles. Course 2—The reverse of course 1. Course 3—10 miles to windward (or leeward), leaving sailboat flying the Corinthian Y. C. flag on starboard, and return; 20 nautical miles. Yachts on any course must not pass to the westward of Tom Moore's Rocks, Tinker's Island, Can Buoy on the outer breaker off Pig Rocks, or the buoy on the southeast breakers off the Gooseberry Islands. The judges are: Daniel Appleton, Chairman; W. S. Eaton, Jr., F. L. Rhodes. The regatta committee is composed of William P. Fowle, Chairman; George W. Mansfield, Secretary; W. A. Harvey, John H. Paine and A. G. Van Nostrand. The club tournament for the 25ft. and 21ft. classes will be sailed Aug. 9, 11 and 12. The prizes are as follows: Corinthian Y. C. cup for 25ft. class; value $100. Corinthian Y. C. cup for 21ft. catboat class; value $75. Corinthian Y. C. cup for 21ft. keel class, value $100. Offered by a member of the club. Second prizes of $10 will be awarded in each race to yachts winning second place. The tournament will consist of two races and a sailoff. A yacht winning twice shall own the cup offered for her class. Starts in the tournament will be made at 2:30 o'clock, and the regular club courses will be sailed.

SIPPICAN Y. C., TENTH OPEN REGATTA, JULY 19.—Courses: First Class, from judges' yacht around S. E. Ledge Black Buoy, around Nye's Ledge Buoy and back to judges' yacht. Third Class, from judges' yacht around S. E. Ledge Buoy, around Bow Bells Buoy and back to judges' yacht. Fourth Class, from judges' yacht around stakeboat off Plantin Island, around Sear Rock Buoy and back to judges' yacht; repeat course once. Weather squally. Wind light N.W., with squalls from N. to N.E. Tide low.

CLASS I.—COURSE 15 MILES.

	Length.	Elapsed.	Corrected.
Climax, E. C. Stetson	26.02½	2 18 00	2 02 04
Anonyma, F. Dabney	25.08	2 58 31	2 41 44
Mist, G. H. Lyman, jr.	23.00½	2 44 01	2 22 46

CLASS III.—COURSE 9 MILES.

Parole, W. H. Davis	19.05	1 36 19	1 19 06

Wide Awake, J. C. Pegram, jr.	14.09½	1 35 05	1 15 45
Island Belle, C. A. Clark	17.02	1 32 00	1 15 59
May, G. Van Rensselaer	16.03	1 44 50	1 27 37

CLASS V.—COURSE 4½ MILES.

Worry, H. W. Bellows	13.09½	0 48 38½	0 36 16½
Fairy, — Caulfield	11.11	0 55 04	0 40 04
McGinty, J. H. Clark	13.08	Did not finish.	

(Course for Class V., from judges' yacht around stakeboat E.S.E. from judges' yacht, around Black Buoy No. 5, back to judges' yacht; repeat the course twice.)

Winners: Class I., Climax first, Mist second; Class III., Parole first, Etta second; Class IV., Wide Awake first, Island Belle second; Class V., Worry first, Fairy second. Mist was the only starter in the second class, and at her request was allowed to sail in the first. Puzzle did not race, but went over the course with the third class. Her time was 1.53.50. After the race Puzzle was struck by a squall and capsized. She was towed ashore and righted. Regatta Committee—J. Gorham Palfrey, chairman; W. H. Davis, J. C. Pegram, jr. Judges—Com. R. S. Ryder, Dr. J. S. Whiting, J. E. DeKay.

Some details in the account of the above race published last week were incorrect, the above official report not having been received.

HULL Y. C.—Eighty-fourth Cash Prize Regatta, July 26. Regular club course. No. 1, for second class, 15 miles; No. 7, for third class, 9 miles; No. 12, fifth and sixth classes, 6 miles. Weather rainy and wind southwest, squally and very strong, keeping away many entries; tide flood:

SECOND CLASS.

Yachts 25ft. and under 30ft. water line.

	Length.	Elapsed.	Corrected.
Harbinger, J. R. Harper	28.01	2 56 10	2 12 44
Erin, J. Cavanagh	Not meas.	3 15 35	

THIRD CLASS.

C. B. yachts under 25ft. water line and over 21ft. sailing length.

Moondyne, W. H. Shaw	24.08	1 39 10	1 09 59
Secret, E. F. Linton	Not officially measured.		
Posy, R. G. Hunt	22.02		

THIRD CLASS KEELS.

Echo, Burwell & Johnson	24.06	1 37 06	1 07 44
Swordfish, H. L. Johnson	Not officially measured.		

FIFTH CLASS C. B.

C. B. yachts 19 and under 21ft. sailing length.

Madge, W. D. Lovell	19.11	1 09 06	0 44 55
Tartar, J. F. Brown	19.11	1 13 40	0 50 33

FIFTH CLASS KEELS.

All keels under 21ft. sailing length.

Composite, J. McIntyre	16.00	1 20 42	0 53 33
Vaga, H. W. Friend	18.05	1 19 59	0 55 27

SIXTH CLASS.

All C. B. under 19ft. sailing length.

Cricket, E. B. Lambert	16.08	1 25 19	0 58 57

Winners first prize, class two, Harbinger; class three, c. b. Moondyne; class three, keel, Echo; class five, c. b. Madge, keel Composite. No second prize awarded, winners not defeating a competitor. No starters in first and fourth classes. Secret and Posy started at second class gun and were ruled out. The race between Vaga and Composite was very close and interesting, first one and then the other being ahead. Swordfish carried away her mast off Pig Rocks Beacon. Regatta committee, E. L. Burwell, W. A. Cary, C. S. Waldo, C. S. Whitten, J. J. Henry. Judges, J. J. Souther, W. A. Cary, J. A. Stetson, J. B. Eorsyth.

CORINTHIAN Y. C.—On July 26 first championship regatta of the Corinthian Y. C. was sailed off Marblehead, the weather being foggy and with fluky winds and a rain squall. The times were:

FOURTH CLASS.

	Length.	Elapsed.	Corrected.
Hornet, J. B. Paine, jr.	25.04	1 35 25	1 28 05
Lassie, W. A. Eaton, jr.	24.08	1 36 52	1 28 21
Kraken, Percy Thase	25.06	1 36 56	1 29 33
Nixie, C. L. Cochrane	Not measured.		

FIFTH CLASS.

Sapphire, C. S. Street ..... Walkover.

SPECIAL CLASS—CRUISERS.

	Handicap.		
Atalanta	5 00	2 54 57	2 49 56
Wave Crest	7 00	2 58 07	2 51 07
Gretchen	10 00	3 05 33	2 55 33
Clytie	Walkover.		

The 40-footers Ventura and Tomahawk started to sail a match race. On the beat to windward to Pig Rock Ventura sailed fastest and spun out a good lead. Both boats withdrew when the fog shut in.

MERLE AND CITY OF THE STRAITS.—Cleveland has been selected as neutral water for a race between the yachts Merle, of Toronto, and the City of the Straits, of Detroit, each the crack craft of the kind of the side it represents. The contest will be on Aug. 4, 5 and 6, the winner to be the one taking the best two out of three. The distance will be 10 miles to windward and return. The Canadian boat wants a six hours' limit, while the other will be satisfied with four hours. There will be a purse of $500 put up by Cleveland parties and $400 by the visitors. A week's racing will be the result. Mayor Gardner will be the referee, and Capt. Joe Nicholson, of Detroit, will be the judge for the City of the Straits. The Captain has written to Mayor Gardner saying if this race comes off satisfactorily, at a later date he will be able to arrange a schooner race between the Idler, of Toronto, and the Idler, of Chicago, to come off here.—*Cleveland Plain Dealer.*

OHIO Y. C.—The club book of the Ohio Y. C., lately received, is a neat canvas bound volume. The club, whose station is at Toledo, and whose cruising ground is on Lake Erie, now numbers 132 members and 20 yachts. The racing rule is a peculiar one, the "gross measurement" as it is called, is found by adding the waterline, beam and the depth from ceiling to under side of deck at foremast; the allowance being 2sec. per foot, per mile. As the yachts are all shoal draft centreboard sloops, this measurement answers fairly well, but it would be hard on any of the modern keel or even compromise craft, and a change will be necessary if such boats are to be added to the fleet. There is a fine field for yachting on Lake Erie, and the Ohio Y. C. is doing much to advance the sport on the western end of the Lake.

A LONG CLUISE IN A STEAM LAUNCH.—The small steam launch Vida, owned by Mr. F. B. Clarke, Knickerbocker Y. C., lately left New York for a cruise by river, lake and canal, going up the Hudson, by canal to Oswego, thence along the lake and down the St. Lawrence, returning by Lake Champlain and the Hudson River. The yacht, which was built by C. L. Seabury & Co., of Nyack, N. Y., is 35ft. long and 7ft. beam, with a single direct acting engine. She is very comfortably fitted up for such a cruise. The party includes Mr. Clarke and his son, Mr. Edwin C. Hill and Mr. George Brandreth. Mr. Hill will act as engineer and Mr. Clarke will be in command.

THE OCEAN RACE OF NAPHTHA LAUNCHES.—On July 22 the two 25ft. naphtha launches started from Staten Island at 11:20 A.M. The same evening they ran into Fire Island Inlet, where they were detained by bad weather for several days. On July 28, at 10 A.M., the two passed Quogue, being very close together.

NEW YACHTS.—The Herreshoff Manufacturing Co., of Bristol, R. I., has just closed a contract for a steam yacht for Mr. Wm. R. Hearst. The contract calls for a speed of 25 miles per hour, the builders to be paid for every fraction of a mile by which this speed is exceeded.

TAPPAN ZEE S. AND I. Y. C.—The Tappan Zee Sail and Ice Y. C.'s annual open regatta will be sailed on Aug. 9 under the rules of the New York Y. R. A. The steamer Wave will be at the Columbia Y. C. house, North River, at daylight the day of the races to tow the racers up to Grand View, where the regatta will be held.

PLYMOUTH Y. C.—The Plymouth Y. C., of Plymouth, Mass., an organization which includes a number of canoes and small craft, will make a cruise of two weeks, starting from Provincetown on August 23. The fleet will be made up of canoes and small cruisers.

NEW STEAM YACHTS.—In addition to the large yacht mentioned last week, Mr. J. Beavor-Webb has on order for a duplicate of Sultana. The latter yacht has been at anchor off Bay Ridge for the past two weeks, and will take part in the New York Y. C. cruise.

GOLDEN FLEECE, steam yacht, lately chartered by Mr. Osborne, has made a voyage around the world, being owned at the time by Mr. Paul A. Ralli, present owner of Yarana.

OHIO Y. C.—This active club has lately taken in 24 members. The club is pushing the scheme for new quarters at Presque Isle, and the result will be a handsome and commodious club house.

JESSICA.—Mr. McDonough's 20-rater sailed from Fairlie, Scotland, on July 3, and is now due at New York. Mr. Fife was to sail for New York last week.

YONKERS CORINTHIAN Y. C.—We have received a neat little book containing the constitution and by-laws of this flourishing club.

AMERICAN Y. C.—The regatta of steam yachts set for July 26 has been postponed to some date not yet decided on.

YORKVILLE Y. C.—This club will sail its fall regatta off Oak Point on Sept. 1.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

AUGUST.

1-2. New York, Trial Races, S.I. Bay.
2. South Boston, Open.
2. Lake St. Louis, Annual, Lachine.
8-22. A.C.A. Meet, Jessup's Neck
23. South Boston, Open.
23. Plymouth, Cruise, Cape Cod
30. Orange, Annual.
30, 31, Sept. 1, South Boston, Harbor Meet.

SEPTEMBER.

1. Ianthe, Annual.
1. Arlington, Ann., Arlington.
20. New Jersey Athletic, Bergen Point, Fall.

A BIT OF AUSTRALIAN CANOEING.

Editor Forest and Stream:

Having just returned from Australia, where I spent the last eighteen months most enjoyably, I take the liberty of writing this letter, thinking that a short sketch of sport, even if it is foreign to our shores, would interest the readers of the FOREST AND STREAM:

The great island of Australia, situated south of the equator, has the seasons reversed, of course, so during the coldest of New England's weather, when the eaves of the houses were decorated with icicles and the wind penetrated the thickest overcoat, I launched a canvas canoe—of my own manufacture (from necessity)—upon the waters of the Murray River and, hoisting my little American flag to the hottest breeze that ever fanned my cheek, started upon a two-months' cruise.

To follow me through all the delightful, painful, curious and annoying experiences that trip produced would be too much of a task to ask of any one, and by the time I have told you of the insects you will have your shirts half off; so, not wishing to make you appear too ridiculous, the lizard, the centipede and the prolific spider families will be omitted. January 10 saw me fairly at it; the town of Morgan, South Australia, had faded from view and before me was a stretch of river, unbroken by a bend, something like two miles. The sun came down closer to the earth than I ever knew him to do before, and the little tyrant—known as a thermometer—nestled close up to 115 deg. in the shade, while the perspiration dropped off my nose with a painful regularity that can be more comfortably imagined than experienced.

To say that two miles was twenty would be geographically incorrect, but by physical computation it would be equally inadequate, and I must confess, though I paddled it myself, I never knew a canoe to move so slowly. That I afterwards learned was a moment, or rather hour, of the day when no living thing, that possessed ordinary common sense or instinct, was fool enough to move a muscle.

When I at last reached the bend and beheld a large eucalyptus on the bank it needed no second thought to induce the canoe in that direction. The stillness of nature was something awful; the parrot, usually so noisy, had buried himself in the thickest clump of leaves the nearest tree possessed, while the chattering magpie put one leg and one eye to sleep, keeping the other as still as nature would permit. The kangaroo had found some friendly shelter, and the emu (big clumsy bird-beast that he is) was satisfied to shelter his head in a clump of salt-bush. I grounded on the sandy landing without in the least disturbing an affectionate family of snakes, while on the side of the bank a guana had ceased his exertions, head downward with one lazy leg still outstretched, too much overcome even to crawl down hill. The attitude was contagious and I too was soon in the land of oblivion, little heeding the rest of my fellow sleepers until a noise aroused me.

There around me, almost within reach, stood a congress of parrots, magpies and carrion crows, carrying on a most wordy debate and giving me a creeping idea that I was the cause of it. I felt like the drunkard who had been so ill and upon awakening found a buzzard sitting on the fence near him, rubbed his eyes, worked his fingers and toes, and remarked: Excuse me, sir (hic), I'm not dead yet." I adjourned congress and got up, much to the disgust of the crows, and pushing off into the stream again was about to continue my journey when I discovered that I had visitors aboard.

I landed. Ants! as long as your knuckle joint and equipped with implements of war patented in the first century. The wisdom of this insect is too great, for she crawls up on the inside of the innermost garment and begins her probing operation too low down to be reached from the top and too high up to be clutched from below, and when one demon is sinking an artesian well between one's shoulder blades and another boring for oil under the kneecap, the body thus attacked hesitates not a moment but after a contortion or two executes a ballet in costume. Then, as if to make matters worse, a disciplined army take possession of the divested garments, gnats struggle with each other for the corner of an eye, to the music of the blow fly, who circles around the head of the victim, carefully selecting a soft spot for his own little operations, and with the lengthening shadows the mosquito brings his family for the evening performance; while the owl hoots out from the tree above and the frog joins in the chorus. Ba-ra-dum! Curtain. I have gone through it, not once but many times, until now I am so full of poison I really believe if a rattler bit me he would crawl off and die.

The two months mentioned were spent shooting and fishing on the banks of this river and Lake Alexandrena, which forms its mouth; visiting stations (ranches) and in listening to stories of early Australia. Some of these stories are full of wild sport, and when told by a genuine old bushman seem to strike the chord harmoniously and make the listener long to experience them. The shooting, it being summer and close season, was confined principally to kangaroo, wallaby and emu; while the fishing was so good, and the fish so numerous and easily caught, that the sport ceased to be sport at all. A kangaroo chase and an emu hunt are well worth ten thousand miles of travel; duck (teal) shooting, in season, is excellent, owing to the scarcity of water courses and consequent bunching of the game. But, aside from these, sport in Australia is limited, and when the modern sportsman falls so low as to drag a red herring in order to ride to hounds, then Pluto off to the good old Southern swamps again. I am happy to think that, as well as the rest of the artificial sporting, is foreign to most of our countrymen; so, wishing that the FOREST AND STREAM may always give its away-from-home readers as well as home readers the same pleasure it has your humble servant, I beg to remain, yours respectfully,

ROLAND ROSS.

SAN FRANCISCO, Cal.

FOLLOW MY MOVEMENTS—AM BOUND FOR—PLUM GUT.—This message, spelled out in the signal flags of the yachting code, served as the introduction for a lengthy and interesting article on the coming meet by Mr. R. B. Burchard in the New York *World* of Sunday last. By permission of the *World* we publish the accompanying sketch of the camp ground.

THE CENTRAL DIVISION MEET.

THE Central Division had as fine a camp site as could be desired. Located between Point Chautauqua and Dewittville on the north shore of Chautauqua Lake, it was far enough removed to enjoy the seclusion so much sought for and yet near by the hotel, where meals were served to all the canoeists at a very reasonable rate.

The camping ground was a meadow, with a straight white sand beach, running out under the water for over 200ft., so that canoes could be drawn up on shore very nicely. It also proved to be a famous bathing spot, with its clean beach like a velvet carpet. This alone was sufficient inducement to indulge in two swims a day, which were taken with clocklike regularity.

Arrangements had previously been made so that when Messrs. Crane and Gaddis, of Dayton, arrived in camp (being the first arrivals) everything was in readiness for a large camp, lumber, poles, men to build docks, tent floors, etc.

The Fourth of July was celebrated in a rather quiet way, considering the material in camp.

The second week brought with it the races, which were much enjoyed and keenly contested. The winner of the novice race, Mr. J. F. S. Crane, of Dayton, made it rather warm for such old-timers as Shiras, Gaddis and French. It is said that he will be at the salt water meet to try conclusions with others.

Not over eighteen canoes were in camp, for many canoeists came for a few days only, and some were staying at different points on the lake with their friends. At Lakewood alone I counted eight canoes the day we broke camp. However, the canoeists indulged in sailing to their heart's content, it being a usual thing to sail about seven hours a day.

So charmed were four of the A. C. A. men with the camp that they remained another week on the lake, swimming, sailing, sleeping and the like, and so sunburned are they now that their friends hardly recognize the tender-looking chaps who left home for a month's outing.

The enforced absence from camp of Vice-Com. Geo. A. Warder and Purser James K. Bakewell was a most unfortunate thing for the first meet of the Central Division. The former had entered into business with W. W. Blow, of Oakland, Cal., and Mr. Bakewell was taken ill very suddenly as he was about leaving home for camp, so that the only officer in camp was the Rear-Commodore, E. L. French.

No. 1. Sailing, free for all, 3 miles:

Winners.	Flags Presented by
1. T. P. Gaddis	George A. Warder.
2. J. F. S. Crane	American flag.

No. 2. Sailing, 3 miles:

1. G. Hart Singer	W. W. Blow.
2. W. W. Lawrence	A. C. A., C. D.

No. 3. Sailing, Novice:

1. J. F. S. Crane	Deowainsta C. C.

No. 4. Sailing, all classes, 75ft. limit:

1. J. O. Shiras	Oakland C. C.
2. E. L. French	A. C. A. flag.

No. 5. Sailing, Jabberwock trophy: The number of entries was not sufficient to warrant calling the race.

No. 6. Sailing and paddling:

1. J. O. Shiras	A. C. A., C. D.
2. T. P. Gaddis	A. C. A., C. D.

No. 7. Sailing, capsize, etc.:

T. P. Gaddis and C. D. Mead tie for first. Miss French.

No. 8. Sailing, consolation: No consolation prizes needed at this meet.

No. 9. Paddling, Class II.: No entries in this narrow class.

No. 10. Paddling, tandem:

1. Mr. French and Mrs. Baskin	A. C. A.
2. Mr. Crane and Mrs. Weber	A. C. A.

No. 11. Paddling upset: Water was too cold.

No. 12. Parade and fireworks: Postponed on account of rain.

No. 13. Hurry scurry:

1. E. L. French	Mrs. J. K. Bakewell.
2. J. F. S. Crane	

On the day on which the Jabberwock trophy race was to be started, it blew, thundered, etc., so that it could not be sailed then. On the two following days a dead calm rested on the lake, and finally when the weather was such that the race could be sailed there were only four of the original entries that were in camp on that day, the last day of the meet. Therefore it was decided to sail for the trophy at the general A. C. A. meet.

LAKE ST. LOUIS C. C.'S REGATTA.

THE only thing that interfered with the success of the Lake St. Louis C. C.'s regatta at Lachine on the afternoon of July 19 was the weather, and it was not so bad after all, for there was clear sunshine a good part of the afternoon, and the water was smooth all the time. The first race started was the decked canoe sailing race, for which there were two starters, Mab, C. Archibald, and Isis, D. A. Poe. Mab got a good lead at the start, and increased it on the run up to Dixie, and won the race with ease. In jibing around the island Isis upset, but her captain climbed into her and finished the race under sail with a full cockpit, coming in a long way behind, however. The open canoe race for the beautiful Commodore's cup came next with five starters. The course, around a paddling buoy, was altogether too short for such an important race, and made it more or less of a dash. Wallace got a good lead, but in the reach in the finish line his lee boards broke down, and H. Routh came in first, Adams was third, McCallum fourth and P. Levine, who swung a tremendous lateen mainsail, with 18ft. spars, broke his rudder.

Then came the paddling races, the first being a tandem race for boys under 18. Five crews started, and after a pretty race the Davidson brothers won, T. Rawlings and N. Dawes second. A punt race for boys under 14 followed, and after a prodigious lot of splashing H. Baby won, G. Boyer second. The green tandem had five starters, and the Rouths drew away from the field at the start, and increased their lead straight through the race; Donnelly and Cowie were second, Barlow and Walker third. A band paddling race came next by way of an interlude before the event of the day, the struggle for the tandem challenge cups. There were three starters, and A. E. Nash splashed his way to glory with G. Auldjo second.

There were but three entries for the challenge cup tandem mile race, the great event of the year in the world of Canadian canoeing. The starting crews were C. H. Duggan and F. Sherwood, A. Irving and J. Morris, F. Fairbanks and F. Stewart. The start was a fine one, the St. Lambert's crew having the inside water, the Duggan crew the middle, and the two Freds the outside. A hundred yards from the start Duggan and Sherwood were leading, and although St. Lambert's paddled a plucky, they paddled a losing race straight through. Duggan and Sherwood won handily, with five or six lengths to the good. Irving and Morris were second, and Fairbanks and Stewart, who broke a paddle, a long way behind. All the crews in this race used Herald canoes. The four-in-a-canoe race was won by the Routh crew, composed of F. Fairbanks, H. Routh, C. Routh and F. Stewart. The single race which followed was a most exciting one. There was three starters, Taylor, Girdwood and Irving, but the race was between Taylor and Girdwood, and better handling of the single blade was, perhaps, never seen. A hundred yards from the start, although Taylor had a short lead, Girdwood was not far behind, and he made a spurt that brought him up to the leader. Taylor was not "pumped," however, he had a wonderful rally, at every stroke he lifted his boat further to the front and won by a length. The event of the day, from a picturesque standpoint, was the next race—the war canoe race. Valois was steered by Tom Paton, Lachine by Auldjo, and at the pistol shot thirty paddles struck the water together, and forward went the two great canoes with a rush like that of a steamer. Valois paddled a good race and steered a good course, but Lachine won the leather medals.

An obstacle race, which consisted of jumping a boom twice and paddling across the finish line in the bow, which was won by Duggan, and a greasy pole, which was won by P. Levin, finished the regatta programme, and the prizes were presented at a "hop" at Hanna's afterwards.

RACES ON THE PASSAIC.—The canoe clubs in the vicinity of Woodside are preparing for a series of open races on Aug. 30 and Sept. 1 on the Passaic River. On Saturday the Orange C. C. will hold its regatta, and on Monday morning the Arlington C. C., followed by the Ianthe C. C. in the afternoon. Canoeists can ship their canoes direct to the Ianthe house in returning from the A. C. A. meet.

RED DRAGON C. C.—A test race between the new boats of the Red Dragon C. C. which resulted in a meaningless drift, was sailed on July 16. Course, around Petty's Island, distance 5 miles. Only two boats finished.

Kie-loe, F. W. Noyes	2 45 00
May Fly, H. E. McCormick	2 45 05

Another attempt will be made, which we hope will be more satisfactory.—MAX.

ARLINGTON C. C.—This club will hold its annual regatta on Sept. 11, starting the first race at 9:30 A. M., the courses being off the club house at Arlington, N. J.

SITE OF THE A. C. A. CAMP, JESSUP'S NECK, LONG ISLAND.
(By permission of New York *World*.)

A. C. A. MEET.

FROM the returns already received it is evident that the coming meet will be the largest and in some respects the most interesting in the history of the Association. The success, which now seems assured, has been attained through so much expense and after so many unusual difficulties incident to locating on salt water, that it may be some years before the experiment will be repeated. Canoeists are therefore advised to make every effort to avail themselves of being present at this meet, and are urged to help make the occasion the success that it deserves to be.

A number of canoeists, including ex-Com. Gibson, Secretary Dunnell and Messrs. Foster and Brown, of the Knickerbocker, have visited the camp site, and all concur with the camp site committee in their favorable impression of the site.

Work is progressing rapidly and all essentials will be completed on Saturday, Aug. 2. Next week will be devoted to the making of tent floors and floats which have been ordered. Those who have not ordered either, and need them, should send their orders at once. Tent floors will cost $3 to $5 each, according to size, and floats will cost $1.50 per canoe, 4 or 5 canoes to a float. These cost a trifle more than during previous years, because of increased length, necessitated by the rise and fall of the tide. The floats will be made after a plan worked out by Mr. Everett Masten, of this committee, and constructed under his special direction.

A dock 400ft. long has been built into deep water, so that steamers may land without difficulty. Two wells have been dug and bricked in to a depth of 25ft., and pure cold water found in abundance. A substantial kitchen building, with ice house and store-room beneath, has been erected and a camp store building is under construction. A great amount of labor has been expended in filling in holes and clearing underbrush.

The camp committee have been on the ground since July 1, when the lease was obtained, and watched anxiously for the appearance of the vagrant mosquito. So far these pests have not appeared, although the weather has been hot and favorable for them. The committee believe that their prediction, that the narrowness of the Neck and the strength of the wind will prevent the settlement of mosquitoes on the Neck, is being borne out by the facts. The big camp fires may draw them, however, and members are advised to have their tents properly equipped with netting.

Members are also requested to bring Chinese lanterns for the night parade and also to lay in a supply of fireworks, although the latter will be sold at New York prices in camp. It is suggested that ladies, as well as gentlemen, bring bathing suits.

Clubs are requested to continue the pleasant feature of distributing club badges, and to send one of each to this committee for file. Members who intend coming to the meet will please apprise the committee as soon as possible of their intention of coming.

Everything has been done and will be done to make this camp comfortable, the committee recognizes that the growth of the meets, the attendance of ladies and the multiplicity of amusements make it necessary to supply good meals and good service. A first-class caterer has been obtained, and it is hoped that most of the members will join in the camp mess, even at the expense of foregoing the pleasures of a private mess, because the patronage largely affects the character of the supply.

The camp will be made exclusive as possible and outsiders admitted only upon personal invitation and by badge or ticket.

The New England members can arrive at camp most readily by steamer Sunshine from Hartford, Saybrook, Mr. N. D. Biel, of Springfield, Conn., will answer all inquiries as to New England transportation.

This committee has acknowledged all letters received to date, so that members who have written and not received responses will know that their letters have miscarried and will please communicate again.

R. B. BURCHARD, Chairman,
Committee on Camp Site and Arrangements.

No. 338 BROADWAY, New York.

NEW YORK C. C.

THE new club house at Staten Island is now completed and the club has sold the old one, built in 1885, to a rowing club at Hoboken. The new house is built on a large scow, a convenient and roomy building and far better than anything the club has had in the past. The opening ceremonies, set for June 21, were spoiled by the storm on that day, but the postponed sailing race was held on July 19. On this occasion the wind was very heavy, Toltec losing a mast before the start, while Eurylda capsized, her owner having some trouble in bringing her in. The only starters were Bat, L. B. Palmer; Leida, Schuyler Schieffelin; Vagabond, C. J. Stevens; Pterodactyl, Com. Nadal, and Mr. W. D. Anderson, in his new Ruggles boat. The course was the regular 3 mile triangle. Leida led for a time, but was finally beaten by Bat, the difference being but one second. Vagabond was third.

No date has yet been set for the cup race, as Mr. Jones has not yet arrived in New York. It will be sailed some time after the close of the A. C. A. meet. The trial races will be sailed on Friday and Saturday next, being started as late as possible in the afternoon to accommodate men who are busy in the city. They are open to all members of canoe clubs. As there is but one challenger for the cup, one representative will be selected by the New York C. C. to meet him, with one or two substitutes. Mr. Ford Jones, the representative of the challenging club, the Brockville C. C. of the city of that name on the St. Lawrence River, is an old member of the A. C. A. and a constant attendant at the meets for some years past, being known as a skilful and daring sailor. For several seasons he sailed the Ramona, but last year he brought to the camp a new canoe, the Cannuck. This boat, like Ramona, was built by Mr. Sauve, the skiff and canoe builder of Brockville, but it is of American type and does not differ in hull or rig from the average racing canoe. In her, Mr. Jones did some very fast sailing last year, winning the A. C. A. sailing trophy.

This trophy, it will be remembered, was established in 1885, the year of the first international race, being won then, as well as in the following year, by Com. Gibson. In 1888, at Lake George, it was won by Mr. M. V. Brokaw, and last year by Mr. Jones. The two previous races for the New York C. C. international challenge cup, sailed in 1886 and 1888, differed from the coming one in that the challengers were Englishmen, and the canoes of English build. In the original races, in 1886, there were two contestants, Messrs W. Baden Powell and Walter Stewart, members of the Royal C. C. of London. The canoes in these races, Nautilus and Pearl, were of distinctively English model, of large displacement and carrying heavy centreboards and lead ballast. They were rigged with two balance lugs, and were sailed with the crew lying down in the bottom of the boat and steering with the feet. The races at the meet, which preceded those at New York, proved that the American canoes, with little or no ballast, and with the crew seated on deck, were immensely superior in speed to the English boats, and in the races for the New York C. C. cup the two challengers discarded their ballast and adopted the deck position. The representatives of the New York C. C. in these races were Mr. C. B. Vaux, of that club, and Mr. Wm. Whitlock of the Brooklyn C. C., and through their efforts the cup was retained by the club.

In the races of 1888, the Royal C. C. was again the challenger, but in this case with but one representative, Mr. Walter Stewart again, who sailed a canoe designed by himself after the American type, carrying no ballast and using the deck position. The cup was defended this time by Mr. R. W. Blake, of the Brooklyn C. C., the winner of the trial races, who finally defeated Mr. Stewart very easily. In each of these series of contests there has been sufficient difference in canoes and methods, apart from the nationality of the challengers, to create a strong interest; but in the present case the international feature is more nominal than real, the challenger being an American, and using the same canoe and rig as the defender; so that the technical issues which were so prominent in the first races have disappeared entirely. At the same time the friendly rivalry between the canoeists of the two neighboring countries, and also between the members of the various clubs that will start in the trial races, promises to make the New York C. C. cup one of the events of the year.

The conditions governing the cup and trial races are as follows:

CONDITIONS GOVERNING THE RACES.

1. The canoes competing must come within the limits defined by the N. Y. C. C. rules.
2. The cup is to be held as a perpetual challenge trophy.
3. The competition is open to not more than three authorized representatives of any canoe club sailing under foreign colors, as many canoes representing the club holding the cup as the challenging club.
4. Two victories to be necessary to either win or hold the cup, the same canoes competing in each.
5. The races to be sailed on the waters of the club holding the cup.
6. Races sailed in the United States will be contested on waters in the vicinity of New York city under the auspices of the N. Y. C. C.
7. The distance sailed over in each race must not be less than eight nor more than ten miles, and within a time limit of three hours. The course to be mutually agreed upon.
8. The races must be sailed at a time mutually agreeable to the challengers and the holders of the cup; but one series of races to be sailed in any one year.
9. The N. Y. C. C. rules to govern the races.
10. The club holding the cup to be responsible to the N. Y. C. C. for its safe keeping. Should it dissolve its organization, the cup will then revert to the N. Y. C. C.

CONDITIONS GOVERNING AMERICAN CONTESTANTS.

11. The representatives of the holders of the cup must be selected after a series of trial races open to all members of canoe clubs in the United States. The regatta committee of the club holding the cup shall have the right to select the competitors for the international races irrespective of the result of the trial races.
12. Should the cup be won by the American contestants in the international race: First, an active member of the club holding the cup must score one victory to entitle that club to retain it. Second, if a member (or members) of any other club wins two races, his club will hold the cup. Third, should the two races be won by members of two clubs, neither being the holder of the cup, the tie will be sailed off subsequently to determine which club shall take the cup.

The New York Canoe Club International Cup Trial Races, originally set for to-morrow and Saturday, have been postponed to Aug. 29 and 30, the week following the A. C. A. meet, in order to enable canoeists generally to enter them and to ship their canoes direct from the meet, by steamer, to the N. Y. C. clubhouse. The final races will probably be sailed Monday, Sept. 1 and following days.

A. C. A. TRANSPORTATION.

Editor Forest and Stream:

Arrangements have been completed with captains and owners of steamer Eagle to transport canoes and duffle from Newark, Yonkers and New York Harbor to Jessup's Neck. Steamer will call at club houses and other places for canoes on Wednesday and Thursday, Aug. 6 and 7. All canoes and duffle must be ready for shipment not later than the morning of the 6th, and all stuff must be ready when boat calls for it or it will be left.

The charge for each canoe to camp and return will be $5. Canoeists who do not send freight money before boat leaves must pay captain of the boat or Mr. G. P. Douglass, A. C. A., who will have entire charge of loading and unloading canoes and duffle, and will start with and remain on board steamer Eagle until canoes are unloaded. This boat runs to camp wharf, Jessup's Neck.

Canoeists with canoes arriving after the 6th can send their boats to foot of Beekman street, East River, to steamer Shelter Island. Freight on canoes on this steamer will be $2 one way, return trip same ($2) unless 150 boats are shipped, in which case return rate will be $1. The fare to camp by steamer Shelter Island is $1.25 each way. State rooms with two berths $1. Supper on board *à la carte*. This steamer leaves foot of Beekman street, Tuesdays and Thursdays at 5 o'clock P. M., and on Saturday at 2 o'clock P. M., arriving at camp about 6 A. M. State rooms should be engaged at least two days ahead, longer if possible. They can be had on board steamer foot of Beekman street and by letter to same address. Steamer Eagle has no staterooms.

Canoes shipped to Long Island City to Long Island Railroad Co. will be carried to Sag Harbor and returned, freight 50 cents each way. Round trip tickets via Long Island Railroad to Sag Harbor and return $4 each to members of the A. C. A.

Steamer Sunshine will leave New London three days in each week for Sag Harbor. It is not yet determined whether she will stop at A. C. A. wharf and camp, but it is probable that she will do so. The camp, however, is but a short sail or paddle from Sag Harbor. Negotiations are now being made for a steam launch to run between Sag Harbor and camp. Steamer Manhansett runs to Sag Harbor from New London daily. It is probable that she will stop at A. C. A. camp wharf.

M. T. BENNETT, JR., for Trans. Com. A.C.A.

The following order has been sent to the customs officers at Burlington, Plattsburgh, Ogdensburg, Cape Vincent and Suspension Bridge: "Treasury Department, Office of the Secretary, Washington, D. C., July 29, 1890.—Collector of Customs: Sir—The Department is in receipt of a letter from Mr. M. T. Bennett, Jr., member of Transportation Committee of the American Canoe Association, in which he states that the annual meet of said Association will be held at Little Peconic Bay, Long Island, N. Y., on the 8th of August, and requests that, as quite a number of Canadian canoeists will attend said meet, instructions be given to allow them to bring their canoes, with necessary outfit, over the border free of duty and free of bond. The Department having heretofore granted similar requests, you are authorized to pass the canoes and necessary outfits thereof of Canadian canoeists arriving at your port or in your district en route to said meet free of duty and without requiring bond for their return, on production of the usual oath for the free entry of personal effects. The customary examination should be made, however, to prevent any frauds upon the revenue. Respectfully yours, O. L. SPAULDING, Assistant Secretary."

FUN AHEAD.

A. C. A. CAMP HEADQUARTERS, JESSUP'S NECK, Long Island, N. Y. Wanted.—Talent in every line for the great A. C. A. triple allied monster aggregation. All are requested to bring their own wardrobe. Salary sure. Only members of the A. C. A. need apply. All applications to be made on the grounds.—L. W. SEAVEY, Director of Amusements.

THE NORTHERN DIVISION YEAR BOOK.—The Northern Division of the A. C. A. has this year published a particularly neat and attractive year book, the work of one of its members, Mr. Hugh C. McLean, of Montreal. The book is embellished with a number of large photographs, including portraits of the division officers and views of the A. C. A. and Northern Division meets of 1889. Extra copies of the book will be sent to canoeists on receipt of 20 cents.

A. C. A. MEMBERSHIP.—Atlantic Division: Delavan C. Scoville, Sag Harbor, N.Y.; Everett W. Frazar, Orange, N. J. Northern Division: R. C. Helles, Geo. G. Robinson, J. H. Routh, W. A. Munn, Montreal; J. H. Carnegie, Coboconk; R. P. Wilkinson, Goderich; Henry Totten, Stratford; Geo. Barry, Montreal.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. K. W., Southampton.—See game seasons as given in our shot columns.

C. E. W., Troy.—We have instituted inquiry in your behalf, and will report in later number.

P. W. D., Hamlet, Ill.—Thank you for the clipping. See portrait of pheasant in our game columns.

E. J. R., New York.—Inquire at the office of the Supervising Inspector, Post Office Building, New York, where you can obtain a copy of the U. S. laws relating to licenses.

E. L. R., Gilbert, Ohio.—It will probably be necessary to scrape off all the varnish. In re-varnishing, make sure that the wood is thoroughly dry, and allow time for each coat to become hard before putting on another or using the canoe.

CONSTANT READER, Baltimore, Md.—Please give me the name of the fish called speckled perch in the fresh-water ponds of North Carolina. Ans. The name is used for the calico bass, which is shown on page 4 of FOREST AND STREAM, July 24, 1890, and described at some length.

S. H. C., Rockland, O.—What will prevent gun barrels from rusting when laid away for a long time? Ans. Apply common beef tallow without salt. You may melt the tallow and pour into the barrels; when the gun is wanted for use pour hot water on barrels and the tallow will slide out.

J. A. M., New York.—Will you kindly inform me if there has been any law made prohibiting gunning in Orange county, N. Y., for the ensuing five years, and would two young men meet with any difficulties from that source in a three days' outing in that or any of the adjacent counties? Ans. We know of no such law, and in absence of one you would have no trouble.

H. T. H., Coolidge, Wis.—I wish you would send me the address of some manufacturer of fishing outfits. I have a plan for a trolling hook that I think will eclipse anything of the kind for catching large fish. How much would it cost to get a patent? Ans. 1. Communicate with the firms whose addresses are given in our advertising columns. 2. Patent will cost $35.

G. Y. S., Westfield, N. Y.—1. Can you inform me what kind of small game there is in northeastern Massachusetts? 2. Is the game very scarce? 3. Also give open season on woodcock, grouse, squirrel and rabbits in Massachusetts. Ans. 1. You will find the game named in your third question. 2. Depends upon where you go. 3. See list of seasons in our game columns.

A CONSTANT READER, Montreal.—Will you please give me the benefit of your information on the subject and tell what, in your opinion, is the best thing to use to make a blind for shooting ducks from a boat—something to resemble a small island? Ans. Use whatever is at hand, most convenient and best adapted to the surroundings, cat-tail rushes, tree boughs, marsh grass, or anything that will simulate nature. If in the autumn, when the vegetation is brown, a gunny sack of dead grass color may be used. In winter use white cloth to look like ice, etc.

O. W. D., Boston.—Will you kindly let me know through the columns of your paper whether or not it is prohibited in any of the States or Canada to kill woodcock after sundown? Ans. Pennsylvania forbids taking woodcock or other game "with torchlight." District of Columbia prescribes that "no person shall shoot at any bird or wild fowl in the night time." Quebec forbids hunting woodcock "at any time between one hour after sunset and one hour before sunrise." Maryland makes it unlawful to kill grouse, woodcock or quail "in the night time, that is to say from one hour after sunset until one hour before sunrise." Wisconsin makes it "unlawful at any season to hunt, shoot, catch or pursue" game birds including woodcock "in the night time."

ONYJULTA, Thompsontown, Pa.—I would like to know the weight of a 10in. brook trout; also the scale of average weights by measurements of the same fish. Ans. The relation between length and weight of the brook trout varies according to the nature of its habitat. In still deep ponds they will be short and deep, while in shallow swift currents they grow long and slim. A 10in. trout will usually weigh a little less than 8oz. Herewith are given lengths and weights of seven specimens which we have weighed: 9in., 3½oz.; 9½in., 3¾oz.; 10in., 8oz.; 12in., 7¾oz.; 12½in., 12½oz.; 13in., 11oz.; 18in., 2lbs. 2½oz. In large individuals the weight increases very rapidly because the fish takes on great depth and thickness. We quote from the records the proportions of two big ones: 25in., 8½lbs.; 30in., 10lbs.

R. T. B., Milford, Pa.—Will you please enlighten me as to the best process by which to preserve the color especially, and, if possible, the pliancy of the skin of trout, bass, perch, etc.? Ans. The best mixture known to us for preserving the colors of fishes, and the bodies as well, consists of equal parts of alcohol, glycerine and water. Dr. J. L. Wortman, formerly anatomist of the Army Medical Museum, Washington, D. C., has a method of keeping the colors of integuments and soft parts, but we have not seen it published anywhere. A letter addressed to him at the Cosmos Club might be the means of obtaining the information. There is no way of obtaining pliability in stuffed fish skins so far as we know. Many museums would be glad to learn of a satisfactory method. The treatment applied to mammal skins would remove the scales of fish skins and oil would spoil the show surface. There seems to be nothing but hard drying on a properly shaped body of some suitable material.

G. A. K., Netherwood, N. Y.—1. I have a small lake of from 7 to 8 acres, and would like your advice as to the kind of fish that would thrive well. Two brooks feed the lake (one of spring water) and two springs near edge of lake run into it. The depth is from 2 to 8ft.—10ft. when lake is high. The bottom consists of mud in parts, and sand and gravel in balance. Plenty of trees border the lake. I have thought somewhat of trying yellow perch. The lake contains sunfish and plenty of minnows and shiners. 2. Will you kindly give me the name and address of the Commissioner to whom I am to apply for fry, and also your advice as to the kind of fish to put in lake? 3. Is there any cost for fry outside of express charges for same? Ans. 1. Write E. P. Doyle, Room 56, Fulton Bank Building, New York city for a blank form of application for fish, stating the particulars about your lake. 2. We should expect that small-mouthed black bass would thrive in the water described. Yellow perch are much inferior to bass. 3. No. If you cannot obtain black bass from the State write to Geo. W. Littleton, Sandusky, Ohio, who furnished the supply for the Pennsylvania Fish Commission this year.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

BIRD PORTRAITS.

Some Native Birds for Little Folks.
BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, $3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.
DAVIES & CO., 1 Finch Lane, Cornhill.

WHAT "KIT CLARKE" SAYS OF

THE KOSMIC ROD

THE PARADISE FIN AND FEATHER CLUB,
LAC DES GRANDES ISLES, CANADA, July 14, 1890.

Messrs. A. G. Spalding & Bros.:

GENTLEMEN—I have handled some pretty good rods, but none has pleased me better than the 5oz. "Kosmic" which you built for me last May. I labored with it daily during the month of June, and lifted many heavy trout up to 4lbs. each, and then, in order to test its murderous qualities, tried bottom fishing with a 4oz. live perch for bait. The little perch went into the jaws of a 4lb. trout, and in due time the trout went into my boat. This you will concede is a hard test for so light a tool, but it stood it like an old timer, and is worth all the praise I can give it. I like a rod with backbone—one that is tough and stiff in the middle joint, for after all a rod's work is done between the two ferrules, and in this most valuable essential my "Kosmic" is perfection. Besides, the artistic mounting and beauty of finish displayed in the rod won admiration from many accomplished anglers. The man who tries to make a better rod will have to hustle.

Yours respectfully, KIT CLARKE.

The Glittering Gang Trolling Bait.

Best in the world. Try them alongside your best bait and you can see the difference. We refund the money if not satisfactory. For sale by dealers. Prices: 75c., $1.00 and $1.25.

Eight muscalonge were caught in two hours by Geo. Graham, Rice Lake, Can., with the best Canadian spoon alongside without a strike.
Six muscalonge were caught on Rice Lake by Chas. Gilchrist one forenoon.
Forty-three pike were taken by Chas. Smith, Oneida Lake, in three hours.
Wm. Comstock, Alexandria Bay, caught 22 bass and 7 pickerel in one day's fishing on our baits.
J. D. Wilson, Tallahassee, Fla., had 16 strikes and took 13 bass, largest weighing 17lbs. 10oz.

We can show hundreds of testimonials received this season already.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fas tas any other reel in the world.
SECOND.—It will wind up the line slowly if the angler chooses.
THIRD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other reel.
FIFTH. It will prevent tips, lines and snells from being broken by large fish.
SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

Wakeman Skeleton Bait.

Far ahead of any Artificial Bait in the World.

Made in four sizes: No. 0, speckled trout and black bass; No. 1. black bass; No. 2, bass and pickerel; No. 3, muscallonge, salmon trout and bluefish. It is guaranteed to catch bass when all other baits fail. It effects a great saving in minnows, on account of the protection afforded by its peculiar construction, one minnow having been known to catch twenty-five bass before it was rendered useless. For sale by all dealers and by the manufacturer. Send for circular and price list.

J. B. WISE, Watertown N. Y.

ANSWERS TO CORRESPONDENTS.

UNWORTHY OFFICIALS.

THE corporations who have controlled the hotel privileges in the National Park have been singularly unfortunate in their employees. Most persons who have been interested in this reservation will remember the frightful condition of things under the old Yellowstone Park Improvement Company, and recently Capt. Boutelle has unearthed a scandal, which involves the three local managers of the Yellowstone Park Association, and which, except for certain reasons, would have resulted in the summary expulsion from the Park of these three managers.

Some time last autumn information reached the Superintendent of the Park that R. R. Cumins, Superintendent of Construction of the Yellowstone Park Association, was preparing to hunt and trap from the Yellowstone Lake Hotel, where he expected to winter. However, during the early winter Cumins was called East, and while there was taken sick, and did not reach the Park again until near spring—too late for him to carry out his plans.

An investigation made by Capt. Boutelle revealed an utter disregard for law on the part not only of Cumins, but also of E. C. Waters, the manager of hotels for the Syndicate, and one Culver, the Master of Transportation. It was learned that Cumins had taken a rifle to the lake as well as a large quantity of strychnine, presumably for use in poisoning animals. It was learned that this gun was carried to the lake in a buggy driven by E. C. Waters, the General Manager for the Syndicate. Cumins and Waters traveled together without other company, and the latter must have known of the purposes of his companion. It was further learned that ammunition had been sent out to Cumins by Culver, who, after futile attempts at denial, acknowledged his guilt.

During the investigation carried on by Captain Boutelle, Waters and Cumins made a clumsy but ineffectual attempt to prove a conspiracy against Cumins.

This investigation took place just as the season of travel in the Park was opening, and for reasons not yet announced by the authorities, action in the matter has been for the present deferred. From what we know of the Superintendent, however, it may be assumed that another year will find Waters, Cumins and Culver residing outside the Park.

In the facts above stated there is room for abundant comment. If the active managers of a corporation like the Y. P. A., which employs hundreds of men, and which has within certain limits almost absolute control within the Park, violate the law, or connive at its violation, how can their subordinates be expected to respect the regulations of the Government? If these managers have themselves no sense of their responsibility to the Government, as well as to their employers, how can their subordinates be expected to feel such responsibility? And yet we believe that among the great majority of employees of the Transportation Company and of the Y. P. A. the feeling is strong that the regulations should be obeyed.

We have no doubt that the reasons which led the Superintendent and the Secretary of the Interior to withhold the decree of expulsion in the case of these three important men were weighty, but at the same time it must be confessed that the prompt ejection from the Park of Cumins, Waters and Culver would have had a great moral effect on the general public, and would have mightily increased that public's respect for the regulations for the Park's government, laid down by the Secretary of the Interior. It would have been an object lesson not easily forgotten. We presume that the question was one of judgment, of expediency, and we are content to await further information.

GEORGE LEE SCHUYLER.

THE death of Mr. George Lee Schuyler is an event of moment in the yachting world; important as it would have been under any circumstances, its significance is doubled by the peculiar surroundings under which it actually occurred.

He was one of the prominent figures of American yachting, famous as the sole survivor for many years of the quintette of spirited yachtsmen who laid the foundation of our national fame, and the last link that joined the great pleasure navy of to-day with the little fleet of the early days of organized yachting on this side of the Atlantic.

On the birthday of the club he helped to organize just forty-six years ago, at the opening of the great annual cruise, on board the magnificent steam yacht which now carries the club flag, a striking contrast to the little schooner on which it was first hoisted, and in the midst of a fleet of over a hundred yachts under the same burgee, this venerable yachtsman passed away quietly, and we may confidently believe, painlessly.

George Lee Schuyler, a grandson of Gen. Philip John Schuyler, was born at Rhinebeck, N. Y., on June 9, 1811. From his early youth he was a resident of New York city, graduating from Columbia College in the class with Hamilton Fish. For many years he was interested in railroads and steamers about New York, especially in the New York and New Haven steamers and the New York, New Haven and Hartford R. R. He married a daughter of James A. Hamilton and grand daughter of Alexander Hamilton, and after her death he married her sister. Mr. Schuyler leaves three children, two daughters and a son, Mr. Philip Schuyler, owner of the steam yacht Nooya, and long a member of the New York Y. C.

Fifty years ago, when New York boasted less than a dozen yachts, Mr. Schuyler was the friend and associate of John C. and Edwin A. Stevens, two of the greatest yachtsmen that America has known. After a few years of desultory yachting, with no organization, these gentlemen met aboard Mr. John C. Stevens's schooner Gimcrack, anchored off the Battery at New York, on July 30, 1844, and organized the New York Yacht Club, with Mr. John C. Stevens as the first commodore. There were present at this meeting Mr. Schuyler and Messrs. John C. Stevens, Hamilton Wilkes, John C. Jay, Louis A. Depau, George B. Rollins, Jas. M. Waterbury and James Rogers. From that time down to last Thursday Mr. Schuyler has been one of the leading members and workers of the club, an attendant on nearly every cruise. At one time he owned the yacht Dream, but for many years he has not been a yacht owner. When the schooner America was built in 1851 he was a partner with Messrs. John C. and Edwin A. Stevens, Hamilton Wilkes and J. Beekman Finley, sailing across on the yacht and sharing in her victory in British waters.

The death of the other four prior to any challenge being received for the Cup which they presented to the New York Y. C. in 1857, placed Mr. Schuyler in a very responsible position, and twice he has been called upon by the New York Y. C. to receive the Cup back and to redonate it to the club under newer and more stringent conditions. Though both of these changes have given rise to much controversy and have been severely criticised, no one has ascribed to Mr. Schuyler any but the highest motives so far as his part was concerned. He has served with credit as the referee in a number of the Cup contests, his decisions being fair and sportsmanlike; and above all he has left an undying monument of his sense of fair play and sportsmanlike spirit in the famous letter of April 15, 1871, called out by the Ashbury case. The sentiments he expressed twenty years ago apply as aptly to international racing to-day as they did then, and show that whatever his individual opinion may have been on specific points, he was animated solely by a sense of fair play and honest dealing.

Mr. Schuyler's death is likely to have a very important bearing on the question of the last deed of gift; it has been generally understood that the whole subject was to come up for discussion on the present cruise, the officers and leading members of the club, including Gen. Paine, being all with the fleet. What the fate of the famous "New Deed of Gift" will be, only time can tell; the history of the America's Cup from 1870 to to-day proves that in the end the side of fair play, the side so ably championed by Mr. Schuyler in 1871, comes out ahead; but whatever verdict the future may bring over the disputes and arguments of late years, American yachtsmen will never fail to honor the memory of the kindly, courteous gentleman and honest sportsman, the late "surviving donor" of the America's Cup.

TRANSFER OF ILLINOIS FISHES.

IN our issue of Nov. 28, 1889, we described in detail a method of rescuing live fishes from overflow ponds in Illinois and planting them in living streams. This beneficent work, inaugurated several years ago by Dr. S. P. Bartlett, the genial and accomplished secretary of the Illinois Fish Commission, has been appropriated and extended by the U. S. Fish Commission and is about to be prosecuted this summer with greatly increased vigor. The results of this plan are so gratifying and immediately perceptible, that all engaged in it and profited by it are anxious to carry it out successfully. The Commissioner of Fisheries is too far removed from the scene of labor to give it his personal attention, but has found in Dr. Bartlett a helper thoroughly familiar with all its details from long experience, deeply interested in its successful accomplishment, and fertile in wise expedients for securing the best results with the least expenditure of time and money. The species which will be saved from starvation and drying up are nearly all anglers' fishes, and include black bass, croppies, wall-eyed pike, pickerel, pike, white bass, yellow bass, ringed perch, spotted catfish, channel catfish, white perch (gaspergou), sunfishes and buffalo.

A PISTOL in a careless stranger's hand, a pull of the trigger, and the keeper of a shooting gallery in the Bowery in this city dropped dying to the floor. It was an accident as such things go, but one which could hardly happen in a carefully conducted gallery. In such a place the attendant loads and stands close beside the shooter, ready and watchful to reach out at once and take the arm in hand if it be pointed anywhere but in the direction of the target. Rules and signs, however conspicuous, are disregarded, but this trained attendant is at once a monitor of his own life and of that of each and every one else in the gallery. He is at a sort of perpetual "place rest," but his eye never relaxes its close watch on that arm until the weapon is placed, empty and harmless, back in the rack.

THE summer meeting of the American Forestry Congress will be held at Quebec, Sept. 2 to 5. The corresponding secretary is Mr. Chas. G. Binny, Philadelphia.

The Sportsman Tourist.

BEAVER WOMAN'S CERTIFICATE.*

A Story of the Old Frontier.

A NUMBER of years ago one of the large daily papers of New York made an attempt to disparage the General of the Army by caricaturing his name.

"Piegan H. Sheridan" was held up to odium for assuming the responsibility of some military operations that resulted in a considerable loss of life among the Piegan Indians. The chief interest in this episode lay in the fact that the soldiers, attacking a camp supposed to be of the Blood tribe at break of day, did not find out that their opponents were in fact Piegans until the victims were past resuscitation.

Public attention was turned for a time to the Northern races, which even among students of Indian science, have received less attention than their numbers and power would seem to demand. The Blackfoot nation is composed of four families, speaking the same tongue and inheriting the same traditions. One of these families, as well as the whole nation, bears the name of Blackfoot; another family is that of the Bloods, and a third that of the North Piegans. These three branches of the tribe live mostly in Canada, while the fourth, that of the South Piegans, inhabits a reservation in northern Montana.

A native myth, less coherent than the story of Noah, and perhaps less authentic, tells that the first father of this chosen race sent out his sons to bring in supplies, that the eldest came back over burnt prairie with game which he had captured and earned the name of Blackfoot from his sooty moccasins. The second son came back with garments, "pe-gun-ni" in their language, whence the name which we have corrupted into Piegan, while the ancestor of the Bloods got his title from some equally simple distinction.

All these people are at present well-ordered and peaceable. The Canadian and American governments issue them beef and flour. They have ponies to ride and sell, and some of them work. But chief among the causes of their good conduct is the prohibiting of the sale of whisky.

This cursed trade, while it brought wealth to the fur dealers, brought ruin to everything else. Occasionally some ill-starred white would suffer from the wild misdeeds of the maddened savages. More often it was the Indians themselves who fell in the deadly brawls born of liquor, or who, dropping in drunken sleep along the trail, froze to death in the merciless cold of the Montana winter.

The episodes about to be related took place in the days of the rum trade when two buffalo robes cost half a pint of border spirits, and when, by reason of the vast herds that dotted the prairies, this currency was plentiful enough for quite a poor Indian to buy drink by the gallon.

These were the times when flourished those famous braves Fire-maker, Very-nearly-a-dog, Buffalo-leggins and The-last-coyote-but-one. They have become men of peace. They have passed to the great majority. They have joined the heroes who lived before Agamemnon, and there is no Homer to stir the dust that covers their memories. May the earth lie light upon them.

The two forks of the Milk River rise in the desolate foothills that fringe the eastern side of the Rockies in northern Montana. The long stretches of swelling prairie that reach far to the east are here lifted into more broken ridges. The valleys are lined with willow brush, and the ponds, as you go gradually higher, have thickets of small aspens mingled with the lower bushes.

There is a depressing power in the dismal surroundings, and when the wind sweeps fiercely down from the west, as it almost always does, life seems but a space of time wasted in weary contention with the elements. The distant mountains, to be sure, have a massive grandeur that exalts your soul, even though you know that the clouds forever massed in their grim recesses sally forth in endless storms; but the treeless, wind-swept flats are as forbidding as were the Elysian fields to the heroes of the Iliad.

Far down on one of the forks of Milk River beyond the Sweet Grass Hills, a trader named Pitkin had built a cabin; rather a substantial structure for a cabin, but not quite up to the dignity of its name, for its builder chose to call the house Fort Pitkin. Formerly the place had gone by the name of Merry's Crossing. The original Merry was one of the subordinate officers of the American Fur Company, and, wandering in the pursuit of duty, had one day met a squaw of the Crow tribe who fixed his vagrant fancy. This woman Merry married, and he made his dwelling, as far as pitching a tent can be called so, at the very ford where Fort Pitkin was built later.

The inheritor of Merry's name and fortune was his son Jake, a restless, smooth-faced, dark-eyed young man, whose incapacity for repose made him at times a troublesome neighbor. Jake traded for skins, principally buffalo robes, sold whisky, powder and blankets, collected horses, sometimes without bill of sale, hunted untiringly, riding a week at a time, took mail contracts, and served as scout for the Government or sided with one Indian party against another in their domestic feuds, as occasion offered.

Jake was rather a polyglot in language. Crow he spoke and Blackfoot, as by nativity and residence he had good right. A certain amount of trapper French was among his accomplishments, while his English, perfectly fluent and idiomatic, had a peculiar mannerism caught probably from some of his early unconscious tutors in that tongue. Between every few words, often several times in a single sentence, Jake would wedge in the expression, "You bet," giving a laughable effect to his soberest utterances.

The most permanent of Jake's dwellings lay on the other side of Merry's Crossing about a mile and a half from Fort Pitkin. Here bundles of blankets were stacked around the walls of the room that served for a store, while piles of buffalo robes bought in trade were heaped in the corner, and a keg smelling strongly of whisky invited customers to brief joy and lasting sorrow.

Jake had formed a connection, which among the crowned heads of Europe would be called morganatic, with a young Piegan squaw named Beaver Woman. He had been brought to take this step partly by the untutored graces of the young woman, partly influenced by pity and a desire to rescue the girl from the brutal treatment of her uncle, a Piegan brave, known as The-last-coyote-but-one. Whatever the original reasons for the union, the couple lived as faithfully and honorably as they could have done if authorized by all the formalities of Egyptian rite.

Jake, indeed, had a superstitious regard for his companion too. She had been as a baby one of the few survivors of an epidemic of small-pox which consumed the inhabitants of her village. So virulent was the pest and so fatal the Indian treatment of plunging the fevered patients into the icy river, that there were not people enough left alive to bury the dead or take down the tepees.

Jake well remembered his shivering terror as a boy, when returning in the evening from a day's hunt, he passed near the lodges of the camp deserted by all but the dead, the skins flapping loose around the poles in the chilly breeze of the darkening twilight, the ragged cones looming spectral in the gathering night, and the dreadful noises now and then breaking the dismal silence, perhaps of some famished dog or gaunt wolf mangling the plague-smitten carcasses and snarling over the horrid meal, or, thought still more awful, the wailing of spirits of unburied braves. Never had his mind got over the dread that the gloomy scene begot within him; and Beaver Woman, whose parents were among the victims that there perished, had for this reason some mystic association with unseen powers in his thought.

It was dark night when young Pitkin, son of the founder of the fort, turned up at Jake's cabin. The latter was reciting to a few listeners one of the "closest calls" that he had ever experienced. "I was trading robes with the Bloods, you bet," went the story, "and there were some mighty sassy breeds*, you bet, in the outfit, too, and they began poking around in the furs and hauling 'em off, you bet, and it was kind of dark, and there wasn't no moon, and I seen a fellow sneaking around, and I couldn't see the sights, so I says to myself, 'I'll turn loose one just to scare him, you bet,' and by luck and chance I shot his ear about three-quarters off. And in about two minutes, you bet, the whole camp was on top of me, and I'd have turned loose good, only the fellow who was trading with me didn't have no sand, you bet. Big husky fellow, but he didn't have no more sand than a coyote. Says he, 'Don't shoot! don't shoot!' you bet; and I just had to keep jawing and palavering and dishing out rum half the night. They wooled me plenty, but I kept my robes, you bet, every time."

"Jake," said young Pitkin when the tale was finished, "don't you want to go for a 'trade and a hunt?' There's a big band of Bloods and Piegans on the St. Mary's, and they say they've struck the main herd." The suggestion chimed well with Jake's humor, and the next morning saw the start of a party bent on gain and not averse to pleasure.

A journey of no great length brought the travelers and their wagon to the Indian camp near the junction of a stream, now called Lee's Creek, with the St. Mary's River.

An unusual amount of amity and brotherhood prevailed among the assembled tribes. Crows, of course, were absent. Their long career of oppression and reprisal put them outside the pale of friendship. They never visited the country except when least wanted, and too often retired with scalps and plunder. All the Blackfoot bands, however, were represented: the Kootenays had come from across the mountains far to the northwest to get their yearly supply of buffalo meat; and a few Crees, temporarily waging peace with their rivals, were on the ground.

It was evening when Jake and young Pitkin reached the village. The autumn, which had been warm and open until late, had turned cold. The clouds were banked in the west. The last of the buffalo would soon leave and the morrow had been fixed on for a great slaughter in the herd the Indians had been following.

From the flaps that served as chimneys to the tepees chilly streams of crooked blue smoke issued; and the flash of the brightening fire could be seen through the skin walls of the council house. The friends entered, greeted the assembly and squatted around the central hearth. An old blind man named Swan-bonnet was engaged in a prayer that was mainly an apostrophe to the Chief Mountain, the most conspicuous peak that towered in the range to the westward. The old man raised his sightless eyes as if, looking through the side of the lodge, he could distinguish the rugged pile which had been the guiding monument of many a hunt and foray in his youth. "Tall bull among the herd of mountains," ran the prayer, "many surround thee, but none equals thee. Thy head rises above the clouds as the horns of a lone elk above the willow bushes in autumn. Game hast thou seen in plenty —mountain sheep and blacktail and buffalo—on the plains. To thee the sheep told the wisdom of his tribe, and the deer and the buffalo told the wisdom of their tribes. Much wisdom hast thou, for thou hast many years. Give to us a year of plenty! Many years of plenty lie hid among thy cliffs. Much wisdom hast thou to bless the people, for thou failest not by age. Oh! Chief, bald is thy head and tall. Old art thou and mighty. Broad are thy shoulders, sky-kisser. Thy trailing robes reach to the plain and under thy fallen garments the years lie buried."

When Swan-bonnet finished, the auditors gave grunts of satisfaction and circulated the ceremonial pipe with energy. Some one told the orator of the arrival of the whites, and he straightway turned to them and proposed to pray for luck on their account, also, suggesting in return that the prayer maker should have something warm to drink. Scepticism as to the result of prayer or fear of the maddening effect of alcohol, induced the traders to decline this offer. Then the sage offered for similar pay to give the strangers names. An Indian earns his manhood's name only by some deed of horse stealing or man killing, some piece of prowess stigmatized as felony by the narrow statutes of sedentary people, while here was a chance to gain an honorable title without pains or danger; but, in spite of a feeling that he was becoming unpopular, Jake declined to furnish the required toll and stayed nameless. In truth Jake not only felt that his whisky was valuable for trade, but he knew so well the consequences of drink on the Indians that he wanted to be all ready to move before he began to distribute liquor. He showed prudence too in keeping out of the way of his kinsman by marriage, Last-coyote-but-one, who had brought his squaws and ponies to the gathering to lay up his winter's meat.

Whether Chief Mountain was pleased to exert its waning power by answering the petition of one of its few remaining worshippers, or whether other causes contributed to the success of the hunt cannot be exactly determined. Certain it is that meat and furs already abounded, and the closing scene did not fall behind the rest of the performance.

The last day of the chase began with clouds and wind. Far along the rolling bluffs the Indian line of riders strung out. Soon the buffalo sighted the advance and were off. The herd pursued was no compact body, but groups of two and three grazing, far and wide. The Indians rode at full speed, incited both by greed and honor, racing madly for the first and perhaps the only chance. For the buffalo, lumbering as they looked, would beat all the ponies going down hill; indeed, would slide and scuffle at high speed down slants so steep that a horseman hardly dared ride. On the level too the great beasts held their own well and only on rising grades would the hunters be able to close in.

Jake himself, though the gains he hoped for were chiefly those of commerce, shot much game. He rode a buckskin pony famed for speed, a pony which had been taught with some trouble to eat oats, and sustained by that tonic diet outdid even his former feats. In other ways the pony was noted. It was the very jewel of Jake's bunch, and had been stolen again and again from its owner, though he had always got it back by force or fraud. Indeed the horse had been taken and retaken so often that he had grown thin in the process, and only his exceptional fare kept him fit to retain his reputation. Thus mounted then, Jake led the line without much effort, singled out the fattest cows for himself, and, before the hunt was over, had killed 13 head to his own rifle, more than twice as many as any other hunter had secured.

This success begot envy. The Indians of heraldic learning now remembered that Jake could claim a Crow quartering in his escutcheon, and the Crow is an abomination to the Blackfoot. That buckskin pony, too, proving by his insolent presence the skill of the half-breed at their own game of horse stealing, was a thorn in the savage side. The refusal of the trader to give whisky to the Medicine Man the night before had angered the council of sages, and the clouds were beginning to sprinkle on the wind sharp icy flakes very irritating to the temper.

Last-coyote-but-one on his return to camp, filled with the sorrows of his race, fired by his own wrongs and his desire for liquor, went at once to the trader's wagon and demanded a ransom of whisky to soothe his injuries. Jake had not got back, and young Pitkin, who lacked the courage and decision of his companion, weakly yielded to the chief's insistance. The mischief was done. Jake, on his return, found the Indians to be sure in temporary retirement engaged in sampling the first fruits of their enterprise, but the attitude of the camp was unmistakably hostile. Surly looks, insolent demands, covert abuse, showed that the time for trade had passed, and that retreat was imperative. Night had fallen, and it might have been possible to get away with the wagon if caution and decision had been combined, but young Pitkin's courage, before doubtful, had ceased to leave any room for surmise. His nervous desire to conciliate the drunken hunters, led to fast increasing boldness on their part. The famous buckskin pony was taken, the wagon captured and the traders felt happy to get away in the snow and darkness on two horses, borrowed for the occasion. Nor was there much time left for mourning, after the weary riders had at length reached Jake's cabin. The elder Pitkin, who happened to be in the house at the time, said he was sure that the Indians would not rest satisfied with their cheap success. In fact, in this instance, the Blackfoot bands were stirred up by the efforts of Last-coyote-but-one as well as by their own longings for plunder and renown. The Kootenays had gone home, feeling that the matter was no funeral of theirs, but the rest of the hunting tribes not only coveted the contents of Jake's store and the scalps of its occupants for their comfort and honor, but they accused Jake of having poisoned their tribesmen. For in the night of the carouse that followed the capture of Jake's wagon several Indians had died. Probably they dropped stupefied by the ordinary venom of the drink and died of the cold, but Last-coyote-but-one persuaded his fellows that "bad medicine" had been treacherously mixed in the barrel to kill them all.

Under these incitements the tepees were hastily taken down, the poles tied to the ponies, the baggage of the party laden upon them, and a long, forced march was made in the direction of Merry's Crossing.

The people at Jake's, few in number and without horses enough to mount them, decided that it was safer to wait than to run, and soon their expectation of attack was justified by seeing a column of ascending smoke which announced the burning of Fort Pitkin. Almost at the same time the Blackfoot scouts had crept near enough to find out that there was no chance of surprising Jake's cabin, and vented their disappointment by a few shots, one of which passed through a window and slightly wounded old Pitkin, while another killed a loose pony on the prairie. Then the invaders retired and fixed their camp in the valley, in full sight but out of rifle range from the cabin.

All night the besieged kept careful watch, but it was not until early morning that any attack was made. The first disorderly rush was checked by a sustained fire. Then a wagon, captured at Fort Pitkin, was shoved ahead as a movable breastwork; but the hum of the bullets around the shins of the assailants and the splintering of the wagon boards proved too much for the nerves of Indians unused to stand fire even for a short time without a chance of fighting back.

Finally all assaults were given up, and the Blackfoot warriors seemed to have definitely accepted the idea of starving out the traders, or, at all events, of waiting for some better opportunity for surprise. Meantime within doors the attack had excited determined animation. Old Pitkin, crusty by nature and crustier by reason of his fresh wound, growled a good deal, and young Pitkin kept up a wail of consistent dispair, but Jake was everywhere. Fierce, reckless, insistent, he flit ed to every window and loophole, himself firing and directing the efforts of the defenders with excited zeal. As the wagon was seen advancing, and young Pitkin tearfully prophesied the approaching cremation of the cabin and its contents,

*This is one of the "Slide Rock from Many Mountains" series.

* Breed is the local contraction for half-breed.

Jake broke out, "Stop your bellering, young feller! What are you firing at the box for? Hit those fellers in the legs, you bet! Don't you know nothing?" The mixture of command and invective insured the adoption of Jake's plan and the defeat of the hostile maneuver; but when the hot blood of conflict had calmed down, the position of the garrison was gloomy enough to partly excuse old Pitkin's morose grumbling.

"That ere squaw," he began, "aint no use, Jake. She'll eat twice as much as a man, and we're short of grub."

"That's my squaw, old man," was the answer, "and don't you forget it, you bet! She'll take her share with the rest, an' if she eats as much as a man, she's more'n four times as good as some men."

Old Pitkin did not take up the inuendo clearly aimed at his own kin, but changed his ground and made an attack on the unoffending BeaverWoman still more malignantly.

"You aint married to that squaw nohow, Jake," said he, "and you're bound to shed her, and pay a big fine to the Territory besides."

For the Legislature of Montana, stirred by a sentiment of purity or desirous of filling the coffers of state, had actually passed a law making the unions of whites and Indians penal offenses unless a certificate of marriage were filed with the county clerk. Jake's uneasy temper was kindled to vehemence by the old man's speech, and fratricism and strife would have arisen had not young Pitkin soothed the quarrel by assuring both contestants that fines or imprisonments were trifling matters to people whose scalps would soon dangle from the Blackfoot lodge poles. Throughout all this discussion Beaver Woman had sat muffled in her blanket apparently resting from her exertions during the fight and unmindful of what was said. But an occurrence that happened in the night showed that the poor thing had deeply reflected over the taunts of old Pitkin, for in the morning the old man looked around and shouted out that Beaver Woman had deserted, pointing out her moccasin tracks in the snow leading toward the Indian camp.

Jake promptly resented the imputation of desertion and accused old Pitkin in direct and even insulting terms of being a meddlesome fool, offering to break his back, among other amenities, if he opened his head again. Nevertheless, the squaw was clearly gone, the garrison hardly better fed and weaker by one.

In truth Beaver Woman had stolen out into the bitter cold night, feeling sure that the Indians (who take every precaution against surprise except staying awake) would have no sentinel on the watch, with the intention of summoning to the rescue a detachment of troops that was stationed near the agency.

Only when she had sallied out did she see how ill-prepared she was for the journey. When day came the light snow would betray her tracks to the then vigilant enemy and she would be ridden down and sacrificed without accomplishing her mission. Then the idea of stealing a horse came to her. The Indian horses, to be sure, would hardly let her catch them without making a disturbance, but the buckskin pony was as familiar with her as a dog. Him she sought noiselessly, found him, patted him softly, coaxed him out of his captor's camp; mounted bareback and at daybreak was far on the road to the wished-for succor.

Last-coyote-but-one was indignant. His feelings embittered his family relations so that, while his harem dared not revolt, there was a feeling among them that such ears or other features as had not already been bitten off would be safer if they too should steal horses and seek the agency. From this air of domestic infelicity the chief sought relief in action. Buffalo meat was still plentiful, but the plunder of Fort Pitkin was running low and he yearned for a continuance of luxury. Sugar was gone. Coffee was gone. Tea did not suit his palate, and of the whisky only the enervating effect was left. The braves must be roused. One day must be devoted to the manufacture of "medicine" and the next to its successful use, and he registered a vow to exterminate the enemy.

Jake, after his fulminations against old Pitkin on the morning of the squaw's flight, settled himself down in clogged silence to prolonged literary effort. He cleaned off a corner of the counter, brought out supplies of ink and paper and began to toil seriously. Page after page of labored manuscript was discarded. He would carefully compile a series of dates, localities, and formulæ, supposed by him to have a legal look, would read over his production; ponder it; and then muttering "left something out again, you bet!" would consign the writing to the fire. At last he seemed to take a final decision, and, writing off with comparative speed a couple of lines, he put the paper carefully in his inside pocket, and turned with an air of relief to resume his martial duties.

During the day the Indians could be seen moving about and at last gathering in the largest lodge, whence issued at times the regular beat of rhythmic effort audible even at the cabin, telling of the progress of the religious rites needed for the making of "medicine." The wearied traders slept by turns during the day, thinking that the Indian preparations boded an attack in the night; but the watchful night again passed undisturbed and morning developed the Blackfoot tactics.

Isolated warriors crept up along the little gulches that seamed the plain, found the best shelter they could, and began to get the range of every window and chink in the cabin to silence the rifles of the garrison, while the wagon captured at Fort Pitkin was to be filled with dry wood, run close to the cabin and set on fire. Fortunately the ground around the house was level for a good distance and the sharpshooters had to take their posts so far off that their aim was inaccurate, but all the morning an annoying fusilade was kept up and two feeble attempts were made to move up the wagon.

The defenders, however, were in a miserable plight, short of food, short of cartridges, short of temper and much in want of sleep. It needed not the Cassandra moanings of young Pitkin, nor the growling of his elder namesake to show that the traders must perish if the Indians should at length try to fire the cabin in the night, as their momentary retirement, having the wagon in position, seemed to indicate. Jake, who seemed to need no rest and certainly took none, found it harder and harder to spur his men to exertion, either by exhortation or reproach. The depression of the Pitkins was catching.

About 3 o'clock in the afternoon young Pitkin, going to a window in a crouching position to take a peep, announced gloomily that the besiegers were getting their horses and that the whites might just as well give up; the Indians could close in before they had lost half a dozen men and carry everything.

Jake, who had run to the window poked his head out, commanded a wider view. "I knew it!" he cried excitedly. "I knew it! She went for 'em. They're coming, they're coming, you bet! Them Bloods know it if you don't. You don't see no Indians rustle like that in winter unless something's up, you bet."

Sure enough the Indians were busy and scarcely in a hostile way. Some were hurriedly striking tepees and lashing packs or travois on their ponies. Others, with higher regard for personal safety, were already riding far along the trail. Only a few aided their determined chief in preparing battle, while faint and clear in the distance now thrilled the ringing call of the bugle sounding its brazen orders; and soon the skirmishers topped the bluff, quickly followed by the command. Their rush was hardly resisted. Last-coyote-but-one still clung to his savage, but now hopeless resolution of exterminating the whites. He shut himself in a tepee and began that measured grunting, which is called the death song. Through a slit in the leathern wall he pushed his rifle and killed the first soldier who approached. The commander, unwilling to sacrifice men, brought up a small field piece. He had been using bad language during all the march at the senseless order which forced him to drag such ornamental lumber over the prairie, but now it served his turn. Two rounds of canister reduced the tepee to a mass of rags and silenced forever Last-coyote-but-one.

As the troops moved up to the rescued traders, old Pitkin caught sight of Beaver Woman sitting a-straddle of the buckskin pony in a most ungraceful bunch. Her black locks, straggling from under the blanket that covered her head, fell around a face drawn with weariness and exposure, and her joy at success was clouded by doubt as to the reception she would get.

Old Pitkin, whose sullen enmity was stronger than his sense of probability, really thought that the squaw had sought safety by a double desertion, siding always with the victors of the hour. His evil temper conquered the pleasure he should have felt at his wonderful deliverance.

"Now then, Jake," he shouted angrily, "I reckon you've got to shed that squaw. We won't have no such draggle-tail spy 'round, noway. Come on now, boys, we'll break a hole in the ice and duck her anyhow, and send her to join her good relations."

Jake, who was hurrying forward, stopped, and, giving the old man a sounding blow, burst out into angry declamation. "I don't shed not squaw, you bet! And no man don't touch to hurt her, neither. I've got eight shots, you bet, in my Winchester for any outfit that wants to try on any ducking racket. I've got the certificate wrote out," he continued, flourishing a paper excitedly, "and to-morrow it goes in, and she's my wife, you bet! same's any white woman in the bunch."

Filed among the valued records of Choteau county, Montana, may be found the following document:

"*This certifies that Beaver Woman is my wife, you bet!*"

The formality of signing this instrument was forgotten, but no one has ever ventured to doubt its validity.

Natural History.

HABITS OF THE WHITE GOAT.

BY JOHN FANNIN AND GEO. BIRD GRINNELL.

[*Continued from Page 33.*]

THE white goat is gregarious in habit, and yet we have never seen it in large bands, as is the case with the elk, the antelope and even the mountain sheep. The only record of anything like a large herd is that furnished by Mr. J. C. McKinnon in a previous chapter, and of this occurrence it must be said that the animals reported were seen at a great distance, and that there is a possibility that they may not have been of this species at all. We have never seen more than twelve or fifteen individuals together at one time, and even this is unusual. It is, however, very common to see groups of from two to six feeding in company. These are usually old females with their young, or young females of one and two years old, which have not yet bred. The males appear to be much more solitary in habit, and to prefer to keep quite by themselves. No doubt as the rutting season draws near they gather about them groups of females. Only on one occasion, however, have we seen an old male in company with several females. This was late in November.

We are unable to state precisely when the rutting season occurs, but presume that it is in December. The young are born—in the main range of the Rocky Mountains at least—in the month of May. A very young one was caught by a Cree half-breed named Burd on May 23, 1889. Its mother having been shot, it remained by her until captured. This animal was very small, its body being only about as large as a cat. The Indians say that two young are sometimes brought forth, but we have never seen more than one following the mother. The female does not breed until she is two years old past. This is the testimony of the Indians, and it is confirmed by our own observation, for we have killed many two-year-old females and have never seen one that had bred. The growth of the young is rapid. At three months old they are well able to keep up with their mothers in climbing the mountains. They continue to suck and to follow the mother late into the fall, and we are ignorant when they are weaned. The horns of the young males appear to grow much more rapidly than those of the females. The latter in October have only short knobs, less than an inch in length, while on young males of about the same age we have seen horns four or five inches long.

The food in summer consists mainly of grass, a species of moss which grows high up on the mountains, and the tender shoots of the low-growing mountain willows which abound in the moist ravines, which are found high up on the steeps which it frequents. An examination of the contents of the stomachs always shows an abundance of woody fiber, which consists largely of the tips of these plants. In the winter they eat pine needles and the twigs of a plant known in the West as "buck brush." Mr. L. L. Bales informs us also that they feed on the soft bark of young fir trees. On the whole, however, little that is definite is known about their food, and a careful analysis of the stomach contents is greatly to be desired. The dung under ordinary conditions may at once be recognized by the shape. It takes the form of pellets, which, instead of being ovate or ellipsoidal in form, are smaller at one end than the other, and take the form of a spherical triangle.

The rugged character of the region inhabited by the white goat is its chief protection. It is not swift of foot like the deer or the mountain sheep, nor is it provided with any special means of defense against the attacks of its enemies. Yet along the steep precipices and among the rough rocks where it has its home it can move as rapidly as almost any animal which may pursue it; and if driven to bay, it has abundant courage and can effectively use the short, sharp, awl-like horns with which the head is armed. A dog or a wolf can readily be tossed over a precipice by a swinging blow of the long, low-carried head, though against a larger animal like a bear or a cougar the goat could make but a poor fight.

Among themselves the males have pitched battles which are often severe. We have never seen one of these, but instances are recorded where horns broken off in battle have been found encysted in the flesh of males that have been killed. The long, shaggy coat and the very thick hide of these animals protect the combatants to a great extent from severe injuries.

We have known of a few cases where, when the white hunter had unexpectedly come close upon one of these animals, the creature has advanced toward the man with bristling hair and threatening carriage; but of course in all such cases the goat has been killed.

Among hunters the white antelope has the reputation of being a singularly stupid animal. It has neither the keen sight of the antelope nor the quick ear of the mountain sheep. Its powers of scent are, however, very good.

The eye is small and flat, thus differing markedly from that of many other of our herbivores, in which the eye is so prominent that it almost seems that the animal can see behind it as well as front. Its habit of carrying the head low is no doubt one reason why it cannot see well, or, at all events, is slow to detect moving objects which are in plain sight.

While its failure to hear sounds, or at least to pay attention to them, may in part be due to the fact that, in the situations which it frequents, rocks are continually rolling down the mountain sides, and landslides and avalanches occur so often that they are common noises of the mountains; yet we are inclined to believe that the white goat is often partially deaf. On several occasions we have noticed, in skinning these animals, that their ears were full of wood ticks. In a single specimen we have counted more than twenty of these insects, of all sizes, deep down in the cavity of the ear, many of them so gorged with blood as actually to stop up the auditory canal. Indians have informed us that sometimes persons get wood ticks in their ears, and that when this takes place the person so afflicted becomes deaf until the parasite is removed. Whatever the reason, it is certain that the white goat displays little of the alertness and watchfulness that characterize most of our game animals, and that it may be approached by the hunter with less caution than any other of them.

[TO BE CONCLUDED.]

BREEDING MINK.

CHATTANOOGA, Tenn., July 28.—*Editor Forest and Stream:* In answer to your correspondent "R. P. S.," in FOREST AND STREAM of July 24, I will say that my father about twenty-five years ago in western New York made quite extended experiments in breeding mink, and with considerable success, enough at least to warrant the belief that these animals can be bred successfully in confinement if properly managed.

My father had at one time thirty mink, mostly of his own raising, and they were as tame and easily handled as so many kittens, but the decline in furs and consequently somewhat of our enthusiasm in the enterprise, and our subsequent removal to Tennessee put an end to the experiment. We lost a number, I remember, toward the last by feeding them too much beef's liver. The little animals were exceedingly fond of liver, and we threw into the yard one day a whole beef's liver, on which they gorged themselves for several days. This brought on a kind of dysentery, of which a good many died. We also lost a number from no cause that we could ascertain, but which I now believe was from keeping too many confined in too small a space. The mink is a solitary animal by nature, and when too many are by force congregated it brings on contagious diseases among them.

Our inclosure was at first about four or five rods square and surrounded a clump of small spruce trees, and had a stream of water constantly running through it in a box about a foot wide and the same depth. Later we found that the animals had to be separated most of the year, for they are vicious fighters, especially the old ones, and thus the inclosure was divided up into small compartments. The outside was an upright tight board fence 6ft. high, resting on a stone wall one foot below the surface, with flat stones at the bottom projecting in, also with a board a foot wide projecting inward from the top, and the corners lined with tin. Then to insure their not climbing out we used to clip the two front nails of the forepaws. If this is done when the animal is young, and the nail clipped close up—that is, taking off the end of the toe with it—it will not be likely to grow out again, and this quite effectually spoils the animal's ability as a climber or digger.

As a boy, it was my part of the farm chores to look after the "minkery," and an agreeable duty it was to me in many respects. The feed consisted almost entirely of woodchucks, in which our section of western New York abounded, and many an afternoon the excuse of being out of "mink bait" was sufficient to let me off about milking time, and many a poor woodchuck fell a victim to my little smooth-bore at short range. The young ones were fed mostly on milk, lapping it up greedily like young puppies.

A young mink is easily tamed, and they are the most cute and playful little creatures in the world. They will play together for hours at a time, rolling and tumbling over each other in the water and out in the most amusing manner. They were sociable and friendly and seemed delighted when I came into the yard to see them. They would crawl all over me and up my coat sleeve and pantaloon legs, and let me feel of their sharp needle-like teeth without offering to bite. I have seen them rolling and tumbling in the water, when one would

stretch out and appear to be dead, and the other seize him by the nape of the neck and drag him out of the water and several feet out on the ground, when the "dead" mink would suddenly jump up and they would both scramble into the water and reverse the performance.

Like all meat-eating animals the mink would gorge themselves with enough at one time to last them two or three days, and during such periods they are stupid and quiet, spending most of the time asleep, and when handled will lazily open their eyes and stretch out and go to sleep again. But let them once get fairly hungry, and they are about as lively a varmit as I ever saw. At such times it is best to be careful about feeding them bits of meat from your hand, for they are liable to grab hold of your finger instead, and then, a mink will beat any bull-terrier that ever lived in the matter of hanging on, and a dozen tomcats cannot do as lively snarling and scratching. You may swing them around, rap them against the fence or duck them under the water, they will still hold their grip, and nothing but a good strong choking until the breath is fairly gone will induce them to let go. It has been a long time since the war, but my finger still bears the marks of such a contest.

C. L. Stratton.

[The Nova Scotia game law has a provision that minks (which are otherwise protected at certain seasons) may be caught at any time for breeding, and that when so captured they become the private property of the captor. We shall give further notes on this subject.]

THE ENGLISH SPARROW QUESTION.

If the English sparrow is such a serious problem in economic science in this country as has been claimed by some, then it is remarkable, as suggested by Forest and Stream in its issue for the 17th of July, that such a "foolish indifference to the subject" is manifested by the agricultural community. That the farmers pay little attention to *Passer domesticus* is evident to all who are in the habit of reading the agricultural papers. Now and then some one calls the sparrow a "pest," and charges it with a long catalogue of crimes, just as ten years ago was the case with the robin. So, too, about corn-planting time, even now, some one will rise to ask if the crow is a useful bird, and, if it is not, how can it be prevented from pulling up the newly-planted maize. And then the editor will wisely repeat what he has been in the habit of saying every spring since he started his paper: That coating the seed-corn with tar or lime will cure the crows of their pulling-up prospensity. And thus the crow question is laid until the next subscriber makes the same inquiry.

To Dr. Elliott Coues, of Washington, D. C., belongs the honor of discovering that the English sparrow will eat the Americans out of house and home, destroying the fruit crop, leave all noxious insects untouched, and drive from their haunts all of our native birds. Since Dr. Coues pointed out the dire calamities, the sparrow question has been a topmost subject in ornithological circles, and has provoked some discussion in legislative halls, as recently beneath the gilded dome on Boston common. The new Massachusetts anti-sparrow law gives permission to kill the English bird, provided it is not poisoned, and that those who kill in the name of the State do not enter upon private property without leave from the owner. What inducements are held out for the killing I do not know, but the provisions of the law mentioned are very wise ones for the preservation of the sparrows, and little harm will come to them under the circumstances.

It seems that a Mr. Bicknell, of Boston, induced the Legislature of the Old Bay State to request the Board of Agriculture of that State to make "inquiry and investigation as to the birds that inhabit the State, and report thereon as to their character, habits, and value as insect destroying and grain and fruit destroying birds."

This will prove something of a job if the investigation is to be thoroughly scientific. It will be necessary for the Board of Agriculture to establish a corps of ornithologists, called a "division," and a laboratory will have to be built, field agents will have to be employed, and a vast amount of information collected. It will take a couple of years, if not more, with all this force, to determine the status of *Passer domesticus*. One field agent should be established in the Berkshire hills to study the habits of birds in that part of the State; another should walk the sands of Cape Cod and Cape Ann, for the same purpose; another should study the fauna of the Connecticut Valley, while a fourth agent should study the habits of the sparrow in Boston, Lowell, Lawrence, Springfield, and other cities. All this will cost a pretty bit of money, and provision must also be made for the publication of bulletins, annual reports, author's editions, preliminary reports, etc., etc.

I believe Massachusetts has an agricultural college, with a corps of professors, laboratories, chemists, biologists, microscopists, ornithologists, stenographers, etc., and it would seem as if this institution should enter upon a scientific study of birds, if it is to be done at all by the State. As long ago as 1884 Mr. Charles S. Plumb, of the New York Experiment Station at Geneva, N. Y., began a systematic study of the sparrow. He examined the contents of many sparrow stomachs, fed them in captivity to learn what they would eat when driven to it, and came to the conclusion that the English sparrow "is essentially an omnivorous eater, with a decided preference for wheat and oats." And this, probably, is the whole story of the sparrow in a few words.

But why should any State engage in this specific work when it is being done at the public expense by the Department of Agriculture at Washington? The division of ornithology in that department was established for the specific purpose of studying the economic relations of mammals and birds which are beneficial or harmful, and as a result the first farmers' bulletin, "The English Sparrow in America," was issued over a year ago. Can it be possible that members of the Massachusetts Legislature have never seen a copy? It is a compact volume of over 400 pages and contains a map showing the distribution of the sparrow at the end of the year 1886. To be sure that is over three and a half years ago, and the sparrow must have distributed himself considerably since that time, since it is estimated that he spreads himself over nearly 60,000 square miles each year. This sparrow bulletin covers the whole ground, including history, public opinion, effect of legislation, shooting, poisoning, injury to buds, fruit, vegetables, seeds, grain, etc., also the relations the sparrow sustains to other birds and insects. It is to be presumed that the habits of the sparrow are the same in Massachusetts, in so far as buds, fruits, birds and insects are the same, that they are in other States, therefore the work asked for by the Legislature of that State having been done already in Washington, why undertake the task again? The official sparrow bulletin of the U. S. Department of Agriculture might profitably be reduced to a pamphlet of twenty pages or so, giving the sum and substance of the practical results obtained, which is all the farmer or horticulturist wishes to know, and in this form it could be widely distributed in Massachusetts. Only about 8,000 copies of the big 400 page bulletin have been sent out for the whole United States. This is a much too slow and cumbersome method.

Washington, D. C. Dr. Fuller-Walker.

POINTER DOG AND MOTHER DUCK.

Eli is a thoroughbred pointer, a native Texan, and resides in Burleson county of the Lone Star State, and justly enjoys the honor and distinction in his locality of being an expert in never failing to point out the woodcock, quail and jacksnipe. From the beginning of November to the end of February he is on duty in the sporting field, and the remainder of the year reposes in the shade about the house, or slumbers in the fresh-plowed earth about the farm, apparently oblivious to the exciting sport of the past or that which awaits him in the future. He is always courteous, and when loitering about the farm seems to keep a "ceaseless vigil" toward his master, in testimony whereof he is ever ready to bring back the rolling hat when carried away by a puff of wind. But the most deceptive and exciting episode in Eli's history now begins.

A few days ago, just after I had passed through the farm gate on my way to dinner, I heard Eli spring some game to my left. I looked and saw something decidedly larger than a quail just ahead of him and coming directly toward me. I stood perfectly still and they came within two feet of me. It was a woodduck, down on a level with Eli's head, and the tip of its short tail feathers were nearly or quite between his open lips, and I saw it turn its head and look round to one side, to see if it was far enough from his mouth. Its wing stroke was graceful yet feeble, and I thought it would fall and be crushed to death by the dog in a moment, when the thought occurred to me that it had left young ones behind. But I witnessed this close race between duck and dog 300 or 400yds. till they passed out of sight; and knowing the dog would come back to see if there were any more, I waited to keep him from killing the young ones if possible. Going to where he had flushed the old one, I heard the young ones crying about in the weeds and grass. I waited for the dog's return. I had scarcely a minute to wait till the dog came, tongue out, panting.

Just as he stood or pointed on the first young one, the old duck seemed to fall paralyzed on top of his head; and of course that claimed all of his attention; and away they went again, and, if possible, the duck was this time closer to his nose than before. I had nothing to do but laugh and await the return of the dog, for I knew he would come back. The mother evidently led him a great way off that time, for they were gone about fifteen minutes, when I saw Eli coming apparently much exhausted, and in her soft, feeble, noiseless way the duck some 15 or 20ft. behind him. I was within 10ft. of the dog when he arrived at the spot where the young ones were; and just at that moment the matron gave him a flap on the head with her wings and seemed to fall on the ground under his nose again.

This insult, linked with his ambition to catch her, gave him new courage, and out they pulled for the third heat. They came toward the house this time, and for 200yds. I could see duck and dog as if fastened nose and tail. The impression left was that the dog had the tips of the duck's tail pinched in his front teeth, knowing that if he relaxed his hold for a better one he would lose the bird; and that a slender mouthful was better than none; and that he would hold to it if he had to run to do it. Again I waited a long time for Eli to come back. At the end of perhaps twenty minutes I started to the house, and about 300yds. I met him, completely exhausted and willing enough to go to the house with me.

This was the most laughable incident of my whole life, and had I not witnessed it I never should have believed in the existence of such courage, perseverance and intelligence in a duck to save her young ones from destruction.

Texas. A. B. H.

The Red Squirrel of Washington. — Quilcene, Washington, July 20.—*Editor Forest and Stream:* The little red squirrel has almost entirely disappeared from around me. They were thick last year, but the fire that ran through the woods last fall burned up all their little pockets of hemlock seeds that they had stowed away in every little cranny and hole in stumps and under logs. The fire burned these all up and the long continued deep snow was too much for them. They are wiped out. I am glad, for they were great foragers. Birds' eggs were tidbits they were extremely fond of. A neighbor of mine had a hen that laid eggs under a log a few yards from the house in the edge of the timber and he missed the eggs, so as soon as he heard her cackle he would go and look for the egg, but it would be gone. One day he took his shotgun and watched from a point where he could see the nest. When the hen came off she came scampering up the log and a squirrel came in sight, went to the nest, and began to roll the egg away. My friend watched him till he had rolled it some little distance from the nest and began to make a meal of it. He waited until the squirrel broke the shell and then the shotgun went off. He missed no more eggs.—C. B. P.

Woodcock in Town.—Brooklyn, Aug. 2.—*Editor Forest and Stream:* In November of 1889 you published over my signature an account of a woodcock killed with a tennis racket on the grounds of the Brooklyn Athletic Association in this city. On the morning of June 1 one was found in the yard of Mr. F. I. Munson, 180 Willoughby street, corner Fleet street, Brooklyn. It was alive when found but died in a few hours. It was a male bird and in poor condition. As it is not the season for the flight of these birds, it seems somewhat strange for a bird of such retiring habits to be found in such a crowded part of the city. The bird was seen alive by Mr. Zack Green and Mr. N. G. Scollay, and a short time after it died was given to me. Hy. J. Growtage.

Dr. Merrill.— We note with pleasure that our correspondent Fred J. H. Merrill, Ph.D. (Columbia), has recently been appointed by the New York State Regents to the position of Assistant Geologist for the State of New York, with headquarters at Albany. He will here be associated with Prof. Hall, the veteran State Geologist, whose fifty years of service have been highly appreciated. Dr. Merrill is now in Europe studying the National museums at London, Paris, Berlin and elsewhere, with a view to introducing their improved systems into New York's museum. Dr. Merrill is the son of Major H. W. Merrill, late U. S. A., who, graduating at West Point in the class '38, served in the Seminole and Mexican wars under Gen. Taylor and Gen. Scott. He was a captain commanding the mounted body guard (Co. B, 2d Regt. U. S. Dragoons) which escorted Gen. Scott from Tacubayou into the City of Mexico, Sept. 14, 1847. Major Merrill is well known to our readers as the author of numerous valuable papers contributed to the Forest and Stream, chiefly on rifle trajectory and other shooting topics. He still recalls with pride the conduct of his valiant Co. B. in the Mexican campaigns. Co. B is now of the 2d Regiment of cavalry.

Recent Arrivals at the Philadelphia Zoological Garden.—Purchased—One golden agouti (*Dasyprocta aguti*), one skunk (*Mephitis mephitica*), two black swans (*Cygnus atratus*), sixteen common iguanas (*Iguana tuberculata*), one banded rattlesnake (*Crotalus horridus*), one ground rattlesnake (*Crotalophorus miliarius*), one pine snake (*Pityophis melanoleucus*) and one green snake (*Cyclophis vernalis*). Presented—One brown capucin (*Cebus fatuellus*), one opossum (*Didelphys virginianus*), two red foxes (*Canis vulpes fulvus*), one Cooper's hawk (*Accipiter cooperi*), three red-tailed hawks (*Buteo borealis*), two fish hawks (*Pandion haliaetus*), two sparrow hawks (*Falco sparverius*), one screech owl (*Scops asio*), one barn owl (*Strix flammea americana*), two American magpies (*Pica candata hudsonica*), one brown pelican (*Pelecanus fuscus*), one Canada goose (*Bernicla canadensis*), one night heron (*Nycticorax griseus nævius*), three alligators (*Alligator mississippiensis*), six crowned horned lizards (*Phrynosoma coronata*), two black snakes (*Bascanion constrictor*), one hog-nosed snake (*Heterodon platyrhinus*), three painted terrapins (*Chrysemys picta*) and one spotted terrapin (*Chelopus guttatus*). Born—One buffalo (*Bison americanus*) one Virginia deer (*Cariacus virginianus*) and twenty-three banded water snakes (*Tropidonotus fasciatus*).

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

The following guns have been tested at the Forest and Stream Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

Clabrough 12, May 1, '90.	Parker 10, hammer, June 6, '89.
Colt 12, July 25, '89.	Parker 12, ham'rless, June 6, '89.
Colt 10 and 12, Oct. 24, '89.	Remington 16, May 30, '89.
Folsom 10 and 12, Sept. 26, '89.	Remington 12, Dec 5, '89, Feb 6, '90
Francotte 12, Dec. 12, '89.	Remington 10, Dec. 26, '89.
Greener 12, Aug. 1, '89.	Scott 10, Sept. 5, '89.
Greener 10, Sept. 12-19, '89.	L. C. Smith 12, Oct. 10, '89.
Hollis 10, Nov. 7, '89.	Whitney Safety 12, Nov 6, '90.
Lefever 12, March 13, '90.	Winchester 10 & 12, Oct. 3, '89.

DEER IN ADIRONDACK LAKES.

In the woods, Hamilton County, New York.—Louis says he has shantied at this lake for seven years, not in this open shanty in winter. This, however, is very comfortable for this time of year, September, although I appreciate just now the roaring fire in front, heavy wool blankets around me and balsam pillows at my back. My wet clothes are hanging up between me and the fire.

Well, it was like this you see. This was to be an off day with us so we had a late breakfast, and afterward started for exercise and amusement as our fancy dictated. I took a boat and rowed out to a large rock, thinking I would land and examine the gulls' nests. When the end of my boat grated on the rock I placed one foot out upon it and although it appeared to be quite solid, it seemed to move away a little distance, and having neglected to remove my other foot from the boat I suddenly sat down in about 4ft. of water. Oh yes, I had plenty of encouragment and advice, especially advice, some of which I have taken; and they (that is the Doctor and the Old Soldier) have gone on their way apparently satisfied, leaving me here at the shanty with Louis. The other guide is at the other side of the lake looking after the jerking of the venison.

We have been here now fourteen days and in four days more expect to be out 25 miles from here, where they live in houses. Time passes quickly, though it be crowded full with pleasant and stirring events. One can't be idle here; if we can't be having some kind of sport we must be recounting it.

Our grand sport here is after the deer; and as they come toward one through the water, with big antlers and large red eyes, as the one had that I saw yesterday, it is quite likely to quicken one's circulation I can assure you. Yesterday we had the great chance of the trip and brought in two of the most beautiful deer we ever saw.

Our hunting grounds here contain four lakes as beautifully arranged as one could wish. The Big West, in front of the shanty, over which we see the sun rise in the morning, is about two miles long by three-quarters wide. In the rear of the shanty we take a trail over a steep hill about a mile to Brook Trout Lake. From the east end of the large lake to the south an easy trail of half a mile brings us to the South Lake. These are beautiful lakes of deep clear water, with forests of dark spruce and lighter firs, generously interspersed with autumn-colored leaves of maple and other hard wood trees, coming down to the water's edge on every side. From the east end of the large lake to the east about a mile is Mud Lake, which is covered with lily-pads, and over considerable of its surface a boat is pushed with some difficulty. This we reached first on our way in and there we stopped for our first hunt of two hours without success; but we were not without meat, having been given a quarter of venison by a party of good fellows we met on their way out. Our supply was first replenished by a fine little buck, which fell an easy victim to the Doctor's fatal aim in the Big West. W. expected at that time himself to keep us supplied, but greatly to his dissatisfaction, be it said, that was the last and only deer he brought in, although he shot at several at (as he says) very long range of course.

The next day a fine little deer was brought in from the South Lake, which the Old Soldier claimed to have surrounded. In the third chase I made a record, succeeding after shooting five times, in driving a deer out of Brook Trout Lake. There were some things about this chase I

didn't quite understand, even after it had been explained by all the party at the camp that evening. "When the wind is blowing hard don't shoot over the side of the boat, but over the end; get the deer to windward, then push the boat instead of pulling it, coming up close behind the deer and shoot over the stern." From this advice and comments I culled the above as reasonable and apparently practicable.

My next lesson was on the South Lake. It was a beautiful day, though a little chilly with a strong east wind. This is a long and rather narrow lake, running east and west, inclosing three small islands. I was directed to watch from the middle island. After watching about two hours, being obliged to stand in a very exposed position, and remarking how much easier, if it became necessary, I could row toward the west, I concluded to move to the east island. This consisted of a low long ledge with a cleft facing the south shore. Raising the stern of the boat rather high in the cleft I made myself very comfortable. (For thus moving I was at night reprimanded by Louis, for in hunting deer the party should be under almost military discipline.) I had watched here about an hour and had just eaten my lunch, and was feeling as fully contented as it is rarely the lot of man to be, when I discovered a dark head with long ears moving slowly through the water directly toward me from the south shore, quite a long distance away. My gun was in the boat with its muzzle on the stern seat. I quickly but carefully took off my coat and hat and placed them with my blanket in the bow without a particle of noise. I then lifted the stern from the rock and let it down into the water and waited, not many minutes, however, for it is wonderful how fast they push themselves through the water. I could soon see it was a doe, and I judged the contest would be close, but determined to keep as cool as circumstances would permit and do my best. With a sharp push against the rock my boat glided out into the lake and the chase commenced. The doe quite promptly took up her position to windward, and although I was in deep water, I concluded to open fire at the first shot. Well, I see loons dive here often, but never one go under water more quickly—not a hair nor drop of blood to show a deer had once been there. I had been told, of course, to drive the deer to shallow water, but I expected to shoot more than once. What should I say at night? No one has seen me, but they had heard me fire; and to say I shot at anything but a deer would be greater disgrace than to have lost one.

Although this chase was short I was somewhat out of breath when I again got in position on the island and glanced away down to the east end of the lake. Lo! there is another deer, and apparently making for a point of land on the north shore, about five hundred yards distant. Quickly making ready, I pointed for the same place also, and pulled for dear life. After making nearly the distance, on turning my head to one side I discovered the deer, a very large doe, making her way toward the south shore. The lake was quite narrow here, and it was only by effort that I turned her back from the shore, and in haste fired both barrels over the side of the boat. Each of us being under way and in opposite directions, we were not as near together as one might suppose. Hastily reloading one barrel only, I succeeded in swinging the boat in front of her again as she reached the north shore. In the excitement I fired again over the side with the same result. As I now reloaded both barrels the doe was making her way toward the east shore, and by the time I got under way she was bounding in the shallow water; I gave her two parting salutes as she bounded over the brush ten feet high and disappeared in the forest. Of course I can now see how I might have had that deer just as well as not, if I had only managed right. They say I was rattled, May be.

Greatly depressed in spirit I slowly found my way back to the cleft and chewed the bitter cud of defeat. Soon a peculiar-looking object on the surface of the water near the south shore attracted my attention. It looked something like an old felt hat, and was slowly drifting to the forest. A strong suspicion that the object might be of interest on closer inspection finally induced me again to leave my watch and push over to that vicinity, where I found the floating body of the deer I had caused to disappear so suddenly beneath the waves two hours before. As I slipped a strong string around one foot of the deer and fastened the other end to the boat I heard W.'s voice calling from the landing. The hunt was finished. It was now two o'clock.

Leaving the deer at the landing, five minutes of brisk walking brought us to the Big West, where we found the Old Soldier and one guide just come in with a dog, whom we enlisted; and in a few minutes we were trailing the big doe where she jumped over the brush. We discovered blood and concluded she would not go far before lying down. W. and I were directed to go east to the creek, he to follow it up to the outlet of Mud Lake, I down about half a mile to an island where I had had great sport killing a large deer a year ago. Time was pressing and the trail was rough. As I knew this would be the case I had left my coat on the shore of the Big Lake. When I reached the island, about 3 o'clock, I was perspiring freely. I hastily kindled a fire in between some large stones where the blaze would be hidden as much as possible, but the guides say the deer are seldom frightened by a fire; a strong breeze was blowing down the creek, and I soon found the fire acceptable even with some smoke. After shivering here until half-past five, the time agreed upon, and hearing nothing, I started to return to the South Lake. The trail is even more difficult to follow up stream than down, as the ice and flood wood in high water causes all the brush to point down stream. Lost the trail two or three times, and finally reaching the lake found no one there. I shot off my gun, kindled a fire and waited. In about half an hour I saw a boat coming toward me. The dog had been unable to start the escaped doe. The guide had carried the other deer to the ice house. We found W. at the east end of the Big Lake, and were soon in sight of the camp-fire and could almost smell the products of the culinary art awaiting us, fit for a monarch—fried venison, boiled potatoes and turnips, all grown on our hunting grounds; griddle cakes and maple syrup and tea (Louis's sugar orchard is also here in sight of the shanty). Then followed or rather continued a discussion of the sports of the day, soon interrupted by the Doctor making a lunge for his bunk and striking his head against a rafter that came within about 2ft. of his pillows at the back part of the cavity. He was requested to be more careful hereafter, as the roof was only made of spruce bark. A little bathing with extract of hamamelis and a good deal of groaning seemed to relieve his mind and head. Soon silence and night reigned supreme. Deep in the night we were aroused by a terrible storm of wind and rain. The roaring of the wind through the trees was something grand. Next day we all stayed in camp and a slight rain would not have kept us there.

Not many days later, another hunt being in order, I was again stationed at the South Lake, this time on the west of the three islands, as it was expected if a deer came in he would come in near the west end of the lake; but the guides, though wise in woodcraft, cannot always tell just where a deer will run. After enjoying the beautiful scenery surrounding the mirrored surface of the lake until past noon, and hearing two rifle shots on the Big Lake, which was guarded by the Old Soldier, and consequently knowing we had meat for the morrow, I was about to relax the vigilance of my watch, when glancing away to the east end of the lake I saw something that reminded me of a deer bounding along the marsh; and passing to the north behind the middle island, half in doubt, I made ready for the boat. When looking again I saw a large bird flying in the opposite direction near the same place, and about concluded that that was what I had first seen; but still watching carefully, I soon saw a dog come down on to the marsh and heard him bark. Then I knew a deer had been there and was probably now in the lake. Another glance before pushing off, and I discovered a little head out from the middle island and coming straight toward me. Standing perfectly still until he came about half way between the middle island and the one I was on, I gave chase. Firing two shots convinced me the cartridges were loaded no stronger than the ones I had used before. He being now headed toward the middle island, I decided to let him land and take him broadside as he came up out of the water. I did so; but he bounded on into the brush. Throwing out the empty shells and pushing in two more of those contemptible cartridges (have to lay it to something, and it couldn't be poor marksmanship), I glided down on the south side ready to renew the attack. No deer in sight, and quickly rounding to the north side, still the same. In this way I circled the island two or three times, and concluded that the deer, being frightened, had skulked in the brush. Landing on a point from whence I could quickly get into action by water on either side of the island if it again became necessary, I cautiously proceeded toward the center of the island, where to my surprise I found the deer dead.

The next few days were passed eating and smoking, gathering spruce gum, fishing, photographing, shooting small game and eating and smoking. After which Louis proposed that we have one more grand round up, and if possible get a big deer, a few choice cuts from which to dry and take home with us. He and John were to take the dogs up on to the mountain to the north, from whence if a deer were started they said he would run into this or Mud Lake. W. determined to take me with him for luck and to prevent the deer from mutilation. Reaching Mud Lake only one boat could be found, the other having probably drifted away during the storm. The best place to watch from was a small island at the south end, commanding almost a full view of the lake proper and also a narrow stretch of water and marsh on either side, leading east and west, and also the outlet of the lake. W. had had great sport at this place on several occasions before, and not having full confidence in my cartridges I willingly consented to land him on the island. Retaining the boat I proceeded to a point on the east shore near the north end. About eleven o'clock we heard a dog making music on the mountain side, coming toward us, but finally turning back. Soon we heard the Old Soldier making terms with the enemy on the big lake. Again we heard the dogs, and at intervals for an hour or two. About one o'clock I saw the deer come into the water not far from me on the north shore, a big buck, a noble fellow, with a veritable rocking chair on his head. He was so near I remained perfectly quiet till he reached a point in the lake that I judged would be his furthest from land, then I made ready in a hurry and pulled for all I was worth, or certainly very nearly all I was worth, for when I had time again it was with difficulty I could even pull my breath. Six empty shells were in the bottom of the boat and W. had unloaded his Winchester repeater, at very long range of course.

We parted with the buck at the edge of the balsam grove on the southwest shore. He was not feeling well; I suspect he was thoroughly tired out jumping in that mud. I drove him all over the lake trying to get him within range of the Winchester. I shouted to W. to come to my assistance. It then occurred to me, and I think to him also, that he had no boat. A consultation was held and W. was dispatched to the shanty for a dog. I was directed to retreat to the north, where my hat was peacefully floating on the surface of the lake, and collect my scattered forces. As I recovered my hat I perceived the guides and one of our four-footed colleagues coming down the marsh on the west shore. My report was not very cordially received. "For all that," as Louis says, "we will go down and see where the deer went out." We found blood and soon the dog commenced to sing out. Louis shouted to me to get back on to the lake and they would have the deer there in five minutes. John had a shotgun, the report of which I soon heard. Out came my deer on to the marsh and seeing me turned again into the brush, the dog following. Soon the deer was brought to bay in the shallow stretch of water west of the island. In a few minutes John fired, and back the deer came and stopped in the water just south of the island. With the dog on the bank at his head he was as pretty a sight as I wish to see. I would have ordered a charge immediately had I not just received a signal from Louis, who had taken John's gun and was creeping up from the southwest, to retreat further into the lake; but the intelligent buck was not to be persuaded into the mud again. Just then he saw Louis and made a dash up the water leading to the east. As he passed me I fired twice; but on he went out of sight, closely followed. While he was standing by the island I dared not fire, fearing to hit the dog. Soon we heard Louis's well known cry of victory and taking the boat around the point of land found him just bleeding the deer. As we returned to the lake with our well-laden boat W. and the Old Soldier were standing at the balsam grove. W. appeared to have something on his mind and coming through the grove as the guides fell behind with their load it came out like this, "You'll not catch me watching on an island again without a boat, nor leaving my watch until the hunt is finished."

Well, here they come now across the lake and it is well, for the guides have supper nearly ready and it is most too dark to write. What is it W. holds up as they come up the hill? A young bear? No, I see it is a hedgehog, but nearly as big as a cub. GEO. W. ANDREWS.

NOTES FROM THE HUB.

BOSTON, Aug. 2. Dr. J. A. French of Boston has been hunting and fishing in Stratton, Maine, and he reports a remarkably fine time. He succeeded in taking all the trout he desired, ranging in weight from one to three pounds. He says that he never saw as many deer in his life. They were seen morning and evening, as they came out into the openings to feed. A large bear also fell to his good luck in hunting. The proprietor of the Globe Nickel Plate Works, of Boston, has just returned from a three weeks' vacation in camp on a pond in New Hampshire. The fishing is so good up there that the gentleman does not desire to give its name and location for pubication. But it is easy to conceive how the good fishing peculiar to the season is possibly attributed to the pond in this. Mr. Philbrick, of Wentworth & Philbrick, has recently returned from his vacation at "the old haunts" in New Hampshire. He reports catching 960 trout of good size—larger than he expected—in the streams he fished. Little Frank Moody, son of Prof. J. F. Moody, of Auburn, Me., now has a record of over 600 trout taken this season. He is the boy recently mentioned in the FOREST AND STREAM, as making the good catch in one day, and is under 10 years of age. Fish Commissioner H. O. Stanley, with Hon. G. D. Bisbee, of Buckfield, Me., has been on a fishing trip up the Swift River into Byron. They combined trout fishing and camping with prospecting for gold in the stream. There is gold in the stream, but whether in paying quantities is the question. It is pretty plain that there is more gold in the sheen of a trout's glistening sides for either of these gentlemen, and it is easy to understand how the prospecting for gold gave place to casting for trout every time a good pool was reached in the river. Tremendous fishing is reported from Camp Haverhill, if we may believe the papers. Mr. F. Sargent says that his wife has taken a nine-pound trout with a fly, and several ranging from three to four pounds. This nine-pound trout is one of the largest of the season from the Rangeley waters. The trout taken by Mr. Guild in May, weighed over 10lbs., and other than these two there is no record of *Salmo fontinalis* above eight pounds in the year 1890. The number that have weighed above seven pounds also appears to have been less than usual. But the number of smaller trout taken has been very great. A number of sportsmen have visited Kenebago, and the lakes and ponds further into the woods in that part of the country, while many visitors are now there, but they report few except small trout.

Reports of moose in Maine begin to be mentioned. One has been seen at Upper Flagstaff, and is reported at Salem. So it would seem that the excessive hunting in the open season has not destroyed them all yet. Mr. David Blanchard, of Boston, who once wrote a letter to the FOREST AND STREAM on the subject, is still greatly in earnest in the idea that the State of Maine should put some sort of a perpetual close time on moose, at least till such time as it will again be safe to make a short open season. Nor is Mr. Blanchard alone in this idea. He is a sportsman of long experience in the Maine woods, and he greatly regrets the fate of the lordly moose, unless the State soon takes action of that sort. He is ably backed by Commissioner Stilwell, whose bill making it a crime to kill a cow moose at any time, was defeated at the last moments of the last session of the Legislature of that State.

The Massachussetts Fish and Game Protective Association has very encouraging reports from the quail they put out this year. In fact, in almost every location where the birds were liberated last spring they have been heard from, and in some cases the increase is reported to be great. But it is a source of regret to the members of the committee, that the recent action of the Legislature in this State has made the open season on quail to begin on Sept. 15, in their efforts to make the open season on all game birds in the State the same. It is a source of regret that the gunners are to be let loose at a date so early, this year above all others, when the efforts of the Association are just beginning to bear fruit. The quail will hardly be hatched, especially the second broods, and the young and half grown birds will be at the mercy of the gunners. What the very tenderest streak of this mercy is, one need not ask, when he has seen grown up gunners returning from a day's shoot with their belts ornamented with the smallest thrushes, which these gunners have taken in the absence of other birds to shoot. The desire to shoot is so strong that the young quail will stand a hard chance for existence after the 15th of the next month. The Association has put out proposals for 5,000 sharptail grouse and for 5,000 pinnated grouse, and the chances are good that the birds will be forthcoming in season to be put out this year. It is understood that there are still a few prairie chickens left on Martha's Vineyard, and the committee of the Association hopes to restore this valuable game bird to the woods of the State. SPECIAL.

THE UPPER MAGALLOWAY.—Wilson's Mills, Me., July 28.—The prospect of having the best deer and moose hunting on the Upper Magalloway River and surrounding lakes and ponds the coming fall is very flattering. The signs of both have not been as plenty for years as they are the present summer. Deer have been seen in the fields within twenty rods of some of the farmhouses several times. Fishing is a little dull just at the present time, but it is thought it will be good the latter part of August and during September. The weather the past month has been charming, cool nights and mornings, and scarcely warmer than 70° to 80° through the day.—SEWES.

A MODEL RAILWAY.—The Burlington Route, C., B. & Q. R. R., operates 7,000 miles of road, with termini in Chicago, St. Louis, St. Paul, Omaha, Kansas City and Denver. For speed, safety, comfort, equipment, track and efficient service it has no equal. The Burlington gains new patrons, but loses none.—*Adv.*

THE MAN IN THE HOLLOW TREE.

In his forthcoming second volume of "Historical and Sporting Notes in and around Quebec," our valued correspondent, Mr. J. M. Le Moine, of Quebec, has incorporated a version of the "Man in the Hollow Tree" stories of which we wrote in the FOREST AND STREAM of July 5. It is interesting as adding one more to the variants there given; and the Indian Scioui must be given the place among the other hunters who have spun this ancient yarn with themselves as the hero. Scioui was a familiar figure of the past, endeared to the frequenters of the lovely Lake St. Charles, north of Quebec. The shrewd old Indian guide, trapper and angler, like his famous legendary colleague Gabriel, must now be enjoying the "happy hunting grounds" promised to him by his sachems. The story, as given in Mr. Le Moine's pages, was told by Scioui to the late Charles Panet, who was for many years the respected member for Quebec county.

One day in early spring time, Scioui, so his story runs, had imbibed too freely of St. Pierre whisky, and lost at night in the woods, duly followed the example of the other bear story heroes and took refuge in a hole in a tree some fifteen feet from the ground.

"I succeeded in wedging myself firmly, as I thought, in the vent of the tree without looking below me. Sleep soon, however, overpowered me. All at once and without one moment's warning I slid down in the cavity about 12ft. and landed on a soft bed of leaves. Here I was entombed, helpless. Realizing my desperate position, I was just yielding myself to despair. It occurred to me to invoke my patron saint; and taking a hasty and unsatisfactory retrospect of my whole life I tried to kneel down to say my prayers, but I found my memory failed me, and the only prayer that I could recollect was *Ora pro nobis*, which I began to repeat in a loud voice, when my ear was struck by a strange noise, as of something scratching on the outside bark of the tree. Then a fluffy ball of fur struck my head, nearly crushing life out of me. I gasped for breath and then yelled with pain and fright. A snort and horrible growl were the only response. Terror sobered me entirely. I realized my position. I had unwittingly invaded the winter quarters of a bear, which at the time was away from home in quest of food, no doubt. Bruin, on his return, had according to his well known practice, let himself down in his lair, tail first, on top of me. Which of us two was the most startled I cannot pretend to say.

"Scared, he stood a second or two staring at me, then turned and took to climbing the wooden walls of my prison while I shouted at him. I still managed to retain some presence of mind. One chance of escape then remained to me. I laid hold of the animal's tail in his ascent, but soon found there was not enough to hold on to. Letting go my hold, I instanly took a firm grip of the long fur growing on his haunches. Never did I travel more satisfactorily by train. In a trice I found mysely landed at the front door of my prison.

"Bruin seemed so put out at the occurrence that he did not stop to look after his fare; he dropped down tail-end first along the tree, ran like a caribou toward the lake and might be running yet had the ice not melted last spring."

A DUCKING BOAT.

Editor Forest and Stream:

The following description of a kind of punt which I used for duck shooting during several years may perhaps be of service to some of your readers. It cannot in any way be compared with the beautiful and graceful skiffs and canoes of which engravings are given in FOREST AND STREAM of June 12, yet it fills a gap, for special purposes, in a way which I have never seen equaled by any other kind of boat.

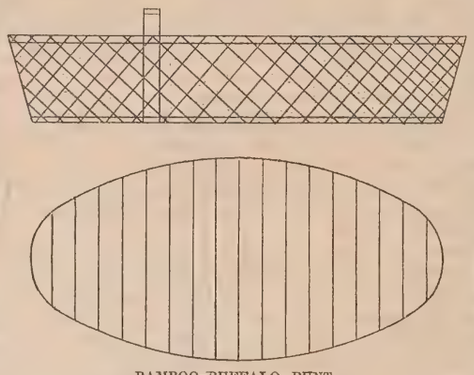
It was made for me in 1870, when I was living in a part of Central India where there were numerous ponds (called jheels) which abounded with duck and other kinds of waterfowl in the cold season of the year. Many of these waters are small and have no boats or canoes upon them. They are often so full of weeds that it is dangerous for any one to swim in them after a dead duck, and in some instances they contain alligators (called muggers), which are likely to seize a dog if used for retrieving.

The frame of my punt was made by a native basket maker. It was 5ft. long, 3ft. wide and 10in. deep, with rounded ends and a flat floor rising slightly toward the bow and stern so as to glide easily over weeds. The wall was of bamboo split into pieces about the thickness of a penholder, and these were crossed diagonally so as to combine strength with lightness. The floor was also of bamboo, split into slabs half an inch to an inch in breadth. These were fixed crosswise and rested in the center upon a strong piece which extended from bow to stern. In each side was a solid bamboo stick an inch in diameter, which was bound firmly from the floor to the gunwale and acted as a tholepin. The inclosed sketch will give an idea of what the frame was like.

It was covered with a large tanned buffalo hide which was soaked in water until pliable, and fixed on by stitches round the gunwale. To make the leather waterproof, a mixture of linseed oil 2qts., beeswax 8oz., resin 8oz. and turpentine 8oz., melted together, was brushed on while warm, and the boat was left bottom upward in the sun and the mixture applied again and again until the leather would absorb no more. It was then painted a light gray color.

The sculls, only 5ft. long, so as to pack inside, were used for rowing, being fixed with rope loops which went over the tholepins, in order that they might not slide into the water when let go for the purpose of taking up the gun. A board 18in. square was used for sitting upon and for preventing the floor being bulged by a man's feet when stepping in.

The boat was so light that it could easily be raised above the head with one hand, yet was not cranky in the water. Being elastic, a fall from a railway truck, or from the top of a camel's hump, did no harm. The shortness made it very convenient for stowing in the luggage van of a train or on a bullock cart. The buffalo hide resisted snags which would, I imagine, have torn open a canvas boat, and which I know from experience would have made a birch bark canoe leak badly. With my weight, about 160lbs., the gunwale was only 4in. above the water, which was advantageous for stalking wildfowl, as grass or rushes 2ft. high were sufficient to hide one's approach.



I used to row in the ordinary way until within a couple of hundred yards of the game, then turn round and paddle gently stern foremost, with the stock of the gun between my legs and the barrel resting on the gunwale, ready to be seized when the ducks began to rise.

I took the boat almost everywhere when traveling and it lasted for four years, by which time the leather of the floor had worn until hardly thicker than brown paper, through scraping across mud banks and over the tops of the water weeds.

When marching about the country, as soon as the day's business was over, I used to hire a villager to carry the boat on his head and show me where the jheels were. I have rowed across water two miles wide and never once had an accident. On one occasion the boat almost capsized through my forgetting to raise the hammers to full cock. I aimed at a duck flying past, and on the instant of pulling the trigger found myself nearly head first in the water. This seems to show that we unconsciously meet the kick of a gun by leaning against the butt when it goes off. The gun I then had was a rather heavy 12-bore (about 7¼lbs. weight). I had used it for two years, and until then had always thought that there was hardly any perceptible recoil, when loaded with my favorite charge for ducks, 3½drs. of powder and 1¼oz. of No. 4 shot (170 to the ounce).

It may appear selfish, but I confess that I always preferred being alone when going after either large or small game. One feels so much more independent and free than when accompanied by a friend, and, to my mind, there is no greater enjoyment than paddling about alone on a lake, with a bright blue sky overhead, looking down at the beautiful water plants and watching the habits of the wildfowl. How well those that are not used for food know that they need not fear the gun. In places where ducks and teal were difficult to approach, the egrets, ibises, jacanas and coots, used to sit quietly while I rowed within 20yds. A small binocular glass is very useful, often enabling ducks to be seen among plants, where they are otherwise hidden. With its help the wounded ducks which dive can frequently be found when they rise among the leaves with only their heads above the water. I generally kept a few snipe cartridges ready for shooting at their heads in cases of this kind, because the spread of No. 4 shot causes some to be missed.

On some of the jheels, where the natives cultivate wild rice and the "water chestnut" (*Trapa bispinosa*), they use very cranky dugouts made of the trunks of palm trees. They are very good for wildfowl shooting, a couple

BAMBOO-BUFFALO PUNT.

being placed side by side and a native bedstead bottom upward being tied across them. The sportsman sits upon this with a leg in each boat, while the owners squat on their heels in the sterns and paddle or pole toward the birds. These are so accustomed to the boats that they allow of a near approach unless they have been fired at before.

A friend living in one place where I was stationed bought, at a cost of £25, an inflatable vulcanized India rubber boat from a London firm. It carried four men easily, but after using it for two years the heat had such an effect upon the rubber that the air oozed out rapidly, although the seams appeared quite sound. When the manufacturers were told of this, they replied that India rubber always "perished" after being kept some time in a tropical climate.

Another friend had a boat made of copper. This was very strong, but a great deal too heavy. On the whole, I know of no boat which combines portability and strength for very rough usage so well as one of leather. If made 6ft. long, 3ft. wide and 1ft. deep it will carry two men, and would, I believe, be very handy on the Western prairies. It could be tied on a wagon and so carried from one piece of water to another when hunters go out for a day's duck shooting.

J. J. MEYRICK.

DEVONSHIRE, England.

SMALL-BORES AND SQUIRRELS.

In the year 1889, just at that period of a September morning when the first signs of the dawn were visible in the east, a youth clad in the garb of a sportsman might have been seen stealing along the angular deformities of a worm fence, which served as a dividing line between cultivated fields and the largest tract of as yet almost untouched woods in the county. In one hand he carried a sample copy of the latest edition of that effective agent of civilization, a repeating rifle, the other was kept busy applying a ham sandwich to where it would do the most good. That youth, friendly reader, was the writer, and if you will come with him in imagination you shall share in his morning's sport, and perchance by doing so enjoy for the passing moment what is next best to the real thing—a hunt upon paper. Come, then, climb the fence with me, and do not swear above your breath as the leaves of the undergrowth part with a portion of their accumulated store of water, and with apparent malice pour their contribution down the back of your neck. It has rained hard almost all night, and before we shall leave this fence 200yds. in our rear our nether extremities will be saturated, but who cares, if the leaves beneath our feet are also soaked? There is less risk of alarming Sciurus, whose ears are no less acute than his eyes are sharp and his limbs agile in carrying him to safety.

Now we are well within the woods, and it isyet a lmost too dark to fairly see the sights, though all about us may be heard the tell-tale swish of branches bent under the sudden impulse of a squirrel passing from one tree to another, the heavy thump of falling nuts, and at least three individuals squalling defiance to one another, or perhaps singing in honor of the approaching day-god. Do you hear that sudden shower of water? That is one gone out on a slender limb for a nut. Hear that thump? The nut was bad or too large to be held, anyway he dropped it. Now listen! Hear that patter, patter, patter, as if a light rain was falling? That is Sciurus "cutting," and he shall be our first target. Carefully, now, the noise has stopped, and we must stop too! Down drops a nut—or what is left of one. There he goes, after another! see him on that twin hickory? Wait until he begins work again—patience is a very large part of a successful squirrel hunter's stock in trade. Now he is busy once more; and we steal along quietly, gently moving aside each protruding branch, cautiously working as near those twin trunks as may be necessary, peering up through the leafy tangles, eager for a glimpse of the little animal, which, with his tail laid sociably along the curve of its back, is rapidly emptying a shell of its juicy contents. There he is, utterly unconscious that danger is near, the nimble forepaws holding and turning a nut against a pair of nature's chisels. A little more to the right, and slowly the slender barrel is moved into line, the white bead of the sight rests just on the butt of the ear; the trigger is pressed, the whiplike crack follows. A center shot, sure enough. Glorious sport? Well, I should remark!

All about here stand hickory trees, and it is unnecessary to move about much; better to sit at the foot of some slender tree with a convenient root, and blend oneself with the surroundings. Hark! yes, there is a squirrel in that tree just in front—hear that swish of wet leaves over there, that's another. Now what is to be done? Move slowly, attend to one at a time, the tiny report will not cause much alarm, no shooting having been allowed in this tract for two or three years, but moving about too quickly will scare away game. There is the little scamp way up in the top, and another, too, on that limb to the left. Oh! for the scatter gun—banish the thought, we are out for sport, not merely to fill the pot. Long shot? yes, full 25yds. from where we stand to that animal, and you know that a 30gr. ball projected by 4gr. powder is not heavy enough to kill game so tenacious of life as Sciurus. Very well, my son, so say those who write from theory, you shall see what can be done in practice. Whack! missed him by jingo! The hiss of the ball so near his peeked ears sends him clear up to the top of the tree; see him coiled up in that crotch? The other fellow stopped working a second, but hearing or seeing nothing, begins operations again. Whack! what, missed again? Where did he go? Ah! yes, there he is peeping around that limb. Don't move—the artful beggar recognizes something beneath him which looks singular—watch him grow out on that branch, his black eyes staring at the object he does not remember to have seen before. Fatal curiosity. Slowly, very, very slowly, the rifle comes to the shoulder, the round ring of the back sight comes before the eye which has never moved from that other eye up there, the bead settles just beneath that glistening center, and with the report the animal pitches out and whirls over and over, till it strikes the ground with a thump, convulsively kicking out among the leaves its last atom of vitality.

Now for that one upon the top—a small mark and a difficult shot; the fourth shot brings him out badly wounded, but he catches some slender branches and gains from them a large limb which he knows will shield him. Bullet after bullet follows his devious scramble, without result beyond emptying the magazine, and the squirrel reaches a portion thick enough to hide behind. Hastily the magazine is filled, and then comes a game of hide and seek; crippled though he is, that limb is always between us. Cutting the top off a slender young hickory, my coat is hung upon it and topped with my cap. Now, as I move to the other side the squirrel moves around, but noting the counterfeit scurries back. A quick shot strikes close to his nose, another slaps into the bark just under him; too hot for him, and up he goes; three shots now in quick succession; then a fourth, that brings him. There! he has caught by one paw, and swings dead or dying. A careful aim now, and the limb, shattered by the bullet, releases its grasp, and the game little beast is ours. So far all is well, but the vicissitudes of squirrel hunting are many. Over yonder, near that old fence, there is a squirrel barking, and while it is generally useless to attempt to stalk one all whose senses are especially alert, let us try it this time, being out only for sport. Cautiously worming through laurel and other undergrowth, keeping a sharp eye in the direction of the sound, carefully scanning the trees about midway of the trunk, the bushy tail jerked up and down in unison with the harsh notes attracts the eye, and then is seen the whole body aligned with the tree. Perhaps you think its sharp little eyes have not seen you, but like a flash it has disappeared. You notice that there are no trees very near the one upon which it was, that the tree itself is a black oak; quite likely, therefore, it is a den tree, and your game is safe inside. Let us see. The closest inspection fails to find any hole, neither does Sciurus materialize. Around and around the tree we circle, straining eye and neck to find the cunning animal, but uselessly; so we will sit down by that old stump for a bit and let curiosity, so strong a trait in Sciurus, do its work.

Minute after minute passes, the practiced eye meantime searching each crotch and possible hiding place. What is that little point, something like a rifle fore-sight, in the back sight? Was that there five minutes ago? There is another; ah! you rascal, there you are, eh? Been there all the time, too. That is a bullseye worth shooting at, with all the chances against the shooter. Whack! wiz-o-o-o, and there goes the squirrel over the leafy carpet, scared by the glancing lead, down the tree it comes and hurries for another which offers security, followed by a perfect shower of leaden pellets, until the click of hammer upon firing pin gives notice that the magazine is empty. Isn't that sport, and it didn't hurt the squirrel either.

It is now rather late to find squirrels feeding in such numbers as may be seen in the early hours, but caution must govern footsteps just the same, while the ears must be alert for dropping nuts. A stop now and then is no disadvantage; in the hollow yonder a nut thumps upon a limb, rebounds and hits the ground; in a few minutes another falls. That is probably a squirrel. Now as we get nearer the place the rasp, rasp of teeth, and with patter, patter of shell, is evidence beyond question. There he is out on the extreme end of a top branch, nibbling, nibbling, his long tail hanging straight down beneath him. Almost a straight up and down shot. Whack! good shot, down he comes, all four legs spread out; thump! he strikes the ground, and like a streak of gray light, darts to another tree near by, vanishing in a hole about 20ft. up the trunk. No, you must not swear, remember you are out for—what—the sport. Well, it is hard luck to be sure, but then if game had no tricks, and could be shot with ease, where would be the sport? To-night you will be telling the wife all about your morn-

ing's tramp, and will praise that wily customer, while wondering how he could drop 30 or 40ft. to the ground without injury. Let us look for another, for we must soon leave to attend business.

Yonder is one jumping more quickly, but carefully to where you saw him last. Now listen! Thump! That is the one we saw, or another. Carefully, now, there he is in that slender hickory, and hard at work. Get just as close as you can. Now give it to him! Whack! Crash! Thump! Only a body shot, but too sick to get away. No, I don't always hit them in the head; wish I did; that would be the quintessence of sport, but it needs constant practice upon game, with the thousand and one conditions of light and circumstances connected with game shooting, which cannot be attained at the target. Pst! There is a squirrel! Don't move an inch, for we are in plain sight, but watch him! There he goes to the top of the tree, now out on that limb for a nut! No, he is going to jump. Whack! Whack! Sput! sounds the bullet as it strikes him; game to the last, he struggles to regain a foothold, but cannot. Down he crashes, and feebly creeps to another tree before he can be caught, ascending just out of reach. Drive another ball through his head at short range and he is dead. Now if you don't think this is sport, try it in reality and see. PICUS.

BUCKHANNON, W. Va., July 30.—The game in this section is about as follows: Quail very abundant, pheasant (ruffed grouse) rather scarce, squirrels very scarce, rabbits abundant, woodcock plenty, deer and wild turkeys tolerably plentiful in the southern part of the county.—VETERAN.

COMPANION WANTED FOR THE WEST.—I would like to be one of a party of two or three, to start about Sept. 1, on a camping out, hunting and fishing trip in Colorado, Idaho or Washington. Address S. R. H., care FOREST AND STREAM.

QUEBEC MOOSE.—The Quebec moose season will open Sept. 1 this year, but non-residents (who must take out a license, fee $20) may not kill moose before Oct. 1, 1890.

ROCKLAND, Me., July 28.—Saw last week a bag prairie chickens which were sent here from the dumping ground.—JOHNSON.

SHOOTING RIGHTS IN CALIFORNIA.

THE Sportsmen's Protective Association of California has recently issued an address "for the purpose of directing the attention of sportsmen to the game preserve evil which has worked its way among us and assumed such formidable proportions that it excites alarm for the future of true sportsmanship in the mind of every man who has its best interests at heart."

The address sets forth: "In no State in the Union has this question excited more comment than in California, where, during the past few years, vast areas of tide-water and marshland, which had previously been open to the public, have been leased by wealthy shooting clubs and preserved for the exclusive use of their members. These clubs obtained control of the best shooting grounds in the State, and nothing was said by the great mass of sportsmen until a year ago, when a tract of 7,000 acres of barren tide-water land in Sonoma county, which had long been a favorite resort for duck hunters, was leased by one of these preserve clubs, notices of exclusion posted and keepers employed. * * * To go further than this, the Association claims that the lands which have been sequestrated by the preservers are barren wastes, entirely useless for agricultural purposes, uninhabited and uninhabitable; that they are not lawfully inclosed or reclaimed, and in many cases have no established legal ownership; that unlawful notices of exclusion have been posted; that navigable streams have been closed, and that sportsmen inadvertently trespassing have, without warning, been fired upon by keepers. * * * It was on such a broad platform of principles at this that our Association received its inception at the hands of the representative sportsmen at San Francisco, but a little over a year ago. Since that time it has steadily grown in numbers and influence, until to-day its membership roll is but little short of 400 names, and is constantly increasing, as our objects and purposes become known to the great body of our sporting population—men from all classes in life, whose interest in love of liberty in all forms leads them to believe that the game and fish of the nation should be as free to its citizens as the air they breathe."

The FOREST AND STREAM wrote to Mr. H. H. Briggs, field editor of the San Francisco *Breeder and Sportsman* for some information about the Protective Association; and Mr. Briggs replies:

"Please find a copy of the pamphlet mentioned in your note, and in sending it I send two or three emphatic statements with reference to it, which I beg you will note. First—The pamphlet was not prepared at the instance of the California State Sportsmen's Association, nor have the views advanced in it the sympathy of that body of sportsmen. I am now and have for many years been the Secretary of the State Sportsmen's Association. I know every man in it intimately and I feel safe in saying that not one single member of the Association sympathizes in any degree with the position assumed by the pamphlet or with the organization which prepared and sent it out.

"Second—The 'Sportsmen's Protective Association of California' had its origin in the anger of a few foreigners, who had for several years arrogated the right to enter upon the premises of Senator J. P. Jones in Sonoma county for the purpose of shooting. The men were of the irregular, unattached, unattachable sort, to whom everything killable was game. After a time the Senator leased the shooting right upon his property to a club of San Francisco and Oakland gentlemen, who proceeded to preserve it and warned off non-members. At once was made about tyranny, autocracy and that sort of thing. The disgruntled ones agitated the matter, gathered about them a few men of like character and formed what is styled the Sportsmen's Protective Association of California. I made it my business to become thoroughly acquainted with the personnel of the Association; and I freely confess that I did not know there were so many and such curious types fond of the gun. During the three evenings which I spent at meetings of the Association not once did anybody speak pure English. The stamp of foreign extraction was on them all. Their views were the views of little men, their temper wholly unsportsmanlike and their disposition one which should entitle them to summary treatment at the hands of landowners if they trespass at any time. I inclose a clipping from the *Breeder* with reference to the matter."

This is the *Breeder's* comment: "The organization styled the Sportsman's Protective Association of California has issued a pamphlet, the central idea of which is to discourage the formation and maintenance of clubs of sportsmen which shall lease or acquire by purchase and preserve suitable tracts of ground or water upon which to hunt. The pamphlet is a rehash of what has been said from time to time by one or two rather thoughtless and inconsiderate sportsman's journals. There is no argument in it and the sentiment is rot. The Protective Association has neither sympathy nor support at the hands of sportsmen generally. Its animous is unworthy, its methods are questionable, and it is, altogether, a good thing to let alone severely."

THE YELLOWSTONE PARK AND DINING CAR ROUTE.—The Northern Pacific Railroad, stretching from the Great Lakes to the Pacific coast, with its elegant vestibuled service of dining cars and Pullman sleepers, not only affords business men, tourists and others a route of travel equal in every respect to any in the country, but renders accessible to sportsmen the only region in which can be found to-day the large game which was once so plentiful in all the West. In addition to the large game, the sportsman will find in the country along the line of the Northern Pacific Railroad such quantities of small game as is unknown in the East. This line, penetrating the Lake Park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green rivers, as well as lying in close proximity to the hunting grounds of the Big Horn, Snowy, Belt, Bitter Root, Rocky, Cœur D'Alene and Cascade Mountains, is unquestionably the sportsmen's route of America. The pamphlet, "Game Preserves of North America," together with other interesting publications, descriptive of the Yellowstone Park and Alaska tours, will be mailed free on application to Chas. S. Fee, G. P. & T. A., N. P. R. R., St. Paul, Minn.—*Adv.*

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

TWO DAYS AFTER BLACK BASS.

"CAN you go on a fishing trip with me to-morrow?" said my friend Stephens, as he came into my room the other day, "Or are you too nearly beaten out?" For I was lying down scarcely able to stir, having just returned from a trip to Island Lake, which trip had been anything but a brilliant success. I at once roused up and said, "I'll go," for Stephens is one of the most satisfactory companions I have ever been out with, a large-hearted, royal good fellow in every way, true as steel; and the proposed trip was only one of a dozen we have taken together this season. "We'll go to Franklin Lake," he said. "There were over sixty big bass sent up from there yesterday." We did not get away on the morrow however, but the following Monday morning saw us driving out of Detroit city, Minnesota, with our tent, fourteen foot Acme boat, rods and provisions, snugly packed in the wagon.

After leaving Detroit Lake we went on ever further and further into the woods, grand beautiful woods, in all the pomp and glory of full summer time. We passed Little Twin Lakes, Meadow Lake, Lake Melissa, and a little before noon reached Buck's Mill on the Pelican River. Here we had been told that we could get some minnows. Plenty of them we could see in the river, but how to get them into our minnow pail! Happy thought! A bolt of mosquito netting was in the wagon; weighting it with stone on one edge, and taking off our shoes and stockings, we made a grand scoop, resulting in more minnows than a dozen fishermen could use in two days.

On we went deeper into the woods: The hills increased in frequency and steepness; the day grew very warm. Did we know the location of the lake we purposed going to? No, not exactly; but we would inquire at the first house. Ripe raspberries began to appear in profusion on the bushes which line the road. We stopped and picked all that we wanted to eat; the finest we had seen this year. Soon a house is reached. "Were we on the road to Lake Franklin?" "Yes, keep right ahead and this road will bring you there, but with many crooks," said the old man of whom we made inquiry. We found the crooks with many extra ones thrown in; and we were reminded of the man "who went a crooked mile." At 3 o'clock we came out on the shores of Lake Franklin—a beautiful lake, wooded all around.

A Mr. Jordan lives on the north shore, and near here we decided to pitch our tent. Soon the white was gleaming amid the green, coffee made and lunch eaten, boat unrolled and set up, rods made ready, and about 5 o'clock off we shoved. We each use split-bamboo rods, think there is none equal to them. Our rods are bait-rods, weighing 8oz. and are good all around rods. We are also devoted to the use of the Sneck bend, Kendal hooks. This afternoon we put three hooks on each line; and baited with frog, minnow and fly.

We moved slowly up the shore, and a few rods from where we started something was seen in the water—was it a shadow moving between us and the shore? "'Tis a bass," said Stephens. "I'll try for him. The cast was made, the line falling near the suppositious bass. Whew! Zip, went the line, the rod bent, and in a few minutes a 3lb. black bass lay in the boat—a good beginning in a strange lake. The wind was blowing pretty hard, but we picked up a bass every now and then as we moved along. Out near the center of the north end of the lake was a great mass of rock coming nearly to the surface of the water. I saw a monster bass come from under this and nip the leg of the frog on my hook, then turn contemptuously away; nor could he be induced to return and bite. We trolled along the west shore of the lake and toward sunset started back for camp. I was rowing very fast, and we were out in the deep water, when suddenly my rod bent nearly double. Stephens took it while I kept the boat in position. The pull was hard and long for I had 175 feet of line out. At length the landing net was brought into use and two three-pounders were added to our catch, one having taken the frog and one the minnow. We staked out a dozen bass that night, none weighing less than 2½lbs. After our 10 o'clock supper we went to bed, feeling very well satisfied with our first experience in Lake Franklin.

At 3:30 A. M. Stephens said "Come get up with you." While he attended to the horse I prepared breakfast, and the rising sun found us out on the lake. One 3lb. bass was taken and then Stephens made the catch of the trip. We were laying by the mass of rock out in the lake where I saw the "big one" the morning before, when Stephens, who had just made a cast to the edge of the rocks gave an exclamation and said, "What have I got now? A whale?" Hither and thither surged the line, the split-bamboo playing grandly. No fish broke from the water. What could it be? What a tremendous pull! Stephens had a look on his face that plainly said "I'll conquer or die." Ah, see that great swirl? How the water boils. Nothing but a bass would cause that. Here they are now in sight. They? Yes, for there two were hooked and a third has just broken a snell and gone. Careful now, for one is a big one. But Stephens knows how to use the rod; and here they are in the boat. From the fly, a Gov. Alvord, we took a 5½lb. fish and from the frog a 3½lb. one, and the one that had broken away had taken the minnow.

Neither of us had made a catch like that in our lives. I thought I did well when I landed without net or gaff hook, a 5lbs. 14oz. bass, in the Red River Rapids at Lost Lake on a 5oz. rod; but this went over that, and I unhesitatingly give Stephens the laurels.

Shortly after 10 o'clock we went to camp. The wind had died out entirely and the heat was excessive. After lunch we lay under the trees and Stephens read aloud from the last number of FOREST AND STREAM. "They are going to issuse a black bass number" he said. "If they knew how much we know about that subject they would have invited us to contribute to that number." "Yes," I replied; "and I don't believe that the editor or any contributor or reader of the FOREST AND STREAM ever had or ever will have more good solid enjoyment than we have had this very day."

We went out a short time in the afternoon, but we were all packed up and started home at 6 o'clock, with 29 bass running from 3lbs. to 5½lbs.

Why not stay and catch more in the evening? We had all we wanted for ourselves and friends. No doubt we could have doubled our catch in the evening as we had just fairly found out the lurking and feeding places of the fish; but while the butcher and savage within us said, "get more," the true fisherman's conscience said "no," so away we drove; feeling as we looked back that

> O'er no sweeter lake
> Shall morning break or noon-cloud sail,
> No fairer face than thine shall take
> The sunset's golden veil.
>
> Long be it ere the tide of trade
> Shall break with harsh resounding din
> The quiet of thy banks of shade,
> And hills that fold thee in.
>
> Still let thy woodlands hide the hare,
> The shy loon sound his trumpet-note,
> Wing-weary from his fields of air,
> The wild goose on thee float.
>
> Thy peace rebuke our feverish stir,
> Thy beauty our deforming strife;
> Thy woods and water minister
> The healing of their life.

At midnight we were in our beds. Tired? Well, I should say so, but oh, so happy and satisfied. Not going on such a trip again? No, not until we can get an opportunity. MYRON COOLEY.

DETROIT CITY, Minn., July 16.

CAMP OF "THE TRIAD."

FOURTH LAKE, N. Y.—*Editor Forest and Stream:* The odor of the "punkie dope" is upon me, and the smoke of the evening smudge eddies in an undecided manner which brings tears to the sternest eye. Neither "great nor populous" is the city whence this comes to you; its pavement the decayed vegetation of the ages and its carrying facilities limited to one frail canoe; its most pretentious building, the "Hall of Concourse," a "Nessmuk Shanty," at present containing the armory, both piscatorial and Nimrodic (?) the "Library," a copy of Dickens's "Tale of Two Cities," Nessmuk's "Woodcraft" and Seneca's "Canoe and Camp Cookery"—select and sufficient for the book be-wearied brains of the public at present enjoying the "freedom of the city." Two other tents, one a smaller duplicate of the first, with the addition of some turkey-red curtains and "scalops," elaborated with red, indicating the presence and abiding place of the gentler sex in person of the "School Girl" and Co-ed;" and the other, a wall tent serving the all-important function of commissary department, complete, as free and satisfied a commonwealth as can be found in this day of "boodle aldermen" and drainage questions!

Ten days have passed since the blue wall of the mountains shut out the last clanking wheel and beleaguering care of "irksome civilization." Ten—that mystical number—never stood for more of peace and pleasure than has been crowded into these ten days. There are trout in the pan, the blue wave sparkles, the sun and moon in turn mirror their faces in quiet old Fourth Lake, which serves a double turn as lavatory and refrigerator, whence fish come "flopping" to the pan. A decided "Nessmukian" air hangs about us. Our house, our housekeeping are of his teaching. A "Nessmuk" camp-fire lights and warms us; and when the evening deepens, and the bright eastern star before the hut sweeps behind the huge hemlock before our door, we wonder, as we muse, in what fair isle of the further forest is pitched the sloping home of that gentle woodland spirit; and the waters of what crystal lake ripple to the swaying dip-dip of the loved single blade, as erstwhile did those whose gurgling over the gnarled roots are our "slumber song."

Sometime when we awake from our reverie enough to undertake organized action we may write of our neighbors of and in the woods, and the amusement they afford us—of the BIG and little trout we did and didn't catch, and of such other matters as delight the soul of the sojourner in the solitudes. At present we are unequal to the effort, and even this would have been spared you had not the last requisite of complete happiness been hitherto lacking. That it may no longer be so, please change, for the present, the address of my FOREST AND STREAM from Irving Park, Ill., to "Old Forge," Herkimer county, N. Y., Alexander's Camp, and complete the elysium of yours respectfully, KORAX.

CALIFORNIA SALMON IN THE MEDITERRANEAN.—*Nature* (London) of July 17 records the capture of a quinnat or Columbia River salmon (*Oncorhynchus chouicha*) in the Mediterranean near Banyuls. The river Aude, in France, was stocked with fry of this species, and the specimen captured is supposed to be a result of the attempts to acclimatize the quinnat in France. The first shipment of eggs of this salmon to France appears to have been that of 1877, when 50,000 were sent from the McCloud River. Since that time many thousands of eggs have been developed and the young fish liberated in several rivers of France, and individuals have been caught from time to time both in the streams and the Mediterranean. The species has proved to be admirably adapted also to a non-migratory life in ponds and lakes.

A LARGE SHARK.—A shark 10ft. long and weighing over 700lbs. was caught in a fish pound, July 30, at Deal Beach, N. J. The species was called a "man eater," a name usually applied to the dusky shark (*Carcharias obscurus*), but frequently used for large sharks of any kind that occur in New Jersey waters. As a matter of fact the shark is a voracious fish destroyer, and takes especial delight in the juicy and frail menhaden. Dr. Hugh M. Smith, of Washington, D. C., told us of finding over 200 whole menhaden in a stomach of one of the common species of *Carcharias*. The true "man eater shark" of the New Jersey coast, as suggested by a contemporary, is a land animal and a permanent resident.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

GREAT FALLS OF THE POTOMAC.

WASHINGTON, D. C., July 30.—Water again 2, which means just two points off from being as muddy as it can get. I wheeled to the falls, not a suspicion crossing my mind that the water was anything but clear,—condition 36—as all the way up the water looked beautifully transparent; but when I crossed at Dickey's Landing the water between the rocks below the falls was very roily. This very sudden change in condition was due to rains up stream.

Black bass fishing has been poor at the falls ever since the big flood (highest on record) of last year. It will be remembered that this immense washout occurred just in the spawning season of the bass, and the young and eggs of that fish must have been destroyed in countless numbers. It is said that bass are not so plentiful now as they once were, but there has not been clear water enough during the past fourteen months to test the correctness of this assertion. Just before the flood of 1889 some enormous catches of bass were made at the falls. During the autumn the fishing there is best, if the conditions are favorable. Last fall there were but a few days when the water was clear enough for bass fishing; in fact the water has been high and muddy as a rule since the spring of 1889. The Big Eddy, one of the famous places, is still there, but at this writing it resembles an overgrown mud puddle. Dickey says not to lay your plans for a fish before Sept. 1. He has now in hand several letters from parties who desire to know when the fish commence biting. The fun may begin in a couple of weeks, but Mr. D. puts little faith in the August fishing. Catfish and eels are being caught now.

The trip to the falls is always a pleasant one. The road is fine and the distance not too great for a good day's outing. Notwithstanding D.'s gloomy predictions we shall try for bass in the big eddy as soon as the water is again clear. There is some hope now that the fish will bite after the present showers. A few catches have been made between the great and little falls; a 5½-pounder is reported to have been taken at the latter place. There is often trouble here to secure proper bait.

The last trip of our friend C. was to Seven Locks, where he found his guide, boat and a few small sunfish for bait. Four small-sized bass were landed. Minnows and crawfish are very numerous near Washington. In many places and ponds near the south end of the Long Bridge the former abound, and along the river in the small streams of Virginia the latter are common. I have explored whole villages of crawfish on the Virginia side of the Potomac, between the Free Bridge and the Chain Bridge. They are to be found in wet meadows; their mud nests or mounds, from 3 to 5in. high, are very curious. While the fishing has been discouraging at the falls, fishermen have fared well at Georgetown recently. Several days ago a man caught four mirror and leather carp at the mouth of a small mill race that empties into the Potomac just below the Aqueduct Bridge. One of the carp weighed 4lbs. The baits were common clams or quahaugs, and pieces of fish. He took, also, a number of small striped bass, scarcely more than 5in. long, and these he put on "the string," without considering protection laws or the laws of common sense; but then he is no worse than some of the market fish dealers, who regularly expose for sale baby striped bass and go unpunished.

GEORGE AND I GO TROUTING.

ALBANY, N. Y.—*Editor Forest and Stream:* Last May, when I promised the boy to take him trouting, there was no particular place in my mind near Albany where there was any certainty of getting a basket of fish; but finally, after repeated reminders on his part, I decided we would try a point on the Boston & Albany Railroad about forty miles out. On leaving home Monday morning I instructed him to meet me there the following Friday night, so we could be on hand early Saturday morning and cook our breakfast by the brook. I had previously taken a tomato can and melted the end off, punched a hole in each side and put a copper-wire bail in; this was to serve as our coffee pot, and could be thrown away when we were through with it.

He was on hand as agreed. We went to bed, taking the alarm clock, as we were to get up at 3 o'clock. It seems as if my head had hardly touched the pillow, when he called me saying, "Papa, I think we are oversleeping; hadn't I better get up and see what time it is?" So up he got, and lighting a match, found it was just half-past one. Once more I was in the land of nod and catching fabulous strings of trout, when the birds singing awoke me just in time to hear the alarm. Dressing quickly, we were soon outdoors; and how nice it did seem, day was just breaking, and it seemed as though every leaf was a bird and each one was trying to sing louder and faster than his fellow. How many people are there who ever hear the wonderful melody of our birds at daybreak?

We walked down the road to the brook, and hastily putting rods together were quickly at work, I going up stream a few rods to wade down through some alders, and the boy fishing down. The first hole I dropped into there was a quick tug, and lifting him too quickly I saw him drop back and make his way down to a hole below. Casting into this I drew either him or his twin out; and keeping down to the road took out two more, each about 8in. long. This result rather surprised me, for instead of having an outing for the boy with a few trout I seemed to be doing a land office business. Having reached the road I walked down to Georgie, who was busy fishing a hole under some willows. I began to picture in my mind how he would wilt when he saw my display. But he did not wilt for a cent, but instead showed four almost as large as mine. This is a little demoralizing, to raise up a boy, and when he gets to be twelve years old have him lay you out on the start.

We kept fishing down stream perhaps a quarter of a mile, and when I saw a swift, deep hole, fringed with drift, held in place by a clump of low brush willow, I made up my mind that that was the place to even up on the boy; so I dropped in and took out a nice one only to have him drop on to a little mud bank right on the edge of the water. In my haste to secure him I stepped quickly, and my foot striking a round stone, I sat down in a foot of water, filling my rubber boots and wetting me completely from the waist down. Nothing daunted, however, I let my bait float down into the hole again, and this time took out a nice one. And right here the greatest indignity of the day was put upon me, for while I was taking the fish off the hook, that boy slipped along behind me and dropped into my pool; there was a tug, and then his little 7½oz. rod began to bow and quiver. Bracing himself, he lifted the fish bodily and threw him on the bank, just as we did bullpouts in our early days. I forgot my dignity then and rushed up the bank to examine the prize. And how handsome he did look—just 11in. long. Not much of a monster, you are probably saying to yourself, but then he appeared so to us, who did not expect much; and to see us shake hands and dance one would have thought we were demented. But not so; we are only two fishing and hunting cranks, father and son, who never want to catch nor kill anything they cannot eat or give to friends.

Trying the pool again with very poor results, we decided to have breakfast. I made a fire and George took a cup and went to meet a farmer coming across the field with a pail of milk. He secured some, and soon the breakfast was ready. Coffee, broiled ham, bread aad butter and doughnuts. Don't it make you smack your lips to think of it, eating out there amid the clover and buttercups, with that brook singing at your feet?

The boy in his eagerness never minded a big hole punched in his rubber boot, causing him to fish all day with it full of water, and to walk two miles after we were through with never a murmur, but with a 5lb. basket full of trout, most of which were caught before eight o'clock in the morning. It is such days as these that live green in our memory and bring father and son in closer companionship than can be attained in the ordinary ways of life. The boy is now away in the country, and I append a verbatim letter:

DEAR PAPA—Grandpa and I were pickerel fishing yesterday. I caught two, we'ght 1lb. each. Lost two. Had one bite besides. Grandpa didn't have a bite. Love to mamma and all, from
GEORGE.

For brevity and conciseness that must recommend itself to newspaper men. DEXTER.

STUBBING AROUND HOME.

THE untimely death of my dear friend and fishing partner, B., last autumn, naturally broke up the continuity of our June annual along the Loyal Sock in Pennsylvania. In fact, when he died, it seemed to me that it was my duty to reel up and never fish again, and just subsist on the flavor of the piscatorial fruit gathered during all those past years. But time, that wonderful healer, willed differently. No sooner had the fleeing months spanned the winter and unlocked the streams again, than the same old feeling came upon me, and the love I thought dead bloomed afresh along with the arbutus. It was while gathering this flower along Mill Creek that the music of the waters entered my soul, and memories of days of happiness flooded my heart with thoughts of rod and reel, and I resolved to fish again.

To stand "a ghost of a show" on the well whipped waters of Mill Creek, one must be up in the morning. The sluggard only gets the leavings. So when the almanac showed the sign in "Pisces" for the morrow I dug my bait, got out my tackle and old clothes, set the alarm for 3:30 and went to rest. With the first "whirr" of the clock I was on the floor, and by 4 A. M. my coffee and eggs were boiling. I had resolved to strike direct for the railway bridge, two miles away, and so well did I foot it through the gloaming that I was under the structure and all tackled up when the 5:12 A. M. express train from the East rolled across. The engineer leaning out of his cab one hundred and fifty feet above me waved his hand in friendly gesture to the lone fisherman; and daylight being now fairly broken, my sport began.

The short-winded fishermen from town who have not the legs to traverse the length of the stream do most of their work below and a short distance above the bridge; the result is that the waters are kept rather barren, still I caught a couple of very fair fish before reaching the falls, and at the foot of the cascade I took in a very nice one, getting drenched with spray in the operation. Clambering on I reached the old mill and here took another. Having four trout I now felt justified in plucking some fresh ferns and lining my basket, for the sun that was just rising in a cloudless sky gave evidence of a hot day and soft trout, unless care be taken with the catch.

I am no friend of early rising In my earliest youth the relation who quoted to me the time-worn couplet—

"Early to bed, and early to rise
Makes one healthy, wealthy and wise,"

has not yet been able to shake himself free from my contempt.

But to be on a trout stream at 5 A. M., the first rod of the day, breeds an exhilaration that it pays to cultivate. Bird songs and rippling waters are doubly sweet just before sun up. The head is clear, the heart is light, and trouble vanishes in the cloud of tobacco smoke you roll contentedly toward the rising sun.

I was now so far up stream, that like a fugitive who has eluded his pursuers, I was content to take my fishing more easily. The sands ahead of me showed no fresh tracks, and I got down to business with that peculiarly contented (shall I call it selfish) feeling that one has when he feels certain he has the "drop" on the boys. Remember, these waters are nagged daily during the season, so when I say that upon arriving at the cross road four miles from town I had ten nice trout, please congratulate me, as I congratulated myself, when I emerged into the sunlight and opened my basket. Right here I came upon one of our most skillful local fishermen, who was just starting down the stream. He had driven to the upper end (poor fellow) so as to have a clean sweep down the creek. How I pitied him, "in a horn."

It was now 9:30 and I had trout enough for the little family, so I magnanimously told the fisherman that I was going home, which I proceeded to do, taking the cross road and tramping along townward toward the main highway. I did not untackle, for a quarter of a mile down the road crossed a little branch of the main stream where in years gone by I had taken many trout. So when I came to the little bridge, I adjusted a fresh worm and from beneath a log that spanned the stream when it entered the woods, I took one of the best trout of the day. Encouraged I poked along down for half a mile and took three more, all nice fellows, and at 11 o'clock I found my basket heavy enough for a reasonable man; and with the trout still biting, stopped short after untackling, and emptying my rubber cup twice at an ice cold spring started for home, where I arrived in time for dinner.

I have been twice since, taking at one time twelve and at another eighteen, using only a half day each trip, and enjoying the fact that no one but my clerk and family knew where I was. The secrecy of the thing is half its charm, and the secret of the luck is being like Washington, "First."

I won't go to Pennsylvania this year. I don't care to tread those old familiar scenes alone. The welcome awaits me there, and the streams and the mountains and the trout are at my service, but I must be content to stay at home, and from my experience so far I find the trout just as gamy, the waters just as musical, the air as sweet and pure right around home as ever I found them abroad. I have learned the lesson that one doesn't appreciate his environment until fate conspiring to bring him face to face with it shows up its beauties in a light he never dreamed of. D. L.

DANSVILLE, N. Y.

FISH PRESERVATIVES.

Editor Forest and Stream:

Replying to "Parson's" query in this week's issue of the "old stand-by," I beg to say my experience with Rex Magnus was similar to his own, only more so. In August 1885 I visited the Eagle waters in Wisconsin for the purpose of securing one of its mascalonge. It will be remembered there was much argument regarding its being a mascalonge, and I was requested to secure one for identification by Prof. Baird. I had the good fortune to catch a number, the largest weighing 36lbs., and I enjoyed more'n 47yds. of unadulterated fun during the siege. A specimen of 10lbs. was put through the Rex Magnus process, the directions being followed to the letter; but the fish, after a four days' journey, reached its destination in such rank condition as positively to prohibit a close investigation. Although marked differently from the fish of the St. Lawrence region, I saw at once that it was *nobilior* from center to circumference, and a fighter from Fightsburg.

As to Preservaline, to be frank, I was suspicious regarding it, remembering my former experience, but I was indoced to give it a trial this spring, because all the fish which I sent home from Lac des Grandes Iles last summer, although packed with ice, reached New York teetotally ruined. I made a solution of 1lb. of Preservaline to 2gal. of water, and after cleaning the trout, allowed them to remain two hours in the solution, and packing in moss, shipped them to New York. No ice was used, and not a word was said about the use of Preservaline. When I returned I made inquiries, and found they had reached home in perfect condition, and nothing peculiar in the taste of the fish was observed. My brother expressed surprise at their splendid condition, and particularly drew my attention to the fact that "all the ice had disappeared." Last year he paid $4.70 express charges, and kicked over $18 worth. This year he took it all back and said the excellence of the trout made up for last year's offensive experience. I sent ten boxes of trout to different parties, and have heard only words of praise regarding their condition. I see the Preservaline Co. have followed my advice by advertising in FOREST AND STREAM. They are wise in this, for in thus drawing the attention of sportsmen to the article they win customers who, after once using it, will never be without it.

NEW YORK, July 31. KIT CLARKE.

ANGLING NOTES.

AFTER an absence of several years from our coasts, the big striped bass have appeared again. Quite a number have been killed at the various fishing clubs off Newport, and one angler killed five handsome fish at the Davis stand at Newport last week; the largest weighed 55lbs. These large striped bass are wary fish and as shy as Long Island trout. They will often take the chum within sight of the angler, while they carefully examine the choicest bait on the hook and leave it severely alone. The fisherman should keep as quiet as circumstance will allow and make as little motion as possible. It is better to use an 9-thread line and commence with short casts, fishing the water near the stand first before trying long casts. The line should be carefully and constantly examined, for the sharp rocks soon chafe and weaken a 9-thread line. One does not often strike a 40 or 50-pound bass, and when that does happen, there should be no weak spot in the tackle.

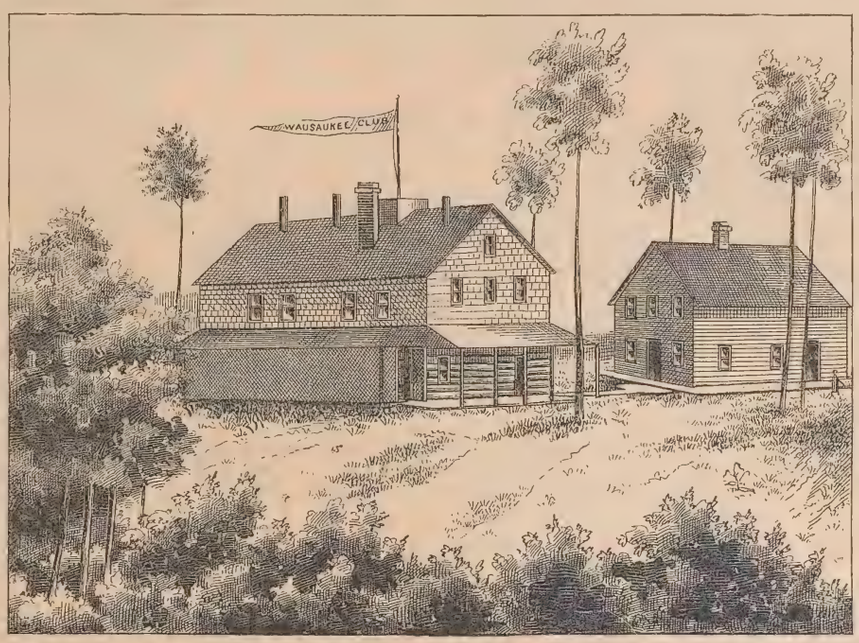
Black bass fishing on the St. Lawrence River is reported as being poor for this year, but it can hardly be wondered at, considering the army of people that flock to that river. There is hardly a foot of water that is not fished over every day during the season. The wise angler prefers to cross over to Brockville on the Canada side and try the Rideau Lake region, where the bass are large and numerous. Messrs. A. V. Meserole and Horace Waters, Jr., two well known anglers from this city, report very fair fishing at Sudbury, Vt. They have killed a number of Oswego bass up to 5lbs. in weight and several black bass of 4lbs. At Lackawaxen, where so many black bass were killed last season, the fishing is very poor; what few have been caught were sickly and in wretched condition. The people along that portion of the river claim that the fish have been poisoned by the refuse of some of the factories above Lackawaxen.

It is astonishing what a number of hotels in the north of England and Scotland make a specialty of advertising fishing waters for both trout and salmon. They spend large sums to secure these rights, and of course it is a great inducement to visitors to frequent such places. This practice is coming into fashion here. The Hotel Robeval, at Lake St. John, is an instance of it. They now control about all the landlocked salmon fishing in that section and furnish permits to the guests.

Lake St. Catharine, near Wells, Vt., contains some enormous pickerel. They have been caught there weighing as high as 18 and 20lbs. These savage monsters tear ordinary tackle to pieces, and it seems almost impossible to get spoons or gangs strong enough to hold them. There are a number of these pickerel in Lake Sanford, which belongs to the Adirondack Club. Senator Livingston killed three there one day last season that averaged 17lbs. each.

THE WAUSAUKEE CLUB.

CHICAGO, Ill., July 28.—It was some time in last November that the first scent was obtained of the organization of yet another strong sportsmen's club to be added to the number of similar bodies already existing in and about this city. It was known and announced that the grounds and buildings of this club would lie in the trout country of Wisconsin, but in view of the solicitations of the promoters, who were actuated by obvious business principles, since they had not yet fully defined their plans, extended notice was at that time foregone. Since, however, FOREST AND STREAM has been the only paper to attempt any history of the sportsmen's clubs of Chicago, and since events proved that this club, whose name, early known to a select few, was to be the Wausaukee Club, bid fair to be one of the most noteworthy gems in the full circlet, it may go without saying that FOREST AND STREAM was, in response to a courteous invitation from Mr. Secretary Tabberner, duly on hand at the formal opening of the club, which occurred Saturday last, July 26. It seems fit at a very early part of this story, to return thanks for the privileges of this trip and the manner in which they were accorded, for very few formal "openings" are managed with such smoothness in detail and admirableness in executive regard.



There were two sleeper loads of merry gentlemen who left Chicago Friday evening for the lodge in the wilderness of the pine woods, and we may as well say that the names of those on board, and those few who were already up at the club house are as follows: C. E. Rollins, Chicago; C. Stewart Warren, Chicago; John Marder, Chicago; W. W. Tabberner, Chicago; J. J. Flanders, Chicago; Dr. J. W. Tope, Oak Park, Ill.; R. L. Martin, Chicago: A. McDonald, Chicago; A. L. Brown, Chicago; F. C. Schoenthaler, Chicago: C. R. Ayars, Evanston, Ill.; L. Baldwin, Chicago; T. E. Courtney, Chicago; C. H. Douglas, Chicago; E. Dillon, Milwaukee; J. W. C. Haskell, Chicago; W. H. Haskell, Chicago; Thomas Cratty, Chicago; W. S. Johnson, Chicago; J. W. John, Chicago; Geo. Sylvester, Milwaukee; James McGill, Chicago; M. A. Donohue, Chicago; W. M. White, Chicago; R. W. Morrison, Chicago; L. C. Bonney, Chicago; C. S. Crain, Chicago; T. S. Hawley, St. Louis; F. D. Turner, Chicago; H. Herman, Milwaukee; L. Kalzenstein, Milwaukee; W. P. Tuttle, Chicago; H. Davis, Jr., Springfield, Ill.; T. J. Jebb, Jacksonville, Ill.; A. W. Harlan, Chicago; W. B. Ames, Chicago; T. J. Worswick, Oak Park, Ill.; J. K. Dunlap, Oak Park, Ill.; W. H. Gray, Chicago; W. A. Gray, Milwaukee; L. J. Blackman, Chicago; M. J. Russell, Chicago; W. A. Amberg, Chicago; J. W. Amberg, Chicago; A. Martin, Pike, Wis.; H. S. Vail, Chicago.

Wausaukee Club is situated well on to 300 miles north of Chicago, directly in the region lying along the Milwaukee & Northern Railway, visited and fully described by the writer last summer. The entering point is the village of Pike, latterly changed in name to Amberg, in honor of the gentleman who has recently moved a tombstone and paving block factory in there. As the inhabitants had not had a square meal since the railroad was built through, some years ago, they welcomed Mr. Amberg and gave everything they had his name. Such is gratitude. Pike was just as good.

At Pike, or Amberg, or up in the woods, anyway, the party ate breakfast, or partially did so, or attempted to do; for the change from the simple diet of the city to the confusing luxuries of the North Woods is not to be made without inconvenience. After that the long line of vehicles pulled out for the club house, over a new but very well chosen trail which the cyclometer of a bicycle enthusiast of the party, Mr. L. J. Blackman, made out to be 11$\frac{7}{10}$ miles in length. It is a drive of between two and three hours for the best of the club vehicles, of which there are some very good ones. It was the original intention to cut the trail through from Wausaukee, the station next below Pike, but some difficulty was had with the supervisors, and the club men left that village alone, somewhat to its pecuniary loss.

Wausaukee Club was organized last December, and in its early history three gentlemen, Mr. C. E. Rollins, Mr. W. W. Tabberner and Mr. C. Stewart Warren, were perhaps the most prominent figures. Mr. Rollins is well known in this city among insurance men and sportsmen, in which class the better the writer wists not. He is of old experience among the deer and trout of this north country, and no better prospector and promoter than he could have been selected deliberately. Mr. Tabberner is equally well known as the general agent of the Milwaukee & Northern Railway, and to his railroad methods, combining hustling and care in details at once, have been largely due the rapid maturity and development of the club. It is said that after the grounds had been selected and the territory purchased, the actual site of the club building was selected by the chairman of the executive committee, Mr. Warren, at a time when the ground was covered with three feet of snow. Mr. Warren is highly to be congratulated upon the selection of the site, which lies upon the brow of the highest bluff of beautiful Wausaukee Lake, 41ft. above the water and flanked with noble trees that talk constantly in the low mysterious language of the pines. Upon this seemly eminence, which affords a gracious prospect on every hand, the first stick of Wausaukee club house was laid in April of this spring, slight promise of the large and striking structure which met our view as we swept around the last curve in the road, and to whose hospitality we were welcomed by Mr. Warren himself with a cordiality and gracefulness which showed what the hotel world lost in the Wausaukee's gain.

There have as yet been no good photographs taken of Wausaukee club house, and no engraving made which conveys any idea of the house and its surroundings. I confess the drawing made by myself, over which an engraver struggled patiently for some time, does the place poor justice. The house is really larger and more imposing in its appearance, with far more of the Queen Anne than the log cabin in the *coup d'œil* as one approaches it. The engraver, however, heard there were logs in the structure, and it was only by exercise of force that he could be prevented from depicting a plain log cabin. As a matter of fact, the design of Wausaukee club house is by Mr. Flanders, a well-known architect, and in its execution it is very happy and striking. The floor area of the building is 40x60ft. The lower story is built altogether of logs, sawn on three sides, with the remaining or bark side left out. Strong iron tree-bolts are sunk at spaces of a few feet through each log, binding it firmly to the one below it. The result is a structure strong as a lighthouse, and it is the boast of the architect that a cyclone might move it, but could not smash it. The upper story is covered with the shingle finish so often employed in city cottages. This story and the roof are painted dark red, which color in contrast to the browns and grays of the logs is at once very striking and very pleasant. This club house cost $7,500. In its effect it surpasses many gaudy buildings of three times the cost which have been erected for similar purposes elsewhere.

THE WAUSAUKEE CLUB HOUSE.

The club house faces south, so standing four-square to every wind that blows, and open to every welcome wind. Its doors and windows are ample and all provided with screens. There are wide verandas on two sides, that upon the lake shore side being simply an inspiration. This great gallery is 16×40ft. in extent, 8ft. high at the eaves, and inclosed completely with a green wire screen against which all mosquitoes, flies and that ilk may vainly weep and gnash their teeth. This is the favorite smoking room. I counted twelve big red rocking chairs out there one time, and it all looked wonderfully comforting and inviting.

Within there is a gun and tackle room, 20×34ft., well provided with lockers. Plenty of tables here, and a good wash room. Back of this is the reception hall, 20×40. This is a great room. Heavy oak tables and furniture here, another wash room handy, a screaming fine old fireplace, tree size, and a fine collection of odd and freak antlers, presented to the club by Mr. Warren. Among these is the head of a Virginia deer with a pretty fair set of woodland caribou antlers on it. This great hall opens upon the gallery fronting the lake. Out of it also runs the hall for the stairway, which leads to fourteen tidy sleeping rooms, furnished with iron bedsteads, good for Napoleons and hunters. Near by also is the door leading to the dining hall, which is in a quite separate building a few paces distant. The latter is a story and a half, or nearly two stories, the upper part being given up to the servants' quarters. The dining hall proper is 32ft. long. It was a very good idea to have that and the kitchen apart from the main building. Back of this yet further are sheds and tents now used by laborers, guides and others. The stables are 100yds. or more away at the foot of the hill, not far from a pleasant little lake which sends a stream across the road. In the erection of these different buildings, the club sawed its own lumber, with a portable sawmill which it brought in. It did this, and still has left the trifle of one and a quarter million feet of lumber left standing on the 4,120 acres of land which it owns in fee simple and by actual purchase. Just what this land has cost it may not be necessary to state, but upon building, etc., over $10,000 has been expended now. The land is admirably chosen, and lies in sections alternating with Government land, so that the amount practically covered is largely increased. The membership share in Wausaukee Club has thus a sort of tangible value to it, and of all the clubs which I have noticed, I believe this starts out the stiffest. Its shares are now $150 each, the capital stock being of 250 shares. There are ninety-five members now paid up, and the list may possibly be extended to 150. The maximum annual dues are $20. Board is fixed at $1 per day, which will probably be eventually found too low. The pusher's fee is $2 per day. Use of team $4 per day. There is a charge for the use of club boats, which might very well be discontinued. There are 9 boats at present, some of them very good ones, and some, made for light portaging work, altogether too light and risky for women and children to use, unless a drowning in one of the deepest and coldest lakes of the North is especially desired. This point is one which should be insisted upon right here: These little semi-canoes, fine as they are for their real purpose, ought to be kept apart and by themselves, and not left at a landing where just any one can get into them. If they are not, a drowning will follow, sooner or later. That happens only too often out of heavy and steady boats.

There are 5 wagons that belong to the club, and 4 teams.

Mr. Thos. Lawton is superintendent of the property, and Mr. J. W. Tavenner, with his cheerful wife, holds the steward's keys. These are selections fortunate in the extreme.

But in such statistics and details as these we lose sight of the story of the club opening, which has all this time been steadily progressing. I do not know just when a club can be said to be actually and formally opened, unless it is when the first bottle of champagne is opened after dinner. The latter occurred in this instance somewhere in the neighborhood of 2 P. M., after numerous courses, chief among which figured one of actual, *bona fide*, fresh brook trout, 65 of them caught that day by Mr. Rollins, out of 322 in all caught by him in three days or parts of days. It was a fine repast this first one of the Wausaukee Club, and many were the sighs of content from those assembled. Finally there began confused noises of shuffling feet, applause and calls of "Rollins! Rollins!"

Mr. Rollins rose, holding in one hand a long trout which he was upon the point of "getting away with," and after a short struggle with a bone spoke as follows:

"Gentlemen: You are a little early in your call for the unworthy president of your club. You are not as hungry as I am, because you have not fished so long as I have to-day, catching trout for a hungry crowd is hungry work itself. I presume you would be pleased to have me, as one better acquainted with this newly acquired property of yours, say a few words in regard to it. Gentlemen, I feel honestly like congratulating you. I do not know of another portion of these great forests where you could acquire privileges similar to those now under your control. You have one of the finest preserves of the country now, with every facility for making it much finer. You own six miles of land along the Middle Inlet, one of the best trout streams of these woods, and the Eagle Nest River, one of the loveliest waters that ever floated a fly. You are in the center of all the better trout waters of this region. The Wausaukee River is within two miles of you, naturally fitted to hold large trout. The south branch of the Pike, and the little South, both in the same direction, are elegant streams, and the latter is fished hardly at all. The Medicine Brook, a famous little stream, is closer to us than it is to Ellis Junction, and so is the famous fishing for big trout at its mouth, in the Peshtigo. You are not over two or three hours' drive from the celebrated Thunder River, much closer than from the nearest railway point. You are only thirty miles from the headwaters of the Little Oconto, the best trout water of them all, as is thought by many, but which is forty miles from any town or stopping place. You are only seven miles from the Roaring Falls of the Peshtigo, five and a half miles from the Caldron Falls, six miles from the High Falls, twelve miles from Thunder Mountain, and nine miles from Thunder Lake. You have, I may say without exaggeration, seventy miles of the best of trout waters directly about you. The excellence of this region for deer is also well known, as we hope in season to see proved,

"For lake fishing you have nine fine lakes, six of which you own outright. The Newton Lakes, a pleasant walk from here, are delightful bodies of water, as you will see, with fine beaches and pleasant surroundings. There are small-mouthed bass and pickerel there, as I see Mr. Haskell and his companion have to-day proven. The Newton Lakes cover respectively 300 and 160 acres. Wausaukee Lake, right at hand, and I leave it to you, is a noble body of water, covers 250 acres, is over a mile long and is over 150ft. deep by actual soundings. Just how deep it really is no one knows, but it is singular and indeed wonderful in this regard. It is full of fish, for earlier in the season we have seen them, and some good bass have been taken there to-day.

"We have planted 12,000 brook trout in the streams in your preserves, and in the lakes 100,000 wall-eyed pike; we have in the little lake of five acres on the inlet above Wausaukee Lake 20,000 fine trout fry from Osceola Mills hatchery, screened in, above and below. We intend to make this small and cold lake a reservoir if possible. It is the intention this fall if possible to put in our hatchery just at the foot of the hill back of the house. We will have abundance of trout for you all. I believe I am right in saying that $26,000 in cold cash could not duplicate the privileges you have now on your first day at the club, and I am sure and hope you will all be pleased."

And everybody was pleased. Mr. Warren was called and also made a succinct and happy response. Mr. Tabberner was wanted and made a railroad speech of about four lines. Mr. Tabberner regretted that Mr. Dutton,

general manager, and Mr. Sheardown, general passenger agent of his road, could not be present, but they sent regards and two boxes of fizz water with the compliments of the road, hoping that the Milwaukee beer and the Milwaukee & Northern champagne would not be conducive to conscienceless fish stories. Mr. Tabberner was willing to have the boys smoke with him, but didn't just exactly know how that club house came there, anyhow. Thought it "growed" there.

So now the club house was opened, and everybody went fishing. For myself, I caught that day, wading along shore and casting the frog, six fine bass, all big-mouths. This was on Wausaukee Lake, just above the club house. In answer to "Kingfisher's" late challenge in the angling columns of this paper, I would like to say that these bass were as hard and stubborn fighters, and fought as long as any small-mouth I ever saw. Ordinarily, in the warmer waters, this is not the case. In this very deep and cold lake, at the season when all the bass are in deep water most of the time, the big-mouths are very different from that fish in many other waters. This was the testimony also of Mr. Gilpin, who caught one the next day. Mr. Cratty, the well-known Chicago lawyer, better known as Tom Cratty, caught two black bass on worms the next evening, but as he didn't give them any time to fight, his evidence is not competent.

Mr. Tabberner and I tried the Wausaukee for trout. That is a deep and narrow stream, but we got only 39 trout, all very small. The stream was very high and muddy. The next day I fished the Middle Inlet, a very rough stream, clear down into the cedar swamp, and I got 50 trout, which Henry, the boy guide who went down with me, said ran as good an average as any he had seen. These were gamy and grand fighters and very different from the torpid Wausaukee trout. No one knows what makes the trout of the latter stream so sluggish of late. The Middle Inlet fish are certainly lively enough. Fly fishing is not practicable on either of these streams, and never will be until they are cleared up, which would be a work of endless toil and expense. There are long reaches of beaver meadows on both these streams, and on the Wausaukee I saw fresh beaver cuttings. I saw the tracks of a big buck in the wet sand along the Middle Inlet. There were three deer seen during my short stop at the club. This fall there should be good shooting.

The weather was rather warm for these few days, and not much fishing was done in a serious way. I believe it was Mr. Vail who caught 8 very nice trout one morning in the brook that runs through Mr. Rollins's meadow. Mr. Rollins has a ranch of about 800 acres, just a step over through the woods. It was over in this direction that Mr. Blackman and Mr. Tuttle went fishing and got lost. They did not get in until 10 o'clock at night, but no one worried, for Mr. Blackman was known to be acquainted with the country. It is an almighty easy country to get lost in, and those who want the thrill of going into a wilderness with a real guide may well feel that the guide is no hollow formality here, for a time at least.

At the present time many of the trout that have been planted in most of these streams are running small. If the club members insist on taking these little fellows, they will be curtailing their own privileges. It is against the law of Wisconsin to keep a trout under 6in. in length. It is all very well to say that a small trout hooked in the eye is bound to die. The only way to do is to put every trout under 6in. back in the water, and let it solve the question of life or death for itself. I proved to my own satisfaction that on the Middle Inlet, at least, one can get a good basket of trout and not break the law. The club should provide each fisher with a 6in. stick for a standard, and fine the man with the small trout. That is the only way they will ever get the standard of their excellent streams up to what it may be. They are admirable as they are. Keep the law, let the little fellows grow, and in a very few years these streams will be as good as they ever were, or better. Otherwise they will never be real trout streams, for they will be kept fished down too close and hard. The Castalia Trout Club of Ohio has a rule like this, I think. They plant their streams, which do not compare with these splendid wild streams, and they get big trout out of their little 8-mile run of open water. There ought to be a decided stand made right at the start on this point by the club, and once the first two years were past, the wisdom of it would be cause of congratulation to all.

A few good reaches for fly-casting might well be cleared out on some of the streams. That is a very tangled country. The Eagle Nest is the prettiest stream for the fly, and ought to be kept sacred to the fly alone. I hope it will be stocked largely in the club operations, and then fished only with the fly. That would be fine.

The Wausaukee men, headed by genial and always helpful Mr. Warren, who by his presence now is doing the club a service it could hardly buy in straightening and smoothing the early, opening tangles in details, certainly know how to entertain as well as to enjoy themselves. I don't know when I have so disliked to turn homeward as I did from the hospitable roof of this grand young club, which has so soon, at one bound indeed, taken high rank in the army of clubs of this region. In many ways this is a unique club, and its history is here all too briefly and imperfectly told. Let us follow its later growth with pleasure and with admiration. For the present, farewell became necessary, and after a last row over the gloomily deep Wausaukee Lake, which is the coldest and blackest, deepest and most merciless looking bit of water I ever saw, and after a last prowl around the old log cabin, which is all that is left of the trading post which the adventurous pioneer of the "free traders," Norman Kittson, established here thiry or forty years ago on the old Menominee trail, I had to cut short a visit which ought to have been a year in length, and take the light Concord wagon which bore several of the members homeward that evening. By and by we arrived at Pike, or Amberg, and met the invariable sign of country civilization, the village brass band. They were going to serenade somebody, probably Mr. Amberg, on account of his changing the name of their town. The man who blew the big bass horn had only one arm. I reckon he must have blown the other one off. At any rate, we knew we were again in civilization. But many and many a tired soul will pass this gateway of the wilderness after this, and drink the rest and strength that lies around Wausaukee. A very strong collection of good business they are, the Wausaukee men, as pleasant to meet as any on earth, and not full of conceit. "We haven't got a 'sportsman's paradise,'" they say, "and we don't claim it; but we've got a place to build up a mighty good club, and there is no better a country anywhere." They might say much more than this and be far within the limits. Long life and success to Wausaukee. Following is the membership:

Officers—President, Charles E. Rollins; Vice-President, Spoor Mackey; Treasurer, John Marder; Secretary, Walter W. Tabberner. Directors—John W. Tope, Wm. S. Johnson, John J. Flanders, Alva L. Rose, Edward F. Lawrence, Wm. Mariner, Geo. H. High, Arnold P. Gilmore, C. Stewart Warren. Executive Committee—C. Stewart Warren, Edward F. Lawrence, Alva L. Rose.

List of Members—W. A. Amberg, F. D. Ballard, L. Blackman, L. Baldwin, T. R. Burch, Z. P. Brosseau, C. L. Bonney, L. C. Bonney, B. E. Bremner, J. W. Brooks, Jr., M. Carruthers, J. A. Clark, E. Carqueville, C. S. Crain, T. E. Courtney, S. M. Coe, T. Cratty, W. B. Conkey, M. A. Donohue, J. Darlow, H. R. Durkee, T. C. Dennehey, A. T. Ewing, J. J. Flanders, E. H. Fishburn, W. G. Furguson, T. E. Gilpin, T. E. Gross, W. H. Gray, F. D. Gray, S. Whipple Gehr, A. C. Gehr, A. P. Gilmore, G. H. High, G. C. Hall, J. W. C. Haskell, A. W. Harlan, Mrs. C. Hopkinson, J. K. Hanes, R. W. Hyman, Jr., A. C. Huston, J. C. Jackson, W. S. Johnson, H. M. Kingman, E. F. Lawrence, E. W. Lyman, J. Marder, J. W. Marder, W. S. Marder, R. L. Martin, Spoor Mackey, H. C. Mitchell, A. McDonald, S. P. McConnell, R. W. Morrison, F. E. Morse, W. C. Newberry, J. K. Prindiville, E. H. Pitkin, W. R. Roney, A. L. Rose, J. M. Rogers, C. E. Rollins, C. E. Rollins, Jr., J. O. Smith, L. B. Sidway, R. J. Street, H. M. Shepard, J. W. Shields, H. A. Sloan, C. W. Schwab, D. L. Streeter, C. T. Stratton, F. D. Turner, W. P. Tuttle, W. W. Tabberner, H. S. Vail, C. Stewart Warren, H. P. Wadhams, W. M. White, D. F. Bromner, F. E. Patterson, C. H. King, J. G. Steevers, all of Chicago; Grant Fitch, H. Herman, F. M. Hoyt, L. E. Katzenstein, W. H. Mariner, F. Sylvester, W. B. Sheardown, of Milwaukee; J. W. Tope, T. Werswick, of Oak Park, Ill.; T. H. Ball, of Aurora, Ill.; Henry Davis, Jr., of Springfield, Ill.; T. S. Hawley, of St. Louis; G. H. Mitchell, of Forestville, Conn.

THE MONTREAL FISH AND GAME PROTECTION CLUB has sent a deputation to Ottawa to petition for much needed amendments to the Quebec fish and game laws, such as reducing the size of net meshes and reducing the number of licenses for netting fish; also to have the dore and bass season assimilated to 15th June. These things the Government have promised to do what they can about. The club has also petitioned to have net fishing stopped in Missisquoi Bay for five years. There is a movement on foot to get a grant from the Provincial Government which will partly pay for game wardens patroling the district from the Grand Nord to the Ontario boundary of Lake St. Francis. The club is paying one good warden already, but its funds are low and will not admit of the employment of a necessary second. This warden has caused the conviction of over thirty persons for infraction of the fish and game laws. As the club is doing so well it should be better supported. Too many sportsmen are willing to condemn any effort toward fish and game protection as useless, but the Province of Quebec Fish and Game Protection Club are demonstrating with a very great deal of ability that success can be achieved when every sportsman puts his hands in his pockets and contributes his mite.—*Montreal Gazette.*

"JUMPING" BASS.—The Windsor, N. Y., *Standard* reports: Charlie Dusenbury, Charlie Roberts, Miss Mollie Russell and Miss Aggie Gilbert were boating on the Susquehanna last Monday evening. As they rowed alongside a piece of driftwood they saw something coming along on the surface of the water with considerable fuss and flopping. Visions of sea serpents and weird monsters rose before them, but ere they had time to become thoroughly alarmed the cause of the disturbance entered the boat by a neat jump and landed in Miss Russell's lap. It proved to be a 2¼lb. black bass. All of which goes to prove that for the gamy bass and for the comfort of fishermen, pretty girls are better bait than dobsons. Can you blame them?

TARPUM IN EAST RIVER, NEW YORK.—On Wednesday, July 23, David Mole caught in his pound net at Little Bayside, L. I., a tarpon, weighing 23lbs., 45¾in. long, and 8¾in. deep. Has one ever been caught in the East River before?—J. E. HILLYER (New York city). [We think this is the first record of taking the tarpum in the East River. It has, however, occasionally been captured on the south side of Cape Cod, and taken to the fish market at Wood's Holl, Mass. It may be called an occasional summer visitor in this latitude, not extending its range north of Cape Cod.]

RED SNAPPER AT MARTHA'S VINEYARD.—On July 12 Mr. Vinal N. Edwards, of the U. S. Fish Commission, went to Menemsha, Martha's Vineyard, collecting. From a little bass trap set in 10ft. of water he obtained a 12lbs. red snapper (*Lutjanus blackfordi*). Mr. Edwards believes this is the first one taken on the Massachusetts coast, but he thinks one was caught some years ago near Block Island. Mr. Blackford had a young example from Long Island. At the time of writing fish were scarce at Wood's Holl.

MISSISQUOI MASKINONGE.—Highgate, Vt., July 30.—I have recently had some fine sport in the Missisquoi River, at Highgate, Vt., with maskinonge. Have killed several fine ones on a light salmon rod. One tipped the beam at 19lbs. It gave me in the rapid water half an hour's fight; broke water like a salmon.—STANSTEAD.

CLAYTON, N. Y.—G. W. Sinsabaugh and his grandson, C. C. Siter, of Troy, N. Y., stopping at the Walton House, caught three fine muscalonge, weighing from 15 to 20lbs. They are the largest caught this season on this part of the river.

A GOOD HOME FOR THEM.—Cobwigger—"What makes you think those four pups will please your wife?" Younghusband—"Because I'm sure she could make such nice dog biscuit.—*Life.*

First trout—This seems to be a quiet neighborhood; how does it strike you as a place of residence. Second trout—Just the thing. There are no flies on it!—*Puck.*

Fisheulture.

AMERICAN BROOK TROUT IN SOUTH AFRICA.

PIETERMARITZBURG, Natal, South Africa, May 21.—*Editor Forest and Stream.*—Many of the readers of your valuable paper, FOREST AND STREAM, will be pleased to hear that the American brook trout has been adjudged a fit and suitable fish for South African rivers, and that the little colony of Natal has taken the initiative toward its introduction in a really practical manner.

The introduction of trout was first brought before the Legislative Council of Natal by Cecil A. S. Yonge, Esq., M. L. C., and was met by opposition on the ground that it would be a waste of public money; but Mr. Yonge's characteristic perseverance and thorough earnestness of purpose ultimately won the day in so far that the sum of five hundred pounds sterling was granted for the purpose. A committee was formed, consisting of Cecil A. S. Yonge, Esq., M. L. C. (chairman), Col. Vaughan, J. C. Parker, Esq., and J. E. Wace, clerk of the committee—all thoroughly in earnest to carry the experiment through to a successful issue. And now, what has been done? Why, out of the small grant a splendid little fish hatchery has been set up, including fry ponds, all of most substantial workmanship, and upward of thirty thousand trout ova laid down from the Solway Fishery (Joseph J. Armistead's), Scotland.

The ova were placed on glass grilles and hatched out well; some of the young trout have already been turned out into the rivers. The success of this experiment is in a very large measure due to the care and watchfulness of Mr. J. C. Parker, one of the committee, who personally took charge of the hatchery from the beginning. This next season, with a further grant, it is to be hoped not a few thousands but a few hundred thousand ova will be laid down, and with the experience already gained in the past the experiment should turn out successful.

We have difficulties to contend with in all our rivers in so far as temperature is concerned; they all heat up considerably in the summer, possibly as high as 75deg. Fahrenheit and possibly to 80deg. at times. What do you think of that? The temperature is what I fear most, still the trout are doing remarkably well in Australia and New Zealand. I expect their rivers are pretty warm sometimes, but have no data to judge from. Also, your American rivers, I imagine, will sometimes run up a pretty high register. On this point your Fish Commission will be well posted; it would be interesting as well as useful information for our Committee on Trout Introduction.

The water in which the eggs were hatched was cooled by passing through boxes containing ice, and the temperature of the water flowing over the eggs varied from 45deg. to 61deg. The eggs were put on the grilles March 8, and some of them were hatched shortly after their arrival. On the 7th of April the number of fry remaining alive was estimated at 3,000. The quantity of water passing through the boxes per minute was one-half gallon at first, and was increased finally to seven gallons per minute. The total quantity available was ten gallons. On the 22d of March one of the alewives had almost lost its sac. On this date 349 of the fry were lost from blue swelling. A. W. ARMISTEAD.

[In New Zealand the *Salmonidæ* have succeeded in rivers whose temperature is low and have failed in waters that are too warm; for instance, at Kawau, when the water in the creeks reached a temperature of 70deg. Sir G. Grey found his trout dying. In Shag River, Otago, trout died, as supposed, because of excessive heat. In Australia, so far as we have read, the *Salmonidæ* have been most successfully introduced in streams whose temperature does not exceed 60deg. in their upper waters.]

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 2 to 5.—Dog Show of the Wilmington Fair Association, at Wilmington, Del. F. R. Carswell, Supt., 101 West Sixth street.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. O. H. Corbett, Secretary.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 19.—Second Annual International Dog Show of the Industial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

Sept. 9.—Field Trials of the Manitoba Field Trials Club. Thos. Johnson, Winnipeg, Secretary.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 3.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary. Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

THE WILMINGTON DOG SHOW.

THE premium list of the first dog show of the Wilmington Agricultural and Industrial Association is ready for delivery. The show will be held in the main exhibition building on the fair grounds of the Association, Wilmington, Del., Sept. 2 to 5. The judges appointed are Mr. R. F. Mayhew and Dr. H. Clay Glover. Seventy-five classes are provided for with prizes of $8 in challenge, $8, $4, and diploma in open, and $5 and $3 in puppy classes for some of the prominent breeds. In some of the other classes the prizes are $6, $3 and diploma, and in a few of the less important classes the prizes are $5, $3 and diploma, and in the remaining classes the prizes are $4, 2 and diploma. The Association offers $10 for the best exhibit, and kennel prizes of $4 each for mastiffs, St. Bernards, great Danes, pointers, English setters, Irish setters, Gordon setters, foxhounds, field or cocker spaniels, beagles and bull-terriers. Entries close Aug. 21. The address of the superintendent is F. R. Carswell, 101 West Sixth street, Wilmington, Del.

DETROIT DOG SHOW.

DETROIT, Mich., Aug. 2.—*Editor Forest and Stream:* We expected to be able to announce this week a full list of the special prizes to be offered by the Michigan Kennel Club at its show beginning Sept. 2; but the committees appointed to solicit special prizes have met with such unqualified success and our citizens have responded to our demand for specials so liberally that we hope to make our special prize list equal to that offered by our club in 1887, which has never been excelled by any other club in America. It is almost certain that aside from the specials offered on single specimens in many classes, our club will offer kennel prizes on the following breeds: For the best kennel of four, mastiffs, great Danes, rough-coated St. Bernards, smooth-coated St. Bernards, deerhounds, greyhounds, Siberian wolfhounds, pointers, English setters, Irish setters, Gordon setters, Chesapeake Bay dogs, Irish water spaniels, cocker spaniels, collies, poodles, bulldogs, bull-terriers, beagles, fox-terriers, black and tan terriers over 7lbs., pugs, Italian greyhounds, and bloodhounds. Best pack of English foxhounds, not less than six. Best pack of shaggy foxhounds, not less than six. Best pack of American foxhounds, not less than six. The following changes and corrections have been made. Owing to the large classes of non-sporting dogs assigned Mr. James Mortimer to judge, the classes of Chesapeake Bay dogs have, at his request, been taken from his list and given to Major J. M. Taylor. A challenge class has been made for field spaniels, dogs and bitches, prizes $10 and $5; cocker spaniel dogs the same, bitches the same; an open class for black cocker dogs with $10 and $5, bitches the same; other than black dogs the same, bitches the same; puppies, any color, dogs $5 and medal, bitches the same; pug puppies the same.

A challenge class for both dog and bitch black and tan terriers over 7lbs. Entries are coming in very liberally and everything indicates a big show.

For the convenience of Eastern exhibitors who are often in the city of New York, we have placed a supply of premium lists and entry blanks of the Michigan Kennel Club's bench show of dogs, to be held Sept. 2 to 5, in the office of the American Kennel Club, 44 Broadway; the American Shooting Association, 184 Stewart Building and of Percy C. Ohl, 60 Broadway. Exhibitors in New York or vicinity can secure lists by calling at these offices, or address M. V. B. Saunders, Secretary Michigan Kennel Club, 230 Woodward ave., Detroit, Mich. M. V. B. SAUNDERS, Sec'y.

AMERICAN KENNEL CLUB AFFAIRS.

HORNELLSVILLE, N. Y., Aug. 1.—*Editor Forest and Stream.*—About the A. K. C. muddle as I look at it, it is of very little consequence whether Mr. Peshall's theory, as to Mr. Belmont's putting money in, is true or not, the most important thing is to know if the officers of the A. K. C. have administered it as the congress of American dogdom or as their private affair. J. OTIS FELLOWS.

Editor Forest and Stream:

With a view of closing this discussion, as far as I am concerned, for Mr. Peshall has taken his communications to other papers, where he must know I cannot follow him, I paid a visit to the A. K. C. office on Monday. I wanted to see how Mr. Lewis had had his payments entered up in the books. Mr. Lewis took office under Mr. Peshall's committee on April 1, 1888, and was employed until Jan. 31, 1889, a period of ten months. Mr. Peshall has tried hard to make himself and others believe that Mr. Lewis had an exhaustive contract, in place of simply carrying on the work at the same rate of remuneration which had been received by Mr. Vredenburgh.

The first payment made to Mr. Lewis was on July 31, and amounted to an even $100. The next was $150 on Nov. 7, and then another $150 on Dec. 17. These made a total of $400 during the year 1888. On Jan. 25, 1889, appears an item of $50, and on Feb. 1 $72, March 30 $50, Aug. 23 $65.50, and Nov. 30 $50, making a total for 1889 of $287.50. This with the 1888 payments of $400 made $687.50, or $68.75 per month for ten months.

The apparent dilatoriness in paying the balance in 1889 attracted my attention, and this is the explanation: On Feb. 1 Mr. Lewis began his engagement as stud book editor at a $1,000 salary, which was paid in regular monthly instalments. He then said that he would draw the old balance as he needed it, and so took it in odd amounts, giving due bills therefor. When these had accumulated some little time an entry of their total was made.

By way of further proof against the exhaustive contract fancy of Mr. Peshall's I compared the bank deposits with the cash receipts for the month of July and again in December. On July 12 the bank account showed a balance of $625.48, and the books called for $651.48. Between that date and July 25 the gross receipts were $83, and a deposit of $80 was then made. From that date to July 31 gross receipts $91, deposit $84 50. From July 31 to Aug. 7, gross receipts $85, deposit $82 30. That is close enough for any one to be satisfied with, for from the gross receipts must be deducted returned stud book entries and the sundry small expenses of running an office. In a portion of December, which I checked, the deposits were equally close. These deposits would not have been made in this way had there been any such thing as an exhaustive contract.

By way of a sop to Cerberus let me tell of an error I did detect. That balance of $1,228.28 was divided between American Kennel Club account, $285.39, and stud book account, $942 89. The division ought to have been $235.39 and $992.89. This mistake seems to have come about in this way. Against the $285.39 were charges of $25, $15 and $10 (they will be seen in the *Gazette* of February, 1889), which reduced the balance to $235 39. Now there were only two accounts in existence at that time—the A. K. C. and stud book. The former was a short one, with but few items, and the latter made up of hundreds of items. To make the division therefor, the easy way was chosen of deducting the A. K. C. account from the balance on hand and putting the remainder to the debit of the stud book account. Hence when the total of $285.39 was taken as A. K. C. balance and deducted from $1,228.38 it left $942 89, whereas the proper amount to have deducted was $235.39, which would have left $992.89 to go on the stud book account.

Another fact which I was advised of would tend to show that Mr. Peshall's management of the A. K. C. finances was not what it should have been. He tells us that he made an exhaustive contract with Mr. Lewis, and he will not accept any statements made by his fellow committeemen or Mr. Lewis that such was not the case. That does not matter so much, all I want to show being the desire of Mr. Peshall to acknowledge his willingness to leave the A. K. C. penniless. Further than that, after Mr. Lewis took charge, on April 1, 1888, Mr. Vredenburgh gave Mr. Peshall, at his request, a statement of cash on hand and bills yet to be paid. This showed a $750 balance, and after the committee had met Mr. Peshall told Mr. Vredenburgh to draw a check for the $750 payable to himself. Mr. Vredenburgh declined to do so, stating that he would not place Mr. Lewis in the position he himself had been in, of running the club without any funds, and for that reason would only accept $500. If Mr. Peshall had had his way, and Mr. Vredenburgh had accepted the $750, where would the A. K. C. have been at the end of the year?

To Mr. Livesey I would say that as he is simply Mr. Peshall under another name, and his question was not asked in good faith, I decline to give an answer. Mr. Livesey said that if I would give the item of book deposits it would be a clue as to Mr. Lewis's remuneration. Upon the same principle if the cashier of FOREST AND STREAM told him what his daily bank deposits were Mr. Livesey could tell what the editor's salary was.

The letter of Mr. Aldrich I have not noticed because I can see nothing in it which goes any way toward substantiating anything, except that the auditing committee did make an examination and call for explanations when they needed them. If any one thinks Mr. Wilmerding would be a party to any funny business they do not know that gentleman. I have known him for ten years now, and what he says "goes" with me all the time. J. W.

MANITOBA FIELD TRIALS DERBY.

FOLLOWING is a list of the entries for the Derby of the Manitoba Field Trials Club, to be run Sept. 9. All were whelped in 1889:

BUNTY (Thos. Montgomery), liver and white pointer bitch, June (Ightfield Dick—Polly Peachem).

COTON (F. Dorsey), liver and white pointer dog, June (Ponto—Dainty).

DAISY NOBLE (D. Smith), orange and white English setter bitch, May (Prairie—Fanny M.).

FROST III. (T. Montgomery), black, white and tan Eulish setter bitch, March (Van R.—Qu'Appelle Belle).

IGHTFIELD UPTON (T. Johnson), liver and white pointer dog, June (Ightfield Dick—Polly Peacham).

MANITOBA BESS (T. Johnson), black, white and tan English setter bitch, September (Dick Bondhu—Western Belle).

MANITOBA FRISK (T. Johnson), black and white English setter dog, September (Dick Bondhu—Western Belle).

POWDER (A. Holloway), black and white English setter dog, March (Van R.—Qu'Appelle Belle).

PRAIRIE A. (E. D. Adams), orange and white English setter bitch, February (Prairie—Fannie M.).

PRINCE NOBLE (D. Smith), black, tan and white English setter dog, May (Prairie—Fannie M.).

RUSH (J. H. Brown), black and white English setter dog (Cable—Belle).

VESTA (C. W. Young), black and white English setter bitch (Cable—Belle).

UNNAMED (Col. Bedson), black, white and tan English setter dog, February (Prairie—Fannie M.).

UNNAMED (L. Kastner), liver, white and tan pointer bitch, March (Bob—Fraulein).

KINGSTON DOG SHOW.

Editor Forest and Stream:

The Kingston Kennel Club's dog show is going to be a success if the number of applications for premium lists and entry forms are any indication. The owners who propose entering their dogs at this show should remember that the entries close on the 15th inst. Arrangements have been made by which all dogs coming from the United States will be admitted without any Custom House duties, no trouble or delay will be occasioned on that head. The building has been arranged not only with a view to accommodating the dogs, but the comfort of exhibitors has not been forgotten; a wash room and sitting room has been provided for their especial benefit. The exhibition outside of the dog show will as usual attract many thousands of visitors, as this fair is the big event of eastern Ontario, so that exhibitors will have plenty of amusement witnessing the races, etc., to repay them for visiting the most beautiful city in Canada, if there was no dog show to attract them and no liberal premium list to draw their expenses from.

C. H. CORBETT, Secretary.

KINGSTON, Ont.

HYDROPHOBIA SCARES.

SOME months ago a statement, having an air of authority, was made that hydrophobia was epidemic here in Massachusetts. This went the rounds of the newspapers, and in many instances was served up to their readers garnished in the most sensational way. Just why, even if true, it should have been made for publication, as it evidently was, is by no means clear. A possible result might have been the passage of a law making it obligatory that all dogs in the State should be muzzled; but even the most sanguine advocate of this plan could scarcely expect that such and end would be attained. And had this law been passed and all dogs been muzzled within the State limits, it would only have afforded partial protection, which could only be complete when all dogs in the neighboring States were treated in the same way. Muzzling is the only positively sure preventive measure, but it can scarcely be effectually applied in America, such is its extent in territory, and it would have to be simultaneous and rigidly enforced all over the country. It is a well known fact that rabies occurs most often in "stray dogs." These range wide, often from one State to another, and through them transmission of the disease would be going on, although well kept dogs were faithfully muzzled.

Not impossibly rabies is more prevalent now than it has been for a few years past; but he who says it is epidemic is assuming a grave responsibility, and one which only can be justified by the most conclusive evidence. "One swallow does not make a summer," nor does one case of rabies—nor 20, if widely scattered, nor 100 for that matter—constitute an epidemic. Fear has ever been recognized as a most important factor in the causation of what passes under the head of hydrophobia. It is also a notorious fact that what are reported to be cases of such are, in the infinite majority, due to other diseases—harmless as far as contagion is concerned—which present symptoms closely resembling the gravest of maladies. That not a few of the cases considered hydrophobia are merely cases of hysteria, no one knowing aught of the subject will undertake to deny. Fear must certainly be the exciting cause of these. How often and to what extent this painful emotion enters into the causation of other cases than those which are simply nervous is not, of course, known; but the conclusion is not unfair that it is an element in almost all cases, even those which are true hydrophobia. Of the many persons bitten by dogs believed to be rabid but a very few indeed suffer serious consequences; and, doubtless, only a very small proportion of those who are bitten by dogs actually so, really acquire the disease. Assuming this to be a fact—and there are good grounds for it—there must then be causes which act with the rabic poison. Few doubt but that this poison is the sole, actual cause, but other influences must affect it. In the presence of contagious diseases physical fatigue renders one more liable to take them; so, also, does intense mental emotion, and there is no more depressing influence than fear. It is only fair to assume that, were two persons bitten by a dog actually rabid and one to practically forget the injury, or, at least, to be free from all uneasiness regarding it, while the other remained in a state of terror, every moment expecting hydrophobia to break out in him, then the latter would be much more liable to suffer from the awful disease than the other, who is undisturbed by fear.

Therefore, to reassure the public and quiet their fears as to this malady is clearly the duty of those who discuss it for print; and, considering all things, it is not easy to justify any other course. The *Medical Record* recently contained an able and fearlessly frank editorial on "The Hydrophobia Scare," and the preventive treatment by inoculation, in which appeared the following: "Once upon a time, when Death and Pestilence bargained for human lives, it was agreed that an equal division of the spoils should be made. At the end of the epidemic, Pestilence claimed that Death had taken more than his share, while Death maintained, in turn, that more than the agreed number were stricken by Pestilence. The quarrel was, however, soon ended when Fear appeared to explain that it was he alone who had been accountable for the discrepancy, not only in increasing but in swelling the death rate. In fact, his record was greater than that of Pestilence and Death combined. Moral: Give Death and Pestilence a reasonable chance on a fair field.

"Although we do not wish to dignify the present hydrophobia scare by calling it an epidemic, the fear of it which has been scattered so widespread over the land has placed it on the top wave of discussion. Fear has at present everything to himself, and it is time to call a halt. As we have said before, we do not wish to question the scientific motives of the gentlemen who manage hydrophobia institutes, but we doubt the good results that are said to have been attained by them. In attempting to prove the truth of the theory of preventive inoculation they are starting from an airy nothing and striving to work down to solid facts. But the real bottom is a great way off. There is too much of partial and willing testimony concerning the question at issue to give any scientific value whatever. Logically speaking, every one must admit that it is exceedingly hard to prove how you may prevent what may never happen, or, in other words, how you can prove that a thing, which at best very rarely happens, is prevented from happening at all by the use of a supposed preventive. In attempting to argue the question we are swinging around a circle of negative propositions. Everyone who has studied the subject acknowledges that hydrophobia, if, indeed, it exists at all in the human system, is at least a very rare disease. Compare this fact with the almost countless number of persons who are bitten from year to year by dogs supposed to be rabid. If statistics were collected on this point the results would prove that there is no more apparent relation of cause and effect between the bite of a dog and hydrophobia than between an accidental sneeze and a stroke of lightning."

The writer has had some opportunities to study rabies, also other diseases of dogs. Very many times in his experience he has had among his dogs cases of what at first seemed beyond all doubt to be rabies, and yet none of his mute friends have ever gone mad. The case of a recent unfortunate is likely to prove of interest in this connection. She was an immense animal. For a day or two she had been ailing, uneasy and restless, and kept much to her kennel, refusing to respond when called. One night at feeding time, when the attendant entered her pen, she sprang at him in the most ferocious manner. Fortunately, he was quick to retreat, and escaped being bitten. She stood glaring at him through the fence for a few moments and then slunk away to her kennel. From time to time she would come out, but not when called, and would lap here and there on the floor, take up bits of wood, stones and straw; also bite at the woodwork and watch imaginary flies on the wall. She also frequently barked or sent out a hoarse, crazy sort of a howl. In fact, she showed signs which would readily be mistaken for rabies. And yet the writer never believed for a moment that she had that terrible malady. To guard against possible error, she was carefully isolated and watched. Soon it became clearly evident that she was suffering from inflammation of the brain. Inquiry developed the fact that she had been kept out in the sun all one intensely hot day, and that night had a slight convulsive attack, lasting, however, but for a moment. As such are not uncommon among dogs, no importance was attached to it. This patient was cared for for about three weeks, when the utter hopelessness of her case was plainly apparent, and she was mercifully poisoned. Such cases as this are very common. In almost all high bred dogs the brain is peculiarly supceptible to inflammation, and when it occurs it excites in many instances symptoms so closely resembling rabies, only one who has had experience in that and in brain diseases can distinguish between them. And there is every reason for believing that in ninety-nine cases out of a hundred, where dogs are killed as rabid, they are simply suffering from brain trouble, either mild and transitory or fixed and intense. So nicely adjusted is the brain of many dogs, it is easily thrown off the balance and unhinged. Insanity occurs in them as it does in their masters, and temporary attacks of delirium are not at all uncommon among them. Fear will induce them; occasionally, also, are they brought on in consequence of a hard run on a very hot day. Besides these there are worms and numberless other causes. There is a popular prejudice that more dogs run mad during the summer than any other season. Undoubtedly more cases of what are reputed to be rabies occur in the hot spell than in any other period of the year. When we consider the fact that dogs are subject to sunstroke, as are members of the human family, it is easy to understand what gave rise to the delusion. If a dog's brain becomes congested by the intense heat of the sun, he runs wildly about, yelping in the most crazy fashion; in fact, he is crazed, and almost everyone would think him suffering from rabies. Usually the shotgun or the revolver is called into service, the perpetrator is lauded as a hero, and another case of the terrorizing malady is added to the list built up by man's gross stupidity and cowardice. Whereas all that was needed to cure this case of "rabies" was a souse in a watering trough.

Were the newspaper reports to be believed, mad dogs are being killed almost every week in some part of this State. In not one instance out of a thousand are the slaughtered victims proved to be rabid. It is doubtful even if Pasteur himself could tell positively from the symptoms alone whether a dog presented all the signs of rabies was really mad or not. Inoculation is the only sure means of diagnosis, and yet the "say so" of policemen and others who pose as saviors of communities are always believed. Verily, the extent of the gullibility of mankind passeth understanding.

There is one point in this connection which will bear emphasis, namely, that no small proportion of the dogs which have gone mad suffer from dumb rabies. A dog with this disease is not, of course, wholly harmless; and yet, since he is unable to bite after the disease is fairly on him, he can not be such a grave menace. What per cent. of rabid dogs suffer from the dumb form of the disease is not known, but there is some reason to believe that the proportion of such cases is nearly as great, if not greater, than that of the violent form.

Now as to the danger of acquiring hydrophobia. The writer repeats what he once stated in these columns, that the chances of a person giving up his life on the scaffold are about as many as those of his dying from hydrophobia. No sensible person will ever make himself unhappy over so slight a danger. The hydrophobia crank will find some consolation in a small stick of caustic, which he can buy in a wooden holder, securely capped, for about 25 cents. Let him carry this in his pocket with his preventive for rheumatism, the horse chestnut, and burn all bites to which he is the victim. He cannot do himself any harm with it, and, if he uses it freely enough, it will prove a rare diversion—at lea t, while it is "taking hold well"—and he will have something else to think about beside hydrophobia.—*Dr. J. F. Perry in Boston Herald.*

IRISH SETTER IMPORTATION.—Fall River, Mass., July 3.—*Editor Forest and Stream:* I have purchased the Irish setter Inchiquin, from the Rev. Robt. O'Callaghan, Borstel House, Rochester, England. Inchiquin is by champion Shandon II. out of Iona, and comprises the best Irish setter bench and field blood in the world, champion Shandon II. being a full brother to the sensational bench and field trial winner champion Aveline. Inchiquin was whelped Jan. 2, 1889. He has never been shown, as Mr. O'Callaghan does not show his dogs until they are two years old. Mr. O'Callaghan considers him good enough to win in England, and from the description he gives I expect to get a dog that will be a great acquisition to the Irish setter blood in this country.—JOHN J. SCANLAN.

ENGLISH SETTER CLUB.

CONSTITUTION.

ARTICLE I.

The name of this club shall be the English Setter Club.

ARTICLE II.

The object and purposes for which the club is organized, and in furtherance of which it is intended to act, are as follows:

1. To fix the standard of physical type and conformation for this breed in accordance with the tests of modern experience derived from actual running in field trials to the end that bench show form may, as nearly as possible, conform to the requirements of actual work in the field.

2. To select persons whose names shall be suggested to the management of the different bench shows as judges of English setters at such shows.

3. To take such action as the interests of this breed may require in suggesting or approving or disapproving the names of persons to act as judges at the different field trials.

4. To offer English setter prizes at such bench shows as shall adopt the standard of type prescribed by this club and who shall select judges from a list of names approved by the club.

5. To offer prizes at field trials under such restrictions and conditions as the club may deem advisable.

6. To take such measures as may be deemed advisable to secure legislation and to maintain legal proceedings for the protection of dogs, or to secure the title and interest of owners therein, or for such other and germane purposes as experience may demonstrate to be needed in the interests of owners.

7. To undertake and advance any measures which in the judgment of the club or its executive committee may be calculated to further the interests of the breed of English setters, or to promote its improvement.

ARTICLE III.

All persons shall be eligible to membership in this club who own or breed the English setter, or who handle the breed at field trials, or who otherwise have some special interest in or knowledge of the breed.

ARTICLE IV.

The following named persons are the organizing members of this club: Pierre Lorillard, Jr., Jas. L. Breese, T. H. Terry, Percy Ohl, John S. Wise, Wm. Tallman, John E. Long, W. A. Coster, Wilson Fiske, J. Treadwell Richards, J. M. Taylor A. P. Vredenburgh, J. E. Quinotte, W. G. Peters, F. B. Rice, W. T. Irwin, P. H. Bryson, W. B. Gates, Arthur Merriman, J. M. Avent, J. Shelley Hudson, George Wells, Taylor Williams, Gen W. B. Shattuc, F. W. Whitlock, Geo. H. Hill, J. E. Dager, Richard Morgan, Wm. A. Neddermeyer, H. Hulman, Jr., Geo. W. Ewing, Chas. L. Holmes, E. Huidekoper, J. A. Graham, Dr. H. Clay Glover, Geo. Jarvis, S. T. Hammond, Captain Patrick Henry, P. H. O'Bannon, James Tracy, H. B Rathbone.

All applications for membership by persons other than the organizing members of the club shall be presented to the executive committee upon a nomination in writing by some member, seconded in writing by another member. The executive committee shall examine into the applications and accept or reject them as they may deem the interests of the club require. The action of the committee shall be final. In case the executive committee vote to membership the person applying, the secretary shall notify him of his election and send to him for his signature an agreement to be bound by and submit to the constitution and by-laws of the club, and upon returning the same signed, accompanied by his initiation fee and the dues for the calendar year, the applicant shall become and be a fully admitted member of the club.

All the organizing members and all members subsequently admitted shall sign an agreement to be bound by and submit to the provisions of the constitution and by-laws.

ARTICLE V.

The officers of this club shall be a president, a first vice-president, a second vice-president, a secretary, and a treasurer.

ARTICLE VI.

The management of the affairs of the club shall be vested in an executive committee, which shall consist of the president, both vice-presidents, the treasurer, secretary, and eight other members, to be elected as hereinafter provided. The executive committee shall also have power and authority to make by-laws regulating the mode of procedure at meetings of members and of the executive committee, and defining the duties of officers, and otherwise prescribing the mode of transacting the business of the club, provided that no by-law shall conflict with any provision of the constitution. The by-laws may be changed or amended from time to time by the executive committee, but the proposed provision shall be filed with the secretary at least thirty days before the meeting at which it is to be considered, and copies thereof shall be mailed to members of the committee by the secretary at least three weeks before said meeting, together with notice that the amendment will be submitted at a meeting to be held at a time and place mentioned in the notice. All members of the executive committee and all officers of the club shall be members of the club.

ARTICLE VII.

The officers of the club and the other members of the executive committee shall be elected at the annual meeting of members by secret ballot, and shall hold office for the term of one year and thereafter, until their successors are elected, except that the first executive committee and the first officers of the club shall be elected at the first meeting, and shall hold office until the first annual meeting, and until their successors are elected. The first meeting of members shall be held on the 24th day of June, 1890, and the regular annual meeting shall be held in the city of New York on some day in February, March or April of each year, to be fixed, together with the place of meeting, by the executive committee at least six weeks before the day of meeting. The secretary shall give one month's notice of the time and place of meeting to each member by mail to his last known post office address. The executive committee shall have power to call such special and extra meetings of members as they may deem needed for the proper transaction of business upon such reasonable notice to members as the committee may prescribe. The president must call a special meeting when requested in writing thereto by five members, for some day within one month from receipt of the request, of which meeting three weeks' notice by mail shall be sent to each member at his last known post office address.

ARTICLE VIII.

The first meeting of the executive committee shall be held on the 11th day of July, 1890.

Regular meetings of the executive committee shall be held quarterly, on the first Tuesday of January, April, July and October; and special meetings shall be held at any time by direction of the president, or upon the written request of five members of the club, upon two weeks' notice by mail, at the last known post office address of the members of the committee, respectively. Adjourned meetings shall be deemed continuations of the meetings adjourned, and no additional notice of such adjourned meeting need be given unless the executive committee shall specially direct.

ARTICLE IX.

Any member shall have the right to be represented at any meeting of the club by proxy, duly authenticated, as provided by the by-laws. The proxy shall only be given to, and can only be used by, and voted upon by, a member of the club, and a person not a member shall not be permitted to represent any member by virtue of a proxy or otherwise.

No single member at any meeting of the club shall be permitted to represent or vote upon more than five proxies.

Absent members may also vote on any question which they expect will come before the club by sending their vote in writing by registered letter through the mails to the secretary in seasonable time for the meeting, and the same shall be read at the meeting by the secretary, and if the vote be definitely expressed in such form as to be applicable to the particular form of the question before the meeting, the vote shall be received and recorded. The provision of a secret ballot shall not apply to votes sent in writing by mails to the secretary.

ARTICLE X.

Five members of the executive committee shall constitute a quorum for the purpose of business, and their action shall be final, except in those cases where, by special provision of the constitution, a larger vote is required.

The action of the quorum shall, however, be subject to review in certain cases in the manner hereinafter prescribed.

In case any member of the executive committee who does not attend at any meeting, or adjourned meeting, shall send to the secretary by registered letter a notice requesting that all the proceedings at the expected meeting, or any particular proceedings or motions thereat, shall be submitted for the action of the entire committee, and if the request shall actually have been received prior to the time appointed for holding the meeting, then and in that event the action of the quorum shall be subject to review, and to approval or disapproval by the entire committee.

If a majority of the entire committee are present at the meeting and vote in favor of the action taken at the meeting, then such action shall be final in any event, and no further submission or review thereof shall be allowed. But if a majority of the entire committee do not vote at the meeting in favor of the action taken at the meeting, then the secretary, in accordance with the request contained in the notice, shall, within five days from the date of said meeting, send a transcript of the minutes of the whole meeting, or of the minutes relating to the particular motion or proceeding, in respect to which the action of the entire committee is desired to each member of the executive committee not present at the meeting, at his last known address by mail, accompanied by a written notice that the action mentioned in the minutes is submitted to him for approval or disapproval, and thereupon the member so notified shall be entitled to send to the secretary by mail his written vote or votes up the questions stated in the minutes, and the vote or votes so sent, if actually delivered to the secretary's address by mail within three weeks from the date of said meeting, shall be recorded as votes upon the question with the same force and effect as if the member had attended the meeting and voted in person. The letter shall be filed and preserved for reference.

If the non-attending members who shall vote against the action of the meeting on any subject, shall, with the attending members who voted against such action at the meeting, constitute a majority of the entire committee, then the action of the meeting shall be annulled and of no effect; but otherwise it shall be deemed approved, and shall become operative at the expiration of three weeks from the date of the meeting.

A review of the action of any meeting may also be had in like manner, upon the request of any member who voted against the action taken, and who may desire to have the question submitted to the entire committee. Such request must be made immediately after the vote is announced, and a reasonable opportunity for such request shall be afforded by the presiding officer. The request shall be voted in the minutes of the meeting as part of the proceedings.

The same procedure shall be followed as in the case where the request is made by mail by a non-attending member.

Votes by mail which are not actually received at the secretary's address by mail within three weeks after the date of the meeting shall not be recorded against the action of the meeting, and the senders shall be deemed to have acquiesced in such action.

The failure of the secretary to send the requisite notices in season shall not invalidate the action of the quorum, and the action of the quorum shall be deemed confirmed if the necessary majority do not vote against such action within three weeks from date of said meeting.

But the failure of the secretary to give said notice shall be cause for his removal from office, and it shall be the duty of the executive committee to remove him after due hearing and to choose another secretary for the unexpired term.

ARTICLE XI.

Vacancies among the officers or in the executive committee shall be filled by the executive committee for the unexpired term.

ARTICLE XII.

The constitution may be amended by a two-thirds vote at any meeting of members of the club of which thirty days' notice has been given, provided a written draft of the proposed amendment shall have been filed with the secretary and published in some recognized newspaper devoted in whole or in part to kennel and field topics at least thirty days before said meeting.

ARTICLE XIII.

The initiation fee of each member shall be five dollars, and the annual dues shall be five dollars for each calendar year; initiation fee payable at time of becoming a member, and dues payable in advance at time of becoming a member, and thereafter on the first day of January in each year.

When any person shall be and remain in arrears upon any indebtedness to the club for a period of more than sixty days after notice requesting payment has been mailed to him by the treasurer, he may be dropped from the roll by the executive committee, and his membership forthwith shall cease and determine.

When, for any reason, the executive committee shall deem that the interests of the club will be protected or advanced by terminating the membership of any member of the club and dropping his name from the roll of the club, they may take such action by a three-fourths vote of the entire committee, the vote to be given either in person or in writing by mail; and the person so deprived of membership shall not be entitled to any hearing, nor shall the committee be required to assign any reason for their action. The powers conferred by this provision are discretionary, and do not depend upon any misconduct of the member, nor require that any charges shall be made.

The executive committee may also by a two-thirds vote, either in person or in writing by mail, suspend or expel any member from membership for such term as they think proper for any misconduct in connection with dogs, field trials or bench shows, upon charges duly made, and after a hearing.

Any member who has been dropped from the roll and his membership terminated, or who has been suspended from membership or expelled, may be restored to membership by a three-fourths vote of the entire executive committee, upon grounds appearing to their satisfaction and upon such terms as they may prescribe.

The executive committee shall also have power to remit the payment of initiation fees and dues, or both, of any member, when in their judgment the interests of the club require such action.

ARTICLE XIV.

The executive committee shall have power by a three-fourths vote to remove any officer for misconduct or flagrant neglect in matters appertaining to his office, after notice and hearing.

Misconduct in matters connected with dog shows, field trials or transactions in dogs shall also be ground for such removal.

BY-LAWS.

DUTIES OF OFFICERS—PRESIDENT.

SECTION 1. The president shall preside at all meetings of the club and of the executive committee, enforce the rules and regulations of the club and perform all other duties usually pertaining to the office of president.

VICE-PRESIDENTS.

SEC. 2. The first vice-president shall perform all the duties of the president in his absence. In the absence of both the president and first vice-president, the second vice-president will act. In the absence of the president and first and second vice-presidents, a temporary chairman shall be chosen to preside.

SECRETARY.

SEC. 3. The secretary shall keep a record of the proceedings of all meetings of the club and of the executive committee, conduct the official correspondence of the club, give notice of the regular meetings of the club and of the regular and special meetings of the executive committee, and when directed by the president call special meetings thereof, give all official notification to members, keep the books and papers of his office, subject to inspection of members on order of the executive committee. And no member shall be entitled to such inspection except upon order of the executive committee. The secretary shall also perform such other duties as may be assigned to him by the president and executive committee.

TREASURER.

SEC. 4. The treasurer shall receive all fees and dues from members, as well as other moneys coming to the club, keep an account of all receipts and expenditures by the club, and a separate account with each member; pay all bills approved, and make all purchases directed by the executive committee. All bills or claims against the club shall be first audited and approved by the executive committee before the treasurer shall pay the same, and no bills shall be paid unless so audited. He shall make a written report to the executive committee whenever requested; he shall make at each annual meeting a written report of the financial condition of the club and of the standing of each member, and he shall notify members in arrears to the club forthwith as soon as the dues or other indebtedness shall become payable, reporting the same to the executive committee when requested.

ORDER OF BUSINESS.

At all meetings of the club the following order of business shall be observed:

1. Roll call.
2. Reading the minutes and communications.
3. Reports of officers.
4. Reports of committees.
5. Unfinished business.
6. Election of officers.
7. New business.

At all meetings of the executive committee the same order of business shall be observed, except that applications for membership and the election of new members shall be taken up immediately after reports of committees.

OFFICERS.

Pierre Lorillard, Jr., President; J. Treadwell Richards, First Vice-President; F. W. Whitlock, Second Vice-President; Percy C. Ohl, Secretary; Dr. H. Clay Glover, Treasurer. Executive Committee, the above officers, and P. H. Bryson, J. Shelley Hudson, J. E. Dager, J. A. Graham, W. A. Power, Wilson Fiske, John E. Long, J. M. Taylor. Standard Committee, Pierre Lorillard, Jr., Wm. Tallman, P. H. Bryson, Wilson Fiske, J. M. Taylor.

BLACK AND TAN TERRIER IMPORTATION.—Dr. H. T. Foote, New Rochelle, N. Y., received last Thursday, from the kennel of Mr. T. Ellis, Manchester, Eng., three black and tan terriers, one dog and two bitches. The dog Broomfield Como was whelped in April, 1889, and is by Jackson's Patrick and out of Cosgrove's Pink. He has been shown but once, taking second in the novice class at Leeds last June. Broomfield Madge, whelped Feb. 24, 1888, is by Jackson's Patrick and out of his Queen. She has been shown four times, twice at Birmingham, once at Manchester and once at Central Hall, London, winning first each time. The other bitch, Beauty, was whelped May, 1889, by Jackson's Gordon and out of McMee's Bess. She was bred to Broomfield Sultan June 9. The first two named will make their first appearance in public in this country at the Detroit show next month.

THE MEDFORD FANCY GOODS COMPANY have issued a very handsome catalogue of the thousand and one articles in the dog furnishing line manufactured by them. The catalogue is profusely illustrated, many of the cuts being printed in colors, which adds not a little to the beauty of the work. The business was established in 1878, and from a comparatively small beginning it has grown to its present vast proportions, with customers in every city of prominence in this country, as well as a large foreign trade. The concern is the only one in this country that makes the manufacture of dog furnishings its exclusive business; and a look through their show-room on Duane street will well repay the visitor for his time, whether he is a fancier or not.

WILMINGTON, Del., Aug. 4.—The Wilmington Fair bench show, should the entries so warrant, will divide all classes made for "dogs or bitches" into dog classes and bitch classes. The Baltimore and Ohio and the Wilmington and Northern R. R. Co. will carry three dogs free upon one ticket to and from the Wilmington Fair bench show when accompanied by owner or caretaker, in baggage car. Similar arrangements are being perfected with the Pennsylvania R. R. Co., and will be duly announced.—F. R. CARSWELL, Supt.

MR. GEO. S. THOMAS, the manager of the North Field Yorkshire Kennel, at Salem, Mass, will shortly return from England with quite a string of dogs, including corded poodles, Irish terriers, King Charles spaniels, pugs, and several noted Yorkshire terriers, with which he hopes to make a clean sweep at the coming fall shows.

CANADIAN FIELD TRIALS.—Chatham, Ont., July 31. —*Editor Forest and Stream:* Please change the date of Canadian Kennel Club field trials at Chatham. They start on Nov. 3 instead of Nov. 10 as you have them in your fixtures. Everything looks favorable for a good trial this fall; we have plenty of game.—F. H. BENNETT.

LYNN DOG SHOW.—Beverly, July 3.—*Editor Forest and Stream:* The second annual bench show of the Massachusetts Kennel Club, Lynn, Mass., March 24, 25, 26, 27, 1891, at Lynn.—D. A. WILLIAMS, Sec'y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

BRED.

☞ **Prepared Blanks sent free on application.**

Flash—Dick Swiveller. F. L. Gordon's (Chicago, Ill.) Irish setter bitch Flash to Geo. H. Covert's Dick Swiveller, July 19.

Julip—Beverwyck Trap. Jas. E. Unks's (Muncie, Ind.) fox-terrier bitch Julip (Beverwick Darky—Blemton Lilly) to his Beverwyck Trap (Dusky Trap—Daze), May 27.

Tickle—Beverwyck Trap. Jas. E. Unks's (Muncie, Ind.) fox-terrier bitch Tickle (Warren Discord—Daze) to his Beverwyck Trap (Dusky Trap—Daze), June 7.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Lassie Bang. F. S. Webster's (Washington, D. C.) pointer bitch Lassie Bang, Aug. 2, seven (five dogs), by the Hempstead Farm Kennels' Robert le Diable.

Julip. Jas. E. Unks's (Muncie, Ind.) fox-terrier bitch Julip (Beverwyck Dusky—Blemton Lilly), July 23, six (two dogs), by his Beverwyck Trap (Dusky Trap—Daze).

SALES.

☞ **Prepared Blanks sent free on application.**

Ketwrah. Red Irish setter bitch, whelped April 10, 1890, by Blaze out of Gladys B., by Counemara Kennels, Middletown, Conn., to M. L. Oppenheimer, New York.

Beverwyck Trap. White, black and tan fox-terrier dog, whelped March 14, 1888, by Dusky Trap out of Daze, by James E. Unks, Muncie, Ind., to Harry Northwood, Martin's Ferry, O.

Rifle and Trap Shooting.

RANGE AND GALLERY.

THE NEW GAS ARM.

FOR some little time past a considerable amount of interest has been evinced on the Continent, and is now being awakened in this country, in respect of a gun in which the propelling agent is liquefied gas. Experiments with the weapon in Belgium were mentioned by our Brussels correspondent two days ago. It is the invention of M. Paul Giffard, a French engineer, whose name is well known in all engineering circles, and who has been at work intermittently upon the principle of this gun for the past twenty-five years. As now brought before the public the gun is simplicity itself, but this simplicity has not been arrived at without long and anxious thought, nor without many changes and variations upon M. Giffard's original conception. The principle, however, has always remained the same, and it is the gradual development of that principle into practice which has occupied M. Giffard's time and has at length been apparently crowned with success. The principle consists in the manufacture and liquefaction of carbonic acid gas, so that it can be safely stored up within a very small compass and will give out 500lbs. pressure per square inch when liberated for actual use. In carrying this principle into practice the liquefied gas is contained, under a high pressure, in a metallic tubular reservoir about 9in. long, which is fixed under and in a line with the barrel of the gun, and which is conveniently grasped by the left hand in firing. Although containing an immense store of power, there does not appear to be any danger in a weapon thus equipped. In the first place, the reservoir is made of Siemens-Martin steel of the highest quality, so that a burst is hardly possible, and, in the second, should a flaw in the metal lead to a fracture, the gas would simply escape much in the same way that it does on the opening of a bottle of soda-water. Then the quality of the metal used for the gas-reservoir is such that it will stand rough usage without liability to fracture. It may be, and, indeed, has been, knocked greatly out of shape when full of gas without any prejudicial result arising, the gas having been afterward used for discharging projectiles from the gun.

So much for the special character of the propelling agent, liquefied gas, which here takes the place of powder. We now come to

the method of utilizing the stored-up ballistic power. In practice the bullet is dropped into a small aperture at the rear end of the barrel, and by moving a small lever it is deposited in the breech chamber of the gun. The hammer of the gun is then placed at full cock and the trigger pulled. By the fall of the hammer a pin is struck, which opens a valve at the rear of the liquefied gas reservoir and permits the instantaneous escape of a sufficient volume of gas for one discharge. The bullet is thus ejected with a force proportionate to the impelling power of the charge, which can be increased or decreased at pleasure by a simple screw arrangement. In other words, the propelling power is completely under control, although, of course, this in practice is not left to the arbitrary will of the ordinary user, but will be fixed and definite, according to the character of the gun in which it is employed. The discharge of the gun is unaccompanied by any report, nor is there the least recoil or kick. On pulling the trigger there is a slight hiss or puff, followed by the noise of the impact of the bullet upon the iron target. The reservoir is very light, and, when charged with liquefied carbonic acid gas, is capable, according to the size and caliber of the gun, of discharging from 100 to 500 consecutive shots at a stated cost of less than one penny. It is stated that there is no fear of any part of the gun or its mechanism becoming oxidized by the gas, and it is hardly necessary to add that there is neither smoke nor smell from the propellant. There is also no deterioration of the liquefied gas from storage or keeping. With regard to the rifle itself, with the exception of the tubular reservoir carried under the barrel, there is no material difference in appearance between the Giffard gun and an ordinary weapon of similar character.

A demonstration of this new gun was given yesterday at the headquarters of the London Scottish Rifles, James street, Buckingham Gate, London. A large number of the members of both houses of Parliament and other gentlemen were present, including the Duke of Roxburghe, Lord Grimston, Lord Dunsany, the Rt Hon. E. Majoribanks, M. P., Admiral Field, M. P., Col. Saunderson, M. P., Col. Waring, M. P., Col. Laurie, M. P., Col. Kenyon-Slaney, M. P., Sir George Baden-Powell, M. P., Col. Strachey, Capt. B. T. L. Thomson, and Mr. J. Stewart Wallace. The proceedings were commenced by M. Giffard explaining the principles and practice of his system, after which he discharged a number of rounds from saloon rifles of six, eight and ten millimetres calibre respectively. The visitors were then invited to try the new rifle, which many of them did with satisfaction. The demonstration went to show the valuable nature of the invention and to prove the soundness and practicability of the principle. Of course the proof was limited to the arms referred to, but it was stated that the principle has been applied in France to military and sporting guns, as well as to revolvers and pistols, with every success. It was also stated that Colt's Company in America are now applying the principle to their arms. On the whole, it was shown that M. Giffard has now practically developed a very important principle, which only awaits application to the various weapons in use for throwing projectiles. It is said that the French Government is at present engaged in investigating the merits of the invention as applied to artillery, in which direction some excellent practice at long ranges has already been made.—*London Times.*

The latest advance in ballistics made in France is the substitution of liquefied gas for powder. Rifles, revolvers and machine guns are to be fired without the use of powder; shells are to be exploded, and in fact it is proposed to revolutionize the art of killing.

This is not the first time that replacing powder by the expansive force of gas has been tried. The air gun was the first attempt made in this line, but after each discharge it was found necessary to compress the air anew, and even then the pressure was not above ten atmospheres. Air guns do not, however, rise much above the toy stage until they reach the point which, a few years ago, was so well illustrated by the pneumatic dynamite gun that within the past few months has shown such a surprising development.

The idea of the inventor of the new system is of the same order. In place of having recourse to air he uses gas previously compressed to a point beyond the liquid state. The ordinary pressures at which it is possible to liquefy gas are well known, as is also the fact that if thirty atmospheres were necessary to liquefy gas we should have an equivalent potential energy where the gas was liberated. Krupp, the great German gunmaker, has been using compressed carbonic acid gas, carried in closed iron vessels, for the past nine years. The tanks are placed in little carriages so that they can be run about from place to place in his establishment, and knowing the cooling effect of the air and gas when mixed together, he has used it to cool quickly the iron hoops that are placed over the tubes of his guns. All over the world compressed carbonic acid gas is used for various well-known purposes.

The expansion of this gas as it comes from its reservoir was what suggested its use as a desirable propellant for projectiles and a bursting charge for shells, torpedoes, and so forth, and its comparative cheapness was another recommendation. It liquefies at 15° centigrade under a pressure of about 50 atmospheres; that is, ten times the expansive force of an air gun. At 200° the force mounts up to 800 atmospheres, and the inventor declares that when necessary he will be able to reach that great pressure. In arms of 6, 8 and 12 millimeters, capable of firing from 50 to 300 consecutive shots, he claims the following advantages: No flame and no smoke, freedom from noise and dirt, absolute accuracy, power to fire evenly and regularly at will, no heating, rapidity of loading, and cheapness.—*N. Y. Times.*

PARIS, July 15.—Some interesting experiments were conducted yesterday at M. Giffard's house with the now famous Giffard rifle in the presence of a small party of the inventor's private friends, including a military attaché and another eminent member of the Diplomatic corps. M. Paul Giffard lives in the Rue de Laborde, in a modest suite of rooms, which have much the appearance of a museum of arms, the walls being lined with models of his gun in various stages of advancement, from the first incomplete attempts and failures down to the perfect weapon. As the inventor has devoted more than fifteen years of anxious labor to solving the problem of the application of liquefied gas as a propelling force to guns of all kinds, and has spent over 1,000 000 francs in experiments, it may readily be believed that his collection of abandoned models is extensive.

The general form of the Giffard gun presents few particular characteristics to distinguish it outwardly from an ordinary breech-loader except a long steel cylinder which is screwed under the barrel just in front of the trigger, and containing the liquefied gas. In the simple new rifles of carbines, not adapted to the repeating system, the bullet is inserted in a round slot in the upper part of the breech, and falls into a small chamber, where it is kept in position by the action of a spring. On pressing the trigger a drop of liquefied gas escapes from the steel cylinder into this chamber, and at the same time the bullet is pushed slightly forward in the bore, so as to receive the full force of the evaporating liquid. The chief difficulty with which M. Giffard has had to contend has been, of course, to regulate the charge of liquefied gas in its passage from the steel cylinder into the chamber containing the bullets, and it is in the solution of this highly difficult mechanical problem that the entire merit—and also, I may add, the secret—lies.

The liquid is simply carbonic acid gas, liquefied under great pressure. I inquired of M. Giffard whether there was no danger of the cylinder exploding in the event of its receiving a very violent blow. His reply was to take a fully charged cylinder, place it upon an anvil, and beat it almost flat. He then attached it to a rifle, which he fired with perfect success. "Nothing," he said, "but a blow from a cannon ball or a flaw in the metal of which the cylinder is made could possibly cause it to burst, and even then the liquid would simply escape with a hissing noise in the form of carbonic acid gas, and could do no more harm than the opening of a bottle of soda water. The metal of the cylindear is extremely malleable, is not subject to oxidization, and though very solid, does not, with the ordinary pea-rifle, weigh more than 5lbs., and with the military rifle 7lbs.

There is no recoil, so that the gun does not require to be heavy, and as a convincing proof that his rifle really gave no recoil, M. Giffard held it about half an inch away from his nose and fired it off in that position. Powder of all kinds being dispensed with, the bore rarely requires cleaning. The propelling force, moreover, is only exercised to the full upon the projectile when the latter has nearly reached the muzzle of the gun, so that the friction of the bullet in its passage down the bore is greatly lessened. The limited accommodations in M. Giffard's *atélier* prevented us from ascertaining, even aproximately, the force of penetration of the projectile, though at about forty paces a small round bullet from the carbine was beaten quite flat against an iron target. The question, therefore, still remains open whether the rifle can be practically adapted for military purposes.

The military opinion which I heard expressed upon the subject are, so far, favorable, especially as the Lebel repeating rifles, with which the French army is already provided, can easily be converted into Giffard rifles, and then can be fired as many as 350 times in two and a half minutes. Moreover, the cost of the Giffard rifle is said not to exceed from 19 to 25 francs. The French authorities have several months in which to make up their minds on the matter, and in any case there can be no doubt as to the ingenuity and importance of the invention, which is likely to find still further application for industrial as well as military purposes, for M. Giffard tells me that he is now engaged in discovering a means of adapting his system to machinery of all kinds, so that one of these days not only the steam locomotive but even the electric motor may be supplanted by a Giffard liquefied gas engine.—*London Post.*

CREEDMOOR.

THE eighteenth annual fall prize meeting of the National Rifle Association of America will be held at the Creedmoor range, Tuesday, Sept. 9. The shooting will continue for five days, beginning at 9 o'clock each morning.

The matches will be shot as follows: Sept. 9, Judd and Wimbledon Cup matches; Sept. 10, the long range and the Barney Walther team match; Sept. 11, President's match for the military championship of the United States of America, inter-State long range match and the Barney Walther team match; Sept. 12, New York State National Guard match, First Brigade National Guard match and the Second Brigade National Guard match; Sept. 13, Hilton Trophy match and Inter-State Military match.

The Directors' match, the Tiffany match, Governor's match, All-Comers' Military match, Revolver match and Steward match will be open throughout the meeting. The hours for shooting are from 9 to 12 o'clock and from 1 to 5 o'clock.

The Hilton Trophy is valued at $3,000. It was presented by ex-Judge Henry Hilton, and is shot for at 200, 500 and 600yds., seven rounds at each distance. The competition is open to teams of twelve from the three divisions of the United States army, one team from the United States navy, a team from the National Guard of each State and Territory, and teams from other countries. Since 1886 the trophy has been held by the Massachusetts National Guard team. The Inter-State Military match is open to teams of twelve men representing the National Guard of each State or Territory. The distances are 200 and 500yds. standing and prone respectively. The Massachusetts team has held the trophy, a statue valued at $350, offered by New York State, since 1886.

ST. LOUIS, Mo., Aug. 2.—The tourney of the St. Louis Pistol Club will end in a few weeks. E. Mohrstadt is at present high on the individual straight average, and it looks very much as though he will become the final winner of the handsome gold medal. He leads the next highest man so much that there is little chance of his losing. Eleven good and true members of the club put in an appearance last Wednesday to do battle for the bauble of gold, and S. G. Dorman proved the lucky individual to make the top score. The scores made by all of the persons competing class up well. For all shooting the club uses .22cal. pistols and a 12½yds. standard American target. The score:

S G Dorman	7	10	10	7	10	9	10	10	9	9—91
M Summerfield	10	8	10	7	10	9	8	10	9	10—89
A McBean	9	10	7	8	8	10	10	8	10	7—88
W Bauer	8	8	10	10	10	7	7	10	8	8—86
W C Mackwitz	9	10	10	7	8	7	9	8	7	10—85
M O Billmeyer	9	7	10	9	9	8	8	10	10	5—85
E C Mohrstadt	7	8	9	8	8	10	10	7	9	8—84
H Stussell	10	7	8	4	8	10	10	10	8	8—83
A F Bengel	10	6	5	8	10	9	8	10	5	10—81
L V D Perrett	5	7	9	8	8	9	9	8	9	9—79
Jay J Schaeffer	9	9	9	8	8	7	9	6	7	5—77

UNSER FRITZ.

NEW ORLEANS, July 19.—To-night the Metropolitan Club had open house and a grand time presenting the prizes won at its recent tournament. The most important event of the evening was the presentation of the championship medal of Louisana, a handsome diamond set piece of workmanship, of which any one ought to be proud to be the wearer. President Cooper called Mr. John Christen, of the Expectation Club, who had made the highest individual score, 1,522 out of a possible 1,625, and pinned this beautiful and most valued prize on his breast. Christen was so overcome that he was unable to respond, and had to call on Mr. T. A. Marshall, Jr., of the *Spirit of the South*, to do so for him, and he performed the task most pleasantly, and made one of the most appropriate speeches of the evening. The next event was the presentation of the Hernsheim trophy to the record breakers, the Arnoults. This prize consisted of a large silver punch bowl and eighteen goblets. The score made by the victorious eighteen was 26 102 out of a possible 29,250. Mr. C. P. Drolla presented this trophy on behalf of the generous donor and the progressive Metropolitan Club. Mr. B. Rouen accepted the gift in the name of the Arnoult Rifle Club; his telling little speech was received with cheers. Capt. Kinler and Lieut. McCoy were on hand to take care of the prizes so gallantly won. McCoy was disgulsed as a minister.

BOSTON, Aug. 3.—The wind and light were good to-day at Walnut Hill, and excellent scores were made. These were the best at 20yds.:

All-Comers' Rest Match.

F Daniels	111	J N Eames	107
W P Thomson	110	L B Avay	105
C Wilder	108	A H Ballard	104
W Peters	102		
M T Day	102		

All-Comers' Off-Hand Match.

H Severance	82	W G Hussey	77
C H Eastman	81	S P George	76
H L Lee	80	D Bayley	73
S O Merville	78	O M Howard	73
S C Sydney	71		
B Downs	71		
A S Hunt	70		

Pistol Practice Match, 50yds.

W G Hussey	91	M T Day	89
H Gill	91	A G Stevens	87
J B Hobbs	75	A N Manus	79
W Woods	79		

BERLIN, Aug. 4.—Captain Weber, the leader of the visiting American riflemen, has gone to Nauheim, where Captain Diehl, another of the American sharpshooters, is lying seriously ill.

ANY RIFLE.—The demand for 10-pound rifles with a trigger pull of 3lbs. is very likely to decline, owing to the action of the National Rifle Association in recognizing the right of shooters to use a rifle of any weight or with any trigger pull. The rule restricting the weight and trigger pull was English and was nonsensical in the extreme. The only way to popularize rifle shooting as a pastime is to allow shooters to suit themselves as to what they shoot, though it has cost the N. R. A. many hundreds of dollars to learn this fact. The rifle manufacturer who puts on the market a close-shooting, 11-pound, set-trigger rifle for from $30 to $40 will be able to sell a large number, and the sooner a start is made the better. The firm that has put out the best set-trigger rifle for the past twenty years has stopped their manufacture, and is now devoting its time to making repeaters, so that the field is open.—*Newark Call.*

ZETTLER CLUB, Aug. 3.—The members of the Zettler Rifle Club on the 200yd. range at Wissel's Cypress Hills Park managed to put up some very fair scores. B. Zettler, who used a new .32 Winchester for the first time, made the greatest number of points, and leads in the club competition with the largest total, 2,869. Dr. J. A. Boyken made the best average, 218.5, on four strings, and is second with a total of 2,617. Yesterday's results:

Off-hand shots, 200yds. distance, strings of 10 shots, possible 250 points—B. Zettler 202, 184, 189, 206, 217, 216, 212; total 1,426, average 20.37. V. Steinbach 185, 183, 195, 193, 193, 201, 201; total 1,351, average 19.30. Dr. J. A. Boyken 238, 204, 222, 210; total 874; average 21.85. G. W. Downs 175, 201, 151, 209; total 736, average 18.40. H. Kohlmetz 160.

DOMINION LEAGUE.—The 54th Battalion still leads the league in the matches fired so far. The aggregate scores of the leading teams are:

54th Battalion, Windsor Mills	4,065
53d Battalion, Sherbrooke	3,894
Halifax Garrison Artillery	3 890
13th Battalion	3 866
45th Battalion, Bowmanville	3 845
25th Battalion Essex Centre	3 800
45th Battalion, Lindsay	3 744
96th Battalion, Port Arthur	3,735

SAN FRANCISCO, July 27.—The shooting range at Shell Mound Park was crowded to-day with enthusiastic marksmen. The National Guard had a strong contingent present, and the different German shooting societies were indulging in their favorite pastime. Many monthly medal competitions were held by the members of the National Guard, and the San Francisco Schuetzen Verein held its initial bullseye shoot. The most interesting event of the day's proceedings was a friendly military match by F. O. Young and J. M. Stewart against C. F. Waltham and A. Johnson. Each participant fired 50 shots. The weapon was the Springfield rifle, with the regulation 6lbs. pull of trigger. Score:

F O Young	45 47 43 44 45—224	C F Waltham	44 42 45 46 46—233
J M Stewart	41 44 43 40 41—209	A Johnson	42 42 41 46 40—211
	433		434

A return match may be looked for at an early day.

HUNTINGTON, W. Va., July 31.—The Continental Powder Co. has been chartered with $1,000,000 capital stock, to erect a smokeless powder factory on the line of the Norfolk & Western Railroad near Ceredo. The Phœnix Powder Co., of New York, is the principal stockholder in the enterprise. The company controls the formula for the manufacturing of smokeless powder in this country, and an effort will be made to have the Government adopt it. If successful, the largest powder works in the United States will be erected.

CREEDMOOR, July 26.—The New York Rifle Club shot one of its series of matches on the above date. The severe storm in the early part of the day kept many at home. Only five of the forty odd members had sand enough to come out. Following are the scores: M. Herrington 89, T. J. Dolan 84, Mr. Loyd 77, Dr. E. R. C. 74, John F. Klein 72. We use the standard American target in all our matches. The other matches of this series will take place on the 9th, 23d and 30th of August.—SECRETARY.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Aug. 6-8.—Onondaga County Sportsmen's Tournament, at Syracuse, N. Y. Guaranteed purses, all cash.

Aug. 12-15.—McDowall Tournament, at Toronto, Can. Held under the auspices of the four gun clubs of Toronto. For programmes address W. McDowall, Manager, 81 Yonge street, Toronto.

Aug. 18-23.—Third Annual Keystone Tournament, at Corry, Pa.

Aug. 26-30.—Grand Inanimate Target Shooting Tournament of the West End Gun Club of Harrisburg, Pa., to be held at Williams Grove, Cumberland county, Pa. For programmes address H. B. Shoop, Secretary, Box 321, Harrisburg, Pa.

Sept. 1-2.—Hackettstown, N. J., Gun Club Shoot, Labor Day, Sept. 1, at targets; Sept. 2 at live birds. For programme address E. Richter, Sec'y.

Sept. 3-4.—Beeville, Tex., Gun Club Tournament. T. J. Skaggs, Secretary.

Sept. 9-12.—Cincinnati, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the World. Avenue Ball Park. Sept. 9, 10, 11 and 12. Guaranteed Purse. Wm. E. Limberg, Sec'y.

Oct. 8-10.—Sixth Annual Tournament of the Middlesex Gun Club, at Plainfield, N. J. Two days targets, two days live birds. $1,000 guaranteed. Programmes ready for distribution Sept. 1.

DALLAS, TEX.

DALLAS, Tex., July 28.—The scores of the last three shoots of the Dallas Gun Club. The targets were bluerocks, 15 singles and 5 pairs doubles. Our club is in a splendid condition; we number nearly 100 members. Our weekly shoots are generally attended by quite a crowd of spectators and they seem to enjoy themselves very much:

MAK-SAW-BA.

CHICAGO, Ill., July 30.—*Editor Forest and Stream:* A match was shot at Mak-saw-ba Club grounds, at Davis, Ind., on Saturday, July 19. Conditions, 50 live birds to each man, high score paying nothing, next in order paying 10, 20, 30 and 40 per cent. of expenses, respectively, Illinois State rules to govern:

John Watson	1221012100211012012011211111111111112121121—44
C B Dicks	1122211112231122122201022122212222121291201221—47
R C Stevens	0011022011202112121111122012210211111211111123—43
J P Card	0122122010101222111121121112121112001101012111111—42
W P Mussey	1012211122211111111021220111111112211111010022—45

The birds were an excellent lot, and the match was particularly interesting, as the closeness of the score will show.

Following this race another at 50 Peoria blackbirds each man, was shot under the same conditions as to payment, viz.: Best score paying nothing, others 10, 20, 30 and 40 per cent. of expenses, respectively. The scores were as follows:

C B Dicks	1010111110101111111111101010101111101111111—41
W P Mussey	0110111111011111101111011010111010111111111—41
G W Andrews	1011110111000110101010111111111111111111011111—41
R C Stevens	0001111111111011111111011011111111011111111—42
L M Hamline	1111111111111111111111111111111111111111011011—46

Ties on 41 each shot at 6 birds each with results as follows:

P B Dicks	011111—5	Andrews	111101—5
Mussey	011111—5		

Second round of ties:

Dicks	111110—5	Andrews	111110—5
Mussey	111101—5		

Third round of ties:

Dicks	110110—4	Andrews	111111—6
Mussey	101110—4		

Fourth round of ties for third and fourth:

Dicks	101111—5	Mussey	0011w.

This race was particularly interesting and exciting from start to finish, and was very enjoyable.

On Saturday next, Aug. 2, the same matches will be repeated at Mak-saw-ba Club grounds, and will be witnessed by a large crowd of members and guests. The matches have created much interest, as the shooters are so closely matched, and the race of next Saturday will be for blood from first to last. W. P. MUSSEY.

NEW YORK, July 31.—The Bronx River Gun Club held a very enjoyable and, considering the heat, well attended shoot on the club grounds at West Farms, in Westchester county, to-day. The targets were American standard bluerocks thrown from 3 traps, otherwise American Association rules governed. The scores were as follows: A. Pfeiffer 19, J. Murphy 14, Y. Seawood 17, H. Seawood 15, A. C. Dittmar 23, C. Clark 17, T. N. Jaxques 17, M. Briedenbach 18, E. Fenton 9, M. Cunningham 9, E. D. Miller 18.

CLAREMONT SHOOTING ASSOCIATION.

NEW YORK, Aug. 2.—*Editor Forest and Stream:* The report from this shooting ground is that all through the summer a greater interest has been noted than the management had expected. The large number of our former regular visitors who are now out of town at the seaside and mountains, accounts for the small attendance on Saturday afternoons at present; but since live-pigeon shooting was introduced the tendency has been for less target and more live-bird shooting.

Our live-bird sweeps on Saturday afternoons have had numerous entries which have not been hitherto reported; and, besides, many come there during the week and practice. Some noted shots have prepared themselves for battle on these grounds. The convenience of having live birds always on hand has been fully demonstrated these past three months, and although we have had as many as 800 birds in the coop at one time, they have been speedily disposed of and we have had continually to replenish our stock.

Sportsmen come down as early as the 7:45 train from New York, find Superintendent Moss ready for business, and because of no delay, and with lively pigeons, shoot a score of from 10 to 50 birds and are back to business by 9:30 A. M.

We have been trying to overcome the objection to bad back ground in our target shooting, and we think we have largely done so. For the past two weeks Mr. Moss has furnished us with white bluerocks, and the shooting of the crowd has improved. There is not complaint now that the targets cannot be seen. The white ones show up well against the dark fence and look as big as a house.

Our regular Saturday afternoon shoots will be held all summer, commencing at 2:30 P. M.; and when fall comes and birds are cheap and plenty, the shooting public may expect some hustling here. Among the visitors to-day were Messrs. Dayton and Coles, formerly of Cincinnati, O. AD VANCE.

Below are the scores:

Ten bluerocks, 50 cents entry:

	1	2	3	4	5	6	7	8	9	10	
Dayton	8	9	10	7	10	9	8	..	..	..	7
Simpson	10	10	7	10	9	8	8	9	9	7	
Collins	9	6	9	9	9	9	8	9	9	7	
Hathaway	8	9	7	8	9	7	7	4	9	8	
Hunt	10	8	8	8	9	9	..	..	..	..	
Howard	5	8	6	6	5	7	5	8	7	6	
Lindsley	9	10	8	7	8	8	9	7	8	7	
Cole	7	7	..	..	8	..	..	..	..	..	

Sweeps at live birds, $2 entrance. No. 1:

Dayton	1 1 1 1—4	Howard	2 1 0 1—3
Cole	2 2 2 1—4		

No. 2:

Dayton	1 1 2 1—4	Howard	2 0 0 1—2
Hathaway	1 2 2 0—3	Lyon	1 1 1 1—4
Collins	2 1 1 1—4	Lindsley	1 1 0 1—3
Simpson	1 1 1 1—4		

No. 3, ties div.:

Dayton	2 2 0 1—3	Howard	0 2 0 2—2
Hathaway	2 0 2 2—3	Lyon	0 1 2 2—3
Collins	1 2 2 1—4	Lindsley	1 0 1 1—3
Simpson	2 0 0 1—2		

Second money shot off in next sweep, miss and out.

BREWER VS. CLASS.

LONG BRANCH, July 30.—The live-pigeon shooting match between Captain John S. Brewer, of Philadelphia, and Frank Class, of Pine Brook, N. J., was held at Long Branch to-day. The shoot was for a purse of $500 a side, 100 birds each, 5 traps, American rules to govern. Captain Brewer shot at 30yds. rise and Class at 28yds. Jacob Peetz acted as referee. Even though the birds were the veriest "duffers" that have ever been trapped in the State, the scores were still remarkable. Brewer killed 98, his other two falling dead just over the bounds, while Class scored 95 and had three others drop outside the boundary. The shoot was under London Gun Club rules, excepting that the score marked the dead line. Brewer lost his 39th and 69th birds; Class lost his 21st, 26th, 32d, 34th and 97th birds, losing the first two through sheer lack of judgment. The shoot was witnessed by over 500 experts, among them John Erb, C. M. Hedden, J. E. Wheaton, "Doc" Van Ness, Wm. Erb, and other Newark shooters; H. Leddy, "Uncle Bill" Sigler, of Montclair; John Riggott, of Rockaway; John Class, of Pine Brook; Charles Evans, Charles Ives and Hugh Liddy, of the Newark Gun Club; John Irwin, Robert Walsh, of Philadelphia; Dr. Knapp, the famous wing shot; John S. Hoey, Walter Murphy, Pierre Lorillard, Jr., Philip Daly, Philip Daly, Jr., Captain Benjamin West, Albert Cubberly, William D. Campbell, Capt. Charles B. Morris, Frederick G. Loeb, Jeptha Van Dyke, John L. Price, Elisha West Price, Frederick Beale, William O. Price and Colonel E. Shade.

E. Floyd-Jones and Edgar Murphy, the New York experts, were also present for the purpose of witnessing Brewer's work, as they are trying to arrange a match with him. Brewer used his second barrel 59 times and Class used his 45 times. The match will probably be repeated.

Capt. Brewer says according to the terms of the match the boundary line should be 80yds. from the center trap, but unknown to him, after the match was ended, the promoters of the affair declared the fence the boundary. Brewer killed 97 birds that fell in fair grounds before there was any dispute.

Of the three remaining birds, one fell dead just inside the dead line, one on the outside of the dead line, but inside the fence, and the other a few feet on the outside of the fence, making the actual number of birds killed 100, 98 of them in fair grounds.

When the referee's attention was called to the one bird that fell inside the dead line, but on the remaining two were declared out; so the actual score was Brewer 98, Class 95. Had the fence rule not been made, Brewer would have scored 100 birds without a miss, as the furthest bird was not 80yds. from the center trap.

He feels indignant that he should thus be deprived of obtaining the full honor due him for making such a remarkable score.

BROOKLYN.

BROOKLYN, July 29.—The Diana Sportsman Club held their monthly shoot at Dexter Park, L. I., to-day. The club formerly shot at Bay View Park, but at their last meeting they resolved to change to Dexter Park. There were 13 members present, and they shot at 15 bluerocks each. They were divided into three classes. The medal in the first class was won by C. Ring, who broke 11. In the second class the medal was won by C. Medler, who broke 12. The third class medal went to H. Hartman, who broke 8. After the regular shoot several sweepstakes matches were shot, in which R. Monsees, C. Ring and D. Robertson were winners.

July 30.—The Bienmore Rod and Gun Club held its regular monthly shoot at Dexter Park, L. I., to-day. The birds did not fly very well on account of the severe heat. Five traps were used and each member shot at 7 birds. J. Bennett won. The scores follow: Regular shoot at 7 birds each—J. Edgerton 7, W. Levens 5 E. Helgans 7, W. Selover 5, J. K. Powell 5, S. Pfahlman 5, J. Van Wicklen 7, Dr. Boehm 7, W. Linnington 5, C. McGee 3, A. Jardine 2, L. Sutter 7, J. Bennett 7, H. Schlictner 3, J. McLaughlin 4. Shoot off for first place, 3 birds each, then miss and out: J. Edgerton 3, E. Helgans 3, J. Van Wicklen 5, Dr. Boehm 7, L. Sutter 3, J. Bennett 8.

July 31.—That new and rising organization, the Erie Gun Club, of South Brooklyn, had its regular monthly shoot at Woodlawn Park, L. I., to-day. The shooting was exceptionally good, no less than 5 men out of the 11 who faced the traps making a clean score of 11 straight kills. In the shoot off the veteran Ike Hyde again showed his superiority by killing 8 more straight, winning the club badge for the second time. The second prize was won by H. Jackson, the third by W. Schellye and the fourth by C. Luhrssen. The score was as follows: Regular shoot at 7 live birds—C. Plate 6, F. Greb 7, J. Plate 7, J. Schmadeke 5, C. Jericho 7, W. Schellye 5, C. Luhrssen 4, H. Dohrman 7, M. Elsisser 6, H. Jankowsky 6 and J. Hyde 7. Shoot off for first prize: F. Greb 1, J. Plate 5, C. Jericho 4, H. Dohrman 7, Ike Hyde 8. In a subsequent sweepstake under club handicap rules F. Greb won first money with 8 straight. Referee, C. Blatzmacher.

LONDON, Ont., July 26.—London Gun Club, 30 Keystones, 5 traps, 16yds. rise:

Evans	1111101010101101110111111110—23

H S Stout	0001010010111010010100000— 9

Following ehe club shoot sweep shooting was indulged in until dark. Score:

First event, entrance $1. 10 bluerocks:

J L Chamberlin	1111111100— 8	Stout	0100001111— 5
Rowley	1111111111—10	Sutphin	1101010011— 6
Gunmere	1110100069— 4	R Moore	1011111001— 7
Lott	0111110011— 6	Redding	0111101011— 7

Second event, 6 single bluerocks, $1 entrance:

Chamberlin	111111—6	Stout	110010—3
Rowley	111111—6	Moore	110011—4
Lott	110011—4	Redding	011111—5

TORONTO, Aug. 2.—The shoot for McDowall's gun was concluded on Stark's athletic grounds this Saturday afternoon. The grounds, which are being laid out for the big shoot, are almost ready, and those who were present expressed their satisfaction at the arrangement of traps, etc. The score:

G Hilton	0111110111111101111010111—20
C Charles	1110010110111111111111000—18
T Sawden	0111110110111111110000000—16

G. Thompson, S. McClure and C. G. Winchell retired.

First sweep, 15 birds:

Charles	111111111111111—15	Sawden	011111101111111—13
McDowall	111111111111111—15		

Charles won on third tie.

Second sweep:

Charles	1111111011—9	Thompson	1111111101—9
McDowall	1011111111—9	Henry	0111111111—9
Sawden, Sr	1001011111—6		

Charles and Henry won.

Messrs. Charles Stark & Co., on whose grounds the tournament will be held next week, have decided to present a copy of the W. W. Greener's book on the gun to each contestant entering in one or more of the guaranteed purses. This work sells for $2. Mr. Paul North, of Cleveland, will assist W. McDowall in the management of his big shoot.

LONDON, Ont., Aug. 1.—An interesting match was shot yesterday on the London Gun Club's grounds, London West, the contestants being Messrs. Redpath and Evans against Messrs. Ward and Avey. The match was close and exciting throughout, as the score shows. The weather was favorable and the shooting fair—296 out of a possible 400.

SANDY GRISWOLD.

WORCESTER, Mass., Aug. 2.—At the regular meet this week of the Worcester Sportsmen, at Coal Mine Brook Range, the merchandise contest was renewed. In the contest at each meet, each man has a possible 25 clay-pigeons, the total of each follows: E. B. Burbank 24, G. J. Rugg 22, C. B. Holden 21, Geo. Adams and Chas. Crompton 20, A. G. Larkin and A. R. Bowdish each 19, I. N. Dodge, C. A. Parker, A. B. F. Kinney, E. E. Hill and C. H. Howe each 18, M. D. Gilman, W. E. Johnson, W. R. Dean each 17, A. L. Gilman 16, F. M. Houghton, V. F. Prentin and J. B. Garlow each 15, W. L. Davis, H. D. Jourdan, E. F. Swan and G. W. Langdon each 14, E. Whittaker 13, H. W. Webber 11, C. R. Burnett 10, T. P. Wilson and J. W. Dougherty each 7.

A SOBER CHALLENGE.—Mechanicsburg, Pa., Aug. 2.—C. K. Sober, the champion shotgun shot of the world, has issued a challenge to Capt. Bogardus, or any other expert shot that sees fit to accept, to shoot him a match for $1,000 a side during the Grangers' Picnic at Williams's Grove, Aug. 25 to 30. Marvelous are the feats accomplished by Mr. Sober with his favorite weapon, and after the match he will give an exhibition of fancy shooting that will astonish the natives for a hundred miles around. Mr. Sober has posted a forfeit of $250 in the hands of Col. R. H. Thomas, of this place, general manager of the Grangers' Picnic, to whom all communications on the subject should be addressed.—MINNIE MINGO

OMAHA, Neb., July 26.—The Omaha Gun Club's regular weekly shoot took place to-day. The day was fine, the marksmen at their best, and at a consequence good scores was the result. The conditions were 25 bluerocks, 5 unknown traps, 18yds. rise: Fogg 18, Townsend 21, Brewer 19, Kennedy 24, Brucker 16, Gray 14, Field 22, Hughes 20, E. J. Corey 20, W. F. Corey 21. A sweepstakes, 10 bluerocks, $2 entrance, same conditions, followed the main event, and proved a tight and interesting chase: Fogg 10, Gray 8, Townsend 9, Hughes 8, Fuller 8, Field 8, Hummel 7. Brewer 6, Borland 10, Jones 6. Fogg and Borland divided first and Townsend took second.

WELLINGTON, Mass., Aug. 2.—In the merchandise match at Wellington to-day these scores were made: Bennett 18, Dodge 17, Scott and White 16 each, Dill 14, Gore, Sanborn and Budd 13 each, Shumway 12, Warren 11, Cowes 10. The winners of firsts were as follows: 6 hubs, White and Bennett; 6 hubs, Gore; 3 pair hubs, Gore; 6 hubs, Dodge and Scott; 6 hubs, Scott and Perry; 6 hubs, White; three pair hubs, Eager, Scott and Bradstreet; 6 hubs, Bennett; 6 hubs, White and Bradstreet; 6 hubs, Gore; 6 hubs, Gore; 5 pair hubs, Perry; 10 nubs, White; 3 pair Hubbs, Dill and Scott; 6 hubs, Bond and Warren; 3 pair hubs, Bond and Bennett; 6 hubs, White; 6 hubs, White and Scott; 6 hubs, Perry and Bond; 6 hubs, White; 6 hubs, Perry and Bond; 6 hubs, Dodge and Sanborn; 6 hubs, Bennett, Scott and Bond.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 220 pages, price $2.50. For sale by FOREST AND STREAM.

THE NEW YORK Y. C. CRUISE.

EVERY year increases the importance of the cruise at the expense of the regatta, and while this year the latter was in no way more notable than those of the other New York clubs, the August cruise is more than ever the great event of the year. It is too soon yet to say whether it has quite fulfilled all anticipations and redeemed some of the dullness of an exceptionally dull season; but if such shall not prove to be the case, it will be due to the apathy of owners, and not to any neglect on the part of the officers. Every effort has been made to meet the wishes of both cruisers and racers, besides the Goelet cups, special races have been arranged at Newport, and those who please may race in the runs.

As usual, the handsome flagship Electra was ready on Wednesday morning at the club station off Twenty-sixth street, New York, and at 9:40 started on the run for New London. On board were Commodore Gerry, Fleet Captain Stephen Peabody, Secretary J. Y. S. Oddie, Treasurer E. W. J. Hurst, Fleet Surgeon Morris J. Asch, Messrs. S. Nicholson Kane and Chester Griswold, of the regatta committee, Mr. D. B. Fearing, and the representatives of the leading New York papers. Once through the Gate, and on the beautiful waters of the Sound, the hot and stifling atmosphere of the city was soon exchanged for a breeze that made life worth living as the flagship ran rapidly toward New London. The run was without incident until near port, when a curious white object that had been frisking about in the distance ran down astern of the Electra and begun a stern chase, which proved a short one, as she not only came up quickly, but was soon far ahead. She was soon recognized as the new Herreshoff torpedo boat Cushing, with Secretary Tracy on board.

Shortly after 5 P. M. the Electra steamed into New London Harbor, and anchored in the midst of the large fleet of yachts that had gathered from all quarters for the cruise. The steamers were out in large numbers, the most imposing being the handsome Alva and the Catarina. Volunteer, looking as large as ever, was with the fleet for the first time in two years; with her was Puritan, the new cutter Wayward, Mayflower in her schooner rig, Œnone, Marguerite and last year's Burgess schooner Merlin. The 70-footers were few, Katrina waiting at Newport, Bedouin being laid up, and only Oneida and Titania, the latter under cruising rig, being with the fleet. Clara was present as usual, while in the 40ft. class were Minerva, Moccasin, Marquita, Chloe, Nymph and Liris, the latter two with cruising parties aboard. Gossoon had started from Newport in the morning, but parted her bobstay off Narragansett Pier and put back. With these racers were cruisers by the score, Dauntless, Yampa, Iroquois, Intrepid, Huron, Medusa, Pocahontas, Fanny, besides many yachts not flying the New York burgee.

In the harbor was the Despatch with Secretary Tracy on board, and immediately on anchoring Com. Gerry, accompanied by his staff, paid a visit to her. The iron lifeboat of the Electra has been lately replaced by a handsome centerboard gig with a couple of sprit sails, and this new boat was sent off in charge of Captain Wickes, its first service being to bring on board Mr. George L. Schuyler, who was to come down from Jamestown, opposite Newport, where he was spending the summer with his daughters, to join the Electra for the cruise, as has been his custom in the past. Mr. Schuyler was waiting at the landing off the Pequot House, and was soon on board, where a warm greeting awaited him.

At 9 P. M. a meeting of the captains was held on the quarter-deck of the Electra, Com. Gerry presiding. In calling the meeting to order the Commodore made mention of the fact that the occasion was the 46th birthday of the club, the first meeting, for the purpose of organizing, having been held on board Mr. John C. Stevens's yacht Gimcrack, on July 30, 1844. The matter of the programme for the cruise created some discussion, three courses being suggested. The first was to sail to Newport on Thursday, the Goelet cup race taking place on Friday, and on Saturday to run to the Vineyard, lying there over Sunday and continuing the regular course to New Bedford for a night and then back to Newport on Tuesday, where the naphtha and rowing races would take up another day. The second programme was after sailing for the Goelet cups on Friday to hold the launch and gig races at Newport on Saturday, sailing on Monday for the Vineyard. The third was to sail to Shelter Island on Thursday, Newport on Friday, and to race for the Goelet cups on Saturday, continuing the cruise to Vineyard Haven on Monday. This plan found some favor, but it was finally decided to proceed at once to Newport and to follow the second programme. The arrangements for races on the runs, published last week, were proposed by Mr. L. Nicholson Kane, of the regatta committee, and adopted, Mr. Kane also mentioning that Rear-Com. Iselin had presented a $250 cup to be raced for by the forties.

It was decided to start the first run early on Thursday, but the first news that went through the fleet about 7 A. M. was that Mr. Schuyler had been found dead on the floor of his stateroom an hour earlier. This sad news changed entirely the arrangements, colors were half-masted, the race was abandoned, the command of the fleet on the run was intrusted to Vice-Commodore Fish, while the Electra remained in harbor with Mr. Schuyler's body on board. Fleet Surgeon Asch, who was on board the flagship all night, pronounced the sudden death due to heart disease. Mr. Schuyler, who was 80 years old, had been feeble for some time, and his death was not unexpected by his family, though it was probably hastened by the extremely sultry weather of Thursday, and the excitement of the trip to join the fleet. The services of an undertaker were secured at New London, and the flagship steamed on in the rear of the fleet, reaching Newport about 3 P. M., calling first at Jamestown, where Com. Gerry visited Miss Schuyler and broke the news to her.

At her request, services were held as soon as the flagship reached Newport; the coffin, covered with the American flag, was placed on the quarter deck, in the presence of a number of yachtsmen, while Com. Gerry, who was deeply affected, read the Episcopal burial service. At the conclusion of the ceremony, which was a most impressive one, the body was taken ashore to meet the Fall River boat for New York, Miss Schuyler also accompanying the remains. Mr. Philip Schuyler, who has been on a long cruise on the eastern coast in his steam yacht Nonya, was notified by telegraph. In the evening a special meeting of captains was held on the Electra, at which Com. Gerry appointed a committee who drew up the following:

ON BOARD YACHT VOLUNTEER,
OFF NEWPORT, Aug. 1, 1890.

The committee appointed by Com. Gerry beg to report that the announcement of the sudden death of George L. Schuyler, on

board the flagship Electra, is received with the most profound sorrow, and this loss to us is most sincerely mourned.

He was one of the founders of the New York Y. C. and its oldest member. He was one of the five gentlemen who built the yacht America, and who presented to the club the America's Cup as an international challenge cup.

After being present at the assembling of the first squadron that this club has ever brought together, he was stricken to death, surrounded by friends, on the morning of July 31.

He was a man of world-wide reputation and of unblemished honor, an intelligent and enthusiastic yachtsman.

We do well to emulate his virtues, and it will be a proud record for us to be, as he was, ready "when each in his silent chamber shall hear his sunset gun."

(Signed) CHARLES J. PAINE,
JAMES D. SMITH.
ELBRIDGE T. GERRY, Commanding Officer.
LATHAM A. FISH, Vice-Commodore.
C. O. ISELIN, Rear Commodore.

The funeral, on Monday, in New York, was very simple, the body being finally taken to the family plot at Tarrytown.

The fleet, with colors at half mast, started from New London about 9:30, no times being taken and no attempt at racing being made, save that occasional brushes took place between one pair or another of the yachts. Titania and Grayling led the fleet in, Huron sailed very well on the whole run, while Quickstep had a very good place at the finish. Just off the torpedo station were the vessels of the British fleet, Bellerephon, Canada and Partridge, arrived from Halifax during the morning. The day had been warm but pleasant, with a free wind in the morning, drawing abeam later on, and save for the depressing occurrence of the morning the run was a very pleasant one. At anchor in Newport were enough yachts to bring the total of New York Y. C. fleet up to 125, while a number of outside yachts were there as well, Awa, Millette, Kathleen, and smaller craft without number. On the run Pocahontas lost topmast, but had a new one in next day, while Halcyon broke her main boom.

GOELET CUPS, AUG. 1, NEWPORT.

All through the spring, when regatta after regatta was started with few singlestickers and no schooners, the cry has been that the racers were waiting for the New York Y. C. cruise, that then all would be ready and there would be plenty of racing. Now that the cruise has come and gone it looks as though, in the schooner class at least, the Goelet cup and the Eastern regatta would make up the sum total of the year's racing, the result being but little better in the singlestick classes. The Goelet cups have for the past five years been the leading event of the season, taking precedence even of the New York Y. C. regatta in June, and the ownership of the cup has in a way settled the question of superiority in each class for the year. Considering its importance, the present race cannot be called a success or much above the low level of all the racing this year. The schooner race was welcome as a novelty, but the absence of Grayling robbed it of much interest; Sea Fox who was looked to for a hard battle with Merlin, made a very poor showing all day: Marguerite, sailing her first race since some important alterations, had smelled bottom on the previous day and could not get her board down; Quickstep, the smallest, and one of the smartest of the schooners, and ready to try to repeat her performance of last year at Marblehead, when she saved her time from the fleet, carried away the jaws of her main gaff in the morning, and was out of the race before it begun. Miranda, who has not raced for a couple of years, was also entered to try the result of recent alterations, but in stowing her mainsail on the previous night the boom was allowed to drop on the wheel, smashing the latter very badly, and although her captain went to Boston that night in search of a new one, he had not returned when the fleet went out to the start. The starters in the schooner class were but six, Merlin, Sea Fox, Palmer, Marguerite, Œnone, and Mayflower, a very good lot, but by no means the fleet that should start if all the schooner racing of a season is to be condensed into a single race.

The half a dozen starters in the singlestick class were hardly more satisfactory, ranging in size from 40ft. up to 86, with all the possibilities of big flukes which accompany such a fleet. Volunteer was once more under her racing colors, and apparently in fine form, but it was not expected that Puritan would save time from her, or make the race other than a walkover. Puritan, looking much as of old, with Capt. Crocker in his usual place at the wheel, was on hand, but in the next class two important yachts were missing, Shamrock being absent altogether, and Titania, under her old rig and with working topsail, merely sailing around in "could if I would" sort of way that must have been intensely provoking to her classmates. Katrina was present, but without her owners on board; and Gracie, also improved by alterations during the winter, was eager for the chance that was denied her last June. Clara was on hand in case of light weather or any stray flukes, and Gossoon, with nearly 50 minutes to take from Volunteer, was also ready.

Minerva's owner has lately been seriously ill and left Newport this same day under the orders of his physician on a trip to the West, his brother accompanying him. Minerva was left in charge of Mr. Gouverneur Kortright, but owing to Mr. Carroll's illness she was not ready to go in. Mr. Carroll has been forbidden to race again this year, even in the case of a speedy recovery, and what the result will be on Minerva's entries in future races remains to be seen.

The early morning brought a violent thunder squall about 5 A. M., the heavy wind causing a number of yachts to drag in the harbor, but at 7 A. M. there was little wind and less promise of any. The fleet started out, however, and by 11 A. M. the flagship was at anchor to the southward of Brenton's Reef Lightship, with a light breeze from N.N.E, blowing out the code signals for the historic "Sow and Pigs" course, 17¼ miles east, southeast to Sow and Pigs Lightship, thence 4½ miles north to Hen and Chickens Lightship, and thence 16¾ miles west, ¾ north to the finish at Brenton's Reef Lightship.

The preparatory gun was fired at 11:33, and the starting gun for the singlesticks 10 minutes later. Clara, showing a couple of bale sticks in her mainsail in true Yankee fashion, was first over, on port tack, with Volunteer just to leeward of her. Puritan, Katrina and Gracie were together some little distance astern of Volunteer, Gracie under Katrina's lee quarter, while Gossoon was last. The crossing interval was 5 minutes, the gun at the end being also the signal for the schooners to start; but in spite of the signals displayed with each gun the whole schooner fleet was badly handicapped. Marguerite was first over, Œnone second and Palmer third. These, with Mayflower, crossed the weather end of the line, but Merlin lumbered down to leeward and was forced to tack near Electra's stern and stand along to the line to the other end. Sea Fox was just ahead of Merlin. The actual times of the start were not taken from the bridge, but the lot was badly handicapped; while the start was sluggish and slovenly in the extreme, so much so as to suggest the desirability of a "one gun" start, in hopes that it may stir men up a little, or, on the other hand, of giving a still longer interval, say of 15 or 20 minutes, so that the disgrace of such unnecessary handicap as in this case may be nominally avoided.

The entire fleet started on the port tack, all carrying clubtopsails and first or second jibtopsails, the schooners mostly carrying maintopmaststaysails. The leaders held the port tack for some time, the wind still blowing light N.N.E., with a weathergoing tide. At the end of the first half hour Volunteer, having increased her lead on the fleet, was furthest off shore save Gracie, now under her lee. Puritan, Katrina, Clara and Gossoon were to windward of Volunteer, the latter well in shore. Marguerite, first of the schooners, was some distance astern of the singlestick division, but well ahead of her sisters, Œnone, Mayflower and Palmer being abeam of each other, while Merlin and Sea Fox were still some distance astern, Merlin having passed to windward and taken the lead of Fox.

At about 12:30 Volunteer caught the first puff of an easterly breeze, which headed her off and then ran back to turn the others, making the course a dead beat for the remaining 13 or 14 miles. Both Clara and Gossoon had held as far as possible to windward since the start, and when the new breeze met them they tacked, Gossoon at 12:30 and Clara at 12:33, heading somewhere up the Sakonnett River. The positions now were: Volunteer, well to the south, with Gracie to leeward of her, and Katrina well to windward of Gracie's port quarter, Puritan being to windward of the pair, and the entire quartette on the original port tack. Inshore and astern of them were Clara and Gossoon on starboard tack, Gossoon having caught Clara or nearly so. Mayflower was traveling to the front of the schooner fleet, and Merlin was working her way steadily after her, Sea Fox doing little to speak of.

About 12:40 Puritan tried the in shore tack, Volunteer at once following her about, but Katrina and Gracie preferred the open water, and hammered along nearly to the outer mark on the off shore tack, Katrina steadily gaining. The schooners held this latter course also, the fleet being thus broken into two divisions. At 1:07 Volunteer went on port tack, to the eastward of West Island, Puritan at once following, and a quarter of an hour later both took in jibtopsails and laid as close as possible for the long leg to the lightship. Volunteer was gaining on Puritan; Katrina, to the south, was beating Gracie badly; and Gossoon and Clara, now far astern of Volunteer, were falling further apart with each mile the little white cutter sailed. Merlin had caught and passed Mayflower long before the mark was reached, while Marguerite, unable to lower her board, had dropped to last place. Palmer also was beaten and did not turn the mark. The times at the Vineyard Haven (Sow and Pigs) Lightship were:

Volunteer	2 20 30	Gracie	3 12 30
Puritan	2 32 40	Clara	3 14 25
Katrina	2 52 07	Sea Fox	3 17 05
Gossoon	3 06 00	Œnone	3 24 06
Merlin	3 07 16	Marguerite	3 33 00
Mayflower	3 09 40		

Gossoon, though outside of her allowance from Volunteer, had taken the honors on the long beat out, leading not only Clara and Gracie, but all the schooners, and making almost as good elapsed time as Merlin and Mayflower. She had beaten Clara over 11m., and though a part of this was due to some fluking under the Newport shore in the early part of the race, a great deal of it was, so far as could be seen, on fair sailing.

The short leg to Hen and Chickens was a close reach, Volunteer turning the second mark just as Katrina turned the first. Little Gossoon held her place over part of this leg, and then the big schooners passed her. Gracie had come down to working topsail and no jibtopsail before the first mark, but Katrina carried her club and intermediate jibtopsail. There is little to tell of the procession home under spinnakers after the fleet left Hen and Chickens, the times at that mark being, so far as taken:

Volunteer	2 51 02	Katrina	3 23 28
Puritan	3 04 42		

The full times of the race were:

	Start.	Finish.	Elapsed.	Corrected.
SLOOPS AND CUTTERS.				
Volunteer	11 44 00	4 39 49	4 55 49	4 55 49
Puritan	11 45 13	5 03 47	5 18 34	Not meas.
Katrina	11 45 49	5 24 12	5 38 33	5 27 02
Gossoon	11 46 53	6 16 13	6 29 20	Not meas.
Clara	11 43 52	6 22 12	6 38 20	6 03 55
Gracie	11 45 22	6 20 28	6 34 46	6 21 24
SCHOONERS.				
Merlin	11 53 00	5 49 21	5 56 21	6 56 21
Mayflower	11 53 00	6 09 29	6 16 29	6 14 25
Œnone	11 53 00	6 29 03	6 34 03	Not meas.
Sea Fox	11 53 00	6 11 23	6 18 23	Not meas.
Marguerite	11 53 00	Time not taken.		
Palmer	11 53 00	Did not finish.		

The schooner cup goes to Merlin, the previous winners being: 1882, '83, Montauk; 1884, '86, Grayling; 1885, Fortuna; 1887, '88, Sachem, and 1889, Sea Fox. The singlestick cup has been won as follows: 1882, Fanny; 1885, Gracie; 1884, Bedouin; 1885, Puritan; 1886, Mayflower; 1887, '88, '90, Volunteer; 1889, Titania. No 70-footer has ever won the cup when a larger boat has started. Titania, knocking about the course under a small rig and with no clubtopsail, after starting to leeward of the line, managed to show up at the weather mark some time ahead of the racers of her class; and, had she been in the race between her and Volunteer would have been most instructive.

One of the chief feature of the day was the race between Gossoon and Clara, the 40-footer beating the 53-footer 11min. 22sec. in 17 miles to windward, while the longer boat picked up 2min. 26sec. on the run home. The sailing of Clara with Minerva and the other good forties this spring would indicate that she is not so much faster than the short boats on the wind as she has been considered; but even in default of any apparent reason for the great difference between her and Gossoon, few will be willing to accept this one race as conclusive evidence that any of the best of the 40-footers can beat Clara by half a minute to the mile, boat for boat. If this or anything like it be true, however, it is a pretty strong argument against the mythical narrow boat that has been foretold in the event of the adoption of a classification by corrected length. Clara, of 53ft. waterline and 9ft. beam, has practically the same sail area as Gossoon, 40ft. waterline and 12ft. beam, measuring 55ft. corrected length to 48ft., in round numbers. A 46ft. Clara, carrying 2,500sq. ft. of sail, would rate at 48ft. corrected length, or the same as Gossoon, and certainly would not have the ghost of a show with the wider boat on even time if Clara herself cannot beat the wide forty by a large margin.

NEWPORT, ISELIN CUP, AUG. 2.

The decision of the regatta committee to offer the Iselin cup for the forties pleased every one, as no better chance for a test has been offered this season. Few New York yachtsmen were present on the occasion of Gossoon's victory at Marblehead three weeks since, and there was a general desire to see a match between the two. At the same time there were other forties present, and though few expected that they would trouble either Gossoon or Minerva, every one wished to see the new Moccasin and also Mariquita after her creditable performance in the Seawanhaka Corinthian regatta. The course decided on was 12 miles to windward or leeward, and when the flagship anchored off Brenton's Reef Lightship at 11 A. M. on Saturday, there was no trouble in laying out a good course, the wind being moderate from S.E. and the water comparatively smooth. The starters were as follows:

	Measurement.	Allowance.	Owner.	Helmsman.
Mariquita, k	48.09	Allows.	A. Belmont, Jr.	Ed. Burgess.
Gossoon, k	47.83	0 20	Adams Bros.	Chas. F. Adams.
Moccasin, c.b	47.23	0 59	E. D. Morgan	Owner.
Choctaw, c.b	47.08	1 06	Arnold Thayer.	Capt. Moloney.
Minerva, k	45.61	2 48	J. L. Carroll.	Capt. C. Barr.

Nothing had been left undone that could fit the boats for racing, Mariquita had a new mainsail, and beside Mr. Burgess at the wheel, she had Mr. E. A. Willard, who sailed Nymph so admirably last year. Gossoon was in fine form, and with both her owners aboard, Mr. Chas. F. Adams at the stick; Moccasin had Mr. Morgan at the wheel, with Mr. Herbert Leeds and Capt. Craven beside him; Choctaw, with copper bronze in place of pot-lead, was sailed by her skipper, a skilful hand; and Minerva, following Clara's example with a couple of battens in her mainsail, had her skipper at the stick and Capt. John Barr with some of Clara's crew to run the deck. All carried clubtopsails and small jibtopsails, but Minerva had her smaller club aloft.

The fleet lay astern of the Electra when the preparatory gun was fired at 12:23, but a minute before the start was given Capt. Maloney brought Choctaw with a rush close under the stern of the flagship, well timed to cross the line in the smoke. Close as she was, there was still room enough for Minerva's bowsprit between Choctaw and the Electra, and Captain Barr put it there in time to back up his hail for room, which Choctaw was forced to give. No prettier picture could a racing man desire to look on than was shown from the high bows of the Electra as the pair ran through the smoke as it left the gun; both heeled well down, Minerva just grazing Electra's forefoot as she leaped out to windward, with Chocktaw lapping her and almost covered by Minerva's mainsail. As she went from under Electra's bow Minerva shot out clear of her rival, and took a good weather berth. Moccasin came by a minute later, but Gossoon and Mariquita hung back to give Minerva her time at the start. It is a curious coincidence that the order of the start was the exact reverse of the order of size and allowances. All crossed on starboard tack, the times being:

Minerva	11 33 54	Gossoon	11 37 04
Choctaw	11 33 49	Mariquita	11 38 15
Moccasin	11 34 51		

Gossoon was the first to tack at 11:45, the others going about at once. She had been overhauling Minerva from the start, and when after several short tacks she went about a little after noon on starboard tack, she was so close to Minerva that the latter tacked to clear her, Gossoon having the right of way in the cross tacking. Gossoon had fairly caught Minerva in this short distance, and the spectators looked to see her run away to the same tune over the next 9 miles, but it was not to be, for the whole of the long way out Minerva held her weather berth in spite of all that Gossoon could do. They came for the mark with Gossoon ahead, but to leeward, and the Scotchman jockeyed her into standing further than was necessary, so that when both tacked together for the last time Minerva had added just enough to her former lead by this maneuver to keep beyond blanketing distance.

Moccasin was third boat, but a long distance astern, having worked the shore all the way out. Mariquita was beating Choctaw, but the two were out of it long before half the windward leg was covered. The turn was timed:

Minerva	2 30 00	Mariquita	2 45 40
Gossoon	2 31 35	Choctaw	3 03 53
Moccasin	2 37 45		

The following times were taken from the Electra, from the turn until the spinaker was broken out on each boat: Minerva 2m. 20s., Gossoon 3.30, Moccasin 5.15, Mariquita 4.50, Choctaw not timed. Minerva rounded without a sign of a spinaker, and in a little over two minutes had the sail drawing, save for some stops near the head, which made it necessary to send a hand aloft, the sail being somewhat torn in freeing it.

Liris, with a working topsail and a boat in tow, had watched the race from the start, coming out with the leaders and sailing to windward of them. Now she started home with them, carrying a baby jibtopsail and a spinaker, which, with no clubtopsail, made a very curious rig. She ran with Minerva and Gossoon for a long time before they left her astern.

The race in was something to see; Gossoon had gained 1min. 5sec. on Minerva in the 12-mile beat, which, taking the allowance and difference of starting time, left her 1min. 2sec. within which she must finish to win. She was within 1min. 35sec. of Minerva at the mark, so that she had little more than half a minute to make up. Had she been near enough to blanket Minerva, there would have been no hope for the smaller boat, Gossoon would have finished at her heels and taken the cup; but the distance was just enough to keep Minerva clear and to allow her sails to draw to the utmost. As the two ran along no difference in their speed was perceptible, Gossoon's champions declaring that she was clearly gaining; while Minerva's friends were as confident that she was more than holding her own. How nearly right they were was shown by the official times, Minerva gaining just 15sec. on Gossoon in 12 miles. Minerva had carried her small clubtopsail to windward, taking in her baby jibtopsail in the latter part of the beat. When once squared away she shifted to her large clubtopsail. The finish of the other boats was very dull, Moccasin had beaten Mariquita and Choctaw very badly, but at the same time was not in the racing with Gossoon and Minerva. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
Minerva	11 33 34	4 01 21	4 27 87	4 24 59
Gossoon	11 37 04	4 03 12	4 26 08	4 25 48
Moccasin	11 34 51	4 11 47	4 36 56	4 35 57
Mariquita	11 38 15	4 17 14	4 38 59	Allows.
Choctaw	11 33 49	4 38 10	5 04 21	5 03 15

Minerva beat Gossoon 49s., Moccasin 10m. 53s. Mariquita 14m., Choctaw 38m. 16s.

Mariquita did the best running, but her performance to windward was particularly poor, while no reason for it was apparent from the accompanying vessels She lost steadily all day, being out of the race from the first mile. It is not to be expected that she will ever hold the pace with Gossoon and Minerva when the two are doing their best, but after the Seawanhaka Corinthian race, and in such good hands as she was on Saturday, something better was expected of her. Choctaw's defeat was so great that a part of it must be ascribed to some mishap, as none of the forties that are now racing are slower by half an hour than the pack.

Gossoon ran alongside of Minerva as the little black fellow anchored in the harbor, and gave a cheer for the winners, but the first official knowledge that Minerva's men had of their victory was when the Electra's launch came up with the handsome Iselin cup, and passed it over the side. So far as sea and weather was concerned, the race was a perfectly fair one; there was no fluking to speak of, and both boats had a fair trial. The result confirms the opinion we formed from the Marblehead racing. Minerva is still good enough to hurry Gossoon in any weather, and the result will depend on the handling and on judgment in chosing courses and setting sails. Any errors on Minerva's part will give the race to Gossoon, but when sailed at her best she has still a good fighting chance of saving her time.

On Sunday the fleet in Newport Harbor included the following yachts, a number having sailed on Saturday:

Steamers—Alva, Sultana, Catarina, Oneida, Lagonda, Lurline, Isolene, Susquehanna, Avenel, Unquowa, Tillie, Peerless, Vivienne and Wampanoag. Schooners—Merlin, Sea Fox, Mayflower, Marguerite, Intrepid, Palmer, Columbia, Alert, Madeleine, Miranda, Ambassadress, Crusader, Ramona, Yampa, Dauntless, Montauk, Grayling, Iroquois, Œnone, Sylph, Wanderer, Norna, Viking, Atalanta, Halcyon, Magic, Fenella, Quickstep, Lotus, Viator and Nirvana. Cutters and sloops—Volunteer, Puritan, Titania, Wayward, Clara, Gracie, Monticeto, Listless, Fannie, Kelpie, Active, Huron, Gossoon, Minerva, Choctaw, Moccasin, Oriva, Banshee, Mariquita, Peri, Nymph, Medusa, Baboon and Tomboy.

The orders were given to dress ship. Com. Gerry and his staff attended church on shore. On Monday morning colors were at half-mast, it being the day of Mr. Schuyler's funeral, and the race to Cottage City was abandoned, the fleet sailing over without times being taken. A fog in the morning threatened to stop the run, but after the flagship had given up at 11:30 and returned to Newport Harbor, the fog cleared and it was determined to start. The run was made quickly, the fleet starting at 1:30 and the leaders reaching Vineyard Haven at 6 P. M. At a meeting in the evening it was decided to sail next day to New Bedford, lying there over Wednesday for the rowing and launch races, and sailing for Newport on Thursday, where some special races will follow. After the meeting the yachtsmen attended a reception of the Oak Bluffs Club.

The race to New London was sailed in a strong S.W. wind, resulting as follows. Moccasin broke her tiller and Liris went to the aid of a boat lost by Titania:

	Start.	Finish.	Elapsed.	Corrected
SCHOONERS—CLASS 1.				
Palmer	10 38 52	3 56 05	4 57 13	4 57 13
SCHOONERS—CLASS 3.

SLOOPS—CLASS 1.				
Volunteer	10 37 19	2 56 22	4 19 03	Allowed
Puritan	10 38 23	3 28 20	4 49 57	Not meas.
SLOOPS—CLASS 5.				
Clara	10 21 35	3 46 12	5 24 37	5 20 47
Cinderella	10 22 27	4 18 27	5 56 00	5 56 00
SLOOPS—CLASS 7.				
Gossoon	10 24 17	2 35 50	4 11 33	4 11 30
Liris	10 23 38	3 14 35	4 50 57	4 50 57
Moccasin	10 25 00	Disabled.		

The following order announces the future movements of the yachts:

The squadron will remain at anchor Wednesday at New Bedford. The commodore requests the pleasure of the company of the captains and their guests, including ladies, aboard the flagship at luncheon at 1 o'clock, and to witness afterward the following races:

Friday, Aug. 8, the following races will be sailed off Newport for the special cups, open to all yachts of the club which have not hauled out to clean since the commencement of the cruise:

Keel schooners, open to all, $300 cup; first class, $200 cup; second class, $200 cup; classes 3, 4 and 5, $300 cup.

Sloops, first class, $200 cup; third class, $200 cup; fourth class, $200 cup; fifth class, $200 cup; sixth and seventh classes, $200 cup.

Conditions and Courses—For each cup there must be two or more starters. Racing rules of the club to govern. Yachts crossing the line with their racing numbers displayed and private signals at the peak will be considered as entered for the race. Courses all to windward or to leeward and return. Sailing directions can be obtained on board the flagship the night before the race until 8 A. M. of the morning of the race.

CEDAR POINT Y. C.—The regatta of the Cedar Point Y. C. was sailed on July 30 over a 15-mile triangular course off the club house. The times were:

	Start.	Finish.	Elapsed.
CLASS 8, CATS.			
Katie	12 20 50	3 13 05	2 52 15
Go Softly	12 21 08	3 05 19	2 44 11
Compo	12 21 11	3 23 40	3 02 29
Rival	12 21 30	2 58 54	2 37 24
Waiva	12 23 00	3 11 00	2 49 00

Judges—W. A. Estes for Lynn Y. C. and H. S. Wilder for Volunteer Y. C.

INDIAN HARBOR Y. C., AUG. 2.

OFF Greenwich on Saturday last there was sailed the second annual regatta of the Indian Harbor Y. C. It is very doubtful if in any race on Long Island Sound such a racing fleet of boats ever came together. The race was open to all club members of the New York Y. R. A., although there were entries from several outside clubs. The course was 5 miles to windward and return, and was logged off by the committee steamer, taking a southeast by east course about an hour before the race. The rules of the Association governed, and the table of the allowances adopted by the Association was used.

In the open classes there was great rivalry, the contestants entering for a $25 sweepstakes, and in addition much money was wagered outside on the result. It is very much to be regretted that an accident occurred to Mr. Jones's Phyllis; she had just crossed the line when the open sloop Delphine caught her bowsprit in the main sheet of the Phyllis. Luckily she was so close to the steamer that several of the guests on board helped to keep her up and saved a capsize. In the melee the mainsheet parted. Some one on the steamer told the Phyllis's captain to take a new start, which he did, going back and recrossing the line again. Of course the judges refused to allow the second start, which was unofficially taken at 2:01:22.

After the steamer Idlewild had taken a large number of ladies on board, both at Greenwich and at Indian Harbor Dock, a position was taken up at the starting line off the harbor, and at 1:40 P. M. the preparatory signal was given, ten minutes later at 1:56 the starting signal was given for all open yachts. All crossed within the ten minutes allowed. The staff was kept bare for ten minutes, when at 2:16 the signal for all cabin classes to start was given. The committee had not intended to include cabin classes, but as the cruising fleet of the New York Y. R. A. was in the harbor, they were told that cabin classes would be made if they desired to enter. With the exception of three or four, most of the fleet entered. So two classes for sloops and cutters and one for cabin cats were made. As the fleet was disbanded before the race and a fair wind was blowing, a number of those entered took advantage of it and left the harbor. Among them was the cabin cat Edna, designed by Gardner last winter for Mr. Phillips of Newark. This is to be regretted, as a chance would have been given to try her against the old style cabin cat.

The wind was southeast, moderate to fresh at times, the tide last quarter of the flood. All started on the port tack. The outer mark was rounded by Tattler first, closely followed by Amateur, Gold Dust, and Susie C. (the famous Susie S.). On the way home Amateur passed Tattler, being the first to finish, making the fastest elapsed time over the course, although Tattler made the best corrected time. After the race a protest was filed by the owner of Phyllis against awarding a race to May B., but was not allowed by the judges. The following is a summary of the race:

CLASS A—CABIN SLOOPS AND CUTTERS 32FT. AND OVER.

	Length.	Start.	Finish.	Elap'd.	Corr'd.
Volusia, J. M. Williams	35 06	2 17 53	4 31 27	2 13 34	1 50 33
Mergus, W. H. Rowe	33.03	2 21 59	4 40 23	2 18 24	1 54 05
Mistral, J. W. Booth	37.06	2 21 07	4 38 22	2 17 14	1 55 13
Viking, C. S. Somerville	34.03	2 17 27	4 51 06	2 33 39	2 09 56
Waconda, Henry Doscher	32 06	2 18 39	Did not finish.		

CLASS B—UNDER 32FT.

Emmy C., Chas. E. Cameron	31.04	2 18 18	3 49 26	2 31 08	2 05 01
Princess, A. E. Earle	27.03	2 19 04	5 05 50	2 46 46	2 17 01

CLASS 1—OPEN SLOOPS 27 TO 32FT.

Amateur, Frank Burritt	30.00	2 00 05	3 59 25	1 59 20	1 32 06
Susie C., J. H. Cornwall	27.54	1 58 02	4 04 24	2 06 22	1 36 42
E. L. Davidson, C. F. Webber	28.00	1 57 23	Did not finish.		
Delphine, J. H Nash	27.01	1 56 49	Did not finish.		

CLASS 2—OPEN SLOOPS 23FT. AND UNDER.

Ramona, J. R. Jennings	21.06	1 57 37	4 07 58	2 10 21	1 34 02
Coyote, H. Bucknall	21.04	2 00 38	Disabled.		

CLASS 3—CATBOATS 27 TO 32FT.

Dot, C. H. Pierce	27.01	1 57 03	4 29 12	2 32 09	2 02 14

CLASS 4—CATBOATS 23 TO 27FT.

Tattler, J. H. Cornwall	24.03	1 56 45	4 00 18	2 03 33	1 31 07
Gold Dust, Silas Seaman	24 00	1 59 39	4 04 58	2 05 19	1 32 07
Sirene, Doremus & Outwater	24.07	1 57 40	4 20 05	2 22 25	2 49 53
Edna, Newbold & Grieve	24.04	2 00 28	4 25 41	2 25 13	1 52 24

CLASS 5—CATBOATS 20 TO 23FT.

Kittie, Thos. T. Taber	22.11	1 57 19	4 59 43	2 32 15	1 57 46
Leader, Rau Bros.	22.04	1 59 52	4 30 08	2 39 36	2 04 23

CLASS 6—CATBOATS 17 TO 20FT.

May B., Benedict May	19.11	1 56 51	4 09 17	2 12 26	1 33 54
Phyllis, W. J. Jones	19.11	1 57 47	4 13 55	2 17 08	1 38 06
Rival, E. B. Hand, Jr., et al	19.11	1 58 27	4 16 31	2 18 04	1 39 32
Zelika, H. A. Sheman	19.05	1 58 24	4 23 00	2 24 36	1 45 19
Go Softly, E. S. Wheeler	19.11	1 58 47	4 24 35	2 25 48	1 47 16
Next, B McGregor	19.06	1 57 27	4 29 42	2 32 15	1 53 05
Lassie, Peter Asten	19.11	2 00 45	Did not finish.		
Foam, C. F. Hicks	19.03	1 57 55	Did not finish.		
Kittiwake, H. B. Pott	17.01	1 58 57	Did not finish.		

Thus the winners are in class A, Volusia over Mergus by 3m, 32s.; in class B, Emmy C. over Princess by 12m.; class 1, Amateur over Susie C. by 4m. 36s.; class 2, Ramona; class 3, Tattler over Cold Dust by 1m.; class 5, Kittie over Leader by 6m. 37s.; class 6, May B. over Phyllis by 4m. 1½s. The judges were Com. A. J. Prime, Yonkers Corinthian Y. C.; Henry O. Asten, Riverside Y. C.; George C. Cortland, New Jersey Y. C. The regatta committee consisted of Henry E. Doremus, Richard Outwater and F. B. Jones.

HERRESHOFF NO. 163.

LYING at anchor in New London Harbor on Thursday last was another novelty of the famous Herreshoffs, who, not entirely content with the marvelous performance of the torpedo boat Cushing, had provided another evidence of their skill as the designers and builders of fast steaming craft. No. 163, as she is yet known, is a stock boat just from the yard for her trial trip, a sharp, clean-lined little day launch, 73ft. over all, 9ft. 6in. beam and about 4ft. draft, intended to fill a place between the convenient but diminutive naphtha launch and the more cumbrous but comfortable cruising steam yacht. This speedy little flyer, with a crew of but three or four, is the sort of a boat to pick a man up in the city at the end of a busy day and carry him home at a rapid pace to Larchmont, Sandy Hook or up the Hudson, bringing him back next morning with no trouble from L roads, tunnels or ferries. At the same time, she is fitted for day runs and short cruises, and is a most convenient craft in every way.

The middle of the boat is given up to a Herreshoff boiler and a set of triple compound engines of high power, the framing being of the lightest, steel being used throughout. Forward of the sunken pilot house is the forecastle, with bunks for three men; in the pilot house a berth can be made up for the captain. Abaft the engines is a convenient cabin with two sofas which fold down, making berths at night; while under the deck, though the headroom is limited to about 4ft., are two fixed berths and considerable stowage room. Forward of the cabin is a convenient toilet room. Of course speed is the main object, but at the same time the yacht affords all necessary accommodation for a boat of her class. The construction is excellent, a double-skin hull, with steamed oak frames, all parts being of the lightest, but well braced. The deck is of matched stuff, carefully glued together and then canvassed. The little craft tried her speed with the New York Y. C. fleet, waiting until the last steamer had started from New London and then running through the fleet until she led into Newport harbor.

BEVERLY Y. C. RACES.

THE 163d regatta of the Beverly Y. C. will be sailed on Aug. 16, and will include the postponed second championship matches of Aug. 2, as well as the special races for the 21, 30 and 40ft. classes. The conditions for the sweepstakes are as follows:

Handsome prizes will be awarded in each class. If the winner prefers, these will be paid in cash. A second prize will be given, provided more than three boats start. A championship pennant will also be given in each class, without time allowance, to become the property of the yacht winning the majority of races. First class schooners will sail at three-quarters of their actual length. Yachts over 24ft. w.l. and not over 30ft. w.l. to form first class; over 20ft. w.l. and not over 24ft. w.l. the second class; over 17ft. w.l. and not over 20ft. the third class; 17ft. and under the fourth class. Third class will be divided into sloops and cats, separate prizes being given in each division, but the whole class to sail for the same pennant. In case of unfavorable weather, the regatta will be sailed on the following Monday, unless otherwise ordered.

The special races are open to yachts of 40ft. w.l. and under, belonging to any club, the prizes being: A cup of $150 in the 40ft. class; viz., from 30 to 40ft. w.l. A cup of $100 in the 30ft. class.; viz, from 21 to 30ft. w.l.; and cups of $50 each for keels and centerboards in the 21ft. class; viz., 21ft. w.l. and under. In case of unfavorable weather, the race will be resailed the day after the Corinthian Y. C. series is over, as the intermediate dates are already taken by that club. The start will be a flying one. Yachts will cross the line between Marblehead Rock and a stakeboat carrying the Beverly Y. C. flag, and will be timed from the whistle. Yachts on their return must pass between the stakeboat and the Rock. Entries, giving name of yacht, name and address of owner, rig, sailing length if known, and length on waterline, may be made to the secretary, W. Lloyd Jeffries, 78 Devonshire street, Boston, before 3 P. M. of the day before the race. Yachts must carry numbers, to be shown at the start and finish, in a position where they can be easily seen by the judges. Numbers can be obtained from the secretary, at his office, prior to 3 P. M. of the day before the race, or at the Eastern Y. C. house, Marblehead, on night before race or morning of the race prior to 9:30. No shifting of dead weight allowed during the race. No restriction as to sails in the 40 or 30ft. classes; 21ft. catboats to carry mainsails only; 21ft. sloops to carry mainsail, jib and forestaysail. Race must be completed by one boat in each class before sunset (as given in Eastern Y. C. book); but if start is delayed, time of race will be extended to correspond. Yachts in the 40ft. class may carry one man for every 4ft. sailing length or fractional part thereof; yachts in 30 and 21ft. classes, one man for every 5ft. waterline or fractional part thereof. The rule requiring yachts to be sailed by a member of the club will be waived. The time allowance of the Eastern Y. C. will be used in the 40ft. class; that of the Beverly Y. C. in the other classes. A steam yacht will be used as judges' yacht, and will fly a large Beverly Y. C. flag. The race will be sailed under the rules of the Beverly Y. C., except as stated above. W. Lloyd Jeffries, T. S. Edmands, John P. Cushing, Robert Saltonstall, P. Grant, Jr., regatta committee.

The cup in the 40ft. class was given conditionally on Minerva's entering, and notice will be sent to all owners of forties as soon as she is heard from.

NEW YORK Y. R. A. CRUISE.

ACCORDING to orders the fleet of the New York Y. R. A., was at the rendezvous, the station of the Harlem Y. C. off College Point, on July 27, and at 9 A. M., on the following morning, with a very light south wind, the start was made. Admiral Prime was in command, on the flagship Edith, and at a meeting of captains it was decided that each day's run should be a race, the times being taken by the steam launch Nixie, Com. Foote, of the Newark Y. C. Prizes were offered for the yacht in each class making the best average on the runs. The wind during the day was light and variable, but the fleet reached its destination, Cold Spring Harbor, late in the afternoon, the leaders being timed:

Emmy C.	5 24 20	Leader	5 50 25
Nina	5 34 47	Orestes	6 06 50
Mistral	5 38 28	Edith	6 13 45
Bertha	5 38 50	Oriole	6 35 00
Edna	5 39 55	Peerless	6 35 07
E. L. Davidson	5 46 15	Coquette	6 45 00

Mergus was first in, but she went inside of the new lighthouse, so was not timed. In the evening a hop was given at the Glenada Hotel in honor of the visitors.

Tuesday morning was very disagreeable, a steady rain and squally wind, but the fleet sailed at 9 A. M., for Wilson's Cove. Mistral, Mergus, Emmy C. and several others had a hard fight across the Sound, but Mistral finally won, the times being:

Mistral	11 12 00	Restless	11 51 50
Mergus	11 17 30	Edna	11 53 30
Harned	11 27 45	Phœnix	12 00 30
Bertha	11 31 15	Creole	12 04 00
Orestes	11 36 15	Kitty K	12 05 00
Emmy C	11 36 20	Mildred	12 15 25
Edith	11 40 00	Sorceress	12 20 15
Nina	11 42 00	Christina	12 24 30
Gracie T	11 43 00	Guile	12 34 30
Merope	11 47 00	Outvie	12 34 31
Leader	11 51 30	Coquette	12 37 45
Peerless	11 51 45		

The fleet had been specially invited last week to visit the Cedar Point Y. C. and take part in its regatta on Wednesday, and with this in view the orders were to sail at 8:30 for Cedar Point, the run not counting as a race. The fleet stopped for a short time at Cedar Point, but just at the start of the race the visiting yachts weighed anchor and stood on for Bridgeport, to the disappointment of their hosts, who had gone to much trouble in order to entertain them during the day and evening. This action of the Association caused much dissatisfaction on the part of the Cedar Point Y. C., as no explanation was made for it. The run to Bridgeport found Mistral again ahead, the times being:

Mistral	1 00 09	Edna	1 25 00
Emmie C	1 11 10	Leader	1 25 15
Edith	1 12 20	Nina	1 25 55
Harned	1 12 38	Phœnix	1 26 22
Hazel	1 13 12	Oriole	1 27 10
Bertha	1 22 00	Guile	1 27 40
Restless	1 22 58	Merope	1 32 41
Orestes	1 23 05	Mildred	1 52 53
Mergus	1 24 29	Coquette	2 06 18

The run of Thursday was the liveliest of the cruise, most of the yachts being reefed, while one, the catboat Nina, lost her mast. The times at Lloyds' Harbor were:

Mistral	2 34 45	Phœnix	5 02 40
Mergus	3 31 25	Leader	5 15 45
Harned	3 40 50	Edna	5 36 05
Emmie C	4 02 00	Bertha	6 05 55
Orestes	4 48 55	Coquette	6 56 00

No others were timed.

Next morning the fleet ran over to Greenwich, where some of the yachts sailed in the regatta of the Indian Harbor Y. C. in the afternoon, while in the evening all bands attended the hop at the Indian Harbor Hotel. Shortly after colors on Saturday morning a meeting of the captains was held on the flagship, at which the fleet was formally disbanded. Some of the yachts returned home, while others continued their cruise to the eastward. The cruise was a success, especially for a first attempt, and is likely to lead to a still larger one next year.

BUZZARD'S BAY Y. C.—The third annual regatta of the Buzzard's Bay Y. C. was sailed off Onset last Saturday in a light east wind. The times were:

FIRST CLASS.

	Start.	Finish.	Elapsed.	Corrected.
Dora	1 33 50	4 11 00	2 37 15	1 52 33
Climax	1 32 00	4 05 46	2 33 46	1 53 33
Mattie	1 33 06	4 12 40	2 39 34	1 57 30

SECOND CLASS.

Mist	1 35 15	4 11 11	2 35 56	1 50 11
Anonyma	1 35 00	4 12 14	2 37 14	1 51 52
Mollie	1 36 40	4 14 15	2 37 35	Not meas.
Chispa	1 35 50	4 18 23	2 42 33	Not meas.
Ida May	1 32 20	4 23 43	2 51 23	Not meas.
Widgeon	1 36 14	4 15 18	2 39 04	Not meas.
Starling	1 36 20	4 21 15	2 44 50	Not meas.
Adelaide	1 37 04	4 21 15	2 44 11	Not meas.

THIRD CLASS.

Puzzle	1 40 10	3 30 34	1 50 24	Not meas.
Eida	1 39 10	3 31 33	1 52 23	Not meas.
Parade	1 39 20	3 31 50	1 52 30	Not meas.

Bertha	1 40 36	3 38 59	1 58 21	Not meas.
Ulula	1 40 18	3 40 10	1 59 52	Not meas.

FOURTH CLASS.

Edith	1 42 45	3 02 11	1 19 26	1 15 31
Earl	1 42 55	3 04 08	1 21 13	Not meas.

The second class sloop Gilt Edge sailed over the course in 2h. 58m. 48s., and had no competitor.

CORINTHIAN Y. C. SWEEPSTAKES.—The programme for the second annual sweepstakes of the Corinthian Y. C. of New York has just been issued, the entries being as follows:

Name.	Owner.	Designer.	Keel or C.B.
Choctaw	Arnold Thayer	E. Burgess	C. B.
Gossoon	Messrs. Adams Bros.	E. Burgess	Keel.
Liris	C. W. Wetmore	W. Gardner	Keel.
Mariquita	A. Belmont, Jr.	E. Burgess	Keel.
Minerva	John Lee Carroll	W. Fife, Jr.	Keel.
Moccasin	E. D. Morgan	E. Burgess	C. B.
Tomahawk	B. W. Crowninshield	E. Burgess	Keel.
Ventura	C. H. W. Foster	E. Burgess	C. B.

The race will be sailed on Monday next, Aug. 11, over a triangular course of 25 knots; one leg, the first if practicable, being to windward. The start will be off Brenton's Reef Lightship, the two turning marks being floats, catboats or tug with Corinthian burgee. The preparatory interval will be 10 minutes, with 5 minutes in which to cross. Professional crews are allowed, one man to each 5ft. of length on deck or fraction thereof. There will be no time limit to the race. The regatta committee includes Messrs. E. B. Clarke, Wm. H. Plummer, Wm. Gardner, Chas. Stewart Davison.

QUINCY Y. C.—This flourishing club, of Quincy, Mass., has now, according to its new club book, a membership of 313 and a fleet of 70 yachts, among them many fast racers in the smaller classes anout Boston. The club still races under a mean length rule, waterline plus ¼ overhang.

ATLANTIC Y. C. No. 3.—A third club by this name has lately been formed, at Quincy, Mass., the officers being: Com. D. W. Pratt Vice-Com. O. F. Lathrop; Fleet Capt. E. W. Crocker; Sec. J. E. Drew; Treas. George W. Hill; Executive Committee, C. N. Hunt, George B. DeHuff, John Wakely.

MONTGOMERY S. C. 7TH REGATTA, JULY 19.—Course, Norristown to Indian Creek and return, 5 miles; wind, fresh northwesterly.

	Length.	Elapsed.	Corrected.
Volunteer, Geo. W. Ritter	15.00	1 19 00	1 19 00
Nellie, Fred Rochell	15.00	1 20 10	1 20 10
Lever, J. S. Lever	15.00	1 21 20	1 21 20
Stranger, E. P. McAllister	15.00	1 25 00	1 25 00
Igidious, Lin. Hallman	15 00	1 25 10	1 25 10
Gracie, E. A. Leopold	12.00	1 45 40	1 35 40
Mary L., E. W. Davenport	14.00	1 49 40	1 39 40
Vesuvius, Alfred Rochell	15.00	Withdrew.	

Timer, Albert Rochell.

Eighth regatta, Aug. 3, Norristown to Indian Creek and return, 5 miles; wind, light southerly:

	Length.	Start.	Finish.	Elapsed.
Gracie, E. A. Leopold	12.00	1 30 00	4 18 00	2 48 00
Volunteer, Geo. Ritter	15.00	1 40 00	Withdrew.	
Nellie, F. Rochell	15.00	1 40 00	Withdrew.	
Mary L., E. W. Davenport	14.00	1 30 00	Withdrew.	
Igidious, Lin. Hallman	15.00	1 40 00	Withdrew.	
Priscilla, Wm. Schnipp	15.00	1 40 00	Withdrew.	
Katie L., Alfred Rochell	15.00	1 40 00	Withdrew.	

It was a reach both ways with occasional head winds, making it necessary to tack off shore. The time limit for these races is fixed at 4:10, and as the Gracie finished 8m. later it was declared no race. Gracie finished about 1½miles ahead of the tuckup Volunteer, which was second boat.

SACO Y. C. REGATTA, AUG. 2.—The annual regatta of the Saco Y. C. was sailed off Old Orchard, Me., Saturday, the course for both classes being 9 miles. The times were:

FIRST CLASS.

	Start.	Finish.	Elapsed.
Caprice	2 53	4 56	2 03
Willie E	2 53½	4 57	2 03½
Solid Comfort	2 52	. . .	. . .

SECOND CLASS.

Amphitrite	2 56	4 53	2 01
Secret	3 00	5 26	2 26
Rambler	3 02	5 35½	2 33½
No Name	3 00	5 36	2 36
Metro	2 55	5 40	2 45
Jonnie	2 57	5 45	2 48
Stranger	2 59	5 56	2 57
Carrie Bell	2 56½	6 00	3 03½
Sea Bird	2 58	6 01½	3 03½

LAKE GEORGE Y. C., Basin Bay, Warren County.—Officers for 1890: Com., Le Grand C. Cramer; Vice-Com., John B. Simpson; Sec'y, John B. Marie; Treas., Charles Elliott Warren; Meas., Phiny T. Sexton; Fleet Surgeon, Dr. Joseph N. Henry; Fleet Chaplain, Rev. Charles H. Lancaster; Member, Committee on Admissions, Mr. E. Burgess Warren.

The following gentlemen have been lately elected: S. Alexander Orr, Troy, N. Y.; Jesse Hoyt, New York; Reuben M. Hoyt, New York; Henry S. Grove, Phila.; Edward C. Donnelly, Jr., New York; Robert E. Glendenning, Phila.; H. H. Man, New York; John I. Howe, Roselle, N. J.; Richard W. Bacon, Phila.; C. R. Nutt, Greenville, Miss.; Percival Glendenning, Phila.

The secretary announces with regret the death of Dr. E. K. Henschel, in Paris, France. Dr. Henschel was one of the first to join the club, and was enthusiastic for its success. By his many manly characteristics he had endeared himself to all, and his loss will be felt by many.

NEWARK Y. C. REGATTA.—The 8th annual regatta of the Newark Y. C. will be sailed on Aug. 16 over the ten mile course of the club on Newark Bay, off Bayonne. The entrance fee will be $3, the winner in each class to take two-thirds and the second, if more than three start, to take one-third. The club will also give prizes for the best elapsed and corrected time. The race will be under the rules of the New York Y. R. A., the classification being: First class, cabin sloops, 38ft. and over; second class, cabin sloops, 32ft. and under 38ft.; third class, cabin sloops, 27ft. and under 32ft.; fourth class, cabin sloops, all under 27ft.; fifth class, jib and mainsails, 23ft. and over; sixth class, jib and mainsails, 20ft. and under 23ft.; seventh class, jib and mainsails, all under 20ft.; eighth class, open cat rig, 23ft. and over; ninth class, open cat rig, 18ft. and under 23ft.; tenth class, open cat rig, all under 18ft.; eleventh class, cabin cat rig, 25ft. and over; twelfth class, cabin cat rig, under 25ft. Entries may be made to A. F. Adams, 746 Broad st., Newark, N. J. Yachts desiring to enter will find good anchorage off the club house, where they may be left in care of the steward.

CORINTHIAN NAVY.—Owing to the very unsettled condition of the weather on Saturday, July 26, the regatta of the East River Squadron was postponed. The fleet of the Navy assembled at New Rochelle on the evening of Aug. 1 to take part in the annual cruise. Commodore Connolly was in command and issued orders for the fleet to get under way at colors on Saturday for Greenwich, Conn. From here the fleet will go to Cold Spring Harbor, and thence to the eastward. The Commodore has devised a code of signals for use on the cruise. The next regatta of the Navy will be that of the West Long Island Sound Squadron, which takes place on Aug. 26. The Staten Island Sound Squadron will hold a fall regatta on Sept. 5 off Sewaren, N. J. The following are proposed for membership: C. Wright Kirby, Jr., J. Fosdick, C. T. Pierce, G. H. Hull, T. F. Hull, J. L. R. Minor, Bert Hoor.

HAVERHILL Y. C., Aug. 2.—The second championship race of the Haverhill Y. C. was sailed on Aug. 2, the times being:

	Elapsed.	Corrected.
Sadie B., H. Emerson	1 07 35	1 04 28
Spray, M. Priest	1 15 43	1 12 16
Planchette, J. Crossin	1 20 00	1 17 18
Clyde, J. Dresser	Not timed.	
Hiawatha, A. Philbrick	Not timed.	

Clyde, Hiawatha did not finish. A protest was made against Sadie B. for fouling other boats. One of the crew of Spray, George Webster, was knocked overboard by the boom but was picked up. The timekeeper was J. G. Hodson, and Judge A. A. Pettingill.

HAMILTON Y. C., 30ft. Class.—The first race of the season for the 30ft. corrected length class of the Hamilton Y. C. was sailed on July 26, in strong and puffy breeze. The times were:

	Elapsed.	Corrected.
Samoa	2 07 20	2 07 20
Nadia	2 14 25	2 13 42
Echo	2 26 30	2 26 16
Isle of Wight	2 34 35	2 33 19
Volante	Did not finish.	

Samoa, Mr. Jarvis's new keel cutter, won easily, her owner, who also designed her and superintended the building, steering her in the race. A late issue of the *Canadian Athlete* contains a portrait of Mr. Jarvis and a description of his boat.

DAUNTLESS Y. C.—The annual club regatta of the Dauntless Y. C. was sailed on Aug. 3 with but four starters. The course was three rounds of a 4-mile triangle, and the times were:

	Length.	Elapsed.
Irene, John Bolen	15.00	2 17 30
Louie W., W. White	22.00	2 15 20
Vida, C. Reynolds	24.00	2 26 10
Ethel, H. Laukner	22.00	2 31 29

QUAKER CITY Y. C.—The new book of the Quaker City Y. C. shows a membership of 125 and a fleet of 56 yachts, steam and sail. The club is in a prosperous condition generally.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1889-90.

Commodore: HENRY STANTON, New York.
Secretary-Treasurer: F. L. DUNNELL.
Vice-Com. *Rear-Com.* *Purser.*
Central Div., Geo. A. Warder. E. L. French. J. K. Bakewell, 110 Diamond street, Pittsburgh, Pa.
Eastern Div., Dr. J. A. Gage. A. S. Putnam. Ralph F. Brazer, Lowell, Mass.
N'thern Div. W. J. White. W. J. Read. C. M. Whitlaw, Montreal, Can.
Atlantic Div., M. V. Brokaw. I. V. Dorland. W. R. Haviland, Yonkers, N. Y.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

WESTERN CANOE ASSOCIATION.

Commodore—C. J. Stedman, Cincinnati, Ohio.
Vice-Commodore—T. J. Kirkpatrick, Springfield, O.
Rear-Commodore—Thos. S. Gates, Columbus, O.
Secretary-Treasurer—J. B. Keogh, 34 Montauk Block, Chicago, Ill

Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by $2 as initiation fee and dues for the current year.

A. C. A. TRANSPORTATION.

Editor Forest and Stream:

Steamer Rialto, Capt. Clark, will run from Greenport and Sag Harbor to the A. C. A. camp at Jessup's Neck under directions from the Transportation Committee, connecting with steamers Manhansett and Sunshine and trains on Long Island Railroad at Sag Harbor until further notice. Fare to camp from either place, 25 cents; canoes and duffle free.

Leave Greenport

On arrival steamer Manhansett from New London, 11 A. M.
On arrival steamer Sunshine from New London, Tuesdays, Thursdays and Saturdays, 8 P. M.

Leave Sag Harbor

On arrival train from New York, 12:10 P. M.
On arrival train from New York, 5:50 P. M.
On arrival train from New York, Sundays, 12:25 P. M.

C. V. WINNE,
N. D. BILL,
M. T. BENNETT, JR., } Transportation Committee.

THE PASSAIC RACING MEET.—The committee of the Orange, Ianthe and Arlington clubs, Messrs. Smiley and Manly; Farmer and Dodge; and Dorland and Schuyler, have made arrangements to accommodate visitors with cots and blankets in the clubhouses and to secure good meals at 50cts. each at the Bellevile Hotel, near by. After their regatta on Saturday afternoon, Aug. 30, the Orange C. C. will give a supper to the visitors. On Sunday morning the fleet will paddle to the hotel for breakfast, then will cruise up the Passaic River to Dundee dam, returning in the evening. After the Arlington regatta on Monday morning that club will give a dinner, and in the evening the Ianthe C. C. whose regatta occurs in the afternoon, will entertain all visiting canoeists at supper. Canoes may be shipped direct from Jessup's Neck to the Ianthe or Arlington clubhouses. The occasion promises to be a notable one, and a very large attendance is expected.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

W. R. K.—Greenwood Lake, Lake Hopatcong, N. J., Lake Mahopac, N. Y.

A. H. D., Sandusky, O.—Is the book I see advertised in your paper by S. T. Hammond a good book for breaking dogs for field use, and does it treat how to handle a dog according to his nature or is that for the trainer to judge himself? Ans. "Training vs. Breaking" is a practical and successful guide for amateur dog trainers; its teachings will aid you in handling a dog according to his nature.

M. C. L., Bethlehem, Pa.—Can you direct me where to buy crappies described in FOREST AND STREAM, July 24, for stocking purposes? Ans. Try Geo. W. Littleton, Sandusky, Ohio. Perhaps Wm. Buller, Superintendent State Hatchery, Corry, Pa., can tell you of some other good point on Lake Erie not so far off. The Pennsylvania name is calico bass. It is very difficult to transport live crappies in hot weather.

T. S., Brooklyn, N. Y.—Kindly inform me what bait is the best for carp. I know a pond in which they were placed about two years ago, but it is hard to get them to bite on worms and bread? Ans. Carp have been caught with a fluttering fly (FOREST AND STREAM, Aug. 19, 1889). For surface fishing grasshoppers have been successfully used. In the South, dough mixed with cotton is often effective. We have known them to be taken on bottom lines baited with raw beef. Germans use maggots, larvæ of wasps, angle worms and boiled grains of wheat and barley. Small but strong hooks are needed. It is not easy to catch carp with rod and line, and good baits vary with the locality.

Wakeman Skeleton Bait.

Far ahead of any Artificial Bait in the World.

Made in four sizes: No. 0, speckled trout and black bass; No. 1, black bass; No. 2, bass and pickerel; No. 3, muscallonge, salmon trout and bluefish. It is guaranteed to catch bass when all other baits fail. It effects a great saving in minnows, on account of the protection afforded by its peculiar construction, one minnow having been known to catch twenty-five bass before it was rendered useless. For sale by all dealers and by the manufacturer. Send for circular and price list.

Fishing Tackle,

COMBINATION WOOD RODS.

Communications regarding fishing cheerfully and promptly answered.

85 Germain Street, Saint John, N. B.

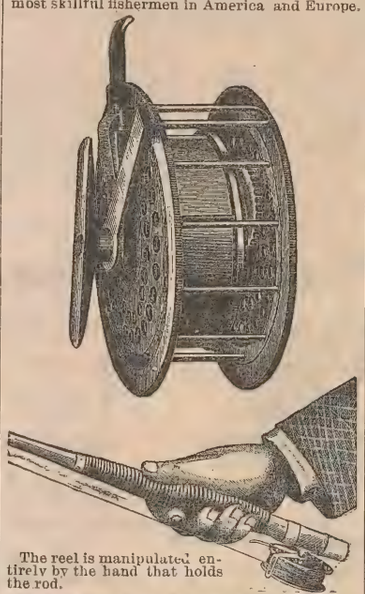
When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.



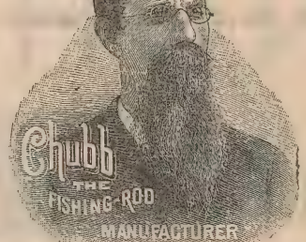
THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH. It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.



The reel is manipulated entirely by the hand that holds the rod.

YAWMAN & ERBE,

ROCHESTER, N. Y.

WILD INDIAN LIFE.

PAWNEE

HERO STORIES AND FOLK-TALES,

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales, and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

Large crown 8vo., 380 pages and 16 large folding plates.

Price, Postpaid, $3.50.

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

The New York Herald.

IF there are any sportsmen so wise that they cannot learn something from this little book, their modesty prevents their fellow men knowing it. The compiler seems to have thought of everything from managing fine guns to snelling hooks, tying knots and skinning eels. He has chapters on rifles and shotguns, hunting and trapping, fishing, camping, dogs, boating, yachting, camp making, cooking, surgery and medicine, and one headed "miscellaneous" seems to include everything which the others have omitted. His paragraphs number more than six hundred. Newly fledged sportsmen who go out for more than a few hours will find it to their advantage to put this book in their pockets, or, better still, commit it to memory before they start.—*New York Herald, Oct.* 20.

This note refers to "Hints and Points, compiled by Seneca." Published and sent on receipt of price ($1.50) by the Forest and Stream Publishing Company.

Some Native Birds for Little Folks.

BY W. VAN FLEET, M.D.

A handsome imperial octavo volume of untechnical descriptions of the lives and ways of fourteen American birds. The list comprises:

Robin, Chickadee, Kingfisher, Great Horned Owl, Bobolink, Blue-jay, Woodcock, Nuthatches, Meadowlark, Ruffed Grouse, Cedar Bird, Kildeer, Summer Duck and Crossbills.

Each of these birds is beautifully illustrated by the photogravure process from drawings by Howard H. Darnell. The paper is substantial, and the 147 pages of large, clear, handsome type contain just the sort of information necessary to make little folks better acquainted with the birds described, and to awaken a taste for extended study. Everything has been done to make the volume one of the most handsome gift books of the year. Price, postpaid, $3.00. FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.

FOREST AND STREAM.

A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, $4 A YEAR. 10 CTS. A COPY. SIX MONTHS, $2.

NEW YORK, AUGUST 14, 1890.

VOL. XXXV.—No. 4. No. 318 BROADWAY, NEW YORK.

CORRESPONDENCE.

THE FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. Communications on the subject to which its pages are devoted are respectfully invited. Anonymous communications will not be regarded. No name will be published except with writer's consent. The Editors are not responsible for the views of correspondents.

ADVERTISEMENTS.

Only advertisements of an approved character inserted. Inside pages, nonpareil type, 30 cents per line. Special rates for three, six, and twelve months. Seven words to the line, twelve lines to one inch. Advertisements should be sent in by Saturday previous to issue in which they are to be inserted. Transient advertisements must invariably be accompanied by the money or they will not be inserted. Reading notices $1.00 per line.

SUBSCRIPTIONS

May begin at any time. Subscription price for single copy $4 per year, $2 for six months. Rates for clubs of annual subscribers:

Three Copies, $10. Five Copies, $16.

Remit by express money-order, registered letter, money-order, or draft, payable to the Forest and Stream Publishing Company. The paper may be obtained of newsdealers throughout the United States, Canadas and Great Britain. For sale by Davies & Co., No. 1 Finch Lane, Cornhill, and Brentano's, 430 Strand, London. General subscription agents for Great Britain, Messrs. Davies & Co., Messrs. Sampson Low, Marston, Searles and Rivington, 188 Fleet street, and Brentano's, 430 Strand, London, Eng. Brentano's, 17 Avenue de l'Opera, Paris, France, sole Paris agent for sales and subscriptions. Foreign subscription price, $5 per year; $2.50 for six months.

IMAGINATION.

WHEN the sensation-mongering newspapers set about manufacturing their annual hydrophobia scare, they are generally pretty certain to describe a disease which, according to so distinguished an authority as Dr. W. A. Hammond, ex-Surgeon-General, U. S. A., is not hydrophobia at all, but is what he terms "false hydrophobia." Since, however, in a large proportion of the cases exploited by the press, the subjects die, it may be suggested that real hydrophobia or "false hydrophobia," it is all one in the end, each resulting in a terrible death. "As well hang a man as to scare him to death." There is, however, this important distinction between the two forms of disease, that while, according to the same high authority, the real hydrophobia is incurable and its victim is beyond hope, "false hydrophobia" is by no means necessarily fatal. Being a physical and nervous condition produced by the action of the mind, it may, under proper treatment, be cured. In relation to this disease, then, surely no greater service can be rendered by the medical profession than first popularizing exact information respecting the two forms of hydrophobia, that the "false" may be distinguished from the true.

In the current number of the *North American Review* Dr. Hammond points out that "false hydrophobia" is one of the diseases to which hysterical and other nervous persons are subject by "suggestion;" in other words, it is brought on by a morbid imagination. Now, there are certain well-recognized distinctions between the true and the false. In ninety-nine cases out of every hundred deaths by "hydrophobia" reported by the press, the victims are said to have barked and snapped like dogs. When such symptoms are present, Dr. Hammond declares they offer proof positive that the malady is not true hydrophobia, but is the effect of imagination. "To bark like a dog, to snap at those near by, and even to run about on all fours," he says, "are among the most prominent symptoms of false hydrophobia; the patient being imbued with the idea that the hydrophobic virus which he imagines has been absorbed into his system is calculated to assimilate him to the animal by which he has been poisoned. Now, such symptoms are never witnessed in true hydrophobia, and their presence is amply sufficient for a discrimination between the two affections."

In real hydrophobia, again, the victim, although terribly anxious and nervous, strives to conceal his state from those about him. Quite the reverse is true with the victim of "false hydrophobia," who is "loud in his expression of apprehension," and dwells upon every fancied symptom with exaggerated alarm.

Still a third distinction between the two forms is in connection with the spasm of the muscles concerned in respiration and swallowing, the victim of "false hydrophobia" exhibiting terror and convulsive movements when trying to swallow water, but yet swallowing coffee, whisky and other liquids without difficulty. These several symptoms stamp the imaginary malady.

Determined by the characteristics here noted, "false hydrophobia," it will be seen, is the predominating type of the disease. It is in fact common, while true hydrophobia is of extremely rare occurrence. As Dr. J. Frank Perry ("Ashmont") wrote in his paper, copied in our Kennel columns last week, the chances of a person giving up his life on the scaffold are about as many as those of his dying from hydrophobia. But it is certain that there are scores and hundreds of persons who, because of their peculiar nervous constitutions, are liable to die of "false hydrophobia," if only a train of circumstances shall ensue to set their imaginations working in that direction. They may readily become the victims of "suggestion," and by their morbid fancy bring on themselves that "hydrophobia" which, though denominated by the physicians "false," is nevertheless fatal.

In the light of these facts it is a grave question whether the maintenance of "Pasteur Institutes" for the pretended cure of hydrophobia is not wholly pernicious. If they cannot cure the real disease, they certainly can and unquestionably do, by their very existence and notoriety, produce the imaginary malady.

Nothing is more sure than that when the world shall grow better enlightened, such mischief-brewing institutions will be suppressed, and newspaper editors who, by false and sensational accounts of pretended hydrophobia cases, work on public credulity, and produce "hydrophobia epidemics," will be indicted and sent to jail where they belong.

ON MARSH AND MEADOW.

ALTHOUGH in a few States woodcock shooting is permitted in July, the real opening of the shooting campaign takes place in this present month of August. In this month we have the beach birds, the rail and the reed bird, which in old times came to us by thousands and gave to the gunner an opportunity to use his arm and to prepare himself for the later cold weather work on quail, grouse and ducks.

The shooting of the August migrants is easy work compared with that of the late fall. It really does not require any very great skill to drop the yellowlegs, as with dangling legs they bunch and hover over the decoys, nor to stop the rail as it flaps up before the boat which goes swishing through the ripening wild rice, starting one bird after another from his reedy cover. The reed bird is not difficult to hit.

Years ago the swarming flocks of yellowlegs, dowitch, willets and jackcurlew, of which the few advance stragglers had made their appearance in July, mustered all their forces in August and began their southward flight. Early in the month they came along in some numbers, but it was not until after the northeast storm, which is looked for about Aug. 10 to 15, that the flight was fully on. Fortunate the man who could be abroad during this storm. Little cared he for the wind and rain, for the birds were likely to be plenty and the shooting good. Then, sometimes, later in the month or early in September, came another easterly storm, which might bring to our shores one of those immense flights of golden plover and Esquimaux curlew, whose coming the local gunners long remember.

Beach bird shooting in the olden time when birds were plenty was very pleasant sport. There was the wide, flat stretch of sand or marsh, and beyond the deep blue sea, with here and there a white sail or the dark trail of a steamer's smoke. There were the distant birds, the trembling excitement as they drew nearer, the doubt as to whether they would hear the call, or if they heard, would heed it; the breathless waiting until they had whirled over the stools, and then the roar of the guns, and again the doubt as to whether the confused birds would return once more to the spot where the decoys stood. Of course it was not all so rosy. Sometimes the sun beat down until it seemed as if a man's brains would bake under the torrid heat; sometimes the mosquitoes would fairly drive one out of the blind, but if a bird's wing was seen on the horizon, how quickly were these discomforts forgotten.

In August in a few localities, but in most of the States on Sept. 1, begins the rail shooting to which the sport at bay birds leads up.

Rail shooting may fairly be termed a sport for invalids and infants. A dear friend of ours used to shoot rail, in kid gloves, sitting in a revolving arm-chair. Still there are few more delightful things than to get down to the river early in the morning, and in the cool air to row up to the meadows. Then shooter and shover change places, the long pole is set against the bottom and the boat's nose moves in among the tall grass. At a distance the sharp cry of the rail may be heard, and nearer at hand, a splashing as some startled bird runs along before the boat on the floating stuff. Presently his body appears above the grass, the light crack sounds, and he falls, to be recovered as the boat sweeps by. What fun it is when two shooters, between whom there is no rivalry, can find a narrow strip of cat-tails, too thick to be shoved through, yet narrow enough to be thoroughly beaten by the poles of the pushers. A boat takes each side of the strip, and it is thrashed from one end to the other, the birds now and then flying out, but most of them running along until they are all collected at one extremity of the strip. Then the fun begins, and as fast as they can load and fire the men shoot until all the birds are down or have escaped. Perhaps all the blocks and even the oars have been thrown out of each boat to mark the dead birds, which must now be picked up. After the shooting is over, comes the pleasant row to the landing, the talking over the events of the day, the quaint stories of the shovers, and finally the drive home along the pleasant country road.

Ah, the good old times! Can they come again?

Sometimes the good shots used to get 200 rail in a single tide. Do they ever make such bags nowadays?

For several years the bay bird and the rail shooting have been disappointing, but the prospects this year seem more flattering. Reports of large bay bird flights are already coming in, and indications are that the season will be a good one.

SNAP SHOTS.

WE have frequently called attention to the fact that pelagic sealing in the waters of the North Pacific Ocean would ultimately result in the destruction of our seal fisheries on the Pribyloff Islands and the extermination of the fur seal. Under the old system, by which seals were killed only on land, there was no danger to the breeding stock, because the animals taken were all young non-breeding males, no females being ever destroyed. In pelagic sealing, however, many females are killed, and this at a time when they are about to bring forth their young. A report recently received at the Treasury Department in Washington from Capt. Healy, commander of the revenue cutter Bear, confirms our statements as to the danger which threatens the seals. Captain Healy visited the islands June 19 and 20, and found a remarkable scarcity of seals. He says: "On both islands the failure of the seals to appear in their usual numbers was very noticeable, the killable seals being very scarce and the breeding rookeries almost uninhabited at the time of our visit, and the probabilities of the company's securing their quota of 60,000 skins before the expiration of the season are gravely doubted by many."

Excelsior, the giant geyser of the National Park, has been very active this season. Some days it has given several eruptions, sending the water three hundred feet up into the air, with a noise and an exhibition of force that was fairly terrific. Tourists who have had the opportunity to witness the eruptions of this geyser this season may congratulate themselves, for the number of people who have seen Excelsior "play" is very small.

The Sportsman Tourist.

MR. RASTUS'S EXPERIENCE.—I.

My Dear Forest and Stream:

I suppose I ought to tell you how I came into possession of the inclosed manuscript. The original writer intended to send it to you, but when it was done he was too modest, and only showed it to his friend, Dr. Fillule. Fillule took it home and showed it to Maj. O'Glory, who in turn showed it to Judge Factum. The judge (who, I am afraid, would if he dared, have adjourned the court at any time and allowed every case before him to stand over till the next term for the chance of catching a 5½lbs. trout) had it intimated to the writer that it ought to be printed as the warning it was meant to be. The writer of it was tickled enough and replied that the judge might get it published if he could, provided he would change the names, because he did not wish to have his brother-in-law or his brother-in-law's brother feel hurt at anything he had said about them. So the judge sent it to me, knowing I was an occasional correspondent of yours. Therefore, you can use it if you like without any hesitation, since every one of the names have been changed so that they are totally unlike the originals. Otherwise the MS. is just as I received it.—G. DE MONTAUBAN.

Editor Forest and Stream:

Tom, my brother-in-law, with whom I board, takes your paper, and as it is constantly lying about I have sometimes picked it up and read some of the stories in it. The tales told by some of your correspondents about the delights of going into the woods, living in camps, catching fishes and similar things, of course I was never goose enough to believe, and now that I have learned for myself what a miserable delusion they all are, I wish to express my disgust and also to remonstrate with you for printing such stuff. I do not know how I can do it more effectually than by telling you my experience.

My profession is that of compiler of almanacs, and as in its exercise my general health and my eyesight had become impaired, my physician ordered me six months' rest. For a good many years I have taken a two-weeks' rest every summer down on Cape Cod, along with my sister Bess. But last year Bess took it into her foolish head to get married. She and her husband let me live with them; and I got along very well until about two months ago. Then there came a baby and the house wasn't big enough for us. It was too small even when I was away all day about my business, but when I had to give up work it was ten times as small as before, and I didn't know what to do with myself. I couldn't afford to travel, besides hating railroads and steamships anyway; but I could not stand it at 249th street either, with a baby in the house that required all Bess's attention from morning till night, and I not able to read. It was hard lines for a man who never did anything in his life that did not involve reading. Then there was Tom's mother, who was around almost all the time and who had no consideration at all for my comfort. I spoke about this to one of my acquaintances, and he said I needn't feel surprised, for widows always thought bachelors had no rights that they were bound to respect. And yet sometimes she was extremely kind and pleasant and mended my stockings and sewed on by buttons with great care and enthusiasm. Bess had done those things for a good while. When she was about five years old and I was twenty-five I used to take care of her, but by the time she was ten she commenced taking care of me and has been keeping it up ever since. We got along nicely till Tom came around.

The doctor said I must go somewhere. I didn't want to go anywhere, for I couldn't afford to travel, and I detest the country and hate horses and cows and pigs with perfect hatred. New York is the only city where a man can live in peace and quiet; and I was very comfortable in 249th street until that blessed baby introduced himself and pushed me out. I thought at one time of going to Calcutta on a sailing vessel, of which a kind of second cousin twice removed was captain, only that the sea always makes me so deathly sick. My brother-in-law, who had always heretofore minded his own business and never minded about me, now took an unusual interest in my health, and suggested a great many places for me to go to. One day it occurred to me that he wasn't so very particular where I went if I would only go.

One Sunday morning he was reading your paper, as usual, when he suddenly turned to me and exclaimed, "Just the thing for you, Erastus. Go up to Scatterabang and spend a month with my brother Bill. He is all alone and can take you in as well as not. It won't cost you a cent for anything but railroad fares and your share of the grub."

I asked for explanations, and found that Scatterabang was away up in some unexplored part of Canada and that Bill had a fishing camp up there where he spent the summer. It was in the woods, five miles away from any house, and nobody ever went there except for hunting or fishing.

Now Bess knows perfectly well that I never fired a gun or caught a fish in my life, but she agreed with her husband that this was just the place for me. To make a long story short, between them they packed me off. Bess showed more interest in my clothes and spent more time in making over two pairs of old trousers into one than she had done before since her baby was born. Tom's mother gave me a large piece of flannel to put on my bowels and a bottle of camphorated spirits. They made out a written schedule of my route, bought my tickets, gave me a letter of introduction to Tom's brother and sent me away. It was fifteen years or more since I had been anywhere without Bess to look after me, see that I took the right train and didn't lose my baggage; but as I had only one change of cars to make and my valise was checked through she was certain I should be all right. Any way, it seemed as if I had to go, although I doubted whether I should ever get anywhere. I found out how much the car fare was, and as Bess always took charge of my money, I made her tie up the amount separately in one of my stockings, so that I would be sure to have enough to get back with in case of accident. I had already had her mark my full name and residence on all my clothing.

I rode all day, and at night took a sleeping car, which several persons of whom I inquired told me would land me at my destination according to the paper I showed them. I scarcely ever rode in a sleeping car and am suspicious of them, so I lay down in my boots and clothes, at which the African in charge of the establishment was much disgusted. I lay awake a good while, and had just dropped into a doze, when he came round and shook me saying, "Be at ——— in about five minutes, sir; only time to dress, sir." It didn't take me long to dress, having only to put on my hat and overcoat, so I was ready very soon, and stood in the aisle of the car I suppose about three-quarters of an hour till the train stopped, and I was told that that was my station. I looked at my watch and saw it was just 4 o'clock, a most unpleasant time in the morning to get up. I got off and found myself at a little bit of a station, with not a soul about except a little old man, who came up and began chattering away at me in a lingo that I couldn't understand at all. If it had been in Latin I might have made it out, or even Greek if neatly written down. The baggage man demanded my check in exchange for my valise, and I gave it him, and the train went away. There was not even a station agent to look after passengers, but as I was the only one there was, and they didn't seem to have even one very often, I could not blame the agent, if there was such a person, for not getting out of bed at such an unseemly hour to attend to me.

The old chap kept talking and I kept looking at him. At last I caught a word that sounded something like what my brother-in-law had called his brother's place, although not like what I called it from the way it was written down. I showed the paper to the old man, but it did not seem to enlighten him any; and no wonder, for I afterward learned that he couldn't read a word of anything, much less my brother-in-law's handwriting. After a while he began to say something that sounded a little like "All right" and "cor-rect," and repeated the words so many times that I followed him and my valise round to where he had an awfully lean old horse and a shaky vehicle that in some places I think is called a buckboard We got in and the old horse rattled us away at a pace I would not have thought the poor creature capable of. I confess it was a nice pleasant morning, and after a little it didn't seem so awfully early as I thought it was, and before very long I was wondering why the people were not up and about their business as we were. We drove right away into the country over a tolerably good road, and I rather liked the idea of being up to see the sun rise. It would be something to write to Bess about. Indeed the country looked rather nice. We came in sight of a very high church spire that shone very prettily in the morning light. I asked a number of questions but did not altogether understand the answers, and I doubt even if the man understood my questions. It is always surprising to me that people will not learn to talk English. We came to a river with a bridge over it, and the old fellow stopped his horse and motioned to me to look at it. I thought it was a nasty place in case the bridge should break down. The water was away more than 100ft. below us, black as ink and raving like mad between perpendicular stone walls awfully rough and jagged and worn into horrid shapes by rains and frosts and the like. Tom's brother afterward told me that it is considered very wonderful, and that people sometimes come many miles to see it, though I don't see why they should. I was glad when we got over the bridge, which was very short, luckily for my nerves.

We came to a house where the man pulled up and signed to me to go in. A woman came and began talking in a very loud voice, in what I suppose she thought was English. I answered pretty loudly too; and the more we didn't understand each other the louder we spoke. At length she apparently did comprehend that I certainly would like some breakfast, for she brought me some and I ate it. I presume it was good for I felt much better after it. The man then came round with another horse and we drove away again for another hour or so. There were some dark blue hills in the distance, that we gradually approached. They looked cool, and soft, and pleasant. The man kept pointing to them with his whip, until I made out that he meant to tell me that there was where I was to go.

We passed a good many houses that were not very big, but apparently accommodated large families; and stopped at one where my man talked a while with another man and three women and nine or ten bare-legged children.

Here it was that the troubles of which I wish to tell you began. I will try to condense the account as much as possible, not only because the full story of my sufferings would be very long but because I like brevity. People who disapprove of my predictions about the weather, or object to other things in my almanacs, often write me, and it frequently happens that their letters are so long that I lack patience to read them through, and thus their time is wasted.

The man with the horse left me, and the other man took my valise and coat and I followed. We went across a lot of fields, over several fences, up and down some gullies, and through many mud holes for about an hour. When I was quite a young man I went on a pedestrian tour through the White Mountains, and have counted myself a good walker ever since, but following this man was no joke. He made no more of my valise than if it had been a feather. I kept hoping he would find it heavy and want to stop to rest. We went down a hill that was so steep and slippery that I had to sit down a number of times when I didn't care to; and right away had to go up another that was just as bad. How I wished I was back in 249th street. We got done with the fields and fences and went into the woods. I wanted to ask how far we had to go, but what was the use of asking questions of a man who couldn't understand a word I said to him? He kept on this way for about an hour and a half more, and it was almost all up hill. There was a kind of path and that was all. I got my boots muddy, my feet horribly wet, and my clothes all sopping with perspiration. My shirt collar was a mere string, and I could feel streams running down my back and dropping from my nose. I never was in such a condition before in my life. I wondered how men could bring themselves to write as they do about walking through woods, stumbling over rocks and roots, and tumbling over fallen logs. It might be pleasant enough if one could be comfortable, for there was a pretty light among the trees and some nice little brooks and high rocks. Bess would have been delighted, but then she is silly about such things. I would rather sit in my easy chair and look at pictures of them.

Just as I was going to make a desperate attempt to have the man stop and let me rest a little, we came to a sheet of water what they would call a pond in New Hampshire, but these ridiculous Canadians, I am told, call everything bigger than a mud puddle a lake. I didn't care what they called it if only I didn't have to walk any more.

The man put my valise and overcoat into an old wooden concern very much like an overgrown hog trough, and also put in a bunch of branches for me to sit on, for there were about two inches of water in the bottom of the thing and there was nothing to bail it out with. I sat as still as I could, for I was dreadfully afraid of going over, but somehow or other the branches slipped away and part of me got very wet. I suppose the man was afraid of getting wet, too, for instead of sitting down he stood up, regardless of the danger of tipping over, and paddled away. We went through narrow passages, under high banks and among little islands that would have pleased Bess greatly, but I must say I took no pleasure in them. This continued for what I thought must have been two hours, for the cold water in which I was sitting was creeping all over me. I was afraid to move, and almost doubted whether the man had not some sinister design on me. When we got done with the islands and out into open water, he began talking and pointing with his paddle, as if there was something to be seen, although my weak eyes could not make out anything; but a little further on I discovered that there was an opening in the trees where there was something that looked like a building and two flags flying, one English and one American.

I realized that this must be the end of my journey, but when I came near enough to see that the building was only a log cabin I most heartily wished I had never consented to leave 249th street. I thought what a fool I had been to leave my comfortable quarters (I forgot about the baby), travel all day and part of a night in hot and dusty cars, get up at 4 o'clock in the morning, been driven I don't know how many miles, and walked I don't know how many more, lost by perspiration five or ten pounds of flesh out of the little I had, and sat an hour at least in a pool of awfully cold water, all to arrive at a log hut in a wilderness, and to know that I couldn't get away from it without going all through the same experience backward. It consoled me a little to have found a man who could talk English with me, for I am rather disposed to rational conversation.

My brother-in-law's brother did not give me much time to ruminate on my situation, but hustled me into the cabin, telling me to take a good wash and change my clothes and then he would give me some breakfast. Breakfast! Why, I had had breakfast at what seemed ten or twelve hours before. I looked at my watch and it wanted five minutes of nine o'clock. Not five hours since I had left that horrid train! And to think of all I had gone through! And this man didn't seem to think any more of my journey than if I had only just come down town on the elevated railroad.

I was glad to wash, shave and change my clothes; but when I opened my valise I found that Bess, directed, I suppose, by that husband of hers, had not put me up a decent thing to wear, nothing but old duds that had been thrown away long ago, thick shirts such as I only wear in winter and some new flannel ones that looked rather tidy, but were not what I was accustomed to. My brother-in-law's brother, whom I may as well call Bill hereafter, for short, brought me a cup of very nice hot coffee; and when I had got through with my ablutions, his man came in and set out a table with tin cups and plates instead of crockery, and two fish that Bill said were trout and told me to "put myself outside of." At home my usual breakfast consists of two boiled eggs and a slice of toast; but my trials had so upset me that I eat one fish and half of another before I realized what I was doing.

Bill said he was going away somewhere with his man and that I had better take a nap until he came back to dinner. He showed me what he called my bed, which was nothing but a wooden bunk with a lot of branches on it, no sheets, quilts nor pillow cases, nothing but a woollen blanket. It was soft, however, and in spite of my uncongenial surroundings I fell asleep and knew nothing more until Bill came in again and showed me a lot of fish strung on a stick, which I learned were trout in their uncooked state. They were rather a pretty fish and I am sure were digestible food, for I had experienced no discomfort from those I had eaten in the morning, although a small bit of boiled haddock is all the fish I ever dare eat at a time. These trout were much larger than those I used to have to eat when I went on my White Mountain excursion so many years ago. One of the young fellows with me at that time was an enthusiastic fisherman, and I remember that one day he put the trout that he caught into a letter envelope and carried it in his vest pocket. Consequently when I read in your paper about trout weighing several pounds, I set it all down as fisherman's romance.

When Bill came in he ordered dinner. I was not very hungry, which I was glad of when I found that the dinner consisted only of baked beans and pork, with bread and butter. When I was a boy I used to be very fond of pork and beans; but of late years they have distressed me so much that I have given up eating them. So there was nothing to tempt me, only that Bill teased me so much that at length I took a plateful, and then a few more.

After dinner Bill took one of the newspapers that I had brought and lay down in a wooden hammock that he had under a kind of shed close by the cabin. It was cool and shady, and I sat by on a bench made of a log of wood and did nothing. There was nothing I could do but look about, and nothing to see except water and mountains and trees, in which I am not interested. I found, however, that green colors did not tire my eyes as the glare of the sun on the ocean used to do at Cape Cod. By and by Bill got up and busied himself with his fishing tackle, so I got into the hammock and dropped asleep. Everything was so dull and stupid I couldn't help it.

The supper was not any more tempting to me than the dinner had been. There was nothing but a kind of pancake, eaten with maple sugar and butter or else with marmalade. After all, they were not bad in the least. The tea was very good, although the idea of drinking it out of tin cups was somewhat repulsive.

After supper Bill wanted me to go out fishing with him, and having nothing in the world to do I accepted, and bitterly did I regret it afterward. We got into a punt and the man rowed us out on to the lake. Bill stood up in the boat and flourished about one of those long, flimsy fishing rods with a line like a bit of thread and some things that represented flies tied on it, but which did not look like any flies I ever saw. He kept throwing them out and pulling them back on each side of the boat. I thought it the funniest fishing I ever saw. We had not gone far before I became aware of some kind of a stinging insect that was tormenting me, and found that the whole atmosphere was full of a small black fly that attacked

every exposed portion of my body. My forehead, wrists, neck, ears and throat were soon in a state of violent inflammation. I slapped my hands about and waved my handkerchief before my face, and although I must have killed hundreds of them, yet as there were several thousand millions left the slaughter did not make much difference. In the midst of my agony I heard a great splash, and looking up found that Bill had got a fish on his line and his rod was bending and turning and twisting every way, and the fish was alternately jumping out of the water and going forward and back, while Bill was letting him go a little and then pulling him back and letting him go again, by means of a reel attached to the rod. The rod was sometimes bent almost double and looked likely to break in two every moment. It seemed very silly to me, for I could not see why he should not have taken a good strong stick with a stout cord tied to it and when a fish got on the hook pulled him right in at once without all that bother, much the same as I saw the men do with the codfish down at the Cape once when Bess coaxed me to go out in a boat with her and some fishermen. After a while the fish seemed to give up the game, and Bill slipped a kind of a net with a hoop in it and a pole under him and took him into the boat. He was very bright and shiny, with pretty spots on him and rather bigger than those I had eaten for breakfast, but although Bill was greatly pleased at having got him I thought it the most foolish way of fishing that could be contrived.

Bill remarked that the flies were beginning to come round, although I was sure they had begun long before. He took a bottle out of his pocket and daubed the contents over his face and neck and advised me to do the same. I didn't like the stuff, for it was pungent smelling and at first made my eyes water, but it kept the flies away, although it did not cure the bites I already had. Bill kept on fishing and got five or six more of about the same size as the first, and several smaller ones about 7 or 8in. long that he handled carefully and put back into the water, telling them to come again next year. I think I should have kept them for fear I shouldn't get them again. We went back to the cabin and there I found a new kind of pest, a little invisible creature that pricked like nettles whenever he got a chance. Bill spelled out his French name for me, B-r-u-l-o-t, and said he was "sand fly" in English. He ordered a good fire built out doors, which drove them away, but the heat was a little annoying. We talked about politics, in which I take great interest, until it grew rather dark, and I was just wondering how people spent their evenings in the woods when Bill remarked that it was bed-time. It was dreadful to go to bed at half past eight o'clock on a beautiful summer evening, but I had to do it.

When we went into the cabin we found thousands of mosquitoes already in possession. As far as any prospect of sleeping was concerned I might as well have been in New Jersey. Bill shouted something in French, and his man came in with a tin pail full of coals and swung it about much as I have sometimes seen a censer swing in churches. This made such a smoke that the mosquitoes couldn't stand it and went outside. Bill hung some netting over our beds and we lay down. He did not take off many of his clothes, and I thought best to do much as he did, dreadful as it was.

My cup of misery was nearly full. No bed but branches, no sheets, no pillows, no nightshirt, no anything to make a person comfortable. It was simply horrible. And then all my fly bites began to smart again, and I scratched myself till the blood ran. Bill lighted a candle and made me wash myself in water fresh from the lake and anoint my sores with weak ammonia water. This made me a good deal easier, but I reckoned that one night in a fishing camp would satisfy me forever. I got to sleep after a while and did not wake until I heard Bill coming in from his bath in the lake, heard a fire crackling in the kitchen and found it was daylight. E. RASTUS.

[TO BE CONCLUDED.]

Natural History.

HABITS OF THE WHITE GOAT.

BY JOHN FANNIN AND GEO. BIRD GRINNELL.

[*Concluded from Page 43.*]

THE most important enemy of the white antelope is man. White hunters kill but few of these animals in comparison with Indians, for there are some tribes of the latter that depend for animal food almost wholly on this species. Among such tribes must be mentioned especially those of the northwest coast, but other inland tribes also hunt this animal a good deal. Such goat hunters are the Kootenais and the Stonies, and no doubt, others living further to the north.

Setting aside man, the white antelope probably suffer more loss from the attacks of eagles than from any other animal. These birds in spring and early summer, before the young have acquired much strength or experience, are persistent in their attacks on them and kill considerable numbers, seizing them on the cliffs which they frequent, and easily carrying them off to lower levels, where they devour them at their leisure. The Indians report that the destruction from this cause is often large, but the old ones defend their young, and where two or three families are in company, do this successfully. On the coast the destruction is, no doubt, greatest from the white-headed eagle (*Haliœetus leucocephalus*), but further inland, where this species is to a great extent replaced by the golden eagle (*Aquila chrysaëtos*), this bird, no doubt, does its share toward diminishing the numbers of the white goats.

The attacks of the eagles on the young of this species have been witnessed by more than one observer, and we are glad to be able to give two such accounts by eye witnesses.

Mr. L. L. Bales has written to us as follows: "I once witnessed an attempt made by two large eagles to capture two kids from a group of two ewes and two billies. I was watching the group which was feeding on the moss that grew on a high slope of a rock, thrown up by the movement of a glacier, when suddenly they bunched in a hurry with the kids under them. They sat on their haunches and kept their heads and horns up and out, the four larger ones forming a circle. They were a good half mile away, yet I shall always believe I heard the rush of those two eagles through the air in their attempt to capture a kid. The eagles managed their attack with method. They did not rush simultaneously. The first one made his rush about ten seconds before the second, and from my point of view I thought the first eagle rushed with the object of flustrating the older goats, and the second one waited to take advantage of the moment of excitement and capture a kid. I saw them make four unsuccessful assaults that day, but that they are successful at times I do not doubt. If they were not, they would not make so many attempts."

The following account, published in FOREST AND STREAM in 1881, of the capture of a young mountain goat by a white-headed eagle, is interesting in this connection:

"As the old man was in bad humor, I decided to return to camp, but on reaching the canoe, an exclamation from Charlie drew our attention to a mountain on the opposite side of the creek, where, in a small opening, we discovered a she goat with a young kid, the latter appearing like a mere speck of snow skipping among the rocks.

"Before starting out I had offered a fair reward for the capture of a kid, and this was the old man's opportunity. As he stripped for the chase, he turned to Charlie and commanded him to remain below and occupy his time in catching trout, with which the stream abounded. He then disappeared in the dense growth of timber which intervened between the creek and the foot of the mountains; while I took up a favorable position with my glass to watch the success of the chase. The ascent must have been difficult, for two hours passed before the form of the Indian appeared in the opening. A short time before this the old goat must have snuffed the danger, for she started up the mountain, and at the moment the Indian came in sight had reached a shelf to which the kid was unable to follow. All this time a large white-headed eagle soared in majestic circles directly over the scene. After several unsuccessful attempts to reach its dam, the kid started back toward the point from which the Indian was advancing, but before proceeding very far sprang down a narrow shelf and stood concealed beneath an overhanging bush.

"The Indian in the meantime working his way upward, stopped within a few feet of the place, but from his actions I was satisfied he was ignorant of the kid's position, and fearing the prize would escape, in my excitement I shouted at the top of my voice; but the sound must have died away before reaching him, for he took no notice. Presently he raised his musket and leveled at the old one, which still remained in the same position on the shelf above, but lowering it again he commenced a search among the rocks for the lost kid. His stupidity annoyed me, for had he kept his position he commanded, so far as I could see, the only way by which the kid could escape; for below was a perpendicular cliff of a thousand feet against the side of which no possible foothold for anything without wings could be seen. But in this I was mistaken, for a rock, loosened by the Indian's foot, rolling over the cliff started the little animal from its hiding place, and with a bound it sprang outward and down. The thought of its fate sent a shudder through me. A thousand feet, sheer down, to be ground to atoms on the rocks below. But no—down it went fifteen or twenty feet, alighting on a rocky cone which stood out at a slight angle from the main cliff, on the top of which there was scarcely room for its feet huddled together. Had it started from that point and soared away over the tops of the trees which studded the valley it would not have surprised me in the least, and I waited breathlessly for its next move.

"For a moment it rested like a speck of snow upon the dark gray granite cone, then with a downward spring of perhaps ten feet it reached a narrow shelf which had before escaped my notice and which ran along the face of the cliff to the wooded mountains on the right. But a sadder fate awaited the unfortunate animal than if it had fallen into the hands of the Indian. The terrible bird which in narrowing circles had kept about the scene, and whose piercing eye had taken in the vantage of the position—the kid separated from the protection of its dam—stopped suddenly in its course, then swooped downward swift as the lightning's flash, its great wings cleaving the air, and seizing the poor kid, just when life and liberty seemed so near, bore it clear of the cliff, fluttered a moment in mid air, then drifted downward along the mountain side, disappearing below the tops of the swaying firs."

The large gray or timber wolf is a dangerous enemy to this species and destroys many of them. We have found the hair and wool in the droppings of the wolf, as has been done by others. Mr. Anderson speaks of the danger to *Mazama* from wolves and says: "Wolves are great enemies to goats, and no doubt make great havoc when the kids are young. Old goats, that is full grown ones, have a habit of sharpening their horns, the Indians say, always at a certain season to prepare for fighting. However that may be, their horns certainly bear the marks of having been whetted on stone on the outside of the points, and are as sharp sometimes as knife points."

Mr. L. L. Bales writes us: "That the large gray wolves catch them I know, as I have seen the wool and hair in the droppings left by the wolves." The coyote or prairie wolf (*C. latrans*) has also, it would seem, a fondness for the young of this species. Mr. Joseph Kipp has informed us that in the "Colonel's Basin" in the St. Mary's Lake region, Montana, he has seen tracks in the snow where young and old goats have been chased by coyotes. It would seem, however, that an old female goat should have no difficulty in beating off a single coyote which might attempt to seize her young.

Mr. John Willis writes us, saying: "The mountain lion is their worst enemy, as they go among the rocks where it is easy for them to spring on the goats."

It is possible that lynxes and wildcats occasionally kill young goats, though probably this does not happen often.

Largest, but least dangerous of the enemies of the white goat, is the black bear, which, on the Pacific coast, at least, lies in wait for these animals among the rocks, and, if it fails in its first attempt at capture, often pursues it for a short distance. We witnessed an occurrence of this kind on one occasion on Mt. Yo, on the North Arm of Burrard Inlet in British Columbia. The goat was seen trotting down the extremely rough slope, which lay between the summit and a bench where we stood, and not far behind it was a bear in pursuit. Both animals were going slowly on account of the extreme roughness of the way. They came down to within 50 yards of where we stood, when the goat turned off to the left. Our companion then shot at the bear, which thereupon gave up the pursuit, and ran off. The goat after proceeding a short distance stopped and looked back. It is doubtful whether a bear could overtake a goat among the rocks, though it could do so on level ground.

SNAKE GOSSIP.

THERE have lately appeared several interesting items in FOREST AND STREAM about snakes which seem to invite a few more words from me, and subsequently, I trust, a few more words from those correspondents who are interested in the matter.

First and once more, "Coahoma's" "stinging snake," the one which is, he says, "jet black on top and pink underneath." These colors might indicate one of the Heterodons; but from such slight data one cannot speak with certainty. Since my communication of July, 1889, I have consulted Holbrook's "North American Reptiles" and other works for some possible clue; and moreover, have referred "Coahoma's" description to Mr. G. A. Boulenger, of the Reptile Department of the British Museum. He regrets being "unable to identify the snake without seeing a specimen, or without a proper (that is, a scientific) description of the reptile." Scientific men will never compromise themselves by haphazard guesses, and I am afraid we cannot hope to assist in identifying this snake on so slight a description. As regards its "stinging tail" one can only repeat that no snake with a weapon of this kind is known to science.

But curiously very soon after my paper on "Snake Weapons" appeared I was told that in a late official report to the U. S. Government on the animals of Venezuela by Consul Plumacher he particularly mentions a snake under the vernacular name *Sobadora*, harmless so far as venom is concerned, but using its tail with considerable force as a weapon of defense. It is said to attack men and "whip their legs with its tail," lashing that member about much as "Coahoma" described his black snake to have done, and as I have already stated some other snakes when angry are known to do, though perhaps with less intention and power than this Venezuela snake seems to possess. Mr. W. H. Hudson, whose delightful contributions to natural history in *Longman's* and other magazines, must be known to many of our readers, informed me that in South America he had seen snakes and also lizards thus use their tail aggressively; that some of the larger lizards would even lash a victim—some small rodent—to death in this manner. I was unable to obtain that official report here in London, and regret therefore so slight an acquaintance with the very interesting information it must have contained. Should "Coahoma" meet with another of those mysterious snakes I would beg leave to suggest that it should be at once dispatched uninjured to the authorities at the National Museum, Washington. It is a pity that the man who killed it did not first test it with his own hand instead of a stick. The "bristle-like sting" would then have told its own story.

One other point of interest is the mention by F. S. Dugmore, in the issue of first of May last, of a snake with "a long, sharp lower jaw tooth, too long to allow of the mouth closing without its being folded back, as it evidently is, after the manner of a poisonous fang." The snake was no doubt *Elaps fulvus*, the only *Elaps* of the United States, and known from southern Virginia to the Gulf and westward. It is commonly called the bead snake in South Carolina, and is known also as the harlequin snake. Dr. Yarrow, of the Reptile Department of the National Museum, considers the fangs "slightly mobile," but I was quite unaware of any lower teeth of this kind. From its size and its peaceable disposition it is not, I think, considered a dangerous snake, though being an *Elaps* it is of course venomous. I think I may venture to say that such novel or doubtful specimens would be always acceptable to any of the well-known and official ophiologists, and might be sent for indentification. If alive so much the better, as in any case there are the zoological gardens to receive it.

In conclusion I beg to refer once more to the subject of dentition. In giving the three examples (July 11, 1889) of the arrangement of teeth from Fayrer which most commonly "prevails in the palate and upper jaw of snakes," I did not occupy space by any mention of the many species that are exceptions, such as the *Oligodons* (few toothed), the *Anodons* (no teeth), and many that approach to the lizard forms, such as *Typhlopidæ*, *Uropeltidæ*, etc. The *Anodon* or *Deirodon* of South Africa, remarkable for gular processes which take the place of teeth to crush the birds' eggs, is an exceedingly interesting exception, and I believe the only species with no teeth or only a few very rudimentary ones. The gular or spine teeth are projections or processes proceeding from the vertebra into the throat, and though of a bony structure are tipped with dentine. By various ophiologists this little tree snake, which feeds on the eggs of small birds, has been named *Rachiodon*, from *rachis*, the spine; *anodon*, no teeth; and by Prof. Owen *Deirodon*, neck-toothed; indicating the position of the spines, though a snake has no true neck or cervical vertebra. Linnæus considered it edentulous, without teeth, as it comparatively is. Then another naturalist classed it with the *Oligodons*, but these being ground snakes and of different habits, the egg-eating snake was again separated and became a distinct type. We have got rather away from the original subject, but we gain some insight into the long and patient investigations which naturalists bestow on every single example before deciding on the best name to be assigned to it. Thus, also, are accounted for the many synonyms we meet with, and which, though at first so tiresome and perplexing, we are led to excuse and even to appreciate, when we know at what cost of time and trouble they have been bestowed.

CATHERINE C. HOPLEY.

SEA LIONS AND BUFFALO.—Fair Grounds, St. Louis, Aug. 2.—A few days since one of our sea lion cows gave birth to a bull calf, born posthumously. Its father died on Feb. 4. The youngster throve amazingly well for ten days, when one night a cold spell unfortunately came and caused two other of the cows to break down the partition erected to separate them from the calf and its dam. In their efforts to huddle together they most unfortunately over lay the baby and killed it. I am in hopes that another of the cows is with young. On July 16 our buffalo cow gave birth to a fine heifer calf which is doing excellently, and which I have every hope of rearing, although it is terribly in-bred, being by the son of its mother.—C. W. BELLAIRS.

BREEDING MINK.

JERSEY CITY, Aug. 8.—*Editor Forest and Stream:* In answer to your correspondent "R P. S.," and for the benefit it may be to others, I will say that mink can be bred successfully in confinement, but of course the nearer you approach their natural haunts in the artificial abode the less care they will require and the more successful will be your experiment. It should be out of doors by all means, no roof to cover, and where they will get the full benefit of air and changes of weather, with free access to earth and water.

I had at one time in my minkery forty-seven of the little nimble bright-eyed fellows, and they were ever as interesting as handsome. The site of my minkery was near the source of two large springs, where the waters of both came together; here I constructed a pond of about 2 rods in diameter and 4ft. to 5ft. deep; around the edge stone were piled and laid to form nooks and holes for hiding places; and under the banks were numerous holes for the formation of nests and breeding places. Their food was fresh meat, consisting of woodchucks, rabbits, fish, and milk for the younger portion of the colony; and they flourished finely.

Around the pond and back about 15ft. a trench was dug 2ft. deep and hemlock planks set on edge, and the trench refilled; and above the ground was a poultry fence 3ft. high and of ½in. mesh, and around the top of the fence was nailed a board 12in. wide projecting inside, the upper and inner edge rounded off.

In this inclosure I have every reason to believe that they were kept secure, as they rapidly increased in numbers, and the first mink placed in captivity was among the last killed; there could be no mistake about this, for one foot was missing, and he became as tame as a house cat.

I do not think that their quarrels interfered with the success of the experiment, as these were never noticeable except during the rutting season.

It was always interesting to watch their antics; and I count them among the most interesting and tractable of our wild animals; and the love and care they have for their young is great.

I never believed that they could be made so tame until I saw with my own eyes and watched and studied them from day to day. I have bred foxes in captivity too, but I do not, from my own experience, pronounce it a sure thing unless it is done on a large area of land.

F. G. KITTREDGE.

POISON OAK AND IVY.—Monroe, N. C.—I have been poisoned several times and once came very near losing my life, owing principally to a drunken doctor. It was in the latter part of April. I went down to a fishery on the Pee Dee River in South Carolina, and the vines were very thick and low, and in passing under some poison vines I was hit in the face by them. I felt the usual symptoms in a couple of days and tried sugar of lead and several other remedies with no avail. I then started for home—40 miles, and by the time I got there I was in a dreadful condition. I called in a doctor who had been on a drunk, and for three days he did his best to finish me, and would have accomplished his desire had I let him alone. I called in another doctor. He changed the entire treatment: told me to bathe all places that were swelled in either very hot water or ice water and to drink all I could hold (as I had high fever and was very thirsty I chose the ice water). He gave me one dose of medicine to open my bowels and a mixture of carbolic acid and linseed oil to apply to the worst places. In two days I was up and on the third day took a horseback ride of forty miles. It was the worst case of poisoning I ever saw, suppuration had set in on my left hand, and the whole skin come off of the palm. So you can see how rapid was the cure. The remedy is cheap and effective and can be procured at any place.—A. T. L.

POISON IVY POISONING.—Some of the remedies are: Rose water, sugar of lead and glycerine; carbolic acid and glycerine; and "eucalyptus," used as lotions. Also take quinine in large doses until a ringing in the ears is produced. I am not a doctor, but as a patient I speak from years of experience.—LORNA.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

CLABROUGH 12, May 1, '90.
COLT 12, July 25, '89.
COLT 10 and 12, Oct. 24, '89.
FOLSOM 10 and 12, Sept. 26, '89.
FRANCOTTE 12, Dec. 12, '89.
GREENER 12, Aug. 1, '89.
GREENER 10, Sept. 12-19, '89.
HOLLIS 10, Nov. 7, '89.
LEFEVER 12, March 13, '90.
PARKER 10, hammer, June 6, '89.
PARKER 12, ham'rless, June 6, '89.
REMINGTON 10, May 20, '89.
REMINGTON 12, Dec 5, '89, Feb 6, '90
REMINGTON 10, Dec. 26, '89.
SCOTT 10, Sept. 5, '89.
L. C. SMITH 12, Oct. 10, '89.
WHITNEY SAFETY 12, M'ch 6, '90.
WINCHESTER 10 & 12, Oct. 3, '89.

THE IOWA CHICKEN LAW.

JEFFERSON, Iowa, Aug. 4.—*Editor Forest and Stream:* In your issue of July 30, giving the open seasons in the several States and Territories, I notice you give Aug. 1 to Dec. 1 as the open season for pinnated grouse, prairie chicken, in Iowa; this should be Sept. 1 to Dec. 1.

The following is the full text of section 5,892, as amended by 17th General Assembly, Chapter 156, Section 2; 18th General Assembly, Chapter 193; and 20th General Assembly, Chapter 67: "It shall be unlawful for any person within the State to shoot or kill any pinnated grouse, or prairie chicken, between the first day of December and the first day of September next following; any woodcock between the first day of January and the tenth day of July; any ruffed grouse or pheasant, wild turkey or quail between the first day of January and the first day of October; any wild duck, goose or brant between the first day of May and the fifteenth day of August; or any wild deer, elk or fawn between the first day of January and the first day of September."

I fear the law is badly broken, however, and mainly by farmers, though as they are very careful to conceal the matter it is not generally known; they contend that as they raise the grain to feed the birds they have a moral, if not legal, right to kill the birds when they choose, and, as I said before, I fear they generally choose to in July.

H.

Editor Forest and Stream:

Everything has been favorable the present season for a good crop of prairie chickens, and the birds have done their part nobly; but the hawks, skunks, weasels, and other vermin, ably assisted by the human skunks (or market-hunters) are doing their level best to annihilate them before the open season, and I think they will come very near doing it. I think our close season is at least two weeks too long, as it virtually protects the market-shooter two weeks longer in his nefarious business. Most of the young chickens here are from two-thirds to full grown, and they are being slaughtered and shipped out of northwest Iowa by the hundreds every day. Now, it is in order for some reader to say, "Why don't you prosecute them?" There is no use to take up your valuable space to answer this question; any one who has tried it under the same circumstances knows why, and all who have not tried it should do so. WM. H. STEELE.

FOREST CITY, Iowa.

Editor Forest and Stream:

You state in your last issue that prairie chickens may be killed in Iowa Aug. 15. Your are in error. The law was changed two or three years ago to Sept. 1, and still stands. Please correct in the interest of sportsmen who do not want to kill weaklings. J. E. S.

OSKALOOSA, Iowa.

[We printed the law as sent to us by an officer of the Iowa State Association as now in force; but the prairie chicken season is as stated in the above corrections.]

DEER IN MEXICO.

THE invitation of royalty is a command. The privilege of yes or no is only a pleasant fiction. But it is different in a free Republic. I could have said no when the Governor of the State asked me to join a hunting party with him recently—but I didn't. I didn't want to refuse. I can prove my liberty some other way. I had heard of the Governor's mountain ranch and how the festive deer and turkey held high carnival there, and this made it easy to become for the moment a courtier.

I had to lose a day or two from work, but that cost me only a short struggle. I was glad of the chance to get acquainted with the chief representative of the hunting craft here about, as I am inclined to believe that when you get a party of hunters together, you are sure to find some gentlemen among them. I still think so.

Our destination was a high ridge some forty miles from this city, which overlooks the broad dry plain that lies between, and is plainly visible. At 5 P. M. the party boarded the train for a half-hour's run to the Governor's farm, where coaches, horses, etc., awaited us. It was made up of General Carlos Diez Gutierrez, Governor of the State of San Luis Potosi, Licenciado Juan Flores Ayala, Secretary of State; Dr. Antonio Sosa, Licenciado Francisco Gama, Licenciado José Vega, Col. Leopoldo Gonzalez, Messrs. W. Gilbert, Augustine Grumbrecht, Laureano Cantolla, José Alcocer, Luis Espinosa y Cuevas, R. Lumpuye, Ramon de Ceballos, José Moran and your correspondent.

Besides native Mexicans there were several Spaniards, two Germans and one "gringo" (the title "Licenciado" is equivalent to Esquire in England, that is, it indicates the legal profession).

As there is no paper published in Spanish of the scope of the "only" FOREST AND STREAM, and as I had been already convicted of writing up such expeditions, I was looked upon as the reporter. This rather numerous individual, by the way, seems to be an American institution, as there is no word for him in Spanish (he is sometimes called "the unspeakable" in English, is he not?) so that along with "ros'-bif," "puddin'," "peek-lees" and other necessaries of life he has become naturalized—name, "cheek" and all, among the gentle Mexicans.

"La Pila!" sings the Mexican brakeman, but for the life of him he can't bang the door till your eyes start from their sockets nor call the stations in Brobdingnag like his American model. Out we tumbled, bags and bundles, rifle, guns, grips—everything except dogs—which one expects to see as the impedimenta of a miscellaneous hunting party. In coaches and on horseback we rode away in the mellow sunset to the big rambling country-house, sweet with the smell of rose and jasmine, where we spent the night. We didn't sleep a great deal. The floors were strewn with cots, and everybody felt merry. Some played monte till they got warmed up over it, and then made it warm for those of us who had gone to sleep. We were like a lot of school-boys. Somebody was so rash as to snore. Immediately a very dignified gentleman—usually dignified, I mean—set out on hands and knees to tickle the offender's feet. Just as the wrathful sleeper awoke and began to lay about him, some enterprising soul illumined the dark room with a match, and we had a fine scrub race by two well-known citizens, not over-encumbered with civilized clothes. The Governor was wise enough to select a small room where there were few beds and quiet.

At 5 o'clock next morning we were off, three coaches strong, with a small army of attendants on horseback. At 10 o'clock the baggage was loaded on burros, which had come over to meet us, we mounted horses and started in a long train up the mountain. The Governor, fine and soldierly looking always, is at his best on horseback. He rides in front chatting with the boss of the ranch, and the rest string out behind. The cactus begins to grow thin, the shrubs tall, mesquite changes to oak, and oak verges into pine and cedar. The grass grows greener and evidences of moisture multiply. The dry valley shrubs at last disappear, the maguey struggling almost to the top. These high ridges sweep the Gulf breezes clear of their moisture, scant enough at best. About half-way up, in a grassy little glade, we find a company of men around a fire making "savory meat," the kind with which Jacob and his mother deceived poor old Isaac. We dismount, and on the sweet pine straw have a breakfast fit for a king, with appetites to match, while in the tall trees overhead moans the deep-toned orchestra of heaven.

Exactly at noon we turned the summit, and the half-fed verdure changed in an instant to glorious luxuriance. Oak groves, black in their very greenness, lay like cloud shadows along the hillsides, and in the glades between grass and flower spread their velvet carpet, regal, incomparable. Vistas of leagues upon leagues stretched in all directions, dry dead hills alternating with the green and yellow of cultivated valleys, and far behind us gleamed the towers and white walls of San Luis Potosi, the "Treasure Trove."

Here the hunt was organized. Some on foot, some on horseback, with guides and without, the party scattered to meet later at the house a mile below. My course soon led me to the house, having seen nothing but green fields and valleys, trees, grass and flowers, over which floating clouds threw nature's kaleidoscope, various, lovely, and infinitely satisfying. Sitting under a shade tree I counted seven varieties of flowers in reach of my hand, and the number increased to nineteen as I descended the hill a few hundred yards to the house. What a spendthrift nature is! If she chooses to favor a place there is no stinting of gifts. And she is quite indifferent to man's convenience, too, often shutting off her purest loveliness by walls like the granite donjon of Yosemite, or perching it, as in this case, 10,000ft. above sea level upon a clumsy mountain.

Early in the afternoon a guide arrived at the house with a handsome deer on his back, red of coat and fat of flesh, the velvet horns about half grown. One party had driven him out of a thicket, and a snap shot from Don Pepe Moran, about the oldest hunter among us, who was in another group, tumbled him over on the run. There was much generous rejoicing among the younger men that one of the less active had been the fortunate one. Several other deer were seen, a few shots fired, but nothing else killed.

The mountain air was bracing, surplus energy had been worked off, and after a vigorous supper we covered the floors of two rooms with cots and bunks and slept the sleep of anticipation. We were to start back at noon, so the ambitious were out early. I took a guide more to keep me off the territory assigned to others than because I wanted him. I found, after the best part of the morning was gone, that he was making a special search for two does whose haunts he knew. I told him in some disgust that I didn't want to kill a doe; but he was obstinate. Pretty soon he found them, and I had to kill one to satisfy him. I consoled myself that a deer is a deer in a big party, and that I should not be "left." Sending the victim in, I made for the highest and roughest point in sight, and after about an hour's tramp was rewarded with a shot at a handsome buck, which opportunity I improved with immense satisfaction to myself. He was a fine fat fellow, not quite so large as the one killed the day before. I took a hasty shot at a smaller one that was with him, and was impressed with that peculiar feeling that every hunter will recognize, that I had hit him. As he left no show of blood, I tried to convince myself that I was mistaken; but some days after the ranch hands found where crows and coyotes had made a dainty feast. When will a fellow learn not to shoot in a hurry?

As a number of shots had been heard in various directions I hoped there would be a fine showing, but was surprised to find that nothing else had been killed and that I was the hero of the day. The General, as his friends called him,—military titles have a strange way of sticking even in times of peace—had hunted diligently without even the sight of a deer. He was disappointed and so were we all, for we felt that his generous and thoughtful hospitality deserved a better fortune. But Diana is a shy and fickle goddess. He evidently enjoyed the abundant good-fellowship, to which he personally contributed much, and our unstinted enthusiasm over the loveliness of his sylvan retreat.

At noon we took up the line of march for home, leaving three enthusiasts to follow next day. A village through which we had to pass stopped us to give an ovation to the Governor. The attentions of the good people were something of a trial to the party, as we were tired and dusty, and dressed strictly for business. After a pleasant night at "La Pila" again, we reached San Luis next morning, and plunged again into the work-a-day world.

There were no casualties except that the General left a box of fine cigars on the train, and came near slipping over a precipice. There was plenty of fun, with gun talk, shooting at marks, etc. The arms were mostly Winchesters, model of 1873, some of them richly ornamented. A few shotguns were carried but no turkeys were seen, and but little use was found for them. My hammerless Lefever was looked upon as something of a miracle in the gun way.

I forgot at the right place to mention the band. A little hatchet-faced old man with a big harp and a sentimental youth with a red ribbon on his hat and a guitar slung across his shoulder furnished the music. It was not bad either. But when the first deer arrived the old man twanged at his harp softly and hummed a while, then, after drilling his assistant, they broke into an improvised song in honor of the fortunate hunter. The verses jingled fairly well, but the music was so lackadaisical that it was irresistibly funny. The old musician's vanity was wonderfully tickled when it was proposed to write off his song. I thought I would translate the lines, but find it impossible to convey their quaintness and childish extravagance.

Two weeks after our return, in the lovely suburban garden of the Governor, the hunters spread a handsome breakfast in honor of their host. Eighteen covers were laid, two guests being invited besides the original party. One was absent from the city and sent his brother; another was sick. The "spread" was capital, the fellowship better. Some in wine, some in water, but all in the best of spirit, drank long life and happiness to the genial host of Alvarez,

"And when he next a-hunting goes,
May we be there to see."

AZTEC.

SAN LUIS POTOSI, Mexico.

PARNASSUS, Westmoreland County, Pa.—Quail are more abundant in this neighborhood than they have been during the past fifteen years. Some are laying eggs for a second brood, as is shown by a nest which is within 100ft. of my room.—LORNA.

NORTH BEND, Pa.—The lumbermen report bears plentier this year than for some time. There are some deer and lots of squirrels and pheasants, and the streams and brooks are full of trout.—J. G. K.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

FIRST DAYS BEHIND THE GUN.

TAKE away the beautiful hammerless gun with its automatic ejectors and its perfect fit, with its smokeless powder, its chilled shot and machine-loaded cartridges; take away the silken haired dog with his almost human intelligence and four-fifths broken at his birth, and give me back the old, long, single-barreled gun, feeling like an old-fashioned "soap stick" with a brick tied on the end; give me back the old "G. D." caps and hornet's nest wadding, and give me back along with them the bounding heart of the first days behind the gun. Away with the buzzing quail, the twittering wing of the noble woodcock; the grouse bursting from the laurel brake with obstreporous wing and the wild duck whizzing down the wind; the bounding deer and the gently cantering antelope, and give me back the robin in the old dark cedar, the highholder in the old gumtree, the gray squirrel in the old hickory, and the eleven years of age with which I started out.

Fondly memory plays over the days when nobler game was plenty, before the cheap breechloader, the market-shooter, and the numerous railroads robbed the fields and woods of all that made them attractive; but to me the happiest days were not those in which I shouldered the well-balanced double-barrel and wandered with the stride of early manhood over hill and dale, with the old dog rollicking gaily over the frosty stubble or threading the tangled swamp, but the days when I was too young to be trusted with a gun, but managed to get one all the same.

My first experience in shooting was with a piece of lead pipe pounded shut at one end, with a touch-hole bored with a fork and mounted by lashing with strings upon a stick. An uncle of about my own age and I used to "hook" ammunition from an older uncle and raid the "chippies" down by the brook. The excitement of holding this on a "chippie" at 20ft., while my uncle touched it off with a piece of punk has so far had no parallel in all my wanderings in this vale of tears.

The difficulty of getting this lead pipe straight enough to make sure of a bird on a fencepost at five paces led to the substitution of a piece of hollow iron some 10in. long that formed the outside of the handle of an old-fashioned grindstone. This was stopped with melted lead at one end and a touch-hole filed in it. I can hear its echo yet through the woods and along the hills, and see the chippie falling from the old cedar fence, and the catbird fluttering wounded out of the elder brush, where he was so busy eating that he let us come within six paces of him.

But our delight was soon lost in a feeling of wild unrest, and nothing would do but to steal the older uncle's gun when he was gone to town. Long practice on his ammunition made this step quite easy. A great day was that when we first got out of sight of the house with it and down among the dark cedars. It had been the height of our ambition to kill a robin, but with our own gun it had been impossible. But now the prize was within our grasp. The strategy expended on that first robin would have saved me in later days many a deer which I have lost by carelessness or over-confidence. And no deer ever caused such sensations as that first robin as he came fluttering out of the top of a tall cedar.

Scarcely any milestone on the path of life has ever looked so big as the day when I was first allowed to have a gun of my own. I was scarcely eleven years old when my father, finding that I was determined to go out shooting in some way or another, concluded that it was best to let me go and have something safe. He had been a sportsman himself when young, and knew the impossibility of restraining the inborn love of the field in a youngster. After a vast amount of caution he allowed me to go out alone with the new gun. The caution was quite needless, for the gun was longer than I was, so that it was impossible to shoot myself with it. It was an old relic of the Revolution, altered to a percussion lock, and bought purposely, as I afterward suspected, to dampen my youthful ardor. I had almost to climb on a fence to load it, but it seemed as light as a feather. It kicked like a mule, but I would have enjoyed a battering ram if it would only kick out in front far enough to reach a robin, which was then the height of my ambition. Half the time it would not fire the cap, but the robins in that day sat still until after repeated snapping it did go off. About half the time it caught on the half-cock notch, but I had only to keep on pulling. It seemed to make no difference where the hammer was started. It's sweep was so great in either case that the principal danger was that the bird might accidentally take a notion to leave after I had pulled the trigger, and get away before the hammer reached the cap. The only caps we had then were the "G. D." (popularly supposed to stand for the two words generally used to make them go), and the splinters used to fly into my fingers, but I never felt them. Often the hammer would fly back to half-cock, half blinding me with the gas from the big hole in the burnt out nipple, but it only sharpened my eye for the next robin.

In those days we carried powder in a bottle and shot loose in our pockets. The amount of the charge was a matter of small moment, and no two successive charges were alike, a good gun being supposed to have a special virtue that made it kill under any circumstances when well aimed. Hornet's nest was deemed the most effective wadding, though paper, tow and even grass were used. Once in a while a chap had some cut wads in imitation of those used by what was generally known as a "Yorker." But as the end of the ramrod was always too small and headed with a small pyramid of dirt, and the wad cut out of wretched pasteboard and old slimsy bootlegs, it nearly always turned sideways in the gun, and the old standby of paper or hornet's nest had to be called in after all to push it down. One of the fundamental principles of the times was that too much powder, by which was meant anything over 2drs. for a 12-bore, made the shot scatter too much, and half the time the gun was loaded so as scarcely to pierce the skin of a full-grown squirrel. Another one was that it took "big shot to kill." The favorite sizes were No. 4, or rather 4's for robins and 2's for rabbits and squirrels. On the other hand there were some who thought that "small shot cut sharper," and that big shot "will ball in the hair." But by "small shot" was meant nothing smaller than 6's, and the great majority thought that anything smaller was fit only for "Yorkers," who were supposed to know nothing about shooting, and were always supposed to be badly beaten when they went out with any of the native experts. In fact it was generally considered quite accidental if a city chap killed anything. All manner of fun was made of them when they came out into the country with a snake-like shot belt around the waist, a copper powder flask hung over the shoulder with a green string, and a fish-net gamebag, which was always supposed to go home empty unless stuffed with leaves or filled with game bought of some native expert. Although few of them actually came from New York, such a sportsman was always called a "Yorker."

One hundred yards was then the regulation distance, for a good gun to shoot and "kill a hundred yards" was as regular a guarantee on the sale of a gun as "coming six in the spring" was on the sale of a horse. Guns were supposed to have intrinsic virtues given by some occult quality of the metal, and guns made in the same way differed as two heads of the same shape differ in the quality of the contents. This was not because of the difficulty of boring two barrels exactly alike, but was some mysterious virtue in the metal, as in fine razors. Guns were then tested by the nearest shot they would place to the pinhead that held the paper. The idea that the scattering of the shot was accidental occurred to few of the country folk of that day. Provided the "game shot" was not dropped in loading, and the loader was not too lazy or too stupid to pick it up and put it carefully in, a good gun never failed to throw one shot to the center. A difference of one-hundredth of an inch in the distance of the shot from the pin that held the paper determined the match, and the gun was graded accordingly. A reputation for a gun thus won was never changed, except by a small circle of the extra wise who insisted that the ability of the shooter always determined the match, because every gun, like a rifle, threw one shot to the center.

Shall I ever forget the excitement in the little hamlet where I used to spend my vacations, when it was announced that a "Yorker" had arrived with "a hundred dollar gun." As the "Yorker," followed by a rat-tailed pointer, whose satin skin excited as much contempt as his master, disappeared in the swamp near by, a conclave was held at the country store. It was decided that no gun could cost that amount of money, and that if it did it would not kill as well as a gun costing only ten dollars and made of good old-fashioned soft iron. In fact "patent breech" guns, as all the better classes of double barrels were then called, were of little account anyhow. A patent breech was a gun in which the nipple for the cap was in the screw plug in the side of the barrel forward of the breech-plug. Grave doubts were entertained of the shooting qualities of such guns which were supposed to be gotten up to sell guns to "Yorkers" at a big price and were of no use for practical work.

But when the man who owned a "smooth-bore rifle" came around every one else had to subside. A "smooth-bore rifle" was not an uncommon thing then. It meant a worn out relic of the times when there was some big game still left in the land and was cut out smooth so as to shoot shot. Its long, heavy barrel, crescent-shaped scoop in the stock and other elements of clumsiness made it an object of reverence in the eyes of the country folk. It was supposed to combine the advantages of a rifle with those of a shotgun, throwing the shot for a certain distance in a ball which then expanded and did the work of a shotgun fired at that point. What the man with a smooth-bore rifle could not kill was not worth the killing, and every one was ready to bet that he could bag more game with it than a dozen "Yorkers" could.

But the light even of this great person had to pale before that of the man who in his day had shot a "cut rifle." There were a few such, far between, old and gray-headed, and they took care not to exhibit their rifles at the target. Their eyes were too old to shoot a rifle now and they hunted only in the memory of the glorious past. The old rifle was kept at home secure from the gaze of the vulgar herd, but in the country store at night to hear them tell of the squirrels' heads they had knocked off at a hundred yards, or rather "twenty rods," when they were young and their eyes were good was one of the rarest of treats. But the king of the lot was the man who had seen the last deer in the neighborhood. It was ever so long ago of course, but he had shot at him and wounded him, and though the "darned fellow what owned the dogs" had laid claim to him, he was sure he had killed him. Though "the other feller drawed the hide," he had nevertheless got his share of the meat, and the bare fact that he had tasted venison made him a great man in the eyes of the listeners.

What an excitement there was in the hamlet when a "helldiver" (we spoke the name with awe, wondering whether it were wicked or not) appeared on the millpond. A hippopotamus could hardly have made a greater commotion. Half a dozen guns were quickly brought out, and the bird generally dodged them all. On one occasion after one had dodged about a dozen charges of shot propelled by powder that would hardly have stuck shot into a pumpkin at 30yds., I opened fire as the game rose above the surface. I didn't deserve any credit for it, because in my excitement I had balked with the trigger several times before and failed to pull it off before some one else had fired and the bird had dodged. But this time he happened to rise just where I was looking for him, and I pulled the trigger before he had fairly settled upon the surface. At the report of my gun his head dropped over from a stray shot behind the eye. That was one of the greatest days of my life, and the airs I put on in the store that night would make my fortune now in any branch of business if I could only imitate them. The contempt I felt for the ordinary breed of shooters would have been enough to run an ordinary "wing-shooting champion" factory.

The various theories of shooting in those days would fill a volume. It was thought impossible for any one to become anything of a shot unless he commenced when a boy. Wetting shot was universally believed to make it shoot closer, saliva being especially efficacious in this respect. Most people thought all guns shot better when very dirty; and in truth some did shoot better, for they were so full of holes that they would hardly shoot at all until the holes were filled up. The longer a gun and the closer its resemblance to a crowbar the better it was supposed to shoot; an idea that doubtless came from its resemblance to a "smoothbore" rifle. Powder had to be rammed hard to shoot strong, and rough barrels shot the strongest because they held the shot back and made the powder exert itself more. The only safe way to carry a gun was with the hammer on the cap, and many thought that shot should go slow so as not to flatten on the hide of a squirrel. Another reason for using big shot, as they were supposed to be slower than small shot. This idea I found quite prevalent later in life among the deer hunters in the backwoods, where it was a maxim with many that a swift ball would flatten on the hide and that a "slow and strong ball" was the thing.

It seems to me now incredible that these times were only thirty-five years ago in the upper half of New Jersey, and only forty miles from New York, and only ten miles from a railroad running trains to the city every hour. And yet those days were about the best, all things considered, that I have ever spent with the gun. It is not wholly true that knowledge brings happiness. It brings a pleasure of a certain kind, but quite as often takes away pleasure of another sort. The mystery that surrounded guns and their actions, and made them an object of reverence to the child's eye, is gone and nothing is in its place. The bright and ever soaring fancy of childhood was a factor in the enjoyment of field sports that can never be replaced. Though the most enduring of all pleasures, it is in childhood only that they have their deepest intensity, and he who has never known what it is to lie awake all night in anticipation of getting a rabbit the next day has missed the best part of the sportsman's life. The jar of the leaves beneath the spring of the squirrel in the distant hickory raises a far wilder tumult in the blood of childhood than in later days the crash of brush and the thump of hoofs on the ground as the deer springs from his bed near by. And never since have I known such sensations as those I felt when I first heard the throbbing wings of the ruffed grouse echo through the deep hemlock timber, or the paralyzing shock in which gun and everything else were forgotten, as with roaring wing he burst from the ground before me and swept like a cannon shot through the dark green of the laurel brake, leaving me engulfed in wonder and awe while the very earth seemed to tremble with the heavy beat of his wing.

T. S. VAN DYKE.

CALIFORNIA.

CHICAGO AND THE WEST.

CHICAGO, Ill., Aug. 9.—It seems that there is trouble with the chicken crop in at least one section of Dakota, and that it is partly due to the omnipresent fiend who shoots before the season opens. Dakota chickens killed in the first of August! It must be noble sport to shoot the little fellows. The following letter is from the Register of Deeds of Codington county, South Dakota, to Mr. Paxson, who is in the same offices with Mr. E. S. Rice, manager of the Standard Cartridge Co., and is relative to a Dakota chicken trip which Mr. Rice was figuring on taking. It may be interesting reading to many who contemplated going to Dakota this fall. It reads as follows:

"WATERTOWN, S.D., Aug. 5, 1890.—Yours of recent date received. I am of the opinion that it will not be a pleasant trip for Mr. Rice and his friend, unless the weather changes. The heat is almost unbearable, and the lawless cusses have already been getting in their deadly destruction regardless of law. A party of us intended to start on the afternoon before opening day for a two-weeks' outing, and intended Mr. Rice and his friend to be with us, but the weather has been such that we have given it up. Prairie fires are running and vegetation of every description is severely scorched. It looks now as though shooting of all kinds would be a failure in South Dakota, although the prospects were grand a few weeks ago. Should things brighten up and a chance for sport be given us I will telegraph Mr. Rice, but will not do so unless I think the trip would be a pleasant one. Hope we may be able to telegraph 'come.'—W. O. FRASER."

It seems strange that men can still be found to-day who persist in violating the chicken law, but there are some fellows born with the chicken-thief instinct strong within them. We do not need to go to Dakota to find a prominent instance of this. We have got a man right here in this city, a man whose name has appeared in these columns, usually in connection with unduly large scores of game or fish killed, a man who is a member of Mak-saw-ba Club, and who is quoted and written up in the daily and "illustrated" papers as a "prominent sportsman," who has for some time been killing chickens down on Mak-saw-ba Club grounds and other farms near by. This is known to members of the Mak-saw-ba Club, who are only waiting till they can get a legal as well as a moral certainty to act upon. This man has often said that he would "kill a chicken whenever he wanted to." He has some land of his own, and he is of that firm belief so deeply rooted in the rural mind, that he can do just as he wants to "on his own land." He is supposed to regard Mak-saw-ba grounds as his own land also. The offenses of this "prominent sportsman" are practically known, and after a while the boys hope to be able to get a case against him. He will then, to use a homely simile, "get it in the neck," with the result, it is hoped, of permanently knocking him out of the arena of all sportsmanlike concerns.

Reports come up from a La Porte, Ind., man, a sort of constable it is said, that there were lately marketed at that place sixty-three ducks, all of which had been killed by one party or his associates, country market-shooters on Mak-saw-ba marsh. That's fine for the boys to think about, too. Doubtless most of these were young wood ducks. It is thought to be impossible to punish the offenders. They live near by, and slip down on the marsh when they think none of the club members are about. Indiana has the game warden "system." It's a great system.

It may be remembered that last fall, or rather last summer, reports were sent in of very early shooting at jacksnipe in this region. It is possible that it will begin nearly as early this year, although last season very good bags were made by Aug. 15. Last week and this great flocks of yellowlegs have been seen flying over the Calumet Lake country. Billy Mussey says he is going out after these, and confidently expects to have golden plover and jacksnipe shooting before long on the Kankakee.

There are three coveys of prairie chickens on the farm of a certain gentleman of the city, within thirteen miles from town. It is probably more discreet not to be explicit. There has been a very good chicken crop this year in Illinois, and such grounds as have been guarded should be well stocked this fall. I have not learned from my friend Mr. Valentine Hicks, of the Rising Sun Game Park Association, but hope that he and his company are faring well and his preserves doing nicely. E. HOUGH.

PRACTICAL GUNSMITH on action work and barrels D. B. L. G. seeks position. Address J. T., this office.—*Adv.*

UPLAND PLOVER IN NEBRASKA.

OMAHA, Neb., July 28.—The gunners in this part of the country are having great sport just now with the upland plover. The birds came in one week ago and old hunters say in greater numbers than for many years. In some localities, principally in the high lands up from the different water courses, the prairie fairly swarms with them.

They are in superb condition, of course, and a more delicate dish than baked plover just at this time would be difficult to conjure up indeed.

Out here the old timers prefer a damp, lowering, even a showery day, for plover shooting, and many of them cannot be induced to go abroad when the meteorological conditions are otherwise. But, as is the case in many other instances, I disagree with the moss-covered old timers, and for a day with these birds give me one just like I had Friday, bright and clear, and hotter than blazes.

It is the same old story with the veteran duck shooter, but equally as fallacious. He declares that the day must be windy and storm-laden, with flurries of snow and other disagreeable concomitants, for success with the wildfowl. But he is "off," as I have demonstrated a thousand and one times to my thorough satisfaction, and I can never be shaken in my belief. To talk about certain conditions of the weather for success with the different varieties of game is all well enough, and adds a spice to the subject matter it could extract from no other source, but always, if possible, give me the pleasantest weather that can be ordered for any kind of shooting. I've seen it in all its phases, from elk and sheep in the rugged mountains of Wyoming and Montana to rail on the reedy Delaware. I have sat in a boat all day long, with the mercury flirting with zero, out in the sloughs of the lower Illinois, knocking the incomparable mallard right and left, and never thought of the cold until the waning light ended the shooting and brought with it a realization that I was all but frozen, and thought it unexampled sport. Then again I have had just as grand shooting and made even bigger bags of the same birds when the atmosphere was at temporate heat, and know it was sport a thousandfold more enjoyable, and robbed wholly of the dangers of pneumonic and rheumatic visitations in the future. Oh, yes, give me a balmy air and a flood of yellow sunshine to shoot in, let it be deer, turkey, duck, snipe, quail or plover, and I'm content. It matters nothing to me then what the connoisseurs of the sport assert is necessary to success.

But my plover shoot. We drove out the old Oregon trail—Arthur Vorys, an old friend of mine, and I—until we reached the Platte, where we halted and made preparations for a day of it. We had seen hundreds of plover en route, and when we stopped could hear their plaintive whistle on the right and left of us, and we were no wise uneasy about the result of our expedition. Why, already a dozen pairs of yellowlegs lay in the bottom of the buggy we had knocked down along the roadside on our way out.

We camped first back of a little bay in a grove of dwarfish maples, with a selvage of wild sunflowers and sumach, and a baldric of silver sand stretching down to the water's edge. It was yet early in the morning, and the gurgling Platte wore a dark green polish, with an intermingling of shadows full of sprinkled light, which made the outlook entrancing.

After the horse had been watered and fed and rested sufficiently we again hooked up, got into the vehicle and started up over the yellow grass for the top of the bluffs. We had no dog, nor did we want any. Dogs and plover shooting do not go together. The birds are always in plain sight, and easily gathered after being killed. They are wholly different from jacksnipe, which are the hardest birds in the world to retrieve without the aid of a good dog's nose.

Well, we had barely reached the brow of the ridge when we were electrified by a very chorus of *twoo-twill-twees*, and as many as four dozen yellowlegs, in bunches of seven and eight, curved their ash-colored wings in lazy flight. A bunch of nine, nearest to us, were the very last to arise, and Arthur and I had no difficulty in getting in both barrels and but three of the flock escaped.

It is slaughter, I know, but there is but precious little single plover shooting when hunting the birds in this manner. I have seen twenty-three plover fall to a single gun and at a single shot, and hundreds of times as high as six, seven, ten or a dozen.

But the birds are delicious, and none are ever wasted, for the man who would refuse a string of these luscious birds is not human, that's all. In the market to-day they bring readily $2.75 to $3.50 a dozen, even more than the matchless little gallinago in the spring and autumn.

Well, we drove here and there over the prairie in an aimless fashion for nearly three hours, and there were but brief cessations in the exhilarating sport which began at the bluff's top.

We always alighted after the first few volleys from the buggy, whenever we saw the birds running ahead of us over the short buffalo sward, or standing here and there upon one leg, like the outposts of some great ornithological army, and took our chances on single birds. And my! you ought to see that man Vorys with his twelve Colt. It seemed to me that he could reach a pair of yellowlegs at a hundred yards away. It mattered not to him—tailers, quarterers, outgoers and incomers, it was all the same. I did not see him make a miss the entire day, and in truth he made none. Oh, I know you will say anybody can knock down nineteen plover out of twenty, but you are mistaken. I have been in the field about as much as the next one and am able to hold my own at any kind of game with the majority of shooters, but you can bet a plover gives me the slip occasionally. Take an old cock and give him a good running start, then let him rise and skin off close to the seartopped grass, and it's ten to one you or any one else will be very liable to overshoot him.

But to curtail what might be stretched into a long story, the total of our day's outing footed up just ninety-two plover, two big prairie hawks, a monster rattlesnake and an owl. S. G.

VIRGINIA BAY SNIPE.—Norfolk, Va.—On Monday last, Aug. 4, we had one of the finest day's shooting we have had this season. On Sunday morning Messrs. T. J. Haywood, E. L. Bartlett and H. P. Lucas, of Baltimore, came down by the Bay Line. At the Princess Anne Hotel, Virginia Beach, they were met by Messrs. Wm. Camp, R. C. Byrd, Wm. Pannill and J. B. White, and soon after we drove to the Martin's Point Gun Club. Monday morning we were in our blinds just after sunrise, On counting up at 8 o'clock we found we had bagged 270 graybacks, yellowlegs and grass plover. In the afternoon when it was cool and pleasant we returned to our blinds. From that time until we had fired away all our cartridges the natives in the vicinity thought "the war" was not over. On counting our whole bag for the day we had 840, for which we had fired about 1,300 cartridges. This was an average of 120 to each gun. Considering the time in which it was all done we had good sport. Several large bags have been made at the club since July 1. Mr. A. H. Hubbard, of Philadelphia, has been down for three weeks, and found game very plenty every day. Captain Jack Todd, C. Woodard and N. Beaman killed 250 one day last week. This club is a new one, and there are two shares left, which can be had by two good fellows by applying to Wm. Camp, Sec'y Martin's Point Gun Club, Norfolk, Va., or J. B. White of same city.—YELLOWLEG.

MY FIRST AND LAST BUFFALO HUNT.—When I was a lad living in Massachusetts there came along one day a show, which consisted of some fourteen young buffalo and a camel. During the hours of exhibition a man came out of the tent and delivered a lecture on the American bison, mode of capture, etc. I have never made up my mind why that man selected me from among so many boys to represent the buffalo in a grand hunt to show the beauties of the lasso; and to this day I am in doubt whether it was because I more closely resembled the young American buffalo or because he thought I was more fleet of foot, but he did select me, and I at once became in spirit a young buffalo. If the envious boys came too near and felt my shaggy hair, I lowered my horns and made a charge, scattering the boys in all directions. Finally a space was cleared, and I was given two rods start and was told to run and "put in my best licks." Away I went across the prairie, maddened by the shouts of the boys, fire in my eyes, the hot steam gushing from my nostrils. I dashed across the prairie, leaving the boys far behind, when all at once something flashed down before my eyes, I felt something like a coarse round file sawing across my chin, and I lay on the ground, the buffalo all gone out of me, and a great score across my chin. And so ended my first and last buffalo hunt.—JAMES WIGHT.

SHOOTING NOTES IN THE SUNDAY "SUN."—Perth Amboy, N. J., Aug. 10.—On Sunday, Aug. 27, the oracular person who inspires the column in the *Sun* which deals in shooting and fishing told its readers that there had been no flight of bay birds along the coast as yet, nor would there be until a change should occur in the "meteorological conditions." I happen to know that yellowlegs were flying at Chadwick's, N. J., on July, 13, 14 and 15, and that a large flight occurred on the 25th, 26th and 27th, in spite of "meteorological conditions." In to-day's *Sun* we may read reports from the New Jersey coast as follows: "Barnegat.—So far only a few yellow snipe have arrived." "Townsend's Inlet.—Bay snipe are as yet very scarce." Compare with these reports the following extracts from a letter received yesterday from a point on Barnegat Bay: "On Wednesday, the 6th inst., there were droves of birds. Some flocks yesterday (the 7th) had 50 to 75 birds. Got 40 myself. There were quite a number of birds flying to-day. One flock of 30 yelpers came over my decoys while I was away from the blind." *Verbum sat.*—K.

FIVE CUBS UP A TREE.—Palmer, Mich., Aug. 2.—Five cubs were killed here this week. They were all upon a large pine tree, and were first seen by a Finlander, who was chopping wood. He told some fellows that lived close by, and they started with rifles, shotguns, revolvers, and double-bitt axes. Some of the party climbed up small trees and began shooting. They fired about fifty shots before they brought all of those cubs to the ground. There were three male and two female cubs. The heaviest of them was 45lbs. During the combat one of the old bears showed up; but one of the party cut loose at her with a charge of fine shot, and she skipped. If there had been any person in the party that had any gumption about him they might have caught all of those cubs alive. It is a shame to shoot cubs at this season of the year, as the hide is no good and those folks let the meat spoil.—GRIBBIN.

OMAHA, Neb.—Omaha hotels are serving young prairie chicken under the head of upland plover every day, and yet the gun clubs have taken no steps toward stopping them. Judge Dundy, "Skip" Dundy, Dr. Galbraith and Henry Homan, of this city, and Editor Hathaway, of Lincoln, left recently for a grizzly bear hunt in the mountains of Montana.—S. G.

THE YELLOWSTONE PARK AND DINING CAR ROUTE.—The Northern Pacific Railroad, stretching from the Great Lakes to the Pacific coast, with its elegant vestibuled service of dining cars and Pullman sleepers, not only affords business men, tourists and others a route of travel equal in every respect to any in the country, but renders accessible to sportsmen the only region in which can be found to-day the large game which was once so plentiful in all the West. In addition to the large game, the sportsman will find in the country along the line of the Northern Pacific Railroad such quantities of small game as is unknown in the East. This line, penetrating the Lake Park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green rivers, as well as lying in close proximity to the hunting grounds of the Big Horn, Snowy, Belt, Bitter Root, Rocky, Cœur D'Alene and Cascade Mountains, is unquestionably the sportsmen's route of America. The pamphlet, "Game Preserves of North America," together with other interesting publication, descriptive of the Yellowstone Park and Alaska tours, will be mailed free on application to Chas. S. Fee, G. P. & T. A., N. P. R. R., St. Paul, Minn.—*Adv.*

MR. S. BOIVIN, whose advertisement of the Metabetchouan Hotel appears in another column, is prepared to put ambitious anglers in the way of catching good bags of ouananiche, and supplies guides, canoes, etc., for either fishing or hunting expeditions. He promises good sport with caribou and other large game.—*Adv.*

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 230 pages, price $2.50. For sale by FOREST AND STREAM.

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

BIG-MOUTH AND SMALL-MOUTH.

Editor Forest and Stream:

I have read for many years the varying views of FOREST AND STREAM'S correspondents concerning the comparative game qualities of the large-mouthed and small-mouthed black bass. I have also read what Dr. Henshall has to say on the subject, which is in effect (if I remember rightly) that there is little if any difference between the two varieties in that respect. Some of the writers agree with his opinion, while others (I think the majority) join issue with him. No doubt all are entirely sincere and each speaks from his own observation. I do not propose to join in the discussion as an advocate for either side; but it has occurred to me that this may be a case parallel to that of the shield concerning the color of which the two knights disputed until they discovered that its two sides were of different colors; in other words, that whether the large-mouthed bass is as game as his small-mouthed brother depends. An experience of my own will perhaps tend to show that it does.

Some years ago I was in the habit of visiting (latterly in the good company of my and your esteemed friend and accomplished angler and scribe, "Wawayanda") a lake in Ontario which abounded in bass of both kinds. It does not, alas! so abound now, thanks to the depredations of a rapacious monster, fitly named pike ("may his face be turned upside down and jackasses dance on the grave of his uncle!"), who, with the connivance of the bibulous fish constable and the short-sigted natives of the vicinage, ruined the fishing with his accursed nets. But before his much-lamented advent the sport was magnificent. Large-mouth and small-mouth took the fly eagerly at all times; but there was no room for doubt that the latter were by all odds the most persistent fighters. It was easy, within a short time after a strike, to determine whether it was Mr. Salmoides or Monsieur Dolomieu with whom I was trying conclusions.

Now, in the course of conversation with my boatman, I was told by him of a small lake a mile or two distant, in which, as he said, were to be found bass whose edible qualities were far superior to those possessed by the denizens of the larger lake, and his soul yearned for some of them. So one day, at his solicitation, I mounted my boat on a hay wagon and soon reached a beautiful pond surrounded by high shores, and the steel blue water in which was of crystal clearness and almost icy temperature. At one or two points a narrow bar of dazzling white clay extended beneath the water a hundred yards or so, but its sides descended abruptly, and there was practically no shallow water in the pond.

I remained all day, but took only a dozen (my average catch in the larger lake was sixty—which, be it remembered, were all eaten), for the fish, owing to the clearness of the water, were exceedingly shy; but that dozen was worth coming for. They fought like demons and leaped like the bounty jumpers of war times; and they all had "mouths from year to year like an overseer's wages." So far as I could judge from that and subsequent experience there, not a small-mouthed bass was in the pond; but no small-mouth could have surpassed them in vigorous and prolonged resistance to the angler's efforts to take them from their moist environment.

The moral of which is that it seems probable that in cold, clear water (which he will not, however, inhabit from choice—I tell it to his shame) the large-mouthed bass "don't ask no odds" of his small-mouthed brother, but those conditions being somewhat rare the majority of anglers find him the less energetic of the two varieties, while those who happen to find him where he cannot reach warm, shoal water and muddy bottom are justified by their experience in defending him against the charge of imperfect development of the organ of combativeness. All which is respectfully submitted.

I may add that the fish above mentioned corroborated the boatman's statement when served at table, for I found them more toothsome than any other bass of either sort I had ever eaten. TRUTHFUL JAMES.

ANGLING NOTES.

THE anglers who have gone to the far-off waters of Lake St. John for landlocked salmon are having much better sport this year than last, and the fish are much larger and in better condition. One well known New Yorker writes that he has lost several "big ones" trying to land them with an ordinary trout net. They are now mostly caught in the boiling, rushing waters of the Grande Discharge, and it requires stout tackle to handle the leaping beauties. There is a new hotel building at the mouth of the river, and it will be ready for guests very shortly. Of course this will be a great convenience to the visitors and save the long trip from Hotel Roberval; but it is a question if making it so convenient will not injure the fishing, as it has in so many other places. Just so sure as large crowds are attracted to a good fishing place, the supply, no matter how great, gives out sooner or later—witness the waters of Lake Gogebic, Nepigon River, Rangeley Lakes, etc., etc. There is only one way to prevent it, and that is to limit the catch. At Gogebic tons of bass were brought in only to be buried, and it is the same at many famous resorts. It seems impossible so teach the mass of people to be moderate in their catch, and to return the surplus to the water.

The Adirondack season is now at its height and everywhere throughout that region the hotels are full to overflowing and the guides all busy, while the different transportation companies have all they can do to handle the crowd and their luggage. It is amusing to see the tourists with Saratoga trunks in the light Adirondack boat and to hear the remarks of the guides, particularly when making a carry. Of course the sportsmen fight shy of the much-traveled routes, for it is only by visiting out-of-the way places that any game or fish can be found. The speckled trout are now only found where cold springs strike in, and these places are only known to the first-class

guides, so that the angler's success depends mainly on having a good guide. Unfortunately this class of men are getting scarce in the North Woods, and most of them are engaged a season ahead. On the lakes the speckled trout are now in very deep water. They are often taken when trolling for lake trout. As soon as the cold frosty nights of September arrive, they will again come to the surface and afford good sport to the fly-fisherman. September is the loveliest month in the year in the Adirondacks; the foliage changes in the most superb way, the brilliant red and gold maples showing in strong contrast to the dark evergreens. The air is cool and crisp and no insects are left to bother one. In addition to the fishing the ruffed grouse and deer are in season, and on some of the lakes a few ducks are to be found. Often after a storm a few big yellowlegs can be killed or a stray plover or two. By the middle of September the great army of tourists have left the woods, and the sportsmen will find plenty of room and attention at the hotels, as well as the choice of the best guides. The brook trout season ends Sept. 15 and the lake trout Oct. 1, but October is a grand month for the deer, and sportsmen on the lookout for fine heads will find this the best month in the season to obtain them.

Mr. John G. Hecksher writes from Newport that he has had excellent striped bass fishing. Among many big ones he has killed one of 35lbs., one of 39lbs., one of 50lbs. and one of 57lbs., all royal good fish.

PICKEREL BAIT AND WATERSNAKE.

Editor Forest and Stream:

While fishing for pickerel one day last week in Stony Brook, Southboro', Mass., I had an experience with a watersnake or water adder, as it is sometimes called, which developed a phase in its habits and character positively new and surprising to me. I had waded out to the shore nearly a rod, and was standing on an old stone wall, now almost wholly submerged, though here and there a stone would show up above the surface of the water.

While casting from one of these uncovered stones I glanced along the line of wall and twenty feet in advance of me was another stone which showed a little above the water, and right beside it and out of the water about two inches was something which at first glance I took to be a frog's head; but a second look assured me that it was the head of a watersnake. I paid very little attention to it until I had whipped the ground all over, and bagged two very good pickerel, when, as the head had not moved, it came into my mind to try the pickerel bait on his snakeship, and see how he would act.

Accordingly I very carefully dropped the bait (frog's leg) within fifteen or twenty inches of him and slowly began to circle it around his head, all the time lessening the circle. He paid no attention to it until it got within four or five inches of him, and then, as it passed directly in front, he struck at it viciously. I struck also, but missed him. Then I put the bait just in front of him and he gobbled it instantly.

I waited until I thought his efforts had compassed the hook, and then I struck. Well, Mr. Editor, from the twisting and splashing I thought I had hooked not only one snake, but a whole family.

I put a good pressure upon my rod and tried to raise him from the water, but he quickly coiled about a bunch of reeds, and by giving him all the pressure my rod would bear I could not get over a foot of his body out of the water. Then I slowly backed away from him, and as I moved the force brought the rod down until it was level. Then I slid from the wall into the water, waded ashore and put the strength of my line against his grip on the reeds. He was very stubborn, but as the pull increased he yielded inch by inch, and soon I had him free and headed for the shore; but just before he reached it a friendly bunch of grass gave him another chance, and he was round it like a flash. However, he was near enough for my purpose, so I laid my rod down, cut an alder and despatched him. He proved to be the largest of that species of snake I ever killed, measuring 4½ft. in length, and I should say quite 3in. in diameter at the largest part of the body.

Did any of your readers ever meet with anything like it? J. W. B.

Boston, Mass., Aug. 3.

THE SUSQUEHANNA.

Editor Forest and Stream:

"Salmon" (pike-perch) and black bass fishing up to the present time has not been very profitable, and we look forward for much better sport when the season advances. The Susquehanna at this place has been visited by anglers daily from all parts of eastern Pennsylvania. They have been trolling in quest of wall-eyed pike and have met with some success. The best place for "salmon" is right at the foot of the falls where the water is very deep, furnishing a harbor for the fish, and if the angler knows how and uses proper bait, success is sure to follow. I always find that trolling is the surest and best method of fishing for pike perch, using the lamper eel, stone catfish, or sunfish for bait. The bait must be fresh and alive in all cases. Some very good catches of "salmon" have been made during the past two weeks. Messrs. El. and Walt. Haldeman, of Bambridge, spent a day here last week, and succeeded in taking twenty-one fine "salmon." These ranged in weight from two to four pounds each, making enough weight for several good baskets. Trolling spoon and lamper eel were used. The largest "salmon" I have ever caught here I pulled in a short time ago. It weighed 6½lbs. and was a beauty. The largest known to have been caught here weighed 9lbs. Mr. George Blotcher landed one of this weight. I have every reason to believe that the river at this point is full of these big fellows. Just a few days ago, my friend, Col. John Frazer, while trolling hooked a fish which weighed apparently 12 or 15lbs. and broke the line before he was able to land it. I have heard of several such instances already this season. The river seems to be well stocked with "salmon," but the river has been high and water muddy so much for the past eighteen months, that the average catch has been poor. The river is now getting low and clear, which will, we hope, give us a successful fishing season from this on.

The black bass are not so plentiful this season as they have been in the past years. I can not account for their non-appearance, unless it is caused by the June, 1889, flood. After that flood and enormous washout I found thousands of bass, and beauties they were, on the islands, in swamps, and, in fact, all the lowlands were full of the pride of our river. These were left only to perish as the waters receded. Comparatively few bass have been taken this season, and these few have been small as a rule. This fish can be found below the falls. Above the York Haven Paper Mill dam is one of the best places, and the river at that place is daily spotted with parties bass fishing. The best baits here for bass are helgramites ("ho jacks" of our people), minnows, small toads and grasshoppers. I had better success with the minnow than the others here mentioned, and have caught a good many bass with the common earth worm for bait. The largest bass I have any record of was caught by myself, a week ago, near Shelly's Island. It weighed 4½lbs. and was a monster, and he fought like a tiger. Lots of sport catching those fellows. Mr. John Snyder, of Roanoke, Va., met with good success this week at Collins Station. John, formerly from Mt. Joy, and a friend brought to basket thirty-eight bass which averaged about 1½lbs. each. This is evidence that as the season advances fishing will improve. These gentleman used minnow for bait.

I hope in a very short time to be able to furnish the readers of Forest and Stream a more encouraging account of doings here. I am confident that we are going to have a successful season yet, we have the salmon and before the finish many bass will have been reeled in. The river is now coming into first-class condition for the sport, better than it has been for the two past seasons, and unless heavy rain dash our hopes to the bottom of the river, some of us will be on deck and entitled to a place. WALTON.

Falmouth, Pa., Aug. 8.

CHICAGO AND THE WEST.

CHICAGO, Ill., Aug. 4.—I am indebted to two correspondents in the issue of July 31 for comments on my whilom bass jumping story, both of which are of the knew-it-all-the-time sort which we all love naturally. In the first place I should say that these gentlemen are quite mistaken if they think I claim to be either an old-timer or a wise man. I am neither. All I do is just to stump around, willing to learn from the wise, and ready at any time to chronicle what seems new to me and most of my acquaintances. I don't know much about it, as Columbus said when he stood the egg on end, but this is the way I do it. And the Homeruses said they knew it all the time and kept it dark for fear the public would go around smashing eggs too much. Frankly, it seems to me better to ventilate a thing of this kind and bring it within the cognizance of the law, as has been done in the Fox River cases through the comment in these columns, than to protect the guilty by silence. It looks that way to me, but probably I don't know. In common with many anglers, I have long ago discovered that the black bass will sometimes jump into a boat, but that their jumping could be so guided and controlled as to be made a process highly destructive against them, was news to me and a great many others. In this connection I beg to point out a slight discrepancy in the comment of our two authorities here, "Homerus" and "Ah Look," who knew it all the time. The former says, "Under ordinary circumstances there is not much chance for 'jumping' bass into a boat: but it is when a stream is rapidly rising," etc., etc. The latter is more liberal, and remarks, "The practice of jumping bass we boys would invariably indulge in when the fish would not bite," etc., etc. The doctors disagree. Now, I don't know much about it, but both these doctors also disagree from the facts we found at Yorkville. They told us there that "when the water was high and muddy" was the best time to jump bass. The river was not rising, but falling rapidly on the night when some fifty odd bass were taken in one boat that way during our stay at Yorkville. The Yorkville story is about as authentic as any, it would seem, and the fact that it didn't happen B.C. is not against it, but in its favor.

It is not often I care to walk the same road twice, but just now I do. It mostly pays to be good-natured, and it takes more than a B. C. bass-jumping story to affect my sweet and amiable disposition; but when Mr. "Ah Look"—whoever he is; he might be politer if he would abandon the old-fashioned business of a sporting *nom de plume*—casts even an implied challenge on my facts, I confess freely that it makes me a trifle warm and also a little tired. I was about to say that the gentleman might come around to my office, and if I liked his ah—looks, I would take him out on a $5 bass trip, one of the kind which he thinks impossible, but perhaps that won't be necessary. The fact is, he had just finished reading about a $5 bass trip when he wrote what he did. To Yorkville on the "Q." is fifty-one miles, and the round-trip fare is, roughly speaking $3. (It is less, but I do not recall the exact figures.) At the City Hotel in Yorkville one can get very good country board, as that goes, at $1 a day. I know, because I have been there. He will not need any boat, and he is right at the fishing. He can make this trip, fish a day and get back home on less than $5. Our party indulged in the luxuries of a $1.50 a day hotel and livery ride to Aurora, and it cost us for two nights and a day out of town $5.15.

I have not spoken of long trips, and have meant such as we have usually taken, of two nights and a day. These trips were not taken on an ornamental basis, and no provision was made for elaborate liquid or other refreshment. As to the fares, not being a railroad man, I mostly pays my fare or walks. If Mr. "Ah Look" should wish to try the Fox at or near Aurora, where many good bass have at times been taken this summer, he will find the distance less—only thirty-eight miles—commutation tickets possible and the trip cheaper. He can reach the river or lake system of the Fox at many other points just as cheaply. I can take Mr. "Ah Look" on either a bass trip, a woodcock trip, a snipe trip, a plover trip or a duck trip, each in season, and get game, too. Such trips have often been described in these columns, and I would rather repeat here than anywhere that there is no city from which so varied and so cheap an amount of good sport can be had as the city of Chicago. This statement has nothing to do with the personal preferences of a sportsman as to expense. Each trip can be as expensive as one likes; but I am talking bed rock. To-day when I read Mr. "Ah Look's" wish for $5 bass waters, I turned around to Charlie Porter, an enthusiastic young angler whose desk is not far from mine, and said, "Charlie, what did your trip to Loon Lake day before yesterday cost you?" He studied a moment and said, "Four dollars." He was up on Loon Lake with Jim Clark one day, near Antioch, on the Wisconsin Central.

"Yes," he continued, "two dollars for railroad fare, and seventy-five cents for three meals at the hotel, and one dollar for my share of the boat and boatman expense, and twenty-five ents for a 'bus fare. They sent a 'bus for us from Antioch. I ate one meal in Jim's tent, and slept there one night. I could have staid at the hotel till the following morning and still not have spent $5 in all."

"Well, here's a gentleman who doesn't think you can take a bass trip out of Chicago on $5," said I, and I showed him the comment.

"Phew!" said Charlie, as he threw down the paper. "You tell him I can take him out for a day and buy him four dozen frogs and get him back for $5!"

A trip to Deep Lake, Channel Lake, Camp Lake, Lake Maria, or any other of half a dozen more would cost just about the same. At Fox Lake, or Grass Lake, unless one went to Paddock's, the cost would be more. One must avoid the summer resorts and keep to the plain country if he wants a $5 trip. He can't take a piano and a cow along with him to be sure, but I never needed any. I could think of a good many of these $5 trips, and could make a good many more if I had time, but we will close the list with one more, on still another railroad. Wauconda Lake was once a fine bass water, and is still a fair one. It is reached via Barrington, on the Northwestern road. Round trip on Barrington is $1.65. Hack fare to lake, two ways, $1. Supper, lodging, breakfast, dinner, supper, lodging and breakfast again, $1.50. Total, $4.15, or 85 cents left for a boat, at 50 cents a day. In all these estimates, railroad fares are quoted from memory, but I think I have them right, and inquiry will find them close thereto.

Now, about the results of such a trip. Young Porter, Jim Clark, Harry Eaton and Frank Reed took in their one day's fishing twenty-two black bass and one pickerel. These are facts, too. There are plenty of bass to be taken on a $5 trip, if you know how.

Jim Clark has caught a great many bass out of his little lake camps in the Fox Lake region this summer. He has found a way that lessens even the slight expense found necessary above, for every one knows that you can live for about thirty-five cents a day in camp. Jim has been sitting around, camping and casting, and inventing things, pretty much all summer. He asks me to come up next week and spend a day or so with him in his tent, and if I have luck I shall go. When I come back I may perhaps go the matter one better, and write a book on "$4 fishing trips," instead of $5 trips.

I am suffering from a combination of ill-natured ailments as I write these lines, but I trust that neither "Ah Look" nor "Homerus" will find them unduly vinegary. That wouldn't be right at all. Only, I don't want to have it even partially understood that I am disposed to prance out and say anything that happens to come into my head, without having any facts to support the statement. Such is not the case.

The best strings of bass brought into the city continue to be those taken by the bait-casters. It is still a puzzle to a great many who fish faithfully, but who don't know how to shoot with the live frog, how some anglers can go out and catch big black bass on the very water where they themselves have steadily failed to do so. It all lies in the art of casting with the free reel. Most people forget that the black bass is a mighty shy bird, and won't hold still while you row up to him and ask him to have one with you. Thirty or forty yards is the best distance to strike up a speaking acquaintance with the black bass.

Aug. 6.—If I may be permitted I would like to add my testimony about "Preservaline" to that of "Parson" in last week's paper. Last week, when at the Wausaukee Club in Wisconsin, I took a dozen sample boxes of this compound, not being able to get it in any other form. At the close of my day's fishing, I cleaned and wiped dry my trout, and soaked them for about three hours in a solution made by emptying the 12 boxes, perhaps half a pound in all, into about a gallon and a half of water. Upon taking the trout out I wrapped them in grass, and put them carefully into the straw covers of a lot of champagne bottles I found lying around. The trout remained in a box, so packed, until 4 P. M. the next day, when I got anxious and put some ice in the box. On reaching Chicago, on the next morning following, the trout were wet and squirmy, but still in the box. I gave them to friends, sending about a dozen of the best out to my parents in a Western town, which they reached about noon the next day. These also had ice in the box with them. The report received thence a few days later said: "The preservaline gives a twang that destroys the real fish flavor." This agrees exactly with the idea I had after trying a few of the trout, which I did before offering any to friends, in order to see whether the powder would be injurious to the health or not. Perhaps too strong a solution was used in this case. The taste was very sharp, stronger than that of salt, and there was no taste of fish at all. The fish seemed in very good order otherwise, and I believe would have been just as good without ice. Not the slightest deleterious effect was noticeable from eating the "preserved" fish. Lately I read a newspaper article describing the nearly fatal sickness of a family, resultant upon eating meat on which salicylic acid had been used in the curing. I don't know what Preservaline is made of, but although it seems harmless, its flavor is not altogether an enrapturing gastronomic discovery.

Speaking of trout reminds one of little trout. It is against the law of Wisconsin to take trout less than 6in. in length. A prominent Wausaukee member said to me, "We are going to stock these streams so constantly that we won't have to throw back the little ones. If we hatch and plant our own trout, going to all that trouble and expense, the trout will belong to us, and we will not be liable to the State for what we do with them. What would be the use planting them otherwise?" The club man is doubtless wrong, and if he were to figure in a test case he would probably find that one can't break a State law even if he is on his own ground. The "6-inch" law is valid on every foot of Wisconsin waters, and it ought to be observed. That is the only way in which good fishing, or rather the best fishing, will ever be had. The farmer who has a covey of prairie chickens on his farm has no right to kill them before the season opens. They are still *fera naturæ*. I believe that Forest and

STREAM, which has recently taken very wide ground, certainly, on the landowner's rights, will agree that the police power of Wisconsin can watch over the fingerling on a club preserve. But this is not apropos of anything. The club in question will doubtless respect the law, and so will the gentleman in question.

Speaking of trout some more: I think I can direct a belated angler to some really good trout water, though I have not had time to try it. Go to Houghton, on the North Peninsula (via M. & N. Ry.), and there charter a tug and go twenty-five miles on Lake Superior to the mouth of Elm River, taking boat and camp outfit and setting a date for the tug to call. Elm River is a nice little stream which seems to have got lost in the shuffle, and the Houghton anglers will probably not thank this paper for giving the thing away. Only two or three parties have been in, so far as anybody knows, and in one day they took over 400 trout, many very good ones. The brook trout of over a hand's length is elusive, reminding one much of the poet's "snowfall on the river," but I presume that one could really catch some good fish in there if he didn't wait till the stream was cleaned. A new stream don't last long, and, in spite of all you hear, there are not many new streams. Perhaps this one is not very new, but it has been left alone lately. Messrs. Joe Croze, Henness & Co. and C. D. Sheldon are all tug men of Houghton, Mich. The last named is an angler and he knows about the Elm. A party of three or four might do well to write him, perhaps.

Mr. Hirth, of this city, has been writing to his friend Mr. C. A. Baker, of Minneapolis, asking for information about good bass waters. Mr. Baker replies that Minnetonka was good in June, but is very poor now, the fish having scattered for deep water. Mr. Baker thinks the lakes above Alexandria, Minn., would be good now, Miltona Lake, 15 miles north of Alexandria, preferred. He also says that the lakes in Chicago county, near Lindstrom and Centre City, are reported very good.

Aug. 7.—Two new experiments, or novelties in angling material, have fallen within my experience this summer, though neither is original with me. The first is the abalone spoon, a few samples of which I got of Henry Skinner, at E. T. Allen's place in San Francisco, last winter. I believe I have mentioned before that this spoon is not the common "mother-of-pearl spoon" sometimes seen in Eastern shop-windows, but is cut from the natural concave of the great abalone shell. The spoon is barely over an inch in length, and oblong, but wide for its length. It is very peculiar in the water, and is bright, though the specimen I have don't revolve very much. They told me that it wasn't meant to revolve. I never used one of these little spoons but once, and I caught a bass very quickly, but I had a frog on the other end of the spoon. Charlie Porter tried one on Loon Lake the other day, and says he had three strikes when the rest could not get a rise. I don't know but this "spoon" might be a good thing to use as a sort of attraction, above the frog, which latter should be used on a single large hook. The corruscations of the pearl surfaces can be seen a long way, and might be useful on the reel-up after a cast. The idea needs more trying. This spoon is said to be the best possible one to use on the Coast, for salmon or the big lake trout.

The other idea in question came through Mr. Chas. Levings, chief engineer of the C. & A., who happened in the other day.

"Did you ever use a guitar string for bait?" asked he. I confessed I never had.

"Well, I was out on the Government Pier the other day," said he, "watching the people fishing for perch. It was slack fishing, and only one fellow near me was having any luck. 'What bait are you using?' I asked of him. 'Haint got no bait!' he replied, and slammed his hook in again. I watched him, and after a while found that he was catching his perch on a piece of soaked catgut guitar string. He said that was a bait which would catch crappies and rock bass when nothing else would. The catgut becomes soft and white after a good soaking, and frays out into little streamers, though it is so tough that nothing can tear it off. This fellow had it just looped up on his hook, like a worm. It seemed to work."

This was something new to me. I tried it on my late trout fishing trip, and caught some trout on my catgut "worm," too. I do not think a sluggish trout will long retain it in his mouth, but in swift water and with eager trout I believe it would be a killer and an invaluable thing in the wormless pine woods. I should think it better than the red rubber things sold as "artificial worms," but trout will not swallow it quite as readily as the plain red worm of commerce. For some small fishes, and for trout under certain conditions, I have a notion that there is something in this scheme of our unknown friend on the lake pier whom Mr. Levings discovered plying his nefarious art. E. HOUGH.

RHODE ISLAND STRIPED BASS.—Sachuest Neck, R. I., Aug. 5.—Since my last notes to you on striped bass fishing around Newport, there have been so many taken that I have not been able to get accurate reports, but can say that fish have been taken of 33, 39, 42, 47 and 59lbs., that I have seen. Of Sachuest I can give a more definite account. Since July 12, 123 fish have been taken up to date at one stand by two rods, a large number of them weighing between 10 and 16lbs.; largest fish weighing 39½lbs., next 32lbs. The next eight largest fish were 28, 27½, 24, 21½, 20, 18, 17½ and 16lbs. One pair was caught of 17lbs., largest fish weighing 12lbs., smallest 5. Reports from all points show that bass have not been known so plenty for years; and in fact one of West Island's oldest boatmen says that they were never so plenty as at present.—W. M. HUGHES.

THE UPPER MAGALLOWAY RIVER, Maine.—Trout fishing just at the present time is a little dull, although several catches we have seen the past week were of fair size. One can easily get all he wants to use, and, at this season, that is considered enough. Deer are unusually plenty all through this region; in some places they have well-worn paths along the banks of the river, and it is almost an every-day occurrence to see two or more feeding on the lily pads in the shallow water. A party camping at Lower Metalluc Pond report good sport and plenty of fish. Several parties are expected on the river on their annual camping pilgrimage the middle of the month.—SEWES.

THOSE who would catch fish must have a supply of proper bait. Mr. A. H. Dirkes, whose advertisement appears in another column, is prepared to furnish all kinds of bait, including white worms and shedder crabs, at all times.—*Adv.*

HABITS OF WALL-EYED PIKE.—Albany, N. Y.—*Editor Forest and Stream:* I was surprised to see in your "Answers to Correspondents" the naming of Lake George pickerel as wall-eyed pike, and as much pleased by the article of Mr. Cheney in relation to Mr. Brown having put some in those waters. More than likely in their ramblings for a place to spawn they have gone down Ticonderoga Creek back to Lake Champlain. These fish run up the rivers before or as soon as the ice is out, and after spawning lie off the river's mouth feeding on and off the sand flats, as the spring rains bring down plenty of worms and probably other matter which they feed on. As soon as the water gets warm they sag off and work along the shores in 10 to 30ft. of water, preferring cobbly bottom; from here they go into very deep water, coming on the reefs to feed, and when the wind blows very hard, or for a day or so after a big blow, you will find them right on top of a reef. I think the wind changes the water over the reefs, making a new current and cooler water, so they come up to feed. They are a bottom fish, and to fish for them successfully one must go to the bottom for them. They are nearly as particular as salmon trout about the water they inhabit, and consequently rank very high as a food fish, being white, solid and extremely free from bones. Mr. Cheney no doubt is thoroughly familiar with the reefs in Lake George, and should he wish I would gladly furnish him with the way we find them in Champlain, and he can soon satisfy himself as to whether they are in Lake George or not. I am not familiar enough with that body of water to know whether there is plenty of food for them in it or not, but from what little I have seen of it I should say no, and think they would be tempted to go back to Lake Champlain.—DEXTER. ["Dexter" has doubtless read our correction of the error in regard to the pickerel. The pike is the pickerel of Lake George. We have the impression, however, that early writers on the fishes of New York include the wall-eyed pike among the species of Lake George. It is probable that "DeKay's Zoölogy of New York gives the range of this fish as understood at the time of his writing, now nearly a half century ago.]

NON-HIBERNATING BLACK BASS.—New London, Conn., July 30.—*Editor Forest and Stream:* Noticing in your Black Bass Number that you credited the small-mouth black bass with going to sleep in the mud in the winter, I would say that in the winter of 1888, while fishing through the ice for pickerel, with minnows for bait, I caught in one day five small-mouth black bass, the largest weighing 5¼lbs., and the smallest 2lbs. and 1oz. I was fishing in a small lake in the eastern part of this State, that had been stocked some ten years previously. The same winter a small-mouth weighing 6lbs. and 11oz. was caught in the same water through the ice while fishing for pickerel. The day I caught the five was a cold, blustering one in January and not by any means "a good fishing day." I must say that these six bass are the only ones I have ever heard of being caught through the ice in this State, but in clear water, with more or less sandy or rocky bottom, it does not seem improbable that "a big catch" might be made with suitable bait. Last winter, which was the most open winter we have ever had in Connecticut, I fished for bass a number of times from a boat, in the same lake, using a number of the best artificial baits and all the natural ones procurable, but did not have even "a run" from a bass, although I caught "slathers" of perch. I found a redibis bass fly "particularly fetching" for the common yellow perch, and the large ones afforded fine sport on a light rod. Whether the five bass I caught that day in '88 were troubled with sleeplessness or whether they were unable to find a bunk to hibernate in, is a question I have never as yet answered. I would like to hear from some of the other "fishers."—NIANTIC.

FISHES DRIVEN ASHORE BY BLUEFISH.—Philadelphia, Aug. 1.—*Editor Forest and Stream:* Noticing your editorial upon the bluefish at Atlantic City, I think proper to drop you a line on the subject. I happened to be on the beach at Atlantic City at the time when the bluefish drove the smaller fish into the surf and upon the beach; the fish so driven were menhaden mostly, with a few weakfish. I saw one young man with five weakfish of about ¾ to 1lb. each in weight. The driving in lasted about four to five hours, and occurred on two days in succession.—R. W. [We are glad to have this additional information about the ravages of the bluefish on the New Jersey coast. The newspapers published just after the occurrence referred to stated that weakfish, or sea trout, were the chief victims of the onslaught, and our authority was very positive as to the fish seen by him. However, it is sufficiently established that bluefish drive every other species of suitable size away from their usual haunts. At this moment one may hear from bays all along the coast as far north as Massachusetts the complaints of fishermen that sea bass, scup, tautog, mackerel and the food fishes generally are remarkably scarce, and they charge this scarcity to the abundance of bluefish. Knowing the strength and ferocity of this fish, we are disposed to believe that it has accomplished the mischief laid to its charge.]

DELAWARE, Pike Co., Pa., Aug. 7.—There is a lull in the black bass fishing at all points near me, from Dingman's to Bushkill. Yesterday we found a rise of 4in. and the water full of floating dirt and confervæ; the temperature of the water was unusually high, and live bait fishing proved very unprofitable. A day or two ago a boy named Campbell caught a few bass with small toads. Pickerel frogs can be had easily, but are not much used. Helgramites, at $2 a hundred, and stone catfish, $2.50, are the successful baits. Few fish of more than 2lbs. are being taken now, although two weeks ago 4 and 5-pounders were common. Young shad are occasionally seen leaping out of water in large numbers.—T. H. B.

FOX LAKE, Ill., Aug. 6.—Dr. R. J. Piper, City Physician of Chicago, and Frank Eiterman, spent Sunday at Howard's, Fox Lake, and caught the largest number of fish caught at the lake this season, securing 125 of the finest collection of fish.—E. C. H.

WEAKFISH AND BLUEFISH are biting well at Perth Amboy, and crabs are large and numerous. Porgies, though abundant, are very small, and bass are scarce as yet.

MAINE BLACK BASS.—North Bridgton, Me., Aug. 9.—Dr. Cheever, of Mattapan, Mass., and Mr. Chas Cobb, of Newton, have been two persistent and successful anglers for black bass. They recently returned from a day's fishing in stream and pond with six fish averaging a little more than 2¼lbs. each. They, together with Mr. Chas. Drost, of Boston, enjoyed some excellent fly-trolling in Long Lake the same week.—J. C. M.

HAVRE DE GRACE NOTES.—Bucknetters have been doing well at this point. From 50 to 200lbs. of rockfish are caught daily by each boat, but hook and line fishing has been poor owing to the high muddy water. White perch fishing has been unusually productive. This is especially the case on the Kent county side of the river. Around St. Jerome's Island fish are very plentiful.—D. W. K.

LAKE CHAMPLAIN BASS.—St. Albans Bay, Vt., Aug. 11.—The bass fishing is better now and for the past four weeks than at any time during the past two years. Attributed to the low water in the Great Back Bay of Lake Champlain. Average depth about 40ft., but low upon reefs and bars. Catches large and very large in size, some catches averaging 3¼lbs. each.—SAMSON.

BLUEFISHING on the Great South Bay, Long Island, has again been most excellent. The average catch last week was from fifty to sixty to a boat, and one boat made a day's high hook record of 300.

Fishculture.

TROUT CULTURE DELUSION.

COLUMBUS, O., Aug. 2.—*Editor Forest and Stream:* I notice in your issue of July 31 the fulmination of Wm. N. Byers, of Colorado. Your readers may some of them recall a communication published by you, from him, in your issue of June 19, in which he endeavored to reply to an article by me in your issue of May 29. To this I replied in your issue of July 10, and I suppose Mr. Byers considers his last fulmination a reply to it. I have to simply request that those readers of FOREST AND STREAM who feel interested in the subject look over the articles of both Mr. Byers and myself, and see if they can find a solitary point made by him in support of the alleged efficacy of artificial trout culture. I have in these communications made several statements, based upon long, careful, systematic experience as a practical fishculturist. Has Mr. Byers in the remotest manner refuted any of these statements? Certainly not, nor can he. Indeed, he has not attempted to do so, but has simply resorted to blackguardism, and of the most rank, personal form. This kind of dust-throwing will deceive no intelligent reader of FOREST AND STREAM. It is the last argument of an ignoramus when driven to the wall. He invariably resorts to personalities, and, as in this case, to petty falsification in both his communications. In his last he says that I stated that "I had never raised a trout." Those who will read my last previous article will find that I said I had never raised a trout for market. This kind of falsification will not help Mr. Byers out of his corner, neither will his blackguard tactics. He has expressed his ability and willingness to point out a large number of streams (fifty or a hundred were the figures volunteered by him), and I very reasonably requested him to name them, as he had volunteered to do; but he utterly fails to do so. Is it not fair to presume that he was not stating the truth when he made the proposition? He also stated that there are a number of people in the vicinity of Denver engaged in artificial trout culture. I requested that he publish a list of their names, because I knew that numerous readers of FOREST AND STREAM would be glad to correspond with them and make investigations. I for one would certainly wish to do so. I have been making these investigations for over twenty years, and for some fifteen years have been receiving information direct from trout culturists themselves that the business was at best a delusion. I must have some 600 communications from those that have tried it, and not one solitary case of success has been reported, beyond the hatching and sale of young fry. Those purchasing the latter have invariably lost the time and money expended in the venture. I have published these facts several times, and I believe on more than one occasion in FOREST AND STREAM. Others have also published the same facts substantially; but very few persons are willing to publish their own failures, even when misled by others. The correct principle would be to do this for the benefit of others.

In his anxiety to be offensibly personal, Mr. Byers refers to the fish ponds several years ago owned by me at Wenonah, N. J. I well know the source from which he draws inspiration in that region of the country, and the reasons which have caused antagonism in that particular quarter for many years past; and were all the facts in connection with that antagonism to be published it would materially increase the circle of my fishcultural friends, and prove to the public that the ever-ready efforts of said party to seize upon every straw which they think might annoy me, does not have as much effect in that direction as would the operations of a healthy Jersey mosquito during the space of fifteen minutes. I am glad of the opportunity to refer to the fishcultural operations in connection with those ponds. At no other private ponds in this country has there ever been so much careful, systematic experimental work conducted as that personally performed by me at that place for at least ten years and until I acquired far more area of water than I was pecuniarily able to own and availed myself of numerous offers for the joint use of other waters and fishcultural establishments fitted up by me. And in this connection I will state for the information of Mr. Byers, who seems to be anxious to know something of my fishcultural experience, that I have fitted up (including remodeling) more fishcultural establishments than any ten men in this country. Large numbers of readers of FOREST AND STREAM are perfectly familiar with these facts and need not be told of them. In this connection some side notes may be of general interest to readers, who will be glad to have Mr. Wm. N. Byers dropped out.

In these many years expose of the trout cultural delusion, numerous comical developments have cropped out. One of them I can appropriately refer to here. Among the numerous publishers for whom I have furnished fishcultural matter during the past fifteen or more years, is one of the largest houses in the country, and which issues three papers of enormous circulation, and in which they maintain departments for the answer of questions of general interest to various classes of their regular readers. Thus, they have a law department in charge of a competent lawyer, a veterinary department in charge of a veterinary surgeon, etc. Some twelve or fifteen years ago, they engaged me to reply to all inquiries in regard to fishculture and to furnish matter generally upon the subject. Some seven or eight years ago, in reply to some letters of inquiry concerning trout culture, I wrote an article in the same vein as that published in FOREST AND STREAM of May 29, and it was published accordingly. The next week I was surprised to see in the same paper a communication of a decidedly personal nature,

which, among other matters, accused me of "having an axe to grind" in connection with carp culture, because I had recommended those scoring failures in trout culture to try carp culture. The week following, an editorial in the paper apologized for the personal communication, saying it was received and published during the absence of the editor-in-chief from the city. And they also said, in substance, that I was generally acknowledged to be one of the best known, reliable authorities upon the subject, that I had previously expressed the same views in connection with the matter in those columns, and without the least reference to carp. And further, that I had put thousands of readers on their guard and saved them from immense loss which would have followed their embracing the delusion. A few weeks later I was in the city of the publications named and called at the office of the papers, where I learned that the writer who had assailed me (over a *nom de plume*) was owner of a costly trout cultural establishment which he was trying to unload on some untutored lamb, and the very week that my article appeared had sent an advertisement of the same to the same paper, and it chanced to appear in the same issue. Another comical feature of the case was the fact that my article was in part a reply to an inquiry from a prospective customer for the trout cultural establishment in question, a fact which I was at the time in blissful ignorance of. Thus it will be seen that the fellow who had accused me of having an axe to grind, was himself the possessor of the dull axe.

The editor of FOREST AND STREAM will recall the fact of having taken me in hand editorially, some eight years ago, for statements which it was alleged that I had made in addresses before the State Boards of Agriculture and the Legislatures of New Jersey and Pennsylvania. The truth was, that I had materially disturbed the arrangements of a certain ring which was trying to secure large appropriations for so-called fishculture in those States, and the ring were endeavoring to reach me through FOREST AND STREAM, which promptly made the *amende honorable*.

I have at other times been assailed in its columns and in the columns of other papers for which I write upon this subject, and in every instance it has been glaringly apparent that the parties assailing me had an ax to grind or had been disturbed in some "job," generally to get hold of public money for the benefit of some association with which they were connected.

One more matter in connection with my fishcultural operations in New Jersey. It was in a region where there was a strange commingling of intelligence and dense ignorance in the same individuals, where agricultural operations were carried on in accordance with certain phases of the moon, and where any undertaking out of the usual order was never undertaken on a Friday! Of course fishculture was ridiculed to the utmost extent, and depredations against my ponds and apparatus were continually being committed, and I was several times subjected to severe loss in consequence. I have been informed by several old fishculturists in other States that they, too, had been subjected to similar treatment in their respective regions, but not to the extent that I had been in New Jersey. I well know that I have had no more failures in fishculture than all others have in proportion to the extent of their operations.

But much of this matter has been published in FOREST AND STREAM years ago, and is only submitted now for the benefit of new readers.

In conclusion, I think that others as well as myself will be pleased to know of a dozen persons now engaged in artificial trout culture, unless directly or indirectly backed with public money; and it is well known that from fifteen to twenty years ago hundreds were so engaged in several States containing trout waters. The sequel must be apparent to any man of common perception.

I must not omit to say that there are numerous streams in several different States where trout can be raised and stocks materially increased, and without any artificial propagation; and it is being done to some extent, and will be extensively practiced when fraud and sham in connection with such matters shall be more generally stamped out and common-sense methods adopted, with deaf ears to jobbery and humbug. When conducted with the same degree of system, intelligence and honesty as agriculture now is, fishculture will become an important and honorable industry in this country. The time is slowly but surely coming when this desideratum will be attained here.

MILTON P. PEIRCE.

COLORADO TROUT CULTURE.—Col. R. E. Goodell and Dr. John Law, of Leadville, Colorado, have bought the Evergreen Lakes property—a well-known summer resort, six miles west of Leadville—and are planning to improve it, and make it one of the most attractive places in the State. Dr. Law is one of the leading fishculturists of the West, and has been remarkably successfully in propagating different kinds of trout. He is entitled to the credit of having stocked Evergreen Lakes with Eastern brook trout, with which species these waters are now teeming. Adjoining the lakes is the great reservation of the United States trout-breeding station, which, when completed will be the largest of its kind in the world, and in a region peculiarly adapted for its purpose. Colorado has within its borders over 6,000 miles of beautiful trout streams, besides numberless lakes in which the native black-spotted species occur. Leadville is rapidly becoming a favorite summer resort of the Rocky Mountain region, and persons visiting Colorado will be delighted with this cloud city.

BLACK BASS CULTURE.—Herr Max von dem Borne, proprietor of the fishcultural establishment at Berneuchen, Germany, has met with very gratifying success in his attempts to artificially hatch out black bass. Under date of July 9 (1890), he writes the U. S. Commissioner of Fish and Fisheries, that they have succeeded in planting 50,000 fry. These have been placed in ponds, lakes and rivers, where there are no other fish. Herr von dem Borne also says that they expect to obtain many thousands of rock bass fry. He is very happy to find that the rainbow trout is a very great success in carp ponds, in water too warm for *Salmo fontinalis* and brown trout.

J. B. Allen, a Block Island fisherman, had an experience with a swordfish a few days ago that he will not soon forget. He had harpooned a splendid specimen, and was about to throw overboard the float, when he became entangled in the rope and was pulled into the sea. The great fish proceeded to lash the sea to foam and to pull the man out to sea. He in the meantime made a frantic effort to uncoil himself from the rope, while his companions in the boat, startled at his sorry plight, could only follow his course. His death by drowning seemed inevitable, but Allen soon released himself, appeared above the surface of the waves and floated. He was soon pulled on board in a much exhausted condition. The swordfish was the largest of the season and weighed 500lbs.—*Springfield Republican.*

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 1 to 5.—First Annual Dog Show of the Youngstown Kennel Club, at Youngstown, O. S. D. L. Jackson, Sec'y.

Sept. 2 to 5.—Dog Show of the Wilmington Fair Association, at Wilmington, Del. F. R. Carswell, Supt., 101 West Sixth street.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. C. H. Corbett, Secretary.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 19.—Second Annual International Dog Show of the Industrial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury, Conn. B. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1658.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

Sept. 9.—Field Trials of the Manitoba Field Trials Club. Thos. Johnson, Winnipeg, Secretary.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 3.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

DOGS OF THE DAY.

I AM asked by a number of the spaniel fancy to make a correction, which I willingly do, as it is not my desire to be misleading in anything I write. In quoting from the circular issued by the Rideau Kennels of Ottawa, concerning the dogs Obo, Jr., and Bob Obo, I stated that at the Newark, N.J., show Obo, Jr., beat Obo II. and Young Obo for the stud dog prize. I am now advised that Obo II. was neither entered nor shown at that show, while Young Obo was then an untried stud dog. The stud dog prize on that occasion was for the dog with *one* of his get, and Black Pete was the one that was shown with Obo, Jr. A good young dog was Black Pete then, but there were at the same show the get of Obo II., champion Helen, Shina, Woodstock Nora, Little Red Rover and others. The correspondent who corrects me is rather of the opinion that, as a spaniel man, I should have known of this. Well, it is a long time ago now, I have lots of other things to think about, and one must give some credence to printed statements of stud dog owners. I don't think the owner of Obo, Jr., meant publishing or claiming what was not correct about his dog, for the reason that he sent the circular to me, and I am a little prone to point out other people's mistakes. I feel assured, therefore, that he will see that the incorrect claim is struck out.

Some of Mr. Frank Dole's new bull-terriers have already arrived at the New Haven Kennels, and their owner writes in his quiet way "they are all very good ones." The lot to hand consists of Grove Duchess, by champion Baron out of Dutch Rose II., a 40lb. bitch; Young Kit (litter sister to White Wonder), by Gully the Great out of Kit, weight 30lbs.; Prince Bendigo, by Bendigo out of Gipsey, 35lbs.; White Prince, by Spotless Prince out of Rose, 30lbs.; Sailor, by Spring out of Rose, 21lbs. That is a pretty good consignment, and there are more to come yet—a black and tan that will, if what is claimed proves true, make Dr. Foote's new purchase put on its best looks to win. Dr. Foote is too good a fancier and too much a lover of the breed to object to strong competition. Then there will soon be on the way the bull-terrier bitch Miss Gladstone, by Dutch out of champion Maggie May—that is a bit of prepotent breeding—and an Irish terrier. Regarding those yet to come Mr. Dole, with recollections of past disappointments in his mind, sagely remarks, "You know how it is, things (that is, dogs) are hardly up to what we generally expect of them."

Mr. Marriner, of Milwaukee, who, I believe, was the first Western exhibitor to take hold of bull-terriers and who has a nice lot of dogs now at his Milwaukee kennels, is now in England. He turned up at the Tunbridge Wells show and got quite a pretty notice in the *Stock-Keeper*. Evidently Mr. Marriner knows how to stroke a cat, for the editor says, "The English doggy men seemed to have taken a great liking to Mr. Marriner, and no wonder, for a better gentleman we never met. He, on his part, was profuse in his admiration of all things English and particularly of doggy men."

"That reminds me." All will remember about the deaf bull-terrier at Boston and the extraordinary shotgun experiments of the gentlemen who couldn't tell a dried blotch mark from mange. It will also be remembered that the veterinary authority, as he believes himself to be, brought Mr. Porter up with a round turn regarding concussion and sound waves. I said at the time that a person with perfect hearing had no conception of how nature attempted to supply the deficiency in persons defective in that respect, and I had a singular illustration of this a short time ago, which proves conclusively to my mind that the Boston vet. has yet much to learn on the subject upon which he wrote so glibly.

I was sitting on a porch with a lady and gentleman, about 160 to 200yds. from where some trap-shooters were practicing at targets. The shooting was in our direction, but the men were hid from view by a rise of the ground and also by the coachhouse, distant about 60yds. from the house. The porch was of course hollow beneath, but the soil reached up to the lapboard which skirted it, and which at the side toward the shooters was one step high, I think, but it might be two. However, it was all boarded up tight. At every shot fired I felt a distinct tremulous motion communicated from the porch floor to the soles of my feet. It was so plainly felt that it made me think of the Boston experiment, and I asked the lady and gentleman whether they could detect any such feeling as I did. They waited for more shots to be fired before giving a positive answer, and both agreed that they could feel nothing. Here was a case in the open air with the firing done at least 160yds. from where I sat, while the Boston experiment was done in adjoining rooms with the connecting door open. I don't wonder that the deaf dog got up when the explosion took place; but he didn't hear it all the same.

In a letter from England I am told of a purchase recently made by Mr. A. Russell Crowell. It is of the two-years-old St. Bernard dog Victory, by Lysander out of Lady Pauline. Victory is described as 33½in. standard, good color, broad, even blaze, wide collar and excellent quality of coat. He was shown twice as a puppy and got vhc. each time, but has not been exhibited since.

Mr. Hall, of Philadelphia, owner of the St. Bernard Marquis of Stafford, is also in England, and has, I learn, purchased four or five bitches. He was a visitor at Hanley dog show, as was Mr. Crowell, and from a poster sent me it is evident some of "the boys" played a joke on the Americans. An election for some local office was about to take place, such elections being held on what we know as the Australian plan. After stating what the election was for and giving other particulars, the poster proceeds to give an illustration of how the voting paper is to be marked. This copy of the imaginary voting paper is made up of three names, the first of which is Mr. Crowell's and the second Mr. Hall's, and the vote mark is placed opposite the latter.

Another visitor at English shows from this side of the Atlantic is Mr. Cornelius Stevenson, of Philadelphia. Mr. Stevenson's fancy runs to Basset hounds and Skye terriers, but he has never had anything very good of the former breed. The probability is, however, that he will purchase something that will place him at the head of the prize lists next year. Bassets are not flourishing in England just now, the classes being poorly filled even at leading shows. They are difficult to rear and there is a lot to breed for before one gets a really good one. When Mr. George R. Krehl gave up the breed, Bassets lost their best friend, for he is what we call a hustler for whatever breed he takes hold of. One of his earliest fancies was Irish terriers, and he took Vero Shaw's tip, "Keep the name before the public," till with the aid of a few other enthusiasts it became thoroughly established. In those days £20 was a tip-top price for a Daredevil, whereas now a good one will run into three figures, and I see my friend Dr. Cary, the secretary of the Irish section of the Irish Terrier Club has just disposed of one for an even £100.

Still another American on pleasure bent to the land of good dogs is Dr. Derby, of the American Mastiff Club. A singular honor is to be paid this gentleman by the Mastiff Club of England, which will, at the Crystal Palace, give a private exhibition of dogs owned by members to enable the visitor to see the good dogs together without having to make special trips about the country. There will be no prizes offered for competition, and the admission will be by invitation. The display will be made toward the close of the present month.

Meersbrook Maiden was beaten at Darlington dog show by Pearl. Mr. Raper judged.

Scottish Prince, the St. Bernard "Namquoit" wrote of as the coming dog, won first at Darlington. "Namquoit" gave his height, which the *Fanciers' Gazette* laughed at. Now "Namquoit" has the laugh, for the *Fanciers' Gazette* reporter says Scottish Prince is as tall as Lord Bute, hitherto claimed to be the tallest St. Bernard ever seen. "When fully developed he will be a monster." Well, I guess, an American's tape is still good enough for us to stand by.

J. W.

WILMINGTON DOG SHOW.

WILMINGTON, Del., Aug. 12.—*Editor Forest and Stream:* All railroads centering in Wilmington, viz.: the Pennsylvania, the Baltimore and Ohio, and the Wilmington and Northern, will carry three dogs free on one ticket.

New York exhibitors can obtain premium lists and entry blanks at the offices of FOREST AND STREAM, 318 Broadway, *Turf, Field and Farm*, 251 Broadway, Percy C. Ohl, 50 Broadway, and the American Kennel Club, 44 Broadway.

Philadelphia exhibitors can obtain premium lists and entry blanks at the offices of *The Fanciers' Journal*, 37 South 3d street, and Fred. P. Kirby, 135 South 8th street.

All exhibitors and visitors to our bench show will have the pleasure of witnessing our races. We have one of the largest trotting, pacing and running race meetings in the country.

Last year our exhibition of horses and cattle was excelled by none in the country.

There will be excursion rates on all railroads and steamboat lines. All railroads run directly to the grounds.

The Adams, United States, and Baltimore and Ohio Express Co. will return dogs free to original shipping point on the usual terms. F. R. CARSWELL, Supt.

COURSING IN OMAHA.—Omaha, Neb., Aug. 5.—*Editor Forest and Stream:* The coursing meet at the Bluffs Park yesterday was a grand success and attracted a large crowd of spectators. The running was most exciting and enthusiasm ran high. Dr. Ayres's fine brindle greyhound made a fine showing, as did Captain Roy's Kell. Hon. John Montgomery's Bouncing Boy, Dr. Bellinger's Faust, J. T. Huffsky's Mercury and others. The next meet here in October will doubtless be a great success, as coursing is better understood now, and there is a clamor for more of it. Dr. George B. Ayres and Clinton Powell have just received from the Wade kennels at Hulton, Pa., a magnificent specimen of the English mastiff, in Edrick. The dog is twenty-one months old, fawn colored, with black ears and marks, weighs 154 pounds, and is a handsome animal every way.—GRIS.

TORONTO SHOW.—The prospects are that the coming International Bench Show of the Industrial Exhibition to be held in Toronto, Sept. 15 to 19, will be the finest show ever held in Canada, both in regard to the quality of the dogs and the entries. The secretary, Mr. C. A. Stone, is kept busy answering correspondence from all over Canada and the United States. Exhibitors will bear in mind that railway arrangements have been made whereby exhibitors may reach Toronto from the lines for one fare for the round trip. The railway and express companies arrangements in regard to the transportation of dogs will be published next week. The entries close Sept. 3, and should be made as soon as possible, to enable the secretary to complete his arrangements.

THE YOUNGSTOWN DOG SHOW.—Youngstown, O., Aug. 11.—*Editor Forest and Stream:* The premium list for the first annual dog show of the Youngstown Kennel Club is ready for delivery. The show will be held on the Mahoning and Shenango Valley Fair Grounds, Sept. 1 to 5. The judge of all classes will be John Davidson, of Monroe, Mich. The show will be under the supervision of Messrs. Wm. F. Bonnell and H. F. Peck. All dogs will be examined by a competent veterinary before going on the bench. The Wells Fargo, Adams and American Express Companies will return all dogs free of charge that are sent over their lines.—S. D. L. JACKSON, Secretary.

A VISIT TO A FAMOUS KENNEL.

A TWELVE hours' ride via Lehigh Valley Railroad, through the most picturesque parts of New Jersey, Pennsylvania and New York—the very Switzerland of America—brings one to that lovely little hamlet, Covert, situated near Seneca Lake, New York. A few days' vacation being allowed me, I accepted the invitation of Mr. C. S. Wixom, of the Hornell-Harmony Kennels, to visit him, and a right royal time I did have. We were met on the arrival of the train by our genial host and hostess, and riding behind a spanking pair of horses were soon at their house, which rests on the brow of a great hill and from whose broad piazza the placid waters of that lovely Seneca Lake are in full view, seen over the tops of tall trees among whose friendly branches many a partridge is wont to light, flushed by the busy little cockers so much in use among the hills. Here, too, among these hills the woodcock seeks his cover, while the rabbit, chased by six or eight couples of beagles, giving forth their merry music as they hunt, finds ways to elude his pursuers, and so save his soft skin.

No man is a sportsman who does not first want a cursory glance at each new and noted dog he may chance to know of, even though his dinner may be in readiness; so not waiting while our hostess was overseeing the repast that was being prepared for us, hungry though we were, we gave one little peep into each stall in the kennels, one look into each of the yards, so as not to lose sight of a single beauty, and then once more sought the shelter of the hospitable roof, where the table, laden with the sweetest and freshest of viands, tempted us to "eat hearty." The glorious air about this lovely home, high on the hills and far away from all sound of horses' hoofs o'er flinty pavements, whetted our appetites till it seemed as if the end would never be, which comment on our part only caused increased merriment and pleasure to our entertainers.

All good things must have an end, and so did this our first meal at Covert. The chairs were pushed back, the cigar box went the rounds and next we were all found on the front piazza, feasting our eyes upon the glorious landscape that was laid out before us, breathing the life-giving air and feeling a life here away from the turmoil and worry of the hot city would be doubly worth the living. The ashes having repeatedly fallen from our cigars gave us warning their usefulness or soothing influence had gone. So up we arose as one, and would you believe it, though not one word having been said as to where we should go, like a company of soldiers we marched straight to the kennels.

The first thing that struck us most forcibly upon entering the kennels was the extreme cleanliness that was everywhere to be observed. The floors were perfectly clean, the stalls were whitewashed, sides, bottoms and tops, not a cobweb nor little pile of dust to be seen anywhere. The dogs were all fat, sleek and healthy, and from one end to the other of the yard or kennel not a single sickly or moping one was to be seen, showing that cleanliness and good substantial food keep them as they should be. The food is varied, and here again we see the good results of it. In a house by itself, known as the cook house, we find a large stove filled to its utmost capacity with wood, where a fire is kept burning all day. Oatmeal mixed with cornmeal or wheat is "set" each night with yeast, and the following day is put in pans and thoroughly baked. While the baking is going on a great wash-boiler is filled with scraps from the butcher's, consisting of sheep and cows' heads, hearts, knuckles, livers, etc. These are all boiled together for hours till the meat falls from the bones, when the boiler is taken off and the stew allowed to cool. At feeding time the bread is broken up in small pieces and five large pails are filled with it. Over this the rich soup is poured, and when served to the dogs it is wonderful to see the relish with which it is devoured by them. The next day milk is served with the bread instead of the soup, and this too disappears with a rapidity that would astonish some of our friends who feed their favorites on cake and dainties. Three times each day the puppies are fed, while the grown dogs get their meal at 5 P. M. regularly. The way they romp and tear about, play and run after feeding would do your heart good to see. Then one by one they glide off to their respective benches, and by 6 o'clock they are all at rest, and quiet reigns supreme.

The kennels are the most perfectly arranged and convenient that I ever saw. The beagles occupy the first room, the greyhound puppies the second, the Russians the third, while the full-grown greyhounds control the fourth. Each room is separated from the other by a high boarding, above which to the ceiling, wire screens do service. The beagles have a playground about the size of two of our city lots, the puppies each another such, while the greyhounds have still greater latitude. In the center is the hospital, a good-sized room provided with a stove, medicine chest, surgical instruments, a comfortable lounge for the watcher, and high raised bunks for the patients. In completeness and convenience I never saw a kennel to equal it, and I have seen many.

Though there is evidently plenty of yard and kennel room for all the dogs (some 60 in number), Mr. Wixom is determined to give them still larger quarters, and is now building another kennel (40x20x10) some 50yds. in the rear of the ones just described, and in the very center of an orchard where the dogs will have good shade in summer and be protected from northern winds in winter. It will contain eight stalls only, each opening out into a large yard, and will be used for bitches during service or in whelp and puppies.

We first inspected the beagles, and here we found many a good one, both dog and bitch. The pride of them all is that lovely specimen champion Royal Krueger, the very cock of the walk, not only on account of his bench performances, but of his field work as well. Of good size, with best of legs, feet, back, coat, a head as near perfect as a dog's can be, we find this great stud dog and prize winner ruling the roost. Then over in the corner sits champion Una picking a bone, while champion Myrtle looks on complacently and wishes she, too, had one. Joan W. and Baby W. are trying conclusions at a race round the yard, while Whisker, that good young dog, feels now that he is standing at the stud, entirely too elated to join them. That perfect-headed little Ava sits in her nest quietly acting the rôle of mother to her little three-weeks-old puppies, while Elf, that recent valuable acquisition, looks up as if to say "me too, by and by." The sight of this kennel of beagles is worth traveling miles to see, and one would travel still further to see them at full cry on a lead fox's scent. Three times during my visit were we treated to a chase. The gradual slope from the house in front gave us a grand view, and as the dew was falling the fox was unboxed and over the fields he was lead for more than half an hour. Then our host "let slip the dogs of war," and away went those little chaps, keen-scented, never losing the track for more than a second without returning to it or finding it, which fact was heralded by a wild burst of merry music. On several occasions so closely did they work that the whole six couples could have been covered with a blanket. Two tame foxes are kept by the kennel man, and are used to exercise the beagles with or occasionally run the foxhounds.

In the breeding kennels we find Harmony, the beautiful greyhound bitch, and worthy daughter of champion Doubleshot—champion Clio, which Mr. H. W. Huntington holds the credit of having bred. She is undoubtedly the best American-bred bitch ever shown, and her long list of winnings in good company endorse our opinion, while her winning or dividing third and fourth prizes at the Eastern Coursing Club's meet, proves her to be most excellent in the field. She is at present nursing a litter of ten as fine puppies as one could wish to see, while champion Memnon, that grand old dog, looks quietly on and declares his usefulness is not yet gone. In the next nest we find the pointer Natation (Nick of Naso—Temptation) obeying the motherly instincts and nursing her five puppies; great big fellows they are too, strong and healthy, pure white, save that some have orange or liver markings.

Hazelhurst, that divided third and fourth prizes with Harmony, also bred by Mr. Huntington, is a worthy son of champion Balkis—champion Cassandra. He has greatly improved since last we saw him, and when another coursing meet is held rest assured he will be heard from. Fannie M. is the only lady of this kennel, and she will soon take Harmony's bench, as she is due shortly to whelp to champion Memnon. Memnon, though now retired after a long and eminently successful career, looks and acts as young as the youngest. His eyes are as bright as a kitten's, and as watchful and restless as ever. The constitution of the dog is marvelous and, were it but for his teeth, he would take a deal of beating now. He is a hale and hearty old man and retains much of his youthful vigor.

The spaniel champion, Hornell Ruby, roams at large among all the dogs, proud of having been the mother of the lovely Velda. Bessie W., a collie of no mean quality and coat, basks in the sun, while not attending to the sheep and cattle, and soon will be seeking her nest where she may nurse her family of little ones. She has a most excellent coat, good legs and feet, and intelligence that is almost human. Little Royal Krueger, a three-months-old son of Royal Krueger, is beyond all question the finest beagle pup I ever saw. His markings are perfect, his head very good, his spread of ears great, while his body and legs are all that could be desired in any dog. Mr. Wixom has repeatedly refused $50 for him, and he came near being sold for $75, at which price he is held. He will make some of our beagle judges hustle a good deal to find a better when he enters the show ring.

For miles and miles around the country, people flock to see the much-talked-of Russian greyhounds that now adorn this kennel. They are now the very center of attraction, and the universal admiration expressed I fear would make them very haughty were they able to understand our language. They have greatly improved since their trip of three weeks was accomplished, and are as lively as crickets while taking on flesh very rapidly. Between Vladimir and Irma it is now a very close thing; they are both pure white, with deep orange markings. The entire importation is possessed of first-class feet and legs, great bone, good strong pasterns, coats that would set a setter man all ablaze, while their heads are simply beautiful, their eyes being dark hazel and as soft and mellow as a Jersey's. If this breed of dogs is what it is said to be by the Russians, it is beyond all doubt due to the sort of treatment the Russians are said to give to their subjects or servants. A dog with such eyes as these have cannot be otherwise than gentle and affectionate; and, though they were very timid when they arrived, they now are fearless, full of life, and overflowing with affection and gentle ways, that prove beyond doubt the falsity of their traducers' statements.

I know little of this breed of dogs excepting from what I have read. Taking the present standard of the English greyhound in matter of conformation, their uses being nearly identical, it seems to me it would puzzle a good judge to decide which is the better, Vladimir or Irma. They are so near alike that one has to look twice to decide which is which. The dog's head is simply phenomenal, being 10¼in. from tip of nose to occiput, while Irma's measures 9¾. The dog, again, stands 27½in. at shoulder (standard measure), while the bitch is only 1in. lower. Judging from their frames it is very doubtful if either will reach maturity or be fully filled out before it is two years old. As they are now but five months old and measure 27½in., it is more than likely their matured height will be something like 36in. They all had a very bad dose of distemper before leaving England, which no doubt retarded somewhat their growth. As to coats, from all I have heard it seems to me theirs is about perfect. The hair is long (some of Vladimir's measuring 4¼in.), soft, and as flat and straight as flax, in marked contrast to some that I have seen, which was as curly as a water spaniel's.

Every attention is being given these dogs, and when they make their début I predict for them a most generous reception, and later on a most successful career. That they will become universal favorites is an assured fact beyond all question. Their symmetrical heads and expressive eyes, their graceful outlines and lovely soft coats will gain for them numberless friends. When last I saw them they were romping in their yards. Now I saw a white streak flash by me, followed by still another; then all of a sudden the two were mingled together and looked like a great ball of white floss rolling about the grass. Their movements are quicker, it seems to me, than of the English greyhounds, and their strength of bone and powerful jaws are sufficient to make any wolf fly for his life on their approach. These puppies are of the much-talked-of Krilutt-Elsie litter, and of which so much has been written. They are a great credit to both sire and dam; and as Krilutt's stud fee has been doubled, it will readily be seen how valuable a dog he must be at the stud, while on the bench his record is too well known to be disputed. He is to-day acknowledged to be the best Russian in England, and the owner of Elsie was very wise in his selection of sire. Two more of this litter are soon to leave England for America in company with Elsie, who remained there in order to be again bred to Krilutt. As I am a firm believer that when on first being bred a bitch shows she nicks well with a stud dog, she should again be bred to the same dog, and every subsequent litter will be better, I shall look forward to this second litter with much pleasure and hope to see my belief confirmed. HIGHLAND.

THE COLLIE OR SHEEP DOG.

MR. RAWDON LEE has published a monograph of the collie that is the most complete history of the breed extant. Mr. Lee is a very pleasant writer and the pages of the book are replete with interest, not only to fanciers, but to the general reader as well. The history of the breed is concisely written and contains all that is important from earliest time up to the present day. The writer takes no stock in the tradition that the black and tan collie obtained his color through a cross with the Gordon setter, and thus treats the matter: * * * * "There was a nonsensical idea that the black and tan sheep dogs obtained their color through crossing with the Gordon setter. There is no doubt the contrary was the case and that the Gordon setter had his coat and sensibility improved by being crossed with the Highland sheep dog."

Mr. Lee is positive in the belief that bench shows have been detrimental to the collie, as far as their working qualities are concerned, and treats the subject as follows:

"The shepherd's dog, when properly trained, is as good in his work now as at any previous period of his history; better, perhaps. It must not, however, be taken for granted that the collie, as he is now seen, obtaining valuable prizes at our canine exhibitions, is the exact counterpart of the dog met with on the sheep farms, and without whom the shepherd could not do his work. There are distinctions between the two. The former has been kept for his beauty alone, and most likely for generations his ancestors had never known what it was to assist the farmer in his duties. So his descendants gradually drop out of the work, and when they come to be trained are not nearly so docile and intelligent as they would have been had all their progenitors been good workers.

"A young pointer or setter will often intuitively stand game on the very first occasion he may scent it, a faculty which has been handed down to him from generation to generation from dogs that have always been trained to do the same thing. A retriever puppy for a similar reason is never happy unless he is carrying something in his mouth. Neglect to keep up this seeming intuition in the pointer, setter or retriever, and see what the result will be in the course of a few generations. The puppy will no longer point or draw upon game naturally, and his education will be ten times as difficult to consummate as it would have been had the old conditions been continued.

"Thus it is with the modern exhibition-bred collie as compared with the one that has been kept and reared for work alone, and produced from parents whose capabilities and excellencies in this respect have been of the highest. We occasionally see at the various trials with sheep held in different parts of the country, a rather handsome dog that is a fairly good worker, but such is the exception, and I am sorry to write that, so far as shepherding is concerned with the collie, the handsomest dogs are usually the worst workers, at any rate in public. Some exhibitors will tell you how splendidly trained to sheep or cattle their prize winners are, but if they be so such performances do not appear in public. Attendances for many years at some of the principal trials have led me to form this opinion. Indeed, on occasions, the duty has devolved upon me of awarding a special prize for the handsomest dog that has worked his sheep to the satisfaction of the judges, and such prizes, excepting in one or two instances that may be alluded to later on, have always gone to dogs that could not have obtained more than a hc. card at any dog show in the kingdom. There are cases where good-looking dogs, bred from prize winners on the bench, have been entered on the off chance of the judges allowing them to compete for the 'beauty prize,' irrespective of their work in the field; but the latter is generally so bad that the exhibition-bred animal is not allowed to enter the ring at the end of the day when this special honor is to be awarded.

"Of course I do not mean to infer that the handsome prize winner will not work at all, my contention merely being that he cannot perform his duty so well through lack of opportunity in his progenitors, as the more common-place creature, whose ancestors have spent all their lives among the flocks. A properly bred collie will take to his work as naturally as a sporting dog will take to his; and I very much regret that the Collie Club has not done as much for the working capacity of its idol as it has toward beautifying and improving his appearance. Some of the very best working shepherd dogs I have ever seen have been small light-limbed animals, active and fleet, owning intelligent faces, and with such shirt wiry coats as to lead one to suspect a not very remote cross of the terrier, which the farmer has kept to assist in destroying the rats, or to help the huntsman when he brings his scratch hounds round to make a raid upon the foxes. At the trials the smooth-coated dogs as a rule more nearly approach show bench form than do their rough-jacketed cousins, for speed and endurance are required rather than long woolly coats, huge 'frills', and 'brushes' big enough to disgrace the best that ever hung behind the boldest of bold reynards."

Mr. Lee devotes a chapter each to the smooth-coated and bobtailed sheep dog, his remarks upon the latter variety being especially interesting.

Sheep dog trials are earnestly advocated by the author, and the chapter devoted to them contains their complete history, together with the rules governing them. There is also a chapter on the collie clubs, with standard and scale of points; and an excellent chapter on management, which alone is worth more than the price of the book to the breeder.

THE A. K. C. AFFAIRS.

Editor Forest and Stream:

In reply to Mr. Watson's two letters, which have appeared in FOREST AND STREAM, regarding the finances of the A. K. C., permit me to say that while there is nothing contained in any of his letters since he has become the acknowledged champion of the clique's methods in managing the A. K. C. affairs, as his statements, or conclusions which he claims to have arrived at, are in no way supported by the known facts. The dog men of this country to-day, notwithstanding the fact that figures have been thrown at us from Philadelphia, Boston and perhaps Rahway, have no more knowledge of the true condition of the management of the affairs of the club than they had months ago.

Mr. Watson has now become the favorite at 44 Broadway. He goes there and from the private account book which was kept by Mr. I-do-not-know-how-much-I-got Lewis, he obtains figures and throws them at us from Philadelphia, through the FOREST AND STREAM.

What the dog men have been expecting, and what they are entitled to as a matter of right, are the items of receipts and expenditures of the club for the year ending Dec. 31, 1888. There is no disguising the fact that the annual report made by Mr. Vredenburgh for that year is a faked one, while even Mr. Cugle would be fully entitled to call it faked, for upon my life it is the worst piece of cooking I have ever come across, and Mr. Vredenburgh must take Carlyle's estimate of dog men, and believe they are mostly fools, all fools, apparently, when he asks us to accept his statement as correct. Now, I don't want Mr. Watson to accuse me of plagiarism, so I will remind him of this fact, that if he will look at the file of the *Sporting Life* for 1888 he will find that a correspondent who signed himself "Porcupine," used about this same language when Mr. Vredenburgh made his annual report for 1887, and in that report Mr. Vredenburgh gave a tabulated statement showing the entire receipts and the sources whence they came, as well as a tabulated statement of the expenses; he then certified that it was correct. Will the present Mr. Watson, or the late Mr. "Porcupine," now explain to us why he used that language at that time about a statement that covered the entire period and was so full and so satisfactory, and now at this time attempts to bolster up an annual report which simply says "balance on hand, $1,228.28?"

It does not make any difference to me whose money was used in the juggle—whether it was Mr. Belmont's, according to Mr. Vredenburgh's statement, or Mr. Lewis's money, according to Mr. Watson and Dr. Perry. I said long ago in a letter, and have repeatedly said so, that these accounts were juggled, and that Mr. Vredenburgh would never over his own signature give us the items of receipts and expenditures for the year 1888.

Mr. Watson invited me to go with him to the A. K. C. office and I might ask him questions and he would answer them from the books. Mr. Vredenburgh is supposed to be the treasurer of the club, and for his services the dog men of this country pay him $1,500 a year; and every man who is a member of a local club, or a breeder who sends his money to 44 Broadway, is entitled to know what is done by the management with the funds they send and the condition of the club; and it is the duty of this $1,500 a year secretary-treasurer to make such a report that a man of ordinary intelligence may understand it.

All the writing that Mr. Watson can do in favor of these faked reports and all the writing that I can do against these faked reports will never settle in the minds of the breeders the condition of the club's affairs. A large majority of the breeders have no confidence in the present management, and if the officials cannot keep their books correctly and even go so far as to fake the minutes of their proceedings, can the breeders hope to have any confidence in pedigrees of our stock which come from such a course?

Will Mr. Vredenburgh kindly give us the figures going to make up the sum $1228.28; and then certify that it is correct?

JERSEY CITY, N. J., Aug. 10. PESHALL.

DOG TALK.

AN American said to me the other day that the English would soon be buying St. Bernards of the Americans. I do not know of anything that would please me more than to see such a state of things come to pass. But it will be many a long day before it will. To be sure we have Watch, Hesper, Alton and Prince Regent, and a lot of other good ones, but where are the bitches of equal quality? What are Saffron, Miranda, Lady Wellington, Manon, or Blodwin, in comparison to the dogs I have mentioned? Are they as good as bitches as the dogs are as dogs? Far from it! And until we get bitches of equal quality and bone we cannot expect to breed "cracks." Many breeders will say, "How about Sir Bedivere?" True, he comes from a very ordinary bitch, but she possesses plenty of size and bone and is well bred. And, furthermore, Sir Bedivere has yet to prove himself of any great value to the breed he represents. A few bitches such as champion La Mascotte, champion Plevna, Bessie II., champion Grace, Sabrina, Florentine, or Sans Peur, would revolutionize the breed in America. We Americans seem to have gathered the idea that all that is necessary is a good dog. Mr. Poag pays $3,700 for Watch, Mr. Moore upward of $3,000 for Alton, and Mr. Sears $2,000 for Hesper, and they think they have made a good investment. But where is the man with "sand" enough to pay $1,000 for a bitch of equal quality? Not one in all America. In consequence, until some nick in breeding produces a good one we must purchase all our good ones from the old country. Monte Rosa was a rare good dog. Mr. Moore has some very promising puppies. But where are the American-bred "clinkers" in rough-coats I mean. I can find twenty here in England to beat our best, and in bitches I don't know of a single one. And I don't expect to see or hear of any from the bitches now in America, barring about six, namely, Saffron, Recluse, Zenith, Blodwin, Lady Wellington and Manon. And to these six bitches we have about the same number of really superior dogs. And the best of the six will not hold a candle to champion Plevna, champion Peggotty, Alta Bella, and many another. These remarks apply not only to St. Bernards, but to English setters and many another breed. I hope the time is not far distant when I shall read of the importation of three good bitches to every dog.

Mr. E. H. Moore's recent purchase, the rough-coated St. Bernard bitch Lady Livingstone (champion Hesper—Lady Abbess), leaves for her future home on Saturday, Aug. 2, via Liverpool on the steamship Bostonian. Promised in a former note to give a full description of her. She was whelped June 27, 1889. She has a grand skull and great depth of muzzle for her age, a good even blaze, dense shadings and great character; ears a bit large and not quite dark enough; good in eye, orange body, with broad perfect white collar; good coat of good color. She stands about 31½in. at shoulder, and will weigh in condition 160lbs. She has won first in novice, and first and cup in puppy classes at Leeds show, the only time shown. I consider her one of the most promising young bitches that ever crossed the Atlantic.

Those that read my comments on Mr. S. W. Smith's young dog Scottish Prince will see that I was not far amiss. At the Darlington show this week he won first, with Aristocrat second and Lord Bute third; not bad for the first time out, with his Lady Floris II. first in bitches.

The Darlington show held last week is the largest one day show in England, numbering this year 840 entries. Fancy a show of that number of dogs, with the judges starting in at 10 A. M., and the dogs on their way home at 5 P. M. on the same day. The dogs are benched under tents, with partitions between only the cross ones; plenty of straw is provided. The judging is done in the open air. The show is not only noticeable for quantity but quality as well, and is classed as a two point show. Newfoundlands were awarded twelve prizes, headed by ch. Courtier; enough to make any American blush.

Dr. H. T. Foote's Meersbrook Maiden won second in the challenge class at Darlington. The comments read "easily beaten by Pearl."

One of the features of the Darlington show was the sheep dog trials. The winner corraled her sheep in 6½ minutes, the second best in 7½ minutes, and the third in 14½ minutes. It is, indeed, a pity that we cannot have similar trials in the States. Though I would like to see some of the winners with a slight resemblance to a bench dog. NAMQUOIT.

HENLEY, Eng.

DETROIT DOG SHOW.—Detroit, Mich., Aug. 9.—*Editor Forest and Stream:* Through the liberality of the Detroit Exposition Association and the kindness of many of our citizens we are prepared to announce that the following kennel prizes will be offered in cash or its equivalent at the Michigan Kennel Club's show, beginning Sept. 2: For the largest entry of sporting dogs owned by one man, $25; non-sporting the same; $25 each for the best kennel of four mastiffs, rough St. Bernards, smooth St. Bernards, English setters, Irish setters, Gordon setters, pointers, great Danes, deerhounds, greyhounds, Siberian wolfhounds, bulldogs, bull-terriers, Skye terriers, best pack of six English foxhounds and best pack of six American foxhounds. $15 each for the best kennel of four bloodhounds, Chesapeake Bay dogs, Irish water spaniels, cocker spaniels, poodles, beagles, black and tan terriers (over 7lbs.), pugs, Italian greyhounds, collies, Yorkshire terriers and best pack of six shaggy foxhounds. Also, the Pointer Club of America offers $25 cash for the best pair of pointers, dog and bitch, owned by one exhibitor. Also, the St. Bernard Club of America offers six medals as heretofore advertised. Several other nice specials have been tenderedour club by gentlemen interested in dogs, and these offers will be accepted and printed in our catalogue. The prospects for a big show are very flattering, and we are prepared to accommodate a large entry.—M. V. B. SAUNDERS, Sec'y.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Highland Yorks. By H. W. Huntington, Brooklyn, N. Y., for black greyhound dog, whelped April 21, 1890, by champion Balkis (Clyto—Primrose) out of champion Cassandra (Debret—Dead Secret).

Highland Clan. By H. W. Huntington, Brooklyn, N. Y., for black and red brindle and white greyhound dog, whelped April 21, 1890, by champion Balkis (Clyto—Primrose) out of champion Cassandra (Debret—Dead Secret).

Highland Abbe. By H. W. Huntington, Brooklyn, N. Y., for black and white markings greyhound bitch, whelped April 21, 1890, by champion Balkis (Clyto—Primrose) out of champion Cassandra (Debret—Dead Secret).

Highland Helen. By H. W. Huntington, Brooklyn, N. Y., for black and white markings greyhound bitch, whelped April 21, 1890, by champion Balkis (Clyto—Primrose) out of champion Cassandra (Debret—Dead Secret).

Highland Fairie. By H. W. Huntington, Brooklyn, N. Y., for black and white markings greyhound bitch, whelped April 21, 1890, by champion Balkis (Clyto—Primrose) out of champion Cassandra (Debret—Dead Secret).

Highland Donald. By H. W. Huntington, Brooklyn, N. Y., for red brindle and white greyhound dog, whelped April 21, 1890, by champion Balkis (Clyto—Primrose) out of champion Cassandra (Debret—Dead Secret).

Lady Monarch. By Nelson McIntosh, Providence, R. I., for orange and white English setter bitch, whelped June 22, 1890, by Roy Monarch (Dashing Monarch—List) out of Blue Jennie (Royal Albert—Blue Nell).

Dad Monarch. By S. B. Allen, Providence, R. I., for blue belton English setter dog, whelped June 22, 1890, by Roy Monarch (Dashing Monarch—List) out of Blue Jennie (Royal Albert—Blue Nell).

Iowa Dash. By H. P. Walker, Boston, Mass., for red Irish setter dog, whelped Jan. 20, 1090, by Claremont Patsy out of Nino.

BRED.

☞ **Prepared Blanks sent free on application.**

Devonshire Countess—David of Dilphos. J. W. M. Cardizn's (Philadelphia, Pa.) pointer bitch Devonshire Countess (Tam—Croxteth Rival Queen) to his David of Dilphos (Dick of Dilphos—Westmoreland Bessie), July 29.

Clarissa—Don III. Connemara Kennels' (Middletown, Conn.) Irish setter bitch Clarissa (Bravo—Leonie) to their Don III. (Elcho, Jr.—Pequot Jess), Aug. 10.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Champion Cassandra. H. W. Huntington's (Brooklyn, N. Y.) greyhound bitch champion Cassaadra (Debret—Dead Secret), April 21, six (three dogs), by his champion Balkis (Clyto—Primrose).

Cad's Pet. Moorefield Kennels' (Colmar, Pa.) English setter bitch Cad's Pet (Moorefield—Cad), July 23, seven (five dogs), by H. Hulman, Jr.'s Gath Mark (Gath—Gem).

Joyce. Rosecroft Kennels' (Birmingham, Conn.) English setter bitch Joyce (Prince Foreman—Passion), July 25, ten (six dogs), by their Don Quixote (Rockingham—Donna).

Currer Bell III. G. G. Davis's (Philadelphia, Pa.) Irish setter bitch Currer Bell III. (Sarsfield, Maud), July 29, thirteen (one dog), by Max Wenzel's champion Tim.

Whisper. M. H. Daly's (Bangor, Me.) Yorkshire terrier bitch Whisper (champion Bradford Harry—Belva), June 14, five (four dogs), by P. H. Coombs's champion Bradford Harry (Crawshaw's Bruce—Beal's Lady).

SALES.

☞ **Prepared Blanks sent free on application.**

Dusky Bob. Silver fawn pug dog, whelped May 13, 1890, by champion Kash out of Nun Nicer, by Eberhart Pug Kennels, Cincinnati, O., to Mrs. Dan Williams, Bismark, Dak.

Dick Roy. Black, white and tan English setter dog, whelped March 26, 1885, by San Roy out of Cora, by Moorefield Kennels, Colmar, Pa., to E. W. Jester, St. George's, Del.

Dad Monarch. Blue belton English setter dog, whelped June 22, 1890, by Roy Monarch out of Blue Jennie, by Nelson McIntosh, Providence, R. I., to Samuel B. Allen, same place.

Roy Monarch—Blue Jennie whelps. English setter dogs, whelped June 22, 1890, by Nelson McIntosh, Providence, R. I.; one black and white to Capt. C. C. Gray, same place; one orange and white to Harry B. Tallman, same place; one blue belton to S. B. Allen, same place, and one lemon and white to M. M. Inman, same place.

DEATHS.

Daisy S. Black, tan and white fox-terrier bitch, whelped Oct. 31, 1889 (Luke—Nora), owned by Learnerd Kennels, Hudson, N. Y.

Learnerd Beulah. White, black and tan fox-terrier bitch, whelped July 7, 1890 (Regent Vox—Daisy S.), owned by Learnerd Kennels, Hudson, N. Y.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspon ients.**

H. M., Brooklyn.—Would you oblige me by informing me through your paper what to do with a dog I have that is sick; he is a hound, 7 years old. His ears are running, his eyes are very sore; he seems to be very costive while on the chain, but seems all right when I take him out for a run; he has a good appetite and always seems hungry. Ans. Give your hound a 5-grain quinine pill night and morning concealed in a morsel of meat; keep the bowels open with syrup of buckthorn in dessertspoonful doses. Sponge the eyes with Pond's extract of witch hazel and sponge the ears with the same.

Rifle and Trap Shooting.

RANGE AND GALLERY.

SAN FRANCISCO.

SAN FRANCISCO, Aug. 3.—To-day the rifle range at Harbor View was crowded all day by the devotees of the hair-trigger. The California, Germania, Gruetli and Eintracht clubs were well represented, and the members entered into the contests with great enthusiasm.

The members of the Germania Club rallied in force, and many close contests were the result. The winners of the medals of the several classes were as follows: Champion class, G. Helm, 414 rings; first class, G. Thieback, 420; second class, F. Attinger, 408; third class, L. Bendell, 376; fourth class, A. Enge, 359. This club also offers medals for the first and last best shots on the target. For the first best shot Messrs. Utschig, Rapp and Kelber tied, having made 23 rings each out of a possible 25. On shooting off for first honors, A. Utschig showed his steady nerve by scoring a center and won first honors with his 25 rings. For the last best shot Herman Heeth scored 25 rings and took the medal. Heeth is now the permanent possessor of this trophy, having been the successful competitor on five occasions.

Captain F. A. Kuhls, the well-known marksman, led the members of the Eintracht Club to the butts yesterday, and some good scores were made as follows: Champion class, F. A. Kuhls, 411 rings; first class, A. Wirtner, 385; second class, O. Thiele, 355; third class, T. Binner, 347. This club also gives a medal for the first and last best shot. The medal for the first best shot was won by F. A. Kuhls, who made 23 out of a possible 25, and the medal for the last was carried off by L. Ritzau, who scored 24 rings.

The shoot of the California Club resulted as follows: Champion class, A. Strecker, 439 rings; first class, F. O. Young, 427; second class, G. Orst, 417; third class, Emil Kehrlein, 391; fourth class, A. Enge, 361. The third class medal was closely contested, Otto Burmeister following up his opponent very closely all the time and closing his score with 392 rings, the same score as the winning man. He was Creedmored, however, on the last shot.

The winners of medals in the Gruetli Club are as follows: First class, G. Orst, 386 rings; second class, E. Luenberger, 338; third class, A. Gehret, 338; fourth class, H. Dietly, 278. This club, although lately organized, numbers some active members and very good shots, and before long will be heard of in the shooting world.

ST. LOUIS, Mo., Aug. 7.—The present tourney of the St. Louis Pistol Club will end with the shoot to be held next Wednesday. At the last shoot Mr. Summerfield quit high, and the medal will be held by him for the coming week. All shooting is at a 12½yd. standard American target. The score:

M Summerfield	9	10	10	7	9	10	7	6	10	10—91
W Bauer	9	7	8	9	10	10	7	9	10	10—89
S V D Perret	9	10	8	9	10	7	9	8	10	7—87
M C Bellmeyer	10	10	9	7	9	8	7	10	9	8—87
S G Dorman	8	10	8	8	8	10	8	10	7	9—86
G Alexander	8	8	8	10	10	7	9	8	10	7—85
H Stussell	10	10	10	8	5	6	7	8	7	10—81
A McBean	10	10	5	10	8	10	6	3	8	10—80
D Barker	8	9	10	7	5	8	8	7	10	8—80
W Hettel	7	7	8	10	7	10	7	6	7	8—77
W Mackwitz	6	9	8	10	6	8	7	8	7	8—77

UNSER FRITZ.

BOSTON, Aug. 9.—The regular weekly shoot of the Massachusetts Rifle Association was held at its range to-day with a good attendance of riflemen. The shooting conditions were good and some fine scores were made in several of the matches. Following are the best scores made to-day; distance 200 yards:

†Record Off-hand Match.

W Charles	83	S O Merville	80	S C Sydney	76
H Severance	80	W Simmons	77	C H Eastman	73
		W G Hussey	77		

*Champion Rest Match.

J Francis	109	S Wilder	108	W Peters	100
		L R Avay	103		

(R) All-Comers' Rest Match.

S Wilder	113	A H Ballard	104	J B Hobbs	95
J Francis	113	W Peters	103	E I Blount	94
J N Eames	108	M T Day	101	A S Hunt	93
W P Thompson	107	S W Carney	99	M R Barter	83
L R Avay	107	A G Stevens	97	A N Mann	82

(R) All-Comers' Off-hand Match.

S O Merville	80	S C Snow	67	A N Mann	63
D R Ball	78	M T Day	66	A G Stevens	71

(R) Pistol Practice Match, 50 yards.

H Severance	93	S T George	88	A G Stevens	83
		W G Hassey	87		

† Only one entry allowed each week.
* Only one entry allowed each shoot day.
(R) Re-entries allowed.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

Secretaries of clubs and managers of tournaments are requested to keep us advised of the dates of their shoots, so that we may give due notice in our column of fixtures.

FIXTURES.

Aug. 12-15.—McDowall Tournament, at Toronto, Can. Held under the auspices of the four gun clubs of Toronto. For programmes address W. McDowall, Manager, 81 Yonge street, Toronto.

Aug. 18-23.—Third Annual Keystone Tournament, at Corry, Pa.

Aug. 26-27.—Live Pigeon Match, at Milford, N. J., given by Mahlon H. Rupell, proprietor Milford House, whom address.

Aug. 26-29.—Twelfth Annual Convention and Tournament of the Central Illinois Sportsmen's Association, at Jerseyville, Ill. Com. R. Hutchinson, Sec'y.

Aug. 26-30.—Grand Inanimate Target Shooting Tournament of the West End Gun Club of Harrisburg, Pa., to be held at Williams Grove, Cumberland county, Pa. For programmes address H. B. Shoop, Secretary, Box 321, Harrisburg, Pa.

Sept. 1-2.—Hackettstown, N. J., Gun Club Shoot, Labor Day. Sept. 1, at targets; Sept. 2 at live birds. For programme address E. Richter, Sec'y.

Sept. 3-4.—Beeville, Tex., Gun Club Tournament. T. J. Skaggs, Secretary.

Sept. 3-4.—Tournament of the Springfield Shooting Club, Springfield, Mass. J. T. Herrick, Sec'y.

Sept. 4-5.—White Plains, N. Y., Gun Club Tournament at Bluerocks. C. P. Rowley, Sec'y, 241 Broadway, N. Y.

Sept. 9-10.—Harvey Hurd's and F. R. Huminger's Peoria Black Bird and Bluerock Tournament, at Petersburg, Illinois.

Sept. 9-11.—St. Paul Gun Club Tournament, Hamline, Minn. Professionals barred. F. D. Pononsby, Pres., St. Paul.

Sept. 9-12.—Cincinnati, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the World. Avenue Ball Park. Sept. 9, 10, 11 and 12. Guaranteed Purse. Wm. E. Limberg, Sec'y.

Sept. 30, Oct. 1-3.—Sixth Annual Tournament of the Middlesex Gun Club, at Plainfield, N. J. Two days targets, two days live birds. $1,000 guaranteed. Programmes ready for distribution Sept. 1.

THE L. C. SMITH CUP TANGLE.

CHICAGO, Ill., Aug. 8.—The question out here just now is, Who owns the L. C. Smith Cup and the money that goes with it this year? This is a question that once seemed an easy one, but complications have arisen since then.

It will be remembered, by Western readers at least, that the L. C. Smith cup was won by the Association shoot in June, 1889, by one H. R. Babcock, a blue jeans, hatchet-faced boy, who, it seems, had not yet reached either the years of majority or integrity. Babcook said he represented the Carmen Gun Club of Illinois, and duly paid the dues of that "club" as well as his own entrance fee. The executive committee of 1888-1889, Messrs. R. B. Organ, H. D. Nicholls, W. W. Foss, Alex. T. Loyd and W. P. Mussey, saw no reason at the time to doubt the statements made. Babcook won the cup on 20 straight. Before delivering into the hands of one so little known this valuable trophy, which is worth $500, the committee, by its chairman, Mr. Organ, telegraphed to Mr. P. Larsen, a railroad man of Carmen personally known to Mr. Organ, querying whether Babcook and the Carmen club were all right. A telegram, signed "P. Larsen," was duly received to the effect that they were all right, and on the strength of this the cup was delivered to Babcook. Upon receipt of this the latter sat down and wrote to his father, who was the other half of the Carmen Gun Club:

"DEAR DAD: I have won the Smith Cup. I get 60 per cent. and you get 40." (By the terms of the contest the winner takes 60, and his club 40 per cent. of the next year's entrance money.)

The above filial letter is said to be now in evidence. But before it was needed as evidence other matters had transpired which rendered it unnecessary.

It seems that Messrs. Babcook, *père et fils*, became elated at the prospect of such wealth. They posed as capitalists, and contemplated heavy investments after the entrance money of 1890 was paid in. Through some indiscretion of the one or the other, or in some manner, at least, Mr. Larsen heard of his telegram. It was news to Mr. Larsen that he had ever sent any such telegram, and some time last winter he wrote and told Mr. Organ so. It appeared, therefore, that all the Carmen Gun Club had to rest on was a bogus telegram, probably sent by Mr. Babcook, *père*, who staid at home and made friends with the telegraph operator. As Carmen is not a great big city, it is probable that the operator knew every man, woman, child and cow in the whole burg. They say something about collusion, and mention Babcook, *pere*, and the operator, but I don't know just what part of a gun club the collusion is, and so we may let that pass.

The result of all this was that when Babcook, *fils*, the shooting half of Carmen Gun Club, came up at last June's tournament, and with an innocent smile on his Chinese face, asked for $320 (60 per cent. for himself and 40 for "Dad"), the executive committee for 1889-1890, namely, Messrs. Ab. Price, C. S. Burton, W. W. McFarland, A. M. Hoffman and Dr. H. C. Buechner, told him they would first have to investigate. Mr. W. L. Shepard, secretary and treasurer, refused to pay over the funds until after he had gone down to Carmen and learned the true state of affairs. He went, and discovered that the Carmen Gun Club was composed of "me and Dad." That was all there was to it. Nine years ago, in 1881, there was a Carmen Gun Club. It met and had one shoot, each member chipping in $1 toward the beer. The club got happily inebriated, and then faded quietly out of sight. So far as uniqueness of composition is concerned, it is "out of sight" to-day. There remained only these two, me and Dad, 60 and 40.

The present executive committee gazed on Mr. Babcook *fils*, and sorrowfully shook its head, remarking "Nixey." Reports also reached their ears from other clubs that Babcook was crooked on loads. So they said "Nixey" again. "Our meet is run for gentlemen and for qualified clubs," they said, "and therefore, Mr. Babcook, we must remark 'Nixey.'"

There remained in the treasury, therefore, $320, which Dad and the rest of the club had not invested as contemplated. I know not how many fair young shoats of Jersey red remain unpurchased, and we well may weep at the number of yearling heifers which thus remain ungarnered into the fold of the Carmen Gun Club. What to do with this $320 the executive committee did not know, and they held a meeting to decide; present, Mr. Ab. Price, chairman, Mr. C. S. Burton and Dr. H. C. Buechner, also Mr. Fred C. Donald, last year's president of the association, and Dr. N. Rowe, president for the coming year, the latter being invited to meet and advise with the committee. Dr. Buechner is now in Europe, and what he thought is not definitely known, but before the meeting Messrs. Price and Burton were of the opinion that there would have to be a re-division of the moneys in the late Smith Cup contest, Babcook being thrown out entirely. That would bring G. L. Deiter, of the Chicago Gun Club, first, as he was next with 19 out of 20, and it would necessitate a lot of trouble, as there were a lot of ties, merchandise prizes, etc., etc., in the lower holes. This seemed inevitable. However, Dr. Rowe, the president for the ensuing year, had another opinion and advised in effect as follows: "Gentlemen, we have no supreme court of appeals in matters of field sports. The best we can do, and indeed the only thing we can do, is to follow the precedents of the oldest established sporting system, that of the turf. The precedent there is, that upon proven disqualification of a competitor, the prize won by such competitor reverts to the party, track or association offering such prize, for such future disposition as it may choose to make."

Upon hearing this the committee resolved to constitute the aforesaid $320 a fund to be expended in the protection of game, or the protection of live pigeon shooting. It is sad to chronicle that this resolution is not to stand; because it would have been refreshing to see the Illinois Association, as an organization, really do the first little bit at protecting game. But this was not to be. Alas!

The racing precedent cited was all very well, and it was all very well to go back to these precedents. The only trouble was that the committee's counselor got it just exactly backward, as very quickly became known as soon as the decision was announced

among the sportsmen of the city. Well, there is not anything much to raise a trouble over in that, and about the only inference to be drawn is that human people sometimes get rattled and that editors, like anybody else, are capable of error at times. They are also capable of rectifying it, sometimes, and in this case the correction was made in a short time after the error. "Gentlemen," in effect, said the committee's guest and counselor, "I find I have advised you wrongly, and I wish to make the correction. The precedent of the turf is not as I have said, but just the other way. The decision should be reconsidered."

But by this time Dr. Buechner had started for Europe, and as it needs a full board to reconsider a decision, there the matter must rest until he gets back. Dr. Buechner's record here is fair. His washerwoman is paid up to date, or nearly so, and he is not known to have committed any crime for which he can not be extradited. His future returns at some time or other may, therefore, be considered almost certain. Almost the same may be said of the committee-counsel, the president of the association, who has also gone to Europe. It may be announced as a fact, therefore, that ultimately the late decision of the executive committee will be reconsidered, and first money in the L. C. Smith Cup, in the 1889-90 contest, $320, will be awarded to Mr. G. L. Deiter, of the Gun Club, where it belongs, and the other prizes scaled properly from 19 down. And when that is at length done, the present tangle about the Smith Cup will be unraveled.

I am enabled by courtesy of Mr. W. P. Mussey and Mr. Henry Smith, of this city, to quote, more or less loosely, a late racing decision which establishes a direct precedent for this case. I am not able, in the hurriedness of this late hour, to verify dates, etc., but doubtless later investigation will show the full record of this case and others similar. The horsemen friends of the field sportsmen will do this readily enough. Mr. Newton Hall, a well known horseman of this city, related these facts to my informants, he having figured in the protested decision himself. Mr. Hall entered a horse at Terre Haute races in the 2.30 class. In that class he met a horse entered as "Stranger," which he knew at once to be a "ringer," as he had seen him before entered as "Forester," and knew he had a record of 2.22. Mr. Hall thought he could beat "Stranger" and did, under protest. The latter horse, however, won the first heat, and then Mr. Hall protested the next heat. "Stranger," however, won three heats out of five and took first. Mr. Hall's horse being second, and the moneys were awarded. Within the thirty days prescribed Mr. Hall had his evidence at hand and proved "Stranger" to be a "ringer" and disqualified him. The Association, on the facts, appropriated the first money for itself, barred Mr. Hall from first and took his receipt for second. Mr. Hall appealed to the National Board of Appeals, which reversed the decision of the Association and adjudged it to pay Mr. Hall the amount of the first money, which it did by adding to the second money already in his hands.

I did not see Mr. Hall personally and have not time to go to the racing records, but although in the recountal of the above some inaccuracies may have fallen in, the main fact of the appeal and ultimate decision is very clear. So there is full precedent for the ultimate and only proper disposition of the first money of the Smith Cup. The State Association does not offer money with a string to it. It is to be shot for, and won, by qualified men, and it was shot for and won by such men, who are gentlemen who represent clubs made up of gentlemen.

The mistakes in this little comedy of errors have all been honest ones, made while each man was trying to be only fair and just. Personal or club motives have not been thought of for a moment. Therefore, the only one in the whole matter who deserves criticism is the young man Babcock; and in his case criticism should be condemnation, unmeasured and severe. He may or may not have made his winning by fair shooting, let us say he did; yet he entered the contest fraudulently and procured credentials that were forged. Let us hear no talk of this being a war of the "city sports" upon a "poor country boy." That is nonsense. Babcock will not be permitted to shoot at Illinois State meet any more, and he ought to be barred everywhere for the sake of clean sportsmanship; but the country boy who is honest and shoots square is the peer of any man who fires a shot in that whole tournament. The country boys are most welcomed, and they are good hard shooters too. Babcock was old enough to know better. He did know better. Since he has not shown himself fit to engage with gentlemen in a gentlemanly rivalry, but has brought not only sordid but also dishonest motives into the sport, he should be scored only once, mercilessly, and then dropped forever and forgotten by those who engage in gentlemanly competitions.

E. HOUGH.

WOLSTENCROFT'S TOURNAMENT.

THE three days' tournament that was held upon the grounds of the Boeckerl Gun Club, at Bridesburg, Pa., last week, was a most successful one in every particular, and too much credit cannot be given Mr. Wm. H. Wolstencroft, under whose sole management the tournament was given, for the able manner in which the affair was conducted. The tournament was not largely advertised or even placed among the shooting fixtures, as Mr. Wolstencroft did not wish to conflict with the tournament of the Onondaga Club of Syracuse, N. Y., and he stated that if his programmes had not been sent out before learning of their date, he would have certainly postponed his event for the month. As it was, the attendance was above his most sanguine expectations, scores being in attendance largely from Pennsylvania, Delaware and Maryland, with a scattering from New Jersey. The grounds were admirably arranged, with every requisite for the running of a good shoot, and every comfort of the shooters was looked after. The system of making entries by purchase of entry cards and the payment of prize money was expeditiously attended to by Mr. Newt Bancroft. The scoring was under the supervision of Mr. I. Wolstencroft. The trap-pulling was a feature, Owen Buckious officiating, and he did the work well, not once did a shooter complain of being balked. Wm. Wolstencroft did not attempt to participate in the sports, but presided at the contests, and it is needless to say did so impartially and to the satisfaction of all. All events were run under American Shooting Association rapid firing rules in squads of 10. Nine Keystone traps were used, which by the way, I think should have been ten in number, then each contestant would have faced each trap an equal number of times.

I noticed a number of long-headed fellows who were very careful to get placed in the squad so as to avoid as much as possible coming in contact with a wicked right-quarterer that was thrown from No. 7 trap. I am certain that the shooter who had this bird twice in a 10-bird sweep was heavily handicapped. The shooting altogether was as hard as could be wished for. Both Keystones and standards were used, and as the traps were regulated to throw them for "keeps" straight strings were anything but frequent. A glance at the scores will show that there were some very fair target smashers in attendance.

First Day, Aug. 5.

About 9 A. M. the first gun was fired in a 10-bird sweep that had been gotten up to warm the guns, and from that hour on the firing was kept up until the programme for the day had been completed. It was almost too hot for comfort until about 5 o'clock, when it began to drizzle, and the last two events were shot in a downpour of rain. The redoubtable Capt. Jack Brewer put in an appearance and competed in one or two events, but the saucers did not seem to be to his liking. The surplus money in the guaranteed events each day was given for best averages and was divided 50, 30 and 20 per cent to-day; the amount was $7 and was split up among the following: J. Wolstencroft took first, breaking 115 out of a possible 125; E. D. Miller second with 109 and "A. James" third with 106. Ties divided unless otherwise noted, four moneys in each event:

Extra event, 10 singles, 50 cents entry, 16 entries:

Second Day, Wednesday, Aug. 6.

The second day opened up clear and warm, with an increased attendance. Among the new arrivals was the irrepressible "Dutchy" Smith from New Jerrey. He found a partner to his liking in one John Rothocker, of Brewertown, and the pair kept everybody in roars of laughter throughout the entire day. Even the trappers forgot to load the traps at times, as they were curious to know what was going on. They certainly made things very lively (or very near it). The surplus for averages to-day amounted to $22, and was divided as follows: Kreuger first with 114 out of 125 shot at, E. Miller 111, second, and "James" 109, third.

Event No. 10, 10 singles, 50 cents entrance:

J Wolstencroft	1111111111—10	Jacobs	1001111111—8
Burroughs	1111111111—10	Fieles	1111001111—8

Third Day, Thursday, Aug. 7.

Again were the sportsmen favored with a beautiful day. In the forenoon the glare of the sun in the faces of those at the score caused numerous goose eggs to be recorded, but later in the day, as old Sol journeyed westward, the sport was thoroughly delightful. The foolish habit of placing a loaded shell in the gun before facing the score was illustrated to-day. As Harry Thurman was approaching No. 1 trap he placed a shell in the gun. He had hardly taken a step before the gun was discharged in the ground. Luckily no damage resulted, but Thurman was undoubtedly reminded of the fact of his gun being loaded, as the recoil brought the butt against the very center of his pretty shooting Jersey, and from his actions for a moment he had evidently located the spot. The average to-day, $22.50 in amount, went to E. D. Miller first with 115 of the 125 shot at, A. James second with 112 and Lumb third with 110:

J Thurman	1111011011111111100—16	H Th'rm'n	1111011000100001111000— 9
Jacobs	1101011101101111111—16	Kinzer	0010100010100110101001— 8

Several informal sweeps were shot each day, of which no official scores were kept. So well pleased was Wolstencroft with this his first tournament that he proposes next year to guarantee some $1,500, and will give one of the largest tournaments in the country. If it is as well conducted as this one has been it should be largely attended.

TEE KAY.

SAN FRANCISCO, Aug. 2.—The San Francisco Blue Rock Club held its final shoot at the Oakland Trotting Park this afternoon, and enjoyed a better attendance than the average meetings have been throughout the season. Although the day was as good as could have been chosen, only a light wind blowing, the shooting did not appear to be above the average, and a good many of the bluerocks went to grass unbroken. The conditions required 16yds. rise for the 12-gauge guns and 18yds. for 10-gauges. Out of the race of 15 single and 5 double bluerocks the following score was made: Slade 17, Mayhew 11, L. Levison 9, Cate 17, Smith 12, Stone 19, Kellogg 21, Bell 18, Cadman 19, Abbott 15.

MIDDLESEX DATES.—New York, Aug. 11.—The date of the Middlesex Gun Club's sixth annual tournament has been changed to Sept. 30, and Oct. 1, 2, 3. The committee, Messrs. W. Fred. Quimby, Chas. Smith and T. H. Keller, propose to make this the banner tournament ever given by the club. Programmes will be ready for distribution Sept. 1, and any information will be cheerfully given by applying to W. Fred. Quimby, No. 291 Broadway, New York.

ST. PAUL, Minn., Aug. 8.—Will you kindly give notice through your paper of our approaching tournament, to be held at the grounds of the St. Paul Gun Club, at Hamline, on Sept. 9, 10 and 11. Professionals barred; 317 birds on the programme. For information write to F. D. PONSONBY, Pres. St. Paul Gun Club, St. Paul.

GLOUCESTER, Pa., Aug. 7.—There was a very-closely contested shooting match to-day at Gloucester between Mr. Meeks and John Adams. The shoot was at live pigeons, 10 birds per man, each 2 traps being used, and Hurlingham rules governing. Mr. Meeks killed 10 straight birds, and Adams 9 out of 10.

WOLSTENCROFT VS. BREWER.—John L. Brewer, the famous wing shot, and Richard Ervien have challenged William H. Wolstencroft and A. James, of Frankford, for a team match shoot at 400 live birds, for $50 a corner, $100 a side, and 100 birds per man,

THE ONONDAGAS.

For the following scores of the Onondaga Sportsmen's Club (Syracuse, N. Y.) tournament, at their new club grounds, we are indebted to the courtesy of Mr. Chas. H. Mowry, editor of the *Sporting Goods Gazette*:

Several informal sweeps were shot each day, of which no official scores were kept. So well pleased was Wolstencroft with this his first tournament that he proposes next year to guarantee some $1,500, and will give one of the largest tournaments in the country. If it is as well conducted as this one has been it should be largely attended.

TEE KAY.

ST. LOUIS.

St. Louis, Mo., Aug. 7.—The first tournament of the Star Gun Club was held last Saturday under most favorable auspices. The weather was pleasant and a good crowd of local trap-shooters were present, all of whom expressed themselves thoroughly pleased with the programme dished up for the benefit. All events were at bluerock targets and the rules of the A. S. A. governed. The traps were screwed up to a high notch, which accounts for the scarcity of straight scores. The scores follow:

First shoot, 10 bluerocks:

Haggerty.....8	P Hauck.....4	Schomberg.....4
Secardi.....7	Hespos 6	A Predock.....7
Becherer.....4	D Hauck 4	E Predock.....9
E Springmeyer 5	G W Reed.....8	N Predock.....7
T Barca.....4	C Kunz.....5	C H Prior.....6
A E Stoll.....6	Ryan 1	

E. Predock first money, Haggerty and Reed second, Secardi third, Stoll fourth.

Second shoot, 10 bluerocks:

Haggerty.....8	Stoll.....7	Becherer.....5
E Predock.....9	Reed 8	A Predock.....7
Secardi.....8	Kunz 5	N Predock.....8
E Springmeyer.....3	T Barca.....6	Schomberg.....6
Hespos.....8	D Hauck.....4	Seltzer.....7
Prior.....5	P Hauck.....4	

E. Predock first, Haggerty second, Seltzer third, T. Barca and Schomberg fourth.

Third shoot, 5 pair bluerocks:

Haggerty.....7	Wolf.....3	Hunckler.....4
Secardi.....5	E Predock.....5	Kunz.....8
Stoll.....5	Prior.....5	Hespos.....4
Reed 5	N Predock.....5	Becherer.....4
Seltzer.....4	A Predock.....3	Morgan.....5

Kunz first, Hagerty second, N. Predock third.

Fourth shoot, 15 bluerocks:

Haggerty.....12	Becherer.....7	A Predock.....12
Secardi.....12	T Barca.....8	King.....14
Stoll.....7	Kunz.....8	Hill.....14
E Predock.....14	N Predock.....11	H Wolf.....3
Seltzer.....10	P Hauck.....6	E Springmyer.....8
Reed.....9	Prior.....12	Morgan.....12
Chance.....7	Hespos.....7	

E. Predock, Hill, King, first; Hagerty second, N. Predock third, Seltzer fourth.

Fifth shoot, 10 bluerocks:

E Predock.....9	Morgan.....8	Heffberger.....7
Wolf 5	D Hauck.....3	Stoll.....8
King 7	Barca.....4	Hespos.....7
Secardi.....7	Reed 5	P Hauck.....6
Seltzer.....9	Becherer.....6	Hugly.....4
Henry 8	A Predock.....8	Sprick.....7
Weber 9	Hill.....9	E Springmyer.....8
Kunz 5	N Predock.....4	Judil 3

Hill first, Stoll second, Secardi third, Becherer and P. Hauck fourth.

Sixth shoot, 10 bluerocks:

E Springmyer.....3	Henry.....9	Prior.....8
Reed 7	A Predock.....8	Hespos.....7
E Predock.....5	G Springmyer.....4	Hugly 2
Secardi 8	Becherer.....5	Sprick.....6
Seltzer.....8	Barca.....8	Heffberger 5
N Predock.....7	Kunz.....7	Morgan.....8
King 9	Stoll.....6	Weber. 6
Hill.....8		

Henry and King first, A. Predock, Prior and Morgan second, Reed, Kunz, N. Predock and Hespos third, Sprick fourth.

Seventh shoot, 10 single and 3 pairs bluerocks:

King.....12	Weber.....9	Prior 9
Henry.....11	Reed 9	Stoll. 8
Hespos.....12	N Predock.....8	Secardi.....9
E Predock.....10	Seltzer.....10	

King and Hespos first, Henry second, E. Predock third.

Eighth shoot, 10 bluerocks:

King.....8	Seltzer.....9	P Hauck 2
Hugbly.....5	Secardi.....6	Prior.....7
Kunz.....5	Hespos.....6	Barca.....9
Becherer.....3	E Springmyer 5	Morgan 4
Judell.....4	Stoll.....5	Sprick.....5
E Predock.....9	Weber. 7	Heffberger 6
Henry.....10	N Predock.....7	Reed.....7
D Hauck.....7	Fink 8	

Henry first, Barca, E. Predock and Seltzer second, King and Fink third, D. Hauck, Weber, Reed, N. Predock and Prior fourth.

One of the prettiest live bird matches shot in this city for some time took place last Wednesday between James Hagerty and H. C. Dick. The birds were extra strong flyers and both gentlemen made several long kills with their second barrels. The match was to have been at 100 birds, but owing to a careless boy who allowed a number to escape, but 85 were shot at by each party. A. S. A. rules applied to the affair. The score:

Haggerty.....1111121211111111111111211o121111111111 2121111111111o1121111211112111221111111—83

Ravelrigg.

UTAH VS. NEBRASKA.

Editor Forest and Stream:

The sweeping challenge issued by Utah was promptly accepted by the Grand Island, Neb., club, and on Aug. 1 the match was shot and the Utah team won. It was a telegraph match, and, as is so usual in such matches, the conditions and circumstances surrounding the contesting teams were different and unequal, and the match was no real test of the comparative merits of the two teams. The Grand Island club is everywhere recognized as one of the best in the United States, in shooting merit, and Utah felt that she had some work cut out for her, and she had. The Grand Island Club shot under adverse circumstances, there being a heavy wind and the air being filled with dust. The match would no doubt have been closer, and might possibly have resulted differently, had Nebraska favored Grand Island with a little of the glorious climate of Utah. The match was at 30 bluerocks, Association rules:

WAYNE VS. GERMANTOWN.—Germantown, Pa., Aug. 9.—Inclosed find score of the second shoot between the Wayne and Germantown gun clubs at bluerocks, 5 bluerock traps, 16 and 18yds. rise, on the Wayne club grounds. The Wayne boys having lost the first match got out their best team for this match, and felt certain of victory, but the fates or better shooting of the Germantown boys decided otherwise. The visiting club all declare themselves delighted with the royal way in which they were treated by the Wayne boys, and every body seemed to be in a good humor and bent on having a good afternoon shoot:

Wayne Gun Club.

WHITE HOUSE, N. J., Aug. 8.—The third of the series of matches between the Flemington and White House gun clubs, 25 bluerocks, 3 traps, resulted in favor of the White House Club. This was the second race they have won from the Flemington team and decides the series. On Sept. 3 the White House team will meet the famous Union Gun Club, from Springfield, N. J., at the White House grounds:

CLEVELAND, O., Aug. 7.—The regular shoot of the East End Gun Club was held this afternoon, and the members did some excellent work. Twenty singles and 10 doubles was the rule, and the scores were high. It was a fine day for shooting, and the bluerocks sailed out of the traps as big as balloons, with an invitation all over their backs asking to be pulverized. The score of the shoot was as follows:

Wherry	0101110110111001011	11 11 00 11 00—19
Brockway	1111110111101110111	11 10 00 11 11—24

PHILADELPHIA, Aug. 9.—There was a shooting match at clay pigeons to-day between the South End Gun Club, of Camden, and the Gloucester City Gunning Club, on the grounds of the former. The conditions were each man to shoot at 15 single and 10 double birds, three traps to be used and Association rules to govern. The South End men won by 12 birds. The score follows:

South End Gun Club.	S	D	Gloucester City Gunning Club.	S	D
Biderman	8	3	Cheeseman	6	6
Countis	8	6	McQuaid	6	0
Peschman	11	4	Groves	1	2
Valentine	5	2	I Budd	8	4
Lichtenberg	5	2	Hewlings	6	4
Buzine	3	4	Lazarus	8	4
Lightcap	1	4	Owens	7	6
Wood	8	6	C Budd	4	5
Lane	12	5	Haskins	4	4
Peak	7	4	Lofield	6	4
	68	40		56	39

KRUEGER VS. MILLER.—Albert Krueger, of Christiana, Pa., and Frederick Miller, of Paschallville, have arranged a match at 50 clay-pigeons per man for $50 a side. The shoot is to come off this week at "Blue Bell," Paschallville, under the management of E. T. Calvert, of that place. Much interest is taken in this match by members of the different local gun clubs, as both are expert shots.

WINSLOW GUN CLUB.—Winslow, A. T., Aug. 5.—At a meeting held in Winslow, Arizona, July 30, we organized a gun club, with 27 charter members, for the purpose of protecting the game in Arizona from the depredations of Indians and pot-hunters, and the perfecting of the members in trap shooting. President, E. McCammon; Vice-President, G. Page; Sec'y and Treas., M. L. Roach; Executive Committee, Harry McCarty, Frank Gibson, F. P. Secrist, A. S. Coon, W. G. McNall.—M. L. Roach.

NEWARK, N. J., Aug. 9.—At Erb's to-day the first event was the match between Gus Griffen, of this city, and William Hollis, of Kearny, the conditions being twenty-five pigeons each man, twenty-eight yards rise, modified Hurlingham rules to govern, for a stake of $25 a side. The birds used in this race were of a fair grade, though not as good as usual. The result of the race follows, Hollis being shot out on his eighteenth bird:

Griffen	2111122002121122122121111—23
Hollis	1021210211102121102—15

Chris. Reinhardt was referee.

The event of the day, and one on which a considerable amount of money was wagered, was a match for $25 a side between Frank Class, of Pine Brook, and E. Jones, of this city, each man shooting at fifteen birds, at twenty-eight yards rise. The men tied, and shot off at five birds each, the result being annexed:

Jones	111110210121100—11 1l11—16
Class	2220222021222o20—11 212o2—15

C. M. Hedden and John Erb were judges and Chris. Reinhardt was referee.

A number of open-to-all sweepstakes, $5 entry, four birds each, were shot, the results being appended: First sweep, Erb and Leddy divided first; Class, second. Second sweep, Wheaton and Erb divided first; Class and Hedden divided second. Third money went to Reinhardt. Third sweep, Hollis and Wheaton took first, Erb and Wheaton second. During the day Hedden killed 23 out 25 birds shot at; Class 51 out of 60; Jones 39 out of 45; Hollis 41 out of 51; Campbell 16 out of 20; Wheaton 15 straight; Erb 25 out of 27; Reinhardt 9 out of 15; Griffen 33 out of 41; Leddy 10 out of 14.

MILFORD, N. J.—A two-days' live pigeon match will be given here Aug. 26, 27, by mine host M. H. Rupell, of the Milford House. Come and try your luck and skill.—Go-Bang.

CLAREMONT SHOOTING GROUNDS, Aug. 9.—Ten bluerocks, 50 cents entrance:

	1	2	3	4	5	6	7	8	9	10
Sigler	8	8	9	9	9	10	9	9	9	10
Thompson	7	10	8	7	9	9	8	9	8	10
Collins	10	8	10	8	10	8	10	9	9	9
Hunt	4	6	7	7	4	6				
Howard	8	6	5	9	4	9	7	6	7	8
Money	7	9	9	8	8	9	4	6	8	3
Lindsley							9	7	10	8

Four live birds, entrance $2.50, ties divided:

Howard	1000—1	Lindsley	1111—4
Simpson	1220—3	Money	2120—3
Collins	1112—4	Sigler	1110—3

Three birds, $1.75 entrance:

Howard	010—1	Lindsley	211—3
Simpson	110—2	Money	222—3
Collins	112—3	Sigler	102—2

THE OMAHA GUN CLUB'S last weekly shoot, 25 bluerocks, 21yds. rise, resulted as follows:

Dunmire	1111111111111111111111011—24
Parmalee	1111111111111111111111111—25

S. G. V. G.

WELLINGTON, Mass., Aug. 9.—A strong wind blew across the traps to-day, and it was quite difficult to judge the flight of the targets, and as a consequence there were more poor scores than good ones. In the second merchandise match for August, at 10 singles and 5 pairs hubs White was first with 17. The other scores were: Bennett and Bond 16, Bradbury 13. Field 12, Bradstreet 11, Sanborn and Hooper 10, George 9, Dill 7, Porter 6. The winners in the sweepstakes matches follow: Six hubs, Sanborn; 6 hubs, Sanborn; 5 pairs hubs, Bradbury; 6 hubs, Bradbury, Field and Bennett; 6 hubs, Sanborn; 5 hubs, Hooper; 3 pairs hubs, Sanborn; 6 hubs, Cowee; 3 pairs hubs, Bradbury and Hooper; 6 hubs, Sanborn; 6 hubs, Sanborn; 6 hubs, Hooper, Bradstreet and Bond; 10 hubs, merchandise match, White; 6 hubs, Bond; 6 hubs, Bradbury and Bond; 6 hubs, White; 3 pairs hubs, Sanborn; 6 hubs, Bond and Bradbury; 5 pairs hubs, merchandise match, Bradbury, Bennett, White and Bradstreet; 6 hubs, Bradbury and Bond; 6 hubs, Bradbury and Bond; 6 hubs, Bradstreet, 3 pairs hubs, Bond; 6 hubs, White.

WHITE PLAINS, N. Y.—The first bluerock tournament of the White Plains Gun Club, to be held on the North End Driving Park, White Plains, Sept. 4-5. For programmes, etc., address C. P. Rowley, 241 Broadway, New York.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to Forest and Stream their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to Forest and Stream their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

AMERICAN CANOE ASSOCIATION.

All of the ten annual meets of the American Canoe Association held since its organization in 1880 have been held on fresh water and away from the coast. The first meet, at which the Association was formally organized, was at Lake George, and for the two following years 1881-2 the meets were held on the Canoe Islands in that lake. In 1883 the Association went to Canada, the meet being held at Stony Lake, near Peterborough.

Next year, after much discussion over the propriety of making a permanent home at Lake George, rather than of visiting different localities in turn, the camp was located on the St. Lawrence, on Grindstone Island. This spot was in itself so beautiful and at the same time convenient for camping and canoeing that three successive meets were held there in 1884, 5 and 6.

In 1887 Lake Champlain was visited, and in 1888 the A. C. A., now a body of some 700 men, returned to its birthplace at Lake George, camping on Long Island, near the old Canoe Islands. In 1889 another visit was made to the St. Lawrence, the site of the camp being on Stave Island, on the Canadian side of the channel, but facing the old camp ground on Grindstone Island. In all these years the possibility of a meet on salt water had been discussed, and in 1887 a serious effort was made to have one there, but the many difficulties that attended the search for a suitable spot caused the plan to be abandoned.

When the turn of the Atlantic Division came to hold the meet in 1890, the idea of a salt water meet was at once revived, some of the best portions of the Atlantic coast being in this division. The search for a suitable location has been going on quietly for several years in view of such a meet, but the tide has proved a most serious obstacle, and caused many otherwise eligible spots to be passed over.

After a long and thorough search, the officers decided on Peconic Bay, the locality first proposed by Mr. Poultney Bigelow in 1886. The particular spot chosen is a tongue of green and fertile ground, in height from 3 to 50ft. above the beach, and tapering out to a spit of sand under water. This peninsula, known as Jessup's Neck, has been generously loaned to the Association by Mr. D. C. Scoville, who has done everything possible to prepare and beautify the grounds and to make them suitable for the Association camp. Through his many efforts in their behalf Mr. Scoville has earned the gratitude and respect of every canoeist in camp.

Canoeists have generally agreed that Grindstone Island was in all ways the most charming location at which a meet has been

held, but the present camp is if anything superior; the main camp faces east, as at Grindstone, in front of it is a bay of clear blue water not less beautiful than Eel Bay; across which, instead of Stave Island, lie the green woods of Shelter Island; while to the east, where one would look for Round Island or Thousand Island Park, is the tall spire of the church of Sag Harbor. While Grindstone Island had but one front really available to canoeists, Jessup's Neck, as will be seen from the chart published 2 weeks since, has two, the view from the Sound, overlooking Peconic Bay, being almost equal to that from the main front, while both bays offer the best of sailing courses. Looking from the west shore, out where Gananoque would bear from the Grindstone hill, there are the green and beautiful shores of Great Hog Neck, the prosaic nomenclature of Long Island having a pronounced leaning toward hogs, clams, rams and cows.

As was anticipated by all who have been actively connected with the management of previous meets, the first salt-water meet has presented unusual difficulties, and entailed a vast amount of work on Com. Stanton and his assistants on the various committees. When the site was finally decided on, after a long preliminary search last fall, there was a great deal of work to be done before the wild and roughly-wooded shore could be made fit for a large camp. There was much underbrush to be removed, a marsh in the depression between the two camps to be filled in, wells to be dug, stairways to be built from the bluff to the beach, floats for the canoes, mess tent and kitchen, a large dock, and the many smaller accessories of a large organized camp. The work was greater than at any previous camp, its extent can only be appreciated by those who saw Jessup's Neck in June and again in August.

Though the camp was only opened on Friday, by Sunday it presented the appearance of a large meet. Opposite the little depression that separates the ladies' camp from the main camp is a dock extending about 150ft. into deep water. Near its head is the camp store, while on the side of the hill is the kitchen, the most extensive affair yet seen at a meet, with a full outfit of ranges, broilers, ovens, etc. Adjoining it, and just on the crown of the hill, is the large mess tent, in which most of the company eat, the two departments being under the charge of Mr. Bare, a New York caterer. Stretching out to the north is a long avenue of tents, large and small, the majority being small wall tents or marquees, occupied by one or two persons. Far down on the extreme point is the Lowell camp, a number of tents with the usual workshop. The camp already boasts a tent lighted by electricity, the work of an ingenious member of the Vesper B. C.

The ladies' camp is located on a bluff just to the south of the dock, in a little grove of cedars. There is no great amount of shade in camp, all there is being here; but there is a breeze blowing constantly across the Neck, making it comparatively cool, even in the sun. The signal code devised by Com. Stanton and signal officer E. W. Brown has proved a success, the little code books being at hand everywhere and the many orders given in this way being easily read.

Com. Stanton and Mr. Burchard were the first in camp, but at 5 A. M. on Friday the steamer Shelter Island landed a large contingent of settlers, tents went up quickly and soon the green bluff was turned to white. The Saturday boat from New York brought another large party, including Mr. Ford Jones, of Brockville, who brought with him the A. C. A. sailing trophy, which he has held for the past year. Mr. Jones met with an unpleasant experience, being stopped at Utica by the strike on the New York Central R. R. He crossed to the West Shore, reaching New York, but without his baggage, coming to camp without tent, bedding or a change of clothes. The strike is likely to detain many others who are coming by way of New York. A large delegation from Toronto is on the way, reported to arrive on Monday night. Up to Monday noon there were about 100 in camp. Mr. Bennett, of the transportation committee, made the trip on the steamer Eagle last week, picking ninety canoes from localities about New York and landing them safely at camp without a scratch.

The monotony of camp life has been varied by several very severe thunderstorms on Friday and Saturday, but these were surpassed by one that came up at six o'clock on Sunday, just as all hands were assembled in the mess-tent. The wind howled across the Neck, and N. W., while the rain came down in a sheet. The tent leaked until the tables were a'most afloat; and then, as the wind increased, all hands were called on to hold it down. While some of the men held the three large tent poles, others, helped by the ladies, held the sides and roof down. The tent rocked and the top split badly, but by hard work it was saved from a total collapse. The storm was too violent to last long, but it did a good deal of damage; after the wind fell and the company sat down in wet and dripping garments to commence dinner anew, the meal was enlivened by couriers from various parts of the camp, each reporting more or less damage to tents. A number were blown down, and hardly a party in camp could boast a complete dry outfit.

What promises to be an amusing feature of the camp is a daily paper, of which the first number appeared on Monday. The title page reads as follows:

THE DAILY DISTURBER.

Published During the "Meet" of 1890, under the auspices of
THE IANTHE CANOE CLUB,
Of Woodside, N. J.

Entered at Jessup's Neck as a first-class article.

Address all communications
THE DAILY DISTURBER,
London office: Soho Square. Ianthe ave., Jessup's Neck, L. I.

The inner pages of this journal contain the following news items:

No. 1. AUGUST 11, 1890. VOL. I.

POSTAL INFORMATION.—All letters should be addressed, A. C. A. Camp, Jessup's Neck, via Sag Harbor. Mail departs 11 o'clock A. M.; mail arrives 7 o'clock P. M. Mail bags will be found in the Secretary's tent.

Mr. D. M. Bond of the Red Dragon club has been appointed postmaster.

Mr. H. E. Jepson of the Puritan club has been appointed bugler.

Will the man who lost an A. C. A. pin call on Geo. L. Parmele for it.

RESTAURANT RATES:

Ticket for 2 weeks	$14.00	Breakfast	.50
" " 10 days	11.50	Single Meals — Lunch	.50
" " 1 week	8.75	Dinner	.75

Ralph F. Brazer served as officer of the day yesterday.

Henry J. Winser, of Newark, N. J., led the church service at Squaw Point yesterday. Forty-one attended.

Signal Code of the A. C. A. for sale at the Secretary's tent, 10 cents a copy. We would advise every canoeist to procure a copy, so that they will know when to go in when it rains.

LADIES IN CAMP.—Mrs. Palmer, Miss Palmer, Mrs. Winser, Miss Winser, Miss Fredericks, Newark N. J.; Miss Calverly, New York; Miss Douglass, Soho, N. J.; Miss Parsons, Chicago, Ill.; the Misses Sherwood; Mr. and Mrs. Schuyler, Arlington, N. J.; Mr. and Mrs. Stephens, Bayonne, N. J.; Mr. and Mrs. Tobias, Perth Amboy, N. J.; Mr. and Mrs. Belmen, Amsterdam, N. Y.

CANOEISTS REGISTERED AT SECRETARY'S TENT:

Ianthe Club of Newark, N. J.—L. B. Palmer, canoe Bat; Geo. P. Douglas, Passaic; W. R. Burling, Nile; B. A. Acrigg, Astræa; Barron Fredericks, Wraith; H. S. Des Brisay, Guyascutas; Wm. F. Marsh. Booze; Wm. P. Dodge, Valfreyia.

New York Canoe Club.—R. B. Burchard, Sea Shell; M. T. Bennett, Jr., Ghost; H. J. Winser, Pinta.

Yonkers Club, Yonkers, N Y.—C. B. Vaux, Bonnie; T. S. Oxholm, Beta; J. W. Simpson, Minx. D. Goodsell, Nesta; R. O. Kirkwood, Dolphin; J. Bruce Gibson, Jno. B. Moffat.

Red Dragon Club, Philadelphia.—D. M. Bond, Thetis: Weston Underwood; H. E. McCormick, Mayfly.

Arlington Club, Arlington, N. J.—I. V. Dorland, Meda; A. A. Crowell, Senorita; Mrs. C. V. Schuyler, Aphrodite; Mr. C. V. Schuyler, Nipsic.

Brooklyn Club, Brooklyn, N. Y.—H. H. Smythe, Eurylda; R. J. Wilkin, Unqua; F. L. Dunnell, Eclipse and Louise; W. Whitlock, Guenn; Jno. Johnson, Vim.

2 B continued.

Messrs. Noyes and Cramer of the Red Dragon Club arrived here yesterday in their canoes. They left Philadelphia Aug. 3.

We have about eighty tents and a population of about 110 human beings. One of the tents here has a tame mouse, but that has been left out in the count, hence the mistake of the New York papers as to the number of people here.

The storm last night was the worst we have had since we arrived; about 15 tents were overturned and much damage done.

In one point this camp is superior to Grindstone, it is just off the favorite track of the New York yachts, and they call in frequently to have a look at the camp. Com. Stanton's speedy cutter Vandal has put down moorings in front of headquarters. Mr. Foster's Lotowana will be here soon, and a number of others are expected with members of the A. C. A. On Sunday a large steam yacht steamed into the bay for a look at the camp, not stopping to anchor. The sloop Hypatia, Atlantic Y. C., with a Larchmont yacht, anchored off the camp for a time in the afternoon, while many small craft were sailing about. On Monday the schooner Phantom lay off the camp for several hours, her owner and family visiting the camp. A party from the steam yacht Fidget also visited the camp, remaining to lunch.

A. C. A. MEMBERSHIP.—Atlantic Division: Geo. H. Bliss, Brooklyn, N. Y.; Theodore Obrig, New York. Eastern Division: Fred S. Montgomery, Worcester, Mass.; Alcuzo E. Flint, Pawtucket, R. I.; Geo. M. Townsend and G. D. Wright, Hartford, Conn.; W. B. L. Cranston, Norwich, Conn.; C. Harris Gurney and Raymond G. Moury, Providence, R. I. Central Division: Harry S. Miller, Albany, N. Y.; John J. Leary, Rochester, N. Y. Northern Division: R. A. Brock, Roy Sweeney, A. M. Burns and Chas. Baird, Toronto; W. P. Slessor, Geo. Oliver, A. G. Robertson, Chas. H. Routh and W. E. Bradshaw, Montreal; Wm. Atkin, Newcastle; A. G. Smith, Ottawa; J. H. Carnegie, Cobocouk.

Yachting.

23. Cor. Navy, Regatta, West Long Island Sound Squad.
23. So. Boston Mus. Fleet, Cup.
23. Queen City, Skiff Class, Tor.
23. Riverside, Ladies' Day, Riverside, Conn.
23. L. Y. R. A., Oswego.
23. Buffalo, Cruise, Lake Erie.
23. Lynn, Lynn.
27. Rhode Island, Open Regatta.
27. L. Y. R. A., Rochester.
28. Miramichi, Black Brook to Oak Point and return.
29. Savin Hill, Moonlight Sail, Savin Hill.
30. Beverly, 3d Cup, Marblehead
30. Sippican, Sweep, Marion.
30. Savin Hill, Cruise.
30. Queen City, 2d Class, Tor.
30. Monatiquot, Sail-off Cham., Weymouth.

THE NEW YORK Y. C. CRUISE.

THIS year at least there can be no grounds for the complaint made last season, that the cruise was but one long race. The runs, which were such a feature of last year's cruise, have this year afforded but two races, those of Tuesday and Thursday of last week from Vineyard Haven to New Bedford and from the latter port to Newport. We gave last week a hasty summary of the former, but the following is a more detailed account:

There was a strong S.W. wind blowing on Tuesday morning, making a beat to the turn, the Sow and Pigs Buoy. The course for all but the forties was through Vineyard Sound, around this buoy, and then up Buzzard's Bay to New Bedford, 38 knots. The forties were sent through Quick's Hole, 24 knots. The smaller yachts were started at 10:20, the larger at 10:30, the times at the line being:

Clara	10 21 35	Quickstep	10 23 44
Cinderella	10 22 27	Gossoon	10 24 17
Liris	10 23 38	Moccasin	10 25 00
Sea Fox	10 37 18	Œnone	10 39 22
Volunteer	10 37 19	Iroquois	10 40 10
Merlin	10 37 46	Mayflower	10 40 23
Puritan	10 38 23	Miranda	10 42 02
Palmer	10 38 52		

Minerva had lad lost her topmast on the run of Monday, and proceeded to New Bedford for a new one. She was credited with being beaten by Gossoon in the informal racing on the run, but this was not the case, as she did not go to Vineyard Haven at all. Choctaw, Mariquita and Nymph were among the missing, only Moccasin, Gossoon and Liris starting. Gossoon carried a working topsail, the others only lower sails. Sea Fox had a lead at the start and it was increased by a luffing match between Merlin and Volunteer, the schooner finally besting the singlesticker. Merlin passed Sea Fox to leeward in the early part of the race, thence leaving her badly all day. Liris was delayed by an accident at the start; when off West Chop Titania, making the run under cruising rig, lost a boat from her davits and luffed up; Liris ran down to her aid, thinking that there was a man overboard. A steam yacht picked up the lost boat, no harm being done, but by this time Liris was far astern of her class. Moccasin also came to grief, the yoke of her tiller, spanning the rudderhead, giving way, so that she could not be steered. Medusa was with the fleet, though not racing; in coming through Quick's Hole she carried away her topmast. Volunteer was the only yacht in the fleet to make Sow and Pigs Buoy on one leg, the others making several tacks at least. The flagship ran through Quick's Hole to time the forties, so the others, save Volunteer, who turned at 1:27, were not timed at Sow and Pigs. The official times were:

	Start.	Finish.	Elapsed.	Corrected.
Palmer	10 38 52	3 56 05	4 57 13	Walkover.
SCHOONERS—CLASS III.				
Merlin	10 37 46	3 10 14	4 32 28	4 32 28
Sea Fox	10 37 18	3 24 23	4 47 05	4 42 28
Mayflower	10 40 23	3 37 54	4 57 31	4 55 43
Miranda	10 42 02	4 01 15	5 19 13	5 15 57
SCHOONERS—CLASS IV.				
Iroquois	10 40 10	3 50 07	5 09 57	Not meas.
Œnone	10 39 22	4 00 26	5 21 04	Not meas.
SCHOONERS—CLASS V.				
Quickstep	10 23 44	3 50 15	5 26 31	Walkover.
SLOOPS—CLASS I.				
Volunteer	10 37 19	2 56 22	4 19 03	Allowed.
Puritan	10 38 23	3 28 20	4 49 57	Not meas.
SLOOPS—CLASS V.				
Clara	10 21 35	3 46 12	5 24 37	5 20 47
Cinderella	10 22 27	4 18 27	5 56 00	5 56 00
SLOOPS—CLASS VII.				
Gossoon	10 24 17	2 35 50	4 11 33	4 11 30
Liris	10 23 38	3 14 35	4 50 57	4 50 57
Moccasin	10 25 00	Disabled.		

Anchored in New Bedford harbor were a number of yachts belonging to the fleet, some having come from Vineyard Haven and others direct from Newport, the list being nearly as follows: Steamers: Electra, Alva, Lurline, Jean, Isolene, Fedalma, Shearwater, Peerless, Adelita and Vivienne; schooners, Viator, Ambassadress, Palmer, Sea Fox, Merlin, Mayflower, Miranda, Intrepid, Atlanta, Phantom, Iroquois, Œnone, Quickstep, Marguerite, Tidal Wave, Grayling, Madeline, Harbinger, Columbia, Halcyon, Fenella, Gevalia, Wanderer; sloops: Papoose, Titania, Volunteer, Puritan, Cinderella, Clara, Liris, Gossoon, Moccasin, Psyche, Vedette, Minerva, Waif, Choctaw, Peerless, Gracie, Nymph, White Wing, Nirvana, Aloha, Peri, Listless, Pocahontas, Minerva, Huron, Clara, Medusa. Norna, Magic, Fenella and Niryana joined the fleet also, and the total number of New York Y. C. yachts in port was sixty.

Wednesday was cloudy and disagreeable, but many spectators were afloat in small boats to see the fleet. At 1 P. M. Com. Gerry held a reception on the Electra, the yachtsmen of the fleet being present. The boat races came off in the afternoon, the Columbia's crew winning the Gamecock colors, defeating crews from the Catarina and Merlin. The Owl colors also brought out three starters, Ambassadress, Columbia and Huron, the former crew winning. In the dingy race, only one boat, the Palmer's, started. The naphtha launches were raced under the same rules as last year, the result being:

	Start.	Finish.	Elapsed.
Electra, five horse power	4 18 46	4 44 39	25 53
Yampa, two horse power	4 12 30	4 45 02	32 32
Palmer, five horse power	4 18 46	4 45 41	26 55
Lurline, two horse power	4 12 30	4 46 21	33 51
Wanderer, four horse power	4 14 59	4 46 56	31 48
Electra, eight horse power	4 27 49	4 57 56	24 07

Electra's five horse power launch won first prize and Yampa's two horse power boat second.

In the evening a reception was tendered to the fleet by Com. Hammond of the New Bedford Y. C. at the club house, the guests being most hospitably entertained until a very late hour. Next morning there was no wind at colors, but later on a light S. W. breeze came in, and at 10:20 the smaller division was started, with the larger 10min later. Moccasin came to grief before crossing the starting line, taking the ground at Clark's Point and being towed off by the steam yacht Lurline. She was out of the race, having taken outside assistance, but still continued and made a very creditable run. Marguerite, after hauling out on Wednesday to repair the damage to her board in a previous grounding, went on Great Ledge, in Buzzard's Bay, and had to be towed off by a tug. There was some good sailing over the first part of the course, but after the Hen and Chickens Lightship was passed it fell light and the finish was late. The official times were:

	Start.	Finish.	Elapsed.	Corrected
THIRD CLASS—SCHOONERS.				
Merlin	10 39 37	6 00 49	7 20 52	7 20 52
Mayflower	10 39 23	Not timed.		
FOURTH CLASS—SCHOONERS.				
Œnone	10 39 27	6 19 14	7 39 47	7 38 05
Iroquois	10 42 15	Not timed.		
Marguerite	10 39 01	Did not finish.		
FIFTH CLASS—SCHOONERS.				
Buickstep	10 23 55	6 13 15	7 50 00	7 50 00
FIRST CLASS—SLOOPS.				
Volunteer	10 38 06	4 31 29	6 13 23	6 13 23
THIRD CLASS—SLOOPS.				
Gracie	10 38 19	5 01 17	6 22 58	6 22 58
Huron	10 43 06	6 10 27	7 27 21	7 23 35
FOURTH CLASS—SLOOPS.				
Wayward	10 36 52	5 06 34	6 29 42	6 29 42
FIFTH CLASS—SLOOPS.				
Clara	10 21 53	5 01 40	6 42 47	6 39 44
Cinderella	10 23 45	6 26 53	8 03 08	8 03 08
Nirvana	10 24 37	Not timed.		
SEVENTH CLASS—SLOOPS.				
Minerva	10 23 26	5 11 58	6 48 32	6 44 08
Gossoon	10 25 00	5 13 15	6 48 15	6 47 38
Liris	10 22 02	Not timed.		

These times show little, the entries were poor and the race fluky. Minerva beat Gossoon and Clara beat Cinderella.

So far as racing goes, the runs can hardly be considered as successful; there were only two races, those just described, and the few entries in each class robbed them of interest. Merlin is easily top of the schooners, Marguerite has been *hors du combat* since the left New London, Quickstep has had no competitor, Volunteer is much too fast for Puritan, Gracie has had no competitor, Wayward is still sailing alone, Clara has easily disposed of Cinderella, and even in the 40ft. class the racing has been particularly dull, with only three or four boats in it.

The final races of the cruise, on Friday, can hardly be dignified by any better term than a fizzle, with only three of the smaller schooners and a handful of the forties to compete. The larger yachts made no pretense of starting, and the liberal prizes were left to be turned back into the club's locker. The course chosen was S. S. E. 9 miles out for the forties and 12 miles out for the schooners, the way out being to winward and home before the wind. The starters were Œnone, Iroquois and Quickstep in the schooner class, and Minerva, Gossoon, Mariquita, Liris and Moccasin in the 40ft. class.

At 11 A. M. the Electra anchored off Brenton's Reef Lightship, and gave the course, S. S. E., and at 11:58 the starting gun for the schooners was fired. Iroquois was first over, but Quickstep at once took the lead from her. Œnone was some distance astern of the two. When the gun for the forties fired at 12:03 Minerva was near the line, crossing just ahead of Mariquita. Gossoon again waited to give Minerva her allowance at the start. The times were:

Iroquois	11 59 22	Mariquita	12 04 11
Quickstep	11 59 52	Liris	12 06 13
Œnone	12 02 00	Gossoon	12 06 31
Minerva	12 03 43	Moccasin	12 08 00

Moccasin was handicapped.

The schooner race was only play for Quickstep, as she beat Œnone and Iroquois easily on even time. She led over the course, but none were timed at the turn.

The fight in the 40ft. class was naturally between Minerva and Gossoon. The latter soon ran from fourth to second place, and after an hour was nearly even with Minerva, though to leeward. For the rest of the way out they sailed very evenly together, the wind being light and fluky however. Mariquita was third best, having dropped Liris, while Moccasin after trying hard to work off her handicap became discouraged and went home.

The times at the weather mark were:

Minerva	2 20 25	Mariquita	2 26 00
Gossoon	2 24 28	Liris	2 33 45

In the beat of 9 miles Minerva had gained 1m. 15s. on Gossoon.

As in the previous race, Minerva's men were very quick with their spinaker, but Gossoon also lost very little time. The run home was made with very little wind, the leaders going off their course in a luffing match. After some time Gossoon passed Minerva and ran away from her, having found a little more wind, and finally led her in by over 3min. The full times were:

	Start.	Finish.	Elapsed.	Corrected.
SCHOONERS.				
Quickstep	11 59 52	6 17 50	6 17 58	6 11 47
Œnone	12 00 52	6 32 51	6 31 59	6 31 59
Iroquois	11 59 22	6 36 17	6 36 55	Not meas.
SEVENTH CLASS—SLOOPS.				
Gossoon	12 06 31	4 01 40	3 55 09	3 54 45
Minerva	12 03 43	4 04 18	4 00 35	3 58 19
Mariquita	12 04 11	4 14 50	4 10 32	4 10 29
Liris	12 06 13	4 22 18	4 16 05	4 16 05
Moccasin	12 08 00	Did not finish.		

Thus the Gossoon beats Minerva on corrected time 3m. and 34s.

The comparative speeds of the Gossoon and Minerva down the wind have been pretty well shown in the Marblehead race of July 11, and again in the race for the Iselin Cup, Minerva in each case being a trifle faster than Gossoon under spinaker. In both of these races the wind was quite steady, far more so than in this last race; and they prove very clearly that the difference in this case, nearly 7min. in 9 miles in Gossoon's favor, was due to flukes, and in no way represents the actual difference of boats.

After the return of the racers to Newport Harbor the fleet was formally disbanded. Com. Gerry, with his staff, at once started on the Electra for New York.

THE FISHER CUP.

THE following challenge has been sent by the owners of Whitewings, being called out by the letter of "Port Tack" lately published in the FOREST AND STREAM:

HAMILTON, Aug. 7, 1890.—John Bell, Esq., owner of yacht Nora, Bay of Quinte Y. C., Belleville, Ont.: On behalf of the owners of the yacht Whitewings, I hereby challenge you to a friendly contest for the Fisher Cup, now held by your yacht Nora, the race to take place on Saturday, Aug. 30, 1890, starting at 11 A. M. The Lake Yacht Racing Association rules to govern the race in every respect. Both boats to be measured before the contest by the measurer of the Bay of Quinte Y. C., in the presence of a representative from each yacht. A referee to be mutually agreed upon who shall settle any disagreement that may arise. Each yacht to have its representative, judge and timekeeper. The course to be on Big Bay, Bay of Quinte, and to be the same as that sailed over by the fleet of the L. Y. R. A. at the Bay of Quinte club races. The above is framed in accordance with the "condition of the Fisher Cup," as laid down in the book of the Chicago Y. C. now before me.—J. H. FEARNSIDE, Hon. Sec'y H. Y. C.

P. S.—We would suggest any of the following gentlemen for your consideration to act as referee: Messrs. A. Ames, Oswego; Geo. E. Evans, Secretary L. Y. R. A., Toronto; J. B. Carruthers, Kingston; W. P. Stephens, yachting editor FOREST AND STREAM, New York, and N. B. Dick, Toronto.

GREAT HEAD Y. C. 2d CHAMPIONSHIP, AUG. 6.—The second championship regatta of the Great Head Y. C. was sailed on Aug. 6 over 9 and 7½ mile courses in a fresh S. W. breeze that struck in just as the gun was fired. The times were:

	Length.	Elapsed.	Corrected.
FIRST CLASS.			
Owl, J. S. Cushing	25.00	1 44 10	1 15 18
SECOND CLASS.			
Eureka, E. B. Rogers	20.02	1 13 25	0 44 48
Eclipse, D. W. Belcher	20.01	1 16 05	0 47 22
THIRD CLASS.			
Nellie May, T. J. Young	21.06	1 16 55	0 49 41
Marion, A. W. Chesterton	20.06	1 24 00	0 55 44
Fancy, Cade and Mitchell	20.03	1 26 35	0 58 03
Phallas, W. A. Garrett	19.00	1 30 05	1 00 08
FOURTH CLASS.			
Scud, Lyman Weston	18.00	1 06 20	0 44 49
Mischief, Edward Belcher	16.07	1 07 07	0 45 04
Bertha, S. H. Cann	17.02	1 10 10	0 43 39
Gracie, C. B. Belcher	16.10	1 11 05	0 49 16
I. X. L., C. H. Smith	16.06	Withdrawn.	

Eureka was disqualified for fouling a mark.

The judges were Vice Commodore J. S. Cushing, C. P. Flagg and R. J. Tombs.

BEVERLY Y. C. SPECIAL RACE.—Mr. John Lee Carroll has telegraphed that Minerva will enter the special race of the Beverly Y. C. on Aug. 16. Gossoon and Ventura have also entered, with six in the 30ft. class. The championship race has been postponed to Aug. 23.

NEW YORK Y. R. A.

THE CEDAR POINT AFFAIR.

APROPOS of the account in last week's issue about the cruise of the N. Y. Y. R. A., in which we said, "The fleet had been specially invited last week to visit the Cedar Point Y. C. and take part in its regatta on Wednesday, and with this in view the orders were to sail at 8:30 for Cedar Point, the run not counting as a race. The fleet stopped for a short time at Cedar Point, but just at the start of the race the visiting yachtsmen weighed anchor and stood on for Bridgeport, to the disappointment of their hosts, who had gone to much trouble in order to entertain them during the day and evening. This action caused much dissatisfaction on the part of the Cedar Point Y. C., as no explanation was made for it." Com. A. J. Prime, the president of the Association, who acted as admiral during the cruise, in a conversation made the following statement to us:

"At a meeting of the Association some months ago the Roton Point Y. C. invited the Association while on its cruise to stop at Cedar Point and take part in its regatta on July 30. No further notice was received from this club. While the fleet was at Roton Point on July 29, at a meeting of the captains, I was asked to give some information as to the regatta next day at Cedar Point. I replied that I had not heard a word about it yet, but I certainly expected that during the day some one from the Cedar Point club would be there to see me, and as soon as I heard I would call another meeting, but in case we did not hear we would stop at Cedar Point on our way to Bridgeport. The secretary of the Association informed me that he had a letter from the Cedar Point Y. C., saying they would have a tug at Roton Point the next morning to tow us to Cedar Point. In the evening while at a ball at Roton Point, a man came to me and said that great preparations were being made at Cedar Point to receive us. I told him I was waiting to hear something about it, as none of us knew anything about the race. He then told me he was the vice-commodore of the club and I asked him to come on board my boat at 7 o'clock the next morning and tell me about it, so I could inform the yachts, and he promised so to do. Wednesday morning I arose early to see this party, but he failed to appear, and just after the 8:30 preparatory gun was fired I saw him sailing by in a yacht and hailed him and asked why he did not come and see me as promised, and he replied that "he did not have time," and sailed away. Several of the yachts were prepared to tow to Cedar Point, but at 9 o'clock no tug appeared and I gave the starting signal, and we all sailed to Cedar Point and anchored. We waited over an hour for some officer or committee to wait on us and give some welcome and explanation as to the race, but the only word I heard from the club was from some person in a little launch as he passed by, saying, "Have you got your number?" and I replied that we were waiting to learn something about the race; but I learned nothing further, and I cannot conceive what use my schooner wanted of a number, as she was the only schooner present. Mr. Cameron, the fleet captain, informs me that the same question was asked of him, and he suggested that the committee should call on the admiral and explain about the race. After waiting over an hour for some recognition from the Cedar Point club, I gave the signal to proceed, and we sailed to Bridgeport."

It would seem, therefore, that there was a misunderstanding somewhere, and unless some explanation is made by the Cedar Point Y. C. we do not see that the fleet erred in leaving. We are certain from Com. Prime's large experience in the yachting world and his great interest in the success of the Association that he would not have acted discourteously under any circumstances.

HULL Y. C.

THE second championship race of the Hull Y. C. was sailed Monday off Point Allerton in a very light easterly breeze and over the same 18-mile triangular course used in Saturday's race. Almost a flat calm prevailed in the forenoon, but the boats were towed to the starting line by the judges' steamer, Wesley A. Gove, and were started when the breeze sprung up soon after 12 o'clock. The first class got away at 12:25, the Albatross leading and Nimbus close astern. The second class got away in a bunch five minutes later, the order being Hawk, Harbinger, Mignon and Pilgrim. The windward leg to Davis's Ledge was a pretty piece of work, and some excellent sailing was done.

Nimbus was first round the buoy at 1:48, and set her jibtopsail. Hawk was 30 seconds behind and broke out a large jibtopsail and set balloon staysail. Mignon luffed around at 1:50:30, hoisting balloon jib in stops as she went around. Pilgrim followed at 1:51. Albatross rounded at 1:51:30, and set jibtopsail. Mignon broke out balloon jib two minutes after rounding, but the Pilgrim worked up on Mignon's weather quarter before breaking hers out. Harbinger had to make quite a tack to get out to the buoy, and did not round until 1:55, breaking out balloon jib as she rounded. The wind hauled to northward and eastward, and the Mignon soon took in her balloon and set her jib topsail. Harbinger held on to her balloon jib until 2:25, and apparently lost by holding to it so long.

The breeze was fairly strong on the second leg, and the outer stakeboat was rounded in the following order: Nimbus 2:41:00, Hawk 2:43:30, Mignon 2:46:00, Pilgrim 2:47:30, Albatross 2:50:20, Harbinger 2:53:30. The first class, by mutual agreement, carried no spinakers, while the second class all set theirs. The Harbinger did the quickest work on her light sails all through the race and broke her spinaker out as she rounded the stakeboat. The others were all slow setting theirs. Hawk carried balloon jib also. The wind lightened all the time, and at times the race was almost a drift. The wind finally hauled again and spinakers were taken in. Harbinger setting hers again about a mile from the finish. Hawk crossed the line first at 3:55:51, followed by Pilgrim at 4:00:57 Mignon came third at 4:03:08, Harbinger, which had run well, coming next at 4:11:21, then the first class boats, Nimbus at 4:11:56 and Albatross almost drifting across the line at 4:30:27. Hawk wins leg and the championship in her class. Nimbus wins leg and must sail off with Albatross. Summary:

FIRST CLASS.

	Length.	Actual.	Corrected.
Nimbus, J. J. Souther	31.04	3 31 56	2 49 04
Albatross, J. J. Henry	34.02	3 50 27	3 07 20

SECOND CLASS.

Hawk, G. Dexter	31.04	3 10 51	2 23 50
Pilgrim, E. W. Dixon	28.08	3 15 47	2 24 40
Mignon, H. Babson	30.11	3 18 08	2 30 30
Harbinger, J. R. Hooper	28.01	3 26 21	2 34 14

The judges were Messrs. J. A. Stetson, W. A. Cary, E. C. North, J. R. Chadwick and E. L. Burwell.

We have cups for every class. In the first class, 27 to 35ft., cup valued at $150, and second prize $50. Other classes cups only. We shall also offer a cup valued at $150 for forty footers, making it open; all the other cups being for club boats.

There will probably be the same provision as the Beverly Club made, namely, that the Minerva must sail. The Gossoon belongs to the club. The race will come off after the Corinthian series, and the official circular will soon be issued.

The forty-foot and first class will sail on one day over an outside course, and the other classes on another day over inside courses.

All cups won in a single race. No two out of three.—W. A. C.

GOSSOON AND MINERVA.

THE New York *Times* of Aug. 4 contains the following interview with Gen. Paine:

"There appear to be many conflicting opinions about the respective merits of the two boats, but it is very plain that no one believes that the Gossoon has any wide margin over the Scotch cutter.

"Gen. Charles J. Paine, owner of the Volunteer, followed the race very closely, and he says he is convinced that the Gossoon is the fastest boat of the two. The General explained his view of the contest to-day to *The Times*'s correspondent, and it appears that he thinks the Gossoon was somewhat handicapped by her big clubtopsail in the latter part of the race where the Minerva gained on her.

"'You see, the wind freshened considerably in the latter part of the windward work,' said Gen. Paine, 'and under these conditions the Gossoon's clubtopsail might not have helped her any. The Minerva carried her small clubtopsail. It is pretty hard to account for the Gossoon's rapid gain in the first hour of sailing, considering that the Minerva did so well out toward the windward mark. The tide might have helped the Gossoon some, and possibly the wind favored her, although it certainly looked as though she was beating the Minerva on her merits.'

"Speaking of the class of forty-foot yachts, the General said: 'I have never departed from my belief that the Lord has made things so that the high-powered boats can win, notwithstanding the Minerva has been successful. I do not mean to say that the present boats of high power can beat the Minerva, but I think that power will win if put into a proper model, and if everything aboard the boat is right. On the other hand, I would not like to see rules adopted which would bar out boats of moderate power.'

"'Then you believe in classifying yachts by their racing lengths?' inquired the reporter.

"'Yes, I do, provided sail area is not taxed too heavily.'

"'Then, is there no limit to the economic use of power?' he was asked.

"'Yes. Power may be carried to an extreme, but I do not believe it has been so carried in any of the present forty-footers for racing purposes. I do think, however, that carrying power to such an extreme as is found in some forty-footers is undesirable, and I would be glad to see some rules adopted by the leading yacht clubs which would prevent the excess.'

"In speaking further of the Gossoon, Gen. Paine said that she is sure to improve. Her deck and spars will dry out, which will help her some, and she will be generally tuned up. Her light construction is unquestionably to her advantage over the Minerva, but then she has got that now and cannot be improved upon in this respect."

The following is from the Boston *Globe* of Aug. 3:

"No doubt the victory of the Minerva is a disappointment to American sympathizers, but it will have a good effect on the 40-foot racing this year. If the Gossoon had won everything from the start she would have stopped racing in the 40-foot class as effectually as the Minerva did last year. It is strange how fleeting a thing fame is. After the first victory of the Gossoon over the Minerva nine-tenths of our yachtsmen had settled down to the belief that the latter was 'done.' In spite of her continued success over all the American forties she was sent to the rear as quickly as if she had never won a race. Now that she has reasserted herself people are reminded of what a very fast boat she is, and how impossible it seemed to beat her a few weeks ago. The fact that we now have a boat that is fully as fast as the Minerva shows a great stride in the direction of speed, and we should be well contented if the new American flyer can take half the races from the swift forty.

"Charles E. Adams, 2d, the helmsman of the Gossoon, is very frank in talking about the race. He says:

"'I think that the Minerva fairly outsailed us after the breeze freshened. Up to the time we forced her about we had gained a good deal, but from that time she got away from us a little all the time. We could foot as fast as she could and possibly a trifle faster, but she pointed higher all day than we did. With regard to overstanding the mark, we thought we did the right thing at the time, but thinking it over since, I am inclined to think we did lose a little by it. She would have crossed our bow if we had tacked, and we did want to be under her lee on the last tack for the mark. We had made up our minds to tack just when she did, and if she hadn't tacked we should have come about in a few seconds anyhow.'

"Capt. Charles Barr of the Minerva looked happy, as was natural under the circumstances. On being congratulated on his victory, he said:

"'It's not much to talk about; it was altogether too close to be pleasaat. Some people have told me that it was a fine race, but I didn't see the fun of it. It was much better fun before the Gossoon came into the racing.'"

PLEON Y. C. SECOND CHAMPIONSHIP, Aug 6.—The second championship race of the Pleon Y. C. was sailed off Marblehead on Aug. 6 in a light S.W. wind and under sunny skies, in spite of a threatening morning. The times were:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Oswa, H. A. Hildreth	19.04	1 42 09	1 30 53
Composite, McIntyre	21.05	1 41 30	.....
Faith, S. W. Sleeper	17.08	1 47 12	1 34 01
Milo, E. C. Mason	17.03	1 50 34	1 37 23
Snail, A. G. Wood	15.07	Withdrawn.	

SPECIAL CLASS.

Minna, J. H. Norris	16.08	1 28 30	1 18 44
Don, Blaney & High	16.04	1 31 50	1 22 29

SECOND CLASS—CENTERBOARDS.

Banjo, J. I. Taylor	17.05	1 19 18	1 10 20
Wasp, B. B. Crowninshield	14.07	1 21 37	1 10 23
Monnie, J. W. Dunlap	13.07	1 30 06	1 17 56
Reba, Poole	14.10	1 29 07	.....

SECOND CLASS—KEELS.

Sheila, W. Jackson	13.06	1 29 17	1 17 02
Midget, H. Jackson	12.03	1 30 55	1 17 37
Estelle, C. Pierce	12.07	1 34 14	1 21 23

Sheila and Banjo having each won two legs, take the championship in their classes. Oswa and Composite were both protested by Edith, and the winner will be announced later. Minna and Don now each have one leg for the championship of the special class. The judges were Frank Toole and A. G. Wood.

DORCHESTER Y. C. FIRST CHAMPIONSHIP, AUG. 6.—The first of a series of three championship races held by the new Dorchester Y. C. was sailed off Harrison Square on Aug. 6, the times being:

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Montezuma, G. E. Curry	22.01	2 11 38	1 37 53
Rival, W. S. Nickerson	26.05	2 12 25	1 43 22

SECOND CLASS.

Rocket, H. M. Faxon	16.03	1 30 51	0 59 31
Flora Lee, C. D. Lanning	16.11	1 31 43	1 01 17
Tantrum, J. F. Small	14.08	1 38 04	1 04 26
Jackdaw, G. Lewis	18.02	1 34 28	1 08 33
Viento, C. B. Fear	16.09	1 39 59	1 09 25
Mirage, G. K. Dearborn	17.05	Withdrawn.	
Scamp, H. N. Nute	18.04	Withdrawn.	

SPECIAL CLASS.

Pansy, J. T. Preston	Not taken.	0 59 17	. . . .
Cowslip, J. Longstreet	Not taken.	1 11 15	. . . .
Violet, H. W. Smith	Not taken.	Withdrawn.	

The judges were Hartford Davenport, James E. Swan, Henry D. Wing, M. W. Davison; regatta committee, C. E. Bockus, H. W. Burr, H. W. Smith, F. C. Blanchard, D. H. Mason.

ROCHESTER Y. C. MADGE CUP.—The first race this season for the cup presented last by Messrs. Wolters and won then by Madge, was sailed on July 31 over a course of five miles to leeward and return on Lake Ontario. The wind had been strong S.W., but fell considerably before the start. The times were: Ripple 3:04:55, Velnette 3:08:21, Majel 3:10:33, Edith 3:10:51, Armida 3:11:02, Fascination 3:11:14. The order at the turn was Ripple, Velnette, Fascination, Majel, Armida and Edith. Ripple lost her topmast through some trouble with the backstay. On the beat home the wind freshened, and Fascination, in taking in her topsail, had a bad knock down. Velnette finally won on corrected time, the elapsed times being:

	Start.	Finish.	Elapsed.	Correc'd.
Ripple	3 04 55	4 50 24	1 45 29	
Majel	3 10 33	4 48 40	1 38 07	
Fascination	3 11 14	4 53 02	1 41 48	
Velnette	3 08 21	4 47 38	1 39 17	
Armida	3 11 02	5 07 00	1 55 58	
Edith	3 10 51	4 50 29	1 39 38	

MOSQUITO FLEET Y. C.—First cup race, Aug. 9, course No. 1. Weather cloudy, wind easy and moderate, tide flood:

FIRST CLASS.

	Length.	Start.	Finish.	Elapsed.	Correc'd.
Tantrum, J. F. Small	15.00	4 00	5 16 05	1 16 05	1 16 05
Nellie, J. O'Leary	14.11	4 00	5 20 55	1 20 55	1 20 50
Lottie, S. H. Rich	14.06	4 00	5 37 40	1 37 40	1 37 07

SECOND CLASS.

Bessie, W. C. Cherr'ton	12.11	4 05	5 26 50	1 21 50	1 19 33
Skeeter, S. N. Small	12.11	4 05	5 40 00	1 35 00	1 32 43

The wind at the start was moderate. About half an hour after the start it died out considerable. The Tantrum turned the buoy first and took the lead and held it to the finish. In the second class Bessie took the lead and beat her competitor handsomely. Winners: First class, first leg, Tantrum; second class, first leg, Bessie. Judges, M. W. Ransom, J. A. O'Leary, Jas. F. Barry.

CAROLINA Y. C. 2D REGATTA, JULY 28.—Weather fair; wind light from S.; tide ebb:

	Length.	Start.	Finish.
Lillian-Florence, H. M. Bowden	16.02	4 20 00	6 47 10
Vixen, E. S. Latimer	19.08	4 13 30	6 42 36
Pirate, Norwood Giles	19.09	4 23 35	6 34 12
Peggotty, Harry Walters	20.05	4 23 52½	6 39 36

Pirate won in first class, and Lillian-Florence in second class. Owing to lack of space on our course, which prevents a "flying start," yachts are given their time allowance at the start, being sent off in detail. Regatta committee, R. N. Sweet, M. S. Willard, H. N. Parsley. Judges, Col. Stanhope E. Blunt, U.S.A., Col. Beuchan Cameron, N.C.S.G., D. M. Williams.

GANANOQUE REGATTA.—Clayton, N. Y., Aug. 9.—The Gananoque (Ontario, Can.) regatta for sailing skiffs, advertised for Thursday, the 7th inst., but postponed on account of light weather, was held to-day in a heavy wind. Five of the fastest boats on the St Lawrence River started with the following result:

Yankee Doodle, St. Lawrence R. S., C. & S. L. Co., Clayton, N.Y..1
Choctaw, F. Jones, Brockville, Ont. .2
I. C. U., F. Hawley, Kingston, Ont. .3
Cyclone, —, Lasna, Gananoque, Ont. 0
Y. kwa, —Nicholson, Gananoque, Ont. 0
Arietta B., R. Bullock, Gananoque, Ont. 0

Yankee Doodle was a mile ahead of the second boat, and once more demonstrates that the championship for St. Lawrence River skiffs belongs to Clayton, N. Y.

AN EXPERT OPINION.—The New York papers have not hesitated to handle the classification question without gloves during the past year, the work of the various committees coming in for pretty severe criticism. How much the most of this was worth is shown from the following editorial from the New York *World*, which certainly surpasses in absurdity anything that has been published for a very long time: "We are glad to note that so eminent an authority as Gen. Paine agrees with the *World* as to taxing of sail power. As Gen. Paine says, 'Power will win if put into a proper model and if everything aboard the boat is right.' Power in a yacht is the power of sail. Other things being equal, the hull which has the ability to carry the greatest sail area will win, and she ought to win. Given two hulls, each 40ft. long, one carrying a boom 5ft. longer than the other, and having 4ft. more hoist, this hull will have the advantage of somewhere near 20ft. more of sail area and must win unless there is some great awkwardness in her model. To tax the superior sail-carrying capacity of this boat in order to make her more like her rival is to destroy the technical value of a yacht race. Aside from the physical invigoration of the sport, the interest would be largely that aroused by a game of chance. To tax sail power is like taxing the endurance of a trotting horse to bring him down to an equality with his less capable rival."

MIST—WILDCAT.—On Aug. 5 a very close match race was sailed at Monument Beach in a double-reef southwester between Mist, G. H. Lyman, Jr., B. Y. C., 26.08 sailing length, and Wildcat, S. P. Hill, of Monument Beach, 26.04 sailing length. Course was from Monument Beach to and around West Island Buoy and return, 15½ nautical miles to windward and return. The match was sailed without allowance, boat for boat, although under B. Y. C. rules Mist would allow 62 seconds. Wildcat started 25 seconds ahead, but Mist finally got a trifling lead, though Wildcat was close after her. Running home Mist shook out one reef and Wildcat shook both. Mist crossed line 8s. ahead, winning by 32s. actual time; a close race for a 31-mile course. Under B. Y. C. rules Wildcat would have won by 30s.

JESSICA.—On the night of Aug. 6 the new cutter Jessica arrived at New York from Fairlie, which port she left on July 3. She was brought out by Capt. James Ritchie with a mate, Archibald Paton, and a crew of two. She had rather a hard passage, with head winds. Her cruising rig will be replaced by a racing suit somewhat larger than Minerva's. Jessica was designed for the 20-rating class, and is 46ft. l.w.l. and 10ft. 4in. beam.

CAPSIZED.—The centerboard sloop Lydia, of Yonkers, when near that place on Aug. 4, on her return from the New York Y. R. A. cruise, capsized suddenly and dropped her crew of four into the Hudson. They were rescued by small boats.

New Publications.

NORTH AMERICAN BIG GAME.

A BOOK on the big game of North America, giving the habits and the best method of hunting each species, has long been needed and will be very welcome to a large class of readers.

Some time ago, when it was announced that such a book was to be published, containing articles on various species by a number of well-known writers, and edited by Mr. G. O. Shields, considerable curiosity was felt by hunters of large game as to what the production would be. This volume had just made its appearance and is now before us.

It is only a few years since the fashion was inaugurated of making composite books on sporting subjects. The most imposing of such books was "Sport with Gun and Rod," issued some years ago from the press of the Century Company, but that was a book rather for the general reader than for the man who was above all things a sportsman.

A book written on this plan, with articles from the pens of hunters who may be called specialists as to the particular game which they pursue, will probably serve its purpose better than one which is the production of a single individual, even though he be well qualified for his task. At the same time it is plain that a book made on this plan suffers when looked at from a literary standpoint. It is likely, unless it is edited with great care and skill, to be a literary patchwork. However, it is not from a literary standpoint that a book of this character should be reviewed. This book is for sportsmen, and, no matter how keen the literary sense of a sportsman, he desires above all things facts, and these he is more likely to get in this way than in any other. To him it matters little if the style be crude and diffuse, so long as it is intelligible and reliable. He is not in search of literary excellence, but of information, and the more detailed and exact that information is, the more useful is the book.

Up to the present time no book has ever been published devoted exclusively to the big game of America. Mr. Shields is the pioneer in this direction, the first man to carry out an idea that has undoubtedly occurred to many hunters. He has selected for his contributors, as will be seen by the list given below, many men who are well known as contributors to the sporting press, and among these are a considerable number who are perhaps more competent than any others to write on the species that have been assigned to them. While this is true, it is equally so that in a number of cases very grave errors have crept into the accounts of the habits given of certain animals, but notwithstanding such blemishes in the work, it can fairly be said that "The Big Game of America" ought to have a place in the library of every man who uses the rifle.

The contents of this massive volume of nearly 600 pages with the names of the authors are given in the following list: Introduction by Hon. John Dean Caton; Moose Hunting in the Rocky Mountains, Newton Hibbs; Elk Hunting in the Olympic Mountains, W. A. Perry; The Wapiti (poem), "Wah-bah-mi-mi"; The Caribou, Wm. Pittman Lett; The Woodland Caribou, Dr. R. B. Cantrell; The Mule Deer, Rev. Joshua Cooke; The Mule Deer of Southern California, T. S. Van Dyke; The Columbia Black-tailed Deer, Thos. G. Farrel; the Virginia Deer, Walter M. Wolfe; A Deer Hunt, "Wah-bah-mi-mi"; Hunting the Grizzly Bear, W. S. Rainsford, D.D.; The Polar Bear, Sergt. Francis Long; A Polar Bear Hunt, ——; The Black Bear, Col. Geo. D. Alexander; The Buffalo, Orin Belknap; The Musk-Ox, H. Biederbick; Still-Hunting the Antelope, Arthur W. DuBray; Coursing the Antelope with Greyhounds, M. E. Allison; The Death of Venus (poem), Wm. P. Lett; The Rocky Mountain Goat, John Fannin; The Peccary, A. G. Requa; The Cougar, W. A. Perry; The Lynx, J. C. Nattrass; The Wolf, Wm. P. Lett; Coursing the Gray Wolf, D. S. Cage; The Wolverine, C. A. Cooper; The Wildcat, Daniel Arrowsmith; Coon Hunting in Southern Illinois, Daniel Arrowsmith; Fox Hunting in Virginia, Dr. M. G. Elizey; Alligator Shooting in Florida, Cyrus W. Butler; The Ethics of Field Sports, Judge John Dean Caton and W. B. Leffingwell.

There is perhaps room for a difference of opinion as to whether animals like the peccary, the wolf, the lynx and wildcat should be called game. Certainly the raccoon, fox and alligator ought not to be included in this list, though the smaller cats and the gray wolf may perhaps belong there. The wolverine is properly fur, and is not in any sense game; as well include the fisher, the badger or the ground hog.

It is quite impossible, within the limits of a review of this character, to go over all the chapters of this book and criticise them as we should like to. It seems better to take up a single article—one which treats of a species very familiar to all hunters in the West, and very easily killed, and to call attention to certain misstatements made about this animal which ought never to have been permitted to appear in a work of this kind, which by many of its readers will be regarded as authoritative.

Mr. W. A. Perry, in his chapter on elk hunting in the Olympic Mountains, makes the statement that the elk, when about to shed their horns, seek some secluded thicket and there rub the antlers against a tree or bush until they have pushed them off. This statement is, of course, the reverse of true. The experience of all observers shows that when the deer and elk lose their horns, this operation is wholly an involuntary one. The absorption which takes place at the base of the antler weakens its attachment to the pedicel and the horn at length drops off by its own weight. This dropping off of the horn has been frequently witnessed, and the fact that some mesas and hillsides in the Rocky Mountains where elk have their winter feeding grounds, are often thickly strewn with shed antlers, is additional evidence, if this were needed, that they do not rub their horns against trees and bushes to get rid of them. Still speaking about the horns, Mr. Perry says that when the horns have completed their growth and are getting hard, and the elk commence rubbing off the velvet, "there is evidently some microbe or insect in the velvet that irritates the animal." We know of no evidence to support this statement, and it seems much more simple and reasonable to suppose, as has been done by previous writers, that as the flow of blood becomes less, the skin which surrounds the horn itches like a healing wound, and that it is to relieve himself from this irritation that the elk rubs off the velvet. In speaking of the rutting season, the statement is made that the band of elk always acknowledges one leader, the largest and strongest bull in the herd. This of course is true in a certain sense, but it is not

true that the leader leads. Instead of being a leader he is a driver, and in the rutting season always brings up the rear of the bunch, prodding the lagging cows or calves with his sharp horns and driving them before him as a cowboy drives a bunch of cattle. At other seasons of the year the bulls are the first to run away, but in the rutting season they are the last, always going about to gather up all the bunch before they start to run. On page 50 it is stated that the elk do not often feed at night but are stirring at the earliest dawn. This is not the case in most parts of the country. Elk are usually most active during the night, and especially in the rutting season may be heard, especially on moonlight nights, from shortly after dark until dawn, fighting, playing in the water and feeding.

To these remarks it may be objected that the habits of a species of wide range may differ in different parts of the country. This is true within certain limits. Habits affected by climate, such as the times of rut and of birth of young, or habits of migration and even hours of feeding, might vary according to the adventitious conditions of the animal's life, but these conditions would not influence such a matter as the growth and shedding of the horns.

Exception may also be taken to Mr. Perry's apparent blood thirstiness. In the accounts which he gives of hunting, he speaks as if it were a common thing for him to kill three or four elk out of a bunch, and again on page 67, he tells where he killed seven or eight at one time. Such slaughter as this makes us think of the turning loose among a band of elk of young city sportsmen who had never before seen big game. It is certainly inexcusable in an old hunter. The tendency to kill is naturally strong enough in every civilized heart, and the efforts of those who write as teachers—for the instruction of those who have had less experience than themselves—should be devoted to checking rather than to encouraging this tendency. All of us who are sportsmen profess to desire to preserve game rather than to slaughter it, and it is unfortunate that this lesson has so far been forgotten in this present work. As already implied, similar comment might be made on a number of other chapters in this book.

As might be expected in a volume of this kind, the articles are of widely varying merit. Some of them appear to have been originally written for this volume; others have at various times in the past appeared in substantially the same form in sporting papers. Such an article is that capital account of the buffalo, written by Orin Belknap, and a most excellent story of mountain goat hunting, by our friend John Fannin, both of which have appeared in FOREST AND STREAM.

The illustrations which adorn the volume also vary widely in merit. Some of them are extremely coarse and to our mind quite unworthy of the work; others while not especially praiseworthy from a standpoint of execution, are really very vivid and lifelike. We may call especial attention to the picture in the article on the mountain sheep, page 366, entitled "Mother and Son." It is in many respects most excellent. So, the head of the musk ox is capital. The figure of the mule deer on page 156, entitled "Resting," is excellent, but what place has a picture of a Virginia deer's head, entitled "The Portrait," page 152, in an article on the mule deer. This cut seems to have been misplaced.

We have written at length of this book because it is in many ways an important one, treating of a subject which has a very great interest for a large class of readers. A work of this kind made up on this plan can hardly fail to contain errors, yet on the whole the "Big Game of North America" deserves great praise. So far it stands by itself, without a rival, and we believe that it will be extensively read not only in America, but in England as well.

A STORY OF THE SEA.*

SKETCHES of sea life are to most readers interesting, partly because they treat of a phase of existence of which most people know nothing by actual experience. Perhaps no one has done so much to render this form of literature popular as Mr. W. Clark Russell, whose stories easily stand in the front rank.

Mr. Patterson's "Captain of the Rajah" is a short story, but it is well told in a simple yet vivid style, which reminds one somewhat of Mr. Russell. It turns on the adventures of the crew of a schooner commanded by a captain who is drunken and brutal, and the voyage terminates in the wreck of the vessel and the death of all except the narrator of the tale.

The book contains about 130 cuts, ranging in size from full-page illustrations to chapter initials and tail pieces. These sketches by Mr. Sheppard are vigorous and lifelike, and add to the interest of the volume.

*The Captain of the Rajah, a Story of the Sea, by Howard Patterson. Illustrated by Warren Sheppard. New York: Union Square Publishing Company, 30 Union Square.

COLORADO SKETCHES.*

MR. FRANCE needs no introduction to readers of FOREST AND STREAM. Either by his own name or by his pseudonym, "Bourgeois," he has long been known as one of our most able and entertaining contributors, and has given pleasure to thousands of readers by his charming sketches of life in Colorado.

Mr. France is an old timer in Colorado and is thoroughly familiar with the scenes of which he writes. Besides this, which is much, he has further the gift of a keen poetic sense and the rare ability to express in charming and feeling language not only what he sees and what he does, but also the reflection to which such sights and actions give rise. Given such an unusual combination as this, it is hardly necessary to say that the writings of its possessor will be eagerly read.

The story of Mr. Dide treats of the adventures of a young tourist in Colorado, whose attire, manners and language justify us in calling him a "dude." There is a thread of story and a suggestion of love in the sketch; but its main incidents deal with what Mr. Dide does while in camp with two old timers, who have gone off for a month in the mountains. One of these is the author, and the other may be conjectured to be another well known contributor to FOREST AND STREAM, who was long editor of one of the most important newspapers in Denver. Mr. Dide, notwithstanding the prejudice that his appearance at first inspires, proves himself a gentleman, and under the tuition of the author takes a number of lessons in the art of angling. There is plenty of fishing and a little shooting in the sketch, and a good deal of unobtrusive instruction in the decencies of sport. There are plenty of men who can write well enough of the "ethics of sport," but, we fear, too few who put in practice what they preach as do the two principal character of the book.

The adventures of Mr. Dide are told in 137 pages of the 259 which make up this book. The remaining sketches are "The Rivals of Basset Bar," "The Owners of the Jack Pot Lode," and "Called." In each of these the scene is laid in a mining camp, and the stories deal with early mining days and show an accurate knowledge of the occurrences of that period. Like "Mr. Dide," they are told with rare felicity and show great feeling.

The charm which pervades Mr. Frances' writings will be felt by every one who reads them, and this latest volume is recommended as a thoroughly wholesome and altogether delightful book on outdoor life. It is illustrated by a number of plates of characteristic western scenery.

*Mr. Dide: His Vacation in Colorado, and Other Sketches. By L. B. France, author of "Rod and Line," etc., etc. New York: Bromfield & Company, 1890.

Answers to Correspondents.

F. L. T., Washington D. C.—Please inform me by your paper who is the best live pigeon shot and who the best clay pigeon shot, that is according to record. Ans. It is not known who are the best shots.

E. T. M., East Boston.—I have just run across a French book printed in 1830, entitled "Pêcheur Français." It tells all about hatching trout. How long is it since we commenced in New York to hatch fish? Ans. The first experiments in the artificial breeding of fish in this country were made by Dr. Theodatus Garlick and Prof. H. A. Ackley, in 1853, near Cleveland, O. It was not until years later that the work was taken up systematically. The French preceded other nations in this line of enterprise.

SALMO, Paterson, N. J.—Please inform me if the introduction of English brown trout and Loch Leven trout has proved a success in this country. Ans. Yes, these trout have been distributed widely over a large portion of our Eastern States and in some of the Western ones, and have bred freely. They reach a large size and possess all the good qualities of superior game fish. We have no native species of black spotted trout east of the Rocky Mountain region, and these introduced species are a great addition to our resources.

H. A. L., Ogdensburg.—Having purchased an island in the St. Lawrence river, we find at its head a large bed of rushes, growing in from 3 to 8ft. of water. Any dead fish or other refuse matter coming down the river is sure to lodge amid the rushes and if there is any possible way, we propose to get them out. Ans. We cannot suggest a plan for the extermination of rushes, except to cut them off as near the roots as possible. The roots are so deeply and firmly fixed that the difficulty of eradicating the plant must be very great.

A. A., St. Louis.—Will you please answer the following question: Which is the fastest flyer, green-winged teal duck or a canvasback duck, and what is the speed of each? Ans. It is believed that the canvasback is the faster flyer, but the speed of neither bird has ever been measured with any approach to accuracy. A number of guesses have been made, but little definite is known. Cross, in his "Fifty Years with Rod and Gun," estimates the speed of the greenwing at from 80 to 100 miles per hour, and that of the canvasback at from 80 to 120 miles per hour.

W. J. CUMMINS BISHOP AUCKLAND
CO. DURHAM, ENGLAND.

When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR
The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.
SECOND.—It will wind up the line slowly if the angler chooses.
THIRD.—No fish can ever get slack line with it.
FOURTH.—It will save more fish than any other reel.
FIFTH. It will prevent tips, lines and snells from being broken by large fish.
SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.
These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

"Sport."

Good Things to Come.

HERE IS A PARTIAL PROGRAMME of what will be given to the readers of this journal during the next few weeks.

In our next issue we shall publish the first part (to be concluded the week after) of a lively account of shore shooting—

Around Cape Hatteras,

written for the FOREST AND STREAM by "Chasseur." In the same number will be begun the publication of a series of illustrated papers descriptive of

The Clubs of the St. Clair Flats.

Written by Mr. E. Hough, illustrated, and relating to one of the most famous shooting and fishing localities in the West, these papers cannot but prove of sustained interest. In the same number we shall also print the first one of a series of chapters entitled

Trapping Days,

from the pen of Orin Belknap, and relating his experience as a trapper in that region lying in the Dakotas, Minnesota, Wisconsin and Iowa, which Mr. Belknap declares to have been the finest trapping ground for furred animals in the United States.

CAGES IN PLACE OF BULLETS.

BEARS have become abundant in the National Park. While protecting other game, the Government has provided also a refuge for the large species of vermin, and has insured for them an abundant supply of food in the elk, and deer, and buffalo in the Park limits.

At Norris Geyser Basin last summer, one of the regular sights was to go out behind the hotel and see them come down out of the timber to feed on the kitchen refuse. They were as tame as so many hogs, and quite as regular at their meals.

It will be remembered that when the question of Adirondack deer hounding was before the New York Legislature some years ago, Paul Smith or some other hotel landlord who wanted to insure his guests the privilege of driving deer into water to be clubbed to death, gravely argued before the Assembly committee that it was in fact beneficial to the deer to be run by dogs; for the running was only a healthy form of exercise, which made them strong and healthy and sharp-witted and keen-scented and alert and competent to take care of themselves and to get away from the still-hunters; in short the persistent and unflagging hounding of deer was held up to be a most efficacious mode of preserving them. We presume that an equally good case might be made out for the grizzlies and other carnivors in the National Park, which by getting the better of and devouring the weak, aged, decrepit and infirm elk and deer and buffalo, would weed out all such inferior stock and insure the survival of the fittest.

But all such theories aside, it has been officially decreed that the bear supply must be diminished; and authority having been given to the Superintendent, Scout Wilson has been deputed to make away with some of the superfluous Ephraims. Now, if the Government has more bears than it can find profitable use for in one of its preserves, instead of killing them in this way, why should it not transfer them to some of its other wild animal preserves, the National Zoological Park, at Washington, for instance? This is, indeed, a very good opportunity for the authorities at Washington to secure a series of living bears, lynxes, wildcats, and other wild animals for their collections at the Capitol. If the Superintendent of the Park has authority to kill these animals, no doubt he is at liberty to trap them; and if the Zoological Park authorities would send out to him some cages and a little money with which to hire men for the work, he could no doubt, at the proper season, supply a fine series of living bears.

THE GIFFARD GAS ARM.

THE announcement of the invention by a French mechanician of an arm in which the change of condition from the liquid to the gaseous form of carbonic acid gas is made to do service as an explosive, has created no small interest among riflemen and gun shooters as well. Military men and civilian shots are alike concerned about this last and cleverest demonstration of the efforts now pushing so vigorously forward in this special line of inventive art. The main wonder is, to our mind, that the thing had not long since been brought out. Years ago in discussing the antiquated character of black powder we remarked that the improvement most needed, especially in small arms, was not in the direction of better mechanical devices, breech actions, safety clutches, and all that, but in the abolition of the black powder cartridge, with its heavy, cumbrous form and many dangerous qualities and the multitude of objections connected with its use. A mere wafer of explosive material, we said, ought to be sufficient to send the bullet on its course.

M. Giffard has gone a step further: he has utilized a material which has been known in every working laboratory for years. The great iron or steel cylinders into which the liquefied gas was forced and confined were the prototypes of the little cylinder which M. Giffard places beside the breech of his gun and draws on drop by drop for his propelling power. All that is necessary to send a bullet on its mission of destruction is a great body of gas suddenly evolved and liberated in the rear of that bullet as it rests in the gun chamber. Black powder does this after a fashion with the simultaneous production of a great volume of smoke and a residuum of soot and unburnt powder. The nitro-powders make this same volume of gas, or gaseous product, with somewhat less smoke, but with other objectionable phenomena. There are hundreds of unstable chemical compounds or mixtures which, under proper conditions, may be changed from the solid or liquid conditions into greatly increased volumes of gases. Many have been tried; not a few with disastrous results, as propulsives in firearms. The Giffard attempt rids itself of many of the uncertainties which attend the use of chemical mixture. His liquid has been made mechanically, and it is a simple reversion of the force which liquefied it that enables it to do its work in the cartridge chamber.

The experiments are as yet inconclusive, and on that account much more is now claimed by the invention, or at least claimed for it, than may be borne out by subsequent commercial test. It is certain, however, that this latest invention will not go into the limbo of discarded promises, so often the fate of clever inventions. It has come to stay, either in a modified form or as a stepping-stone to some other contrivance in the same line and fully adapted to general use.

LUCK.

THE lucky sportsman is found in nearly every locality; and is, in most cases, looked upon merely as a lucky individual, while no thought is taken as to why he is thus blessed above the ordinary man, who goes a-field with dog and gun. He is lucky in always having a good dog, a good gun; and above all, he is nearly always lucky in obtaining a shot, while his companions are generally in the wrong places, and the birds persistently fly only in the direction of the lucky one. It is generally in ruffed grouse shooting that the lucky sportsman makes his reputation. This king of birds is preternaturally wise and wary; and when much hunted it takes a master hand to cope with him, and it is no wonder the tyro sees nothing but luck in his capture.

Now, while we all know that with every shooter good luck often has ever so much to do with filling the game bag, and that bad luck is a sweetly consoling factor in accounting for slim results, the mistake people make is in ascribing to uniform good luck what is actually the fruit of skill and care and hunting sense. Luck plays its part with all of us in the field, but good luck does not persistently attend any one individual season after season, to the making of his reputation; nor does bad luck dog the steps of another year after year.

He who has the reputation of being a lucky sportsman, then, is very rarely lucky in the sense that is ordinarily understood, but he is indeed lucky in the possession of perceptive faculties that enable him to do the proper thing at the proper time. His dog is naturally no better than others; but it has been handled in the manner that best brings out its good qualities. His gun is not superior to the guns of thousands of others, but the proper charge is used in it, and that this is generally sent in the right direction at just the right time, is to be credited, not to luck, but to hunting sense. Of course the birds rise near him, or if flushed by others, fly in his direction, but there is no luck about it; he has been a close and careful student of the game he seeks, and intuitively, as it were, he posts himself nearly always in the right place, at the right time. Even when on strange ground, a casual glance shows him where the game ought to be; and the same half glance also shows him just the line of flight the birds will take when flushed, and mechanically, with hardly a thought upon the subject, his feet take him that way; and his companion again has occasion to congratulate him upon his luck.

IN most States the prevailing disposition of fines which may accrue from convictions for the violation of the game and fish laws is to devote them to the public school funds. Now, if all the infractions of the protective statutes were actually punished and the prescribed fines collected, we should never hear of Blair Bills in Congress, nor any other legislative measures to provide educational funds. The fellows who shoot game out of season and net fish would supply funds so abundant that the school tax rate might well be lowered.

SEÑOR E. CHÁZARI, Commissioner of Fisheries of Mexico, in a letter to Col. John Gay dated Aug. 8, 1890, wrote that the rainbow trout developed from eggs furnished by the U. S. Fish Commission are doing admirably. He has trout aged 30 months which are as large as some 6-year-olds seen by him in the United States. The lake trout eggs, numbering 50,000, yielded only one per cent. when hatched, but all the other eggs of the *Salmonidæ* did well. Sr. Cházari is desirous of obtaining more eggs of salmon and trout. The rainbow trout were reared in ponds in the City of Mexico.

The Sportsman Tourist.

MUTABLE.

LITTLE FORD came along the creek one bright morning to keep his early appointment with Uncle Thuse for a fishing excursion, and not finding him at the trysting place, which was where the punt was moored, continued on up the hill to the old man's cabin. Uncle Thuse was sitting on his favorite soap box under the po'ch, and looked poorly, so much so that the boy, as he seated himself in the doorway, remarked, "Why, Uncle Thuse, you look awful old this morning, what's the matter; are you real sick?"

"Yis, honey, I'se reel sick. Rumytisy all ober me. Ole man ant wuf nuffin nowerdays. What ken yer spect when I wus so old en tired-lookin' when I wos borned dat dey named me Thuselum, arter der oldest man what der Bible menshuns? En I isn't grow'd younger since. Toby sure, I couldn't spect it, couldn't spect it. I'se a sittin' heah, Marse Fo'd, en I'se er thinkin' ob der ole times afore der wah, when so long es er nigger 'haved hisself he was keerd fer, speshly when he was ole on der place. Dish yere wos wot I wos er thinkin' of, Marse Fo'd:

Marse Linkum's proklemashum gub each nigger to hisself,
En er t'ous'n dollar darky come to be a man er welf;
But he warn't wuff noffin fer he wouldn't earn his meat,
En niggers loss der market kase dey wussent wuff der keep.
Dish yere blessed freedom doan probe so berry fine,
Kase dere's 'sponsibility tenden, we didn't hab ole time.
Marse foun' der close en feedin' en der cabin snug en bright,
En we didn't lay a-thinkin' whars der brekfus? ober night.
I'se a pore ole nigger, an' I'se waitin' fer der ho'n
Dat call der darkies home when der day's work's done.
Der craps done finish, en der gleanin's mity pore,
Nuffin left fer der *ole* niggers et er closin' of der wah.

BOSTON, July 17. FRED R. SHATTUCK.

MR. RASTUS'S EXPERIENCE.

[*Concluded from Page 67.*]

WHEN Bill came in and I found it was daylight, I got up too; and not caring for a bath took a good wash, drank a cup of coffee that the man brought me, shaved and dressed myself slowly. When I looked out of doors I found that the light was just touching the tops of the trees on the hills across the lake, making them, I must say, very pretty indeed, besides the reflections of the trees on the shore, all upside down in the water. Bess would have talked about it half an hour at the rate of a mile a minute. After I had got all dressed I looked at my watch and it was just half-past four o'clock. I was disgusted. All my regular habits knocked into pi! My usual hour of rising in 249th street is eight, breakfast at nine, desk at ten, lunch at one, dinner at six, bed at eleven. And here I was, all ready for breakfast at half-past four, and hungry at that!

I went out to find Bill and see if there was any way in which I could get away from the place, but he was off fishing again. I smelled something cooking, which pleased me, for I wanted my breakfast before starting, in any case. The air outside was fresh and really nice. After I had walked up and down the piazza in front of the cabin quite a while, I saw Bill coming round the point in one of those egg-shell things, a bark canoe, one of the kind that tips over if one's hat isn't on straight. And yet the fellow was actually standing up in it! He came ashore, tossed out half a dozen or so more trout and called out something that I found out was an inquiry whether breakfast was ready.

The cook evidently said that it was and proceeded immediately to set out those wretched tin dishes again, and brought out more trout, with fried potatoes and salt pork. I ate two trout, some potatoes and a little of the fried pork, which really was not so bad as I thought it was, for I always pitied the poor people who were obliged to eat pork every day. (I afterward found that Bill's man preferred pork even to a nice bit of beefsteak.) The man I think had discovered my weakness, as he brought me a couple of slices of toast exquisitely browned, which I ate with butter and marmalade. Bill's coffee was excellent. In fact I had always heard that Bill when at home was extremely particular, and even fussy about his eating and drinking, and all his surroundings. What ever could have induced him to go and live up there all summer in the manner he did I cannot imagine. I was just getting my mouth cleared to ask how I could escape from that place when the man came in with fresh coffee, and Bill and he went to jabbering away in their incomprehensible jargon, so I got no chance.

Breakfast over Bill said that they two were going up to some river or other to see about a dam or something and I had better come with them. At first I declined, but when I reflected that there was now certainly no chance of getting away home and that it would be dreary in the extreme to stay there alone all day, I decided to go.

They put some things into a bag, the man stuck the handle of a frying pan into his belt, we all got into the boat and set off. In about half an hour we landed, walked a little way through woods and then began to climb down the side of a mountain. The others went down like goats—I don't see how they did it—but I assure you I wished ten thousand times I had remained at the cabin, instead of coming there to leave my mangled remains at the foot of that cliff. It was dreadful. I had not much hope of getting down alive. Still, by taking plenty of time, placing my feet with great care, holding on to trees and bushes with both hands, and sitting down and sliding in a good many places, I did get to the bottom without any broken limbs. The others were quietly sitting smoking their pipes, without any show of anxiety about me at all. Indeed, I have this to complain of about Bill, that he didn't seem to concern himself much about me anyway. He just did what he wanted to do and assumed that I was doing what I wanted to do, too, which was very far from the case. I certainly didn't want to go on any such neck-breaking expedition as this by any means. There was only one thing I really did want to do and that was to get back to 249th street as quickly as possible.

At the foot of the mountain was a river, and on it was another of those horrible bark canoes. They made me get into it without asking whether I liked it or not, sat me down in the bottom of it and paddled me away. I sat still, not daring to move hand or foot, for about an hour. We came to a lake, passed several islands, and at length stopped at one to straighten our legs out. It was quite time, for mine had been asleep a long while. I asked if the place we were going to was much further, but the most definite answer I got was that it was "a good bit." We embarked again, passed more islands, then a long, winding piece of a river and came into another lake—quite a large one. Unlike the others, it had a good stretch of sandy beach, and they let me get out and walk. I found a great many tracks of birds and beasts in this sand, some large and some small. I asked Bill about them when he paddled to the shore to take me in. He pointed out tracks of caribou, which, it seems, is a kind of deer; fox tracks, lynx tracks and others, besides those of a variety of birds that I had never heard of. There were some marks that looked a good deal as if made by a human foot, which Bill said were bear's tracks, and mildly added that that shore was a splendid place for game. I thought likely it might be good for game, but didn't consider it a good place for me if there were bears around. I wanted to get into the canoe again, but Bill decided it was time we had some lunch, so what did he do but sit down there in the midst of all those indications of savage animals, build a fire and make tea. He and his man ate cold boiled pork and bread; but they had had sense enough to put up a box of sardines with some crackers and a little butter for me.

After our lunch, which happily was not disturbed by wild beasts, there was more paddling till we came to quite a high waterfall, at the mouth of a river emptying into the lake. We got out, the man took the canoe upside down on his head, Bill swung the bag of provisions over his shoulder, and I followed them on a narrow footpath through the woods up the river, which I could hear on my left hand all the time. It was a long walk and a good deal up hill before we came to the water and got into the canoe again, paddling up stream till we came to rapids, where the men pushed the canoe against the current with poles that they cut in the woods. I sat perfectly still, in deadly terror all the time. There was another season of carrying things, and more paddling up river and across lakes to another waterfall, and a dam that was the one Bill had come to see. He looked at it just about two minutes and then commenced unpacking that everlasting fishing rod of his. I don't believe he cared a snap about the dam. He caught a number of trout, some of them quite large, and grew very much excited, jumping about from one rock to another, not minding whether he was in the water or out of it. Some of the trout, one especially, led him a good deal of a dance. Sometimes he had the rod almost quite doubled up over his head, and one time I saw him stand for several minutes with this bent-up rod without moving a muscle, and then all of a sudden there was a splash away off down the stream, the rod was straightened out and the fish 50yds. away. I really grew quite interested in watching their maneuvers. Many a time I thought Bill was surely going into the river. When he got this fish ashore he said that that alone was worth the whole price of admission, that he had got glory enough for one day and wouldn't fish any more. It weighed just 3¼lbs. Bill lighted his pipe and sat down and looked at it about half an hour. I confess it was very handsome, although I have seen many fish a great deal larger and of many different kinds in the markets.

The man then prepared us something more to eat, baked beans this time out of a tin can. Afterward Bill smoked again; and after having daubed myself over with the fly oil I took a nap on a flat rock in the shade. We then embarked again for our return. Arrived at the other end of the lake, Bill announced his intention of "running the rapids," which caused considerable discussion between him and his man. I didn't know what "running the rapids" was, but it was evidently something out of the common and not without danger. I thought the man was remonstrating or at least objecting on my account; but Bill spoke up sharply to him, which was not his custom, and he prepared to obey orders. Neither of them consulted me in the matter at all. Bill took the bow of the canoe with a pole in his hands and told me in a peremptory and not very polite manner not on any account to speak or to move unless I found myself in the water all over. He pushed the canoe off from the shore, held it steady for a few seconds against the current, gave a decided order to his man, quickly exchanged the pole for a paddle and off we shot.

The terror of the next few minutes I shall never forget. We seemed to be going to certain destruction at the rate of a thousand miles an hour. Fifty times I was sure we were going to be dashed against the rocks, but somehow a few quick strokes of Bill's paddle or a sudden word spoken to his man enabled us to go clear. He need not have told me to keep still, for I could not have moved if I wanted to. I felt my hair stand on end and my blood stop running. I just held on to the sides of the canoe with both hands. We came out into quiet water for a moment: and I heard Bill say something that I thought was in the way of commendation to his man and direction what to do next. There was another rapid, but not as bad as the first and then we came to a strong, steady current that carried us down fast and Bill seized the opportunity to light his pipe. The third rapid was worse than the second, though not as bad as the first, and was passed in the same way. Bill was not so much concerned about it as to let his pipe go out, and I am not sure but the smoke from it gave me confidence. The next thing I knew we were pulled to the shore at the top of the big waterfall, and I don't suppose we had been ten minutes in coming back over the distance that it had taken us two hours of walking, carrying the cane, poling and paddling in going up. Still I would rather go on foot, and a very great deal rather not go at all.

I had had all the canoeing I wanted for my lifetime, but yet there were more experiences to come. We had not been half an hour going down the large lake when a shower came on with thunder, lightning and heavy squalls of wind and rain. We reached the shore before it was very bad, hauled the canoe up, turned it over and crawled under it. This kept our heads and bodies dry, but it was not big enough to cover our legs, which got well soaked. The rain lasted an hour or so; and we put off again, having no more mishaps till we reached our original starting place at the foot of the mountain. There was then another shower coming up; and it was too late and dark for us to see to climb up that terrible cliff, so there was nothing for us to do but stay there all night. The men looked about until they found a suitable place, and then by some means or other they stripped the bark off some trees, braced it up against some poles and made a very good shelter. It rained hard before they got through, and I was soaked from head to foot. Literally there was not a dry thread on me. I wondered what Bess would think if she knew what a condition I was in. At home, if by chance I even got in the least damp, she would have me put to bed in hot blankets with a dose of ginger tea inside of me and a bottle of hot water at my feet. And here I was, utterly drenched and without even a roof over my head.

With much difficulty, in a lull of the rain, the man got a fire going, and by its light pulled the bark off another tree, dried it, and gave it to me to lie on. We finished the beans and cold pork, but it rained too hard for us to cook anything, and my supper was scanty. I would have given all my last year's almanacs to be back in 249th street where I belonged and where things suited a man of my disposition. Perhaps some of the people who write stories for such papers as FOREST AND STREAM like this kind of thing, but I don't. I have not a doubt now that if Bill were to write them a letter he would tell all about how he caught that last trout, and never say a word about all our miseries.

While I was thinking them over I fell asleep. The others had been snoring for two hours, having first made up a big fire that dried our clothes a little, and burned our faces a good deal. I was getting indifferent to these discomforts, for I was certain I should take a cold that would turn into bronchitis and then into lung fever or consumption and carry me off, or else into rheumatism that would double me up for the rest of my days. One of the last things Bess told me before I left home, and she told me a good many, was that I should never, on any account, lie down with wet feet, and that if by any chance my clothing should get damp I must change it instantly. Once in the night I spoke out loud to see if my voice was getting hoarse or anything, and was surprised to find it was not; but I could feel that my legs were stiff and was sure the rheumatism was commencing. The fire burned down, and I kept crawling nearer to it until finally I burned holes in both my stockings, but just then the man got up and started it anew.

I had only been asleep a few minutes when Bill roused me up, and said it was time to start, although I saw that it was only beginning to be daylight. In a few minutes we began to climb up that dreadful precipice that it cost me such anxiety to get down. All I wish to say about it is that I got to the top at last. The labors and struggles I went through no tongue tell or pen indite, yet I ultimately lived to get back to the cabin, glad to get even into a log hut, if I could only rest.

I was for lying down at once, but Bill wouldn't let me. He had a little fire built in the stove, for the morning was chilly after the rain, made me wash all over, change my clothes, drink a dish of some kind of broth, and eat a cracker before getting into my bunk. He put a thick blanket over me, and tumbling into his own bed after having gone through very much the same performances himself fell asleep at once, and after awhile I did the same and never woke until 11 o'clock. I was astonished to find I had no rheumatism, and that considering the fearful trials I had gone through I felt remarkably fresh.

But I had had more than I wanted of that kind of life, and as delicately as I could, I sounded Bill about how I could get away. He only said that it was too late for that day, that the next day would be Saturday, and the next after that Sunday, and that on Monday we would see about it. I was, therefore, condemned to three days more, but I firmly resolved that no earthly inducement should tempt me away from the cabin again, where, if my surroundings were not congenial I was not very uncomfortable. I could at least sleep all I liked, and sleeping I knew was good for me. We had some more things to eat, and lounged about the rest of the day. I borrowed a knife and whittled out a neat paper cutter to take home to Bess's baby.

Saturday we rowed about the lake in the punt, and so avoided the detestable bark canoe. Bill caught more fish in that absurd fashion of his, and I scooped them up in the net, which got to be rather fun after I had missed three or four, and nearly tumbled overboard in trying to reach one that was nearly 10ft. away. The flies did not trouble me much, but the sun burned my nose and the back of my neck horribly.

Sunday was another leisure day, and although I could not read much it did not seem very long. We passsed a good part of it in eating and sleeping, and listening to the screams of the loons on the lake. They had frightened me awfully the first night I was there. There were several flocks of wild ducks sailing about, old ones with their young, that looked very pretty. In the afternoon we heard an owl close by. Bill and his man went out after him with guns, but did not get him. Just at night a boy came with letters and papers. The stupid little fellow had no more sense than to paddle across that lake in the same magnificent hog-trough that I had crossed in the first time. I don't know whether Bill and his man were aware what a dangerous vehicle it was, but at any rate they said nothing about it. Perhaps they thought that if this particular boy were drowned there would be plenty left, which perhaps was true, for in all my born days I never say, outside of a Sunday school procession, so many children in so short a time as I had seen, after it got to be light, on my way to the lake.

There was a letter from Bess for me, eight pages: four about the baby, two about Tom and two about other things. Among the other things she said that when she told my doctor where I was gone he said, "Just the place for him. Keep him there till the snow flies and it will add ten years to his life." I wrote back at once that I didn't think the ten years would be worth having at the price, and that I would return as soon as I possibly could. More than that, I didn't think I could live ten days at that place, much less three or four months. I had only been there five days, and had already suffered martyrdom four or five times. The idea of staying several weeks, with nobody to talk to except Bill, who was not at all loquacious, except when talking to that Frenchman of his, and who I felt almost always got the better of me when we discussed politics! And besides, he often appeared disgusted with me when I would not admire the same things that he did. He had a habit of raving about the same kind of things that Bess would run on so about: trees, clouds, rocks, mountains, rivers, waterfalls, shadows, reflections, and the like. Some of them, no doubt, were pretty enough, but I could not see anything in them worth talking half an hour about, or spending half a day in photographing, as he did, or in painting, as Bess would do.

The last two days had been so free from serious discomfort that I was not really in quite such haste to be gone as I had been, and I rather suspected that the green of the trees and the gray of the rocks were good for my eyes. I had enough to eat, could not complain of my appetite or digestion and slept first-rate, so I thought I might hold on a day or two longer, if only I would not be beguiled again into going far away from the cabin.

Monday it rained. We played cribbage, at which I came out ahead, and did odd jobs indoors. Bill's man sewed patches on to a part of my trousers that had come to grief dreadfully when I slid down the rocks. Bill had not cloth enough to make the two patches alike. One was the last scrap of a red flannel shirt that had been used up for similar purposes, and the other was out of the leg of an old boot. I did not bring the trousers home.

Tuesday the men took the bark canoe and went away somewhere. They were gone all day, and Bill came home cross without any fish. I had nothing to eat, as I do not know how to cook.

Next morning Bill announced his intention of going off for the day, and suggested I should go with him, as he was not going far. I didn't want to go, but having been alone all one day I didn't care to try it again so soon. I went, and if I wished once that I hadn't gone I wished it a thousand times. The time we went up the lakes was a mere excursion compared to this. I cannot give an idea of it. There was climbing up hills and down hills, getting across brooks on logs—when I did not slip off, as I often did—going through woods where there was no track at all, and through swamps where I sank to my ankles at every step, and the flies were so thick there was nothing else to be seen. The fly oil was no protection at all. They could not possibly have kept off me if they had tried. There were too many of them, they got in each other's way.

We came to a swift, shallow river that Bill and the Frenchman waded across. I tried to follow, but, of course, fell down. They got me on my feet, but I went down again in two minutes. We came to a place where Bill began his everlasting fishing, standing in the water above his knees. I sat down on a stone and tried to keep the flies out of my face with a bush. After a while the Frenchman came and built a fire for me, which drove them away. Bill kept hooking fish and the man scooped them up with the net.

I took off my boots, poured the water out and dried them, but when they were dry I could not get them on over my wet stockings, so I had to take off and dry them also. By that time Bill was half a mile or so down the river calling me to come on. I started, but had not gone 20yds. before I had to wade again. The stones were round and smooth so I slipped a good many times, but didn't go in all over. Sometimes I was in the water and sometimes on land, pulling myself up banks, climbing over fallen trees and scratching myself with branches. It was simply awful, and that is all I can say about it. Bill was all the time telling me to hurry up along and saying he was having splendid sport. I don't know how he could in conscience call that sport, for he was up nearly to his thighs in running water and in danger all the time of going completely over. I reached him at last; and he truly did have a fine lot of fish, some of them larger than any I have seen before, except that one 3½-pounder. He was happy as possible, but as for me, what with boots full of water, wet clothes, flies and a hurt foot that I got in one of my tumbles, I was not happy at all, not comfortable in the least, and moreover was quite anxious to know how I was to get back, for if I had got to wade and climb all that distance over again, I felt I might as well give up and be drowned at once.

Soon, however, the fish ceased to bite; and it did me good to see Bill unjoint his rod and pack it up. We made a short cut through the woods to a lumberman's road, and quite soon were on a good path that led to the cabin. I had enough. No money would have tempted me to go fishing with Bill again.

The next day some other people came, and among them were two who were not fish crazy. I always could get somebody to stay at the cabin with me and could make up a game at whist without difficulty. Two of the men brought their wives and one brought two daughters; for Bill's cabin had a ladies' room besides the men's room that we had been occupying. The women were rather extravagant about scenery, and went to a good many places that were troublesome to get at in search of it, and twice they climbed down and up that terrible mountain; but so long as I was not obliged to go with them I did not care. One went to the river with her husband to fish and tumbled in, but I never heard that she went wading.

I didn't stay till the snow flew, but I staid till the leaves began to turn and I was quite strong and my eyes very well. Then I came home; and Tom, in his scarcely respectful manner, told me I was looking so fat and hearty that my most impudent friends wouldn't know me.

I made up my mind that I would let people know my opinion of trout fishing and camping out, so here Messrs. FOREST AND STREAM you have it in full. I hope that hereafter no poor innocents may be deluded into thinking there is any fun in them. E. RASTUS.

ANTOINE BISSETTE'S LETTERS.

IV.

M'sieu Fores' Strim:

Dis sprim Ah was took on share de hol' Onc' Lasha sugar place.

Ah 'll took of Joel Bahtlett sonnylaw what hown Joel hees farm, cause Joel ant had no son cep one gal, hees sonnylaw marry of.

He 'll furnishin' noting but de tree and de hwood. Ah 'll furnishin' all de res', de spout, de sap buckle, de bilin kittly an' de man, dat was de bes.'

Ah was goin' try for mek some hones' wagein's an' not have mah half be too smaller as hees.

Ah tink he was be fair 'f Ah 'll have half, an' Ursule, he 'll help it carry sap sometam, have half, an' den Joel sonnylaw, hees nem John Orvit, fan' hees half where he could, hein?

Ah 'll ant gat no sugar haouse, only jes' shanky, sem Onc' Lasha had, an' Ah'll ant had no saporator or covaporator, Ah do' know haow he call it, come sap in one en' an' sugar in tudder.

Only jes' hol' fashin pot-ashins kittly, hang on pole balant on big stump for swung off fire sem as you want it.

Sometam dey be big run, Ah was bilin' all naght, put on the hwood all de tam mos,' an' mek de sap "fluff" for mos' bile over, honly littly chunk porks was stop it.

Dat was de way for mek good maply sugar, all de chip an' bark an' moss was drop in, it not be strain off.

Den, wen you'll tase it, you know you 'll gat maply sugar. Wen you 'll buy maply sugar, you 'll ant want loafer sugar, ant it?

Wen Ah 'll be bile so Ah 'll gat lonesick sometam, noboddy come see me but mah chillen, an' Ah 'll ant gat no more as fourteen Ah b'lieve.

It mek me tink of hol' tam wen Onc Lasha, Solem Brigg, Sam Lovit an' all of it use for come, an' Ah weesh he come naow.

Ah hear of folks talk for took hees hwomens campin' Ah 'll ant b'lieve it, an' Ah ant want it dey brought dey waf.

When mans goin' campin' he 'll go for res'. He ant want hees hwomen, jus' wen he 'll begin shut hees eye an' go sleep, he ant want his waf ponch heem in hees side of it wid helbow an' say "Ah guess we better papy de square room dis sprim'," or Ah 'll gat for have some bonnit so good as Mees dis one, dat one, he 'll gat.

Ah 'll ant want Mees Hudly Sam Lovit, Mees Brigg an' all of it sat up an' oversee it mah cookin' an' say, "Ah b'lieve dat sugar done," "Ah b'lieve it burnin," or if Ah mek some odder cookin' steek up hees nose of it an' said, "Dat was jes' lak what you'll spec of dese mans."

Ah b'lieve for hwomans cook to home, an' Ah 'll ant faound no faults 'f he suit me, 'f he ant, dat vas mah privilege, don't it?

If hwomans want for have some funs, let it weed onion, dat was funs 'nough.

If dat ant 'nough let it go vis'tin' long to some odder hwoman's an' 'f he ant have funs dey ant no funs in talkin'. All de biscuit an' sasses dey heat can' stop de nowse of hees talkin', wen he 'll gat on some good vis'tin'.

Mos' mek me tink of it, was big flock blackbird come in tops of maply an' beegin holler, honly blackbird saound more lak lot o' gal as hol' sass-heatin' hwomans. De hwomans saound more lak forty crow wen he 'll fan' nowl or foxes.

Wen Ah was young noting please me but de nowse of de blackbirds, naow Ah lak as well de crow nowse, but Ah 'll ant want hear it all de tam.

But mah hol' frien' ant come very oftin lak he was wen Onc' Lasha mek some sugar off. Some of it gat too many hol' an' too many rheumatiz for go aout in de evelin.

Some of it gat de grass grow top of it for great many year.

An' it mek me lonesick for sit lone by mah fire an' smoked mah pipe, an' hear honly de haowl hoot an' de fox barkin' way off on de hwood. All de hol' tam come back of mah mind an' Ah felt sorry all de boy ant here, or Ah ant gone 'long wid mos' all of it.

But if dey was here dey heat mah sugar. 'F Ah was dere Ah can' git some sugar, prob'ly, so Ah guess it was de bes' as he was.

Sometam Ah 'll try for feel better for sing some hol' French song on de top of mah voice, "La Claire Fontaine," "Roulant ma Boule:"

"Rouli, roulant, ma boule roulant,
En roulant ma boule roulant,
En roulant ma boule."

Sometam Ah sing de song of Papineau, but de hecho come from de maountain lak some voice from Canada wen Ah 'll was boy, 'fore Ah mos' spilt mah bloods in de Papineau war, an' mek me more lonesick Ah 'll was 'fore. Sem lak hol' song say, "Ah 'll never ant freegit."

One naght Ah gat mah fire fix up good an' de kittly ant want much watch.

So Ah 'll put six hegg in it for bile mah luncheons bomby, an' Ah 'll lit mah pipe an' seet back in de shanky for comfortably visit long to mahsef.

It was so steel Ah can' hear noting but de fire snappin' an' de sap floppin' in de kittly, and dat was nowse ant 'sturb me so Ah gat good chance for tink baout all M'sieu Mumpsin read in you papier.

Some mans in it tell haow much he gat or ant gat, Ah do' know, for so many shoot of hees gawn.

Ah b'lieve Ah can beat it any way.

One tam Ah 'll took mah hol' G. S. R. Tower (Ah b'lieve Ah got for steek to dat) dat was already load up, an' took mah paowders an' mah waddin' dat was waspbee nes' dat tam, an' evree ting prob'ly dat was necessity.

Wal, seh, Ah go for hunt some patteraige an' Ah go prob'ly two nhour 'fore Ah 'll see one an' he was skulk in some berree bush so Ah 'll mos' can' gat sight of it. But Ah 'll tink Ah'll gat 'nough an' Ah shot. "Whish! Boom!" Ah 'll mow road in de bush, but dat patteraige "vroop!" he go safe.

Ah 'll was sup-prise, for Ah know what kan' o' man Ah was for shot an' Ah know what kan o' gun G. S. R. Tower was for shot. Ah 'll was sup-prise but Ah 'll an' discourage.

Ah beegin for load agin, put on mah paowders, put on mah wad, paoun' heem daown hard wid hol' iron rammy rod, den feel mah pocket for mah bag-shot, fus dis pocket, den dat pocket, den all of it, an' he ant dare. Den, bah gosh, it beegin creep on me, Ah'll freegit dat bag-shot!

Wall, seh! Ah was so mad Ah put in some leetly stone, an' Ah 'll ant go far 'fore Ah 'll see patteraige set on limb, an' Ah 'll blaze 'way of it. "Vroop!" he go safe.

Ah 'll load sem way 'gin, fav, seex tam, an' shot jes' so many tam all at fair mark of patteraige, an' Ah 'll ant keel one of it.

Den Ah 'll go home an' prob'ly Ah 'll was mad, hein? Seven shot an' ant got sometings evree tam.

Dat was one tam.

Tudder tam was great many while ago, wen dare was come pigeon in Danvit for nes' one sprim. Wen he 'll flew off an' back, de sky was cloud of it so de sun ant shine.

Ah 'll had mah hol' G. S. R. Tower all prepare, half full of load, an' Ah run off in de lot by de aidge of hwood wen Ah 'll see de biggest flew come over, an' dey mek it so dark Ah can' see mah gawn saght, but Ah 'll pant up where he was prob'ly ten rod t'ick an' Ah 'll pull off de triggin an' de gawn roar off an' ponch me in de graoun up of mah ankle.

Den de pigeon beegin for rain top of me, more of it, more of it, up to mah knee, mah wais', mah neck, an' Ah 'll beegin to climb aout of dat pile pigeon.

Wen Ah look of de flock Ah can see de hole Ah mek in it goin' long in de sky, an' spot of sunshine goin' long under it cross de fiel'. Dat was one shot.

Everee boddee in Danvit had pigeon pot-pie for two week.

Oh! bah gosh! Dat hegg gat bile so hard Ah 'll mos' can' bit it, Ah 'll 'fraid. Your truly, A. B.

Natural History.

THE WAYS OF A ROBIN.

CLEVELAND, July 10.—*Editor Forest and Stream:* Many thanks to Mr. Rowland E. Robinson and the pages of FOREST AND STREAM for bringing to our notice "Rural Hours," by Miss Susan Fenimore Cooper. It is a most charming book and reminds us much of the writings of Thoreau and Gilbert White, of Selbourne. It is a book unknown here, one would suppose, from the fact that the copy we have just finished has been waiting over sixteen years on the shelf of the public library for some one to wipe off, for the first time, the dust from its leaves. Among the many pleasing observations noted by the author in her walks among the hills that surround Otsego Lake, the story of the robin is well worth reprinting, as illustrating the intelligence of birds and with what readiness they accept the protection of man when offered them. DR. E. STERLING.

The account of the robin is as follows:

May 25, 1848.—Early this morning there was great agitation in the tree-tops waving near us. For an hour or more there was high tragedy hovering over the pines and maples. The birds, of course, are in the midst of their spring joys and family cares, and they are very numerous this year, more so than usual. The large pine overshadowing our cottage roof at the northward has several nests and appears a favorite resort of the robins. Early this morning a great hawk came sailing over the river from the eastern hills, and wheeling in airy circles above the pines. * * * The cries of horror, of wrath and indignation of the robins, as the tyrannical hawk drew nearer and nearer, and at last alighted on the pine, was truly distressing. Oh, for a gun! Oh, for a sportsman's hand to aim straight at the heart of this Gessler of the wood! In a moment, perhaps fifty robins and other small birds had gathered about the pine, utterly fearless for themselves, but full of sympathy for the afflicted households of their brethren, and mad with powerless rage against the hawk. Oh, for a valiant kingbird to put the monster to flight by boldly dashing at his eyes, as kingbirds often do! but, alas, there was neither man nor kingbird near enough to avert the catastrophy. With the utmost coolness the hawk perched himself near a nest, and after helping himself to a young robin * * * sailed proudly away. Perhaps some fifteen minutes passed, and again the wicked wretch came sailing over the meadows toward the pines. The same agitation and increased agony among the robins followed, but, of course, it was fruitless. The arrogance and impudence of the hawk were intolerable to behold. He picked out another nestling, and again sailed away. Four or five times during the course of an hour he repeated the same performance, picking out a young bird, first from one nest, then from another. * * * Alas, for the bereaved mother-birds and their mates; their sharp cries of grief were heard throughout the day. The agitation among the whole feathered tribe in our neighborhood continued more or less until evening. * * *

May 28.—The hawk has again made his appearance, attacking a nest on the opposite side of the house, to the great anguish of the bird people in that direction. * * * Their sharp cries of grief were heard throughout the day; the agitation among the whole feathered tribe in our neighborhood continued more or less until morning.

May 29.—The poor little robins are consoling themselves; they are building a new nest, and they have chosen a very singular position. * * * This morning one was noticed with a straw in its mouth flying toward the front door, and now, this evening, the beginning of a nest is plainly seen directly over the front door of the house, almost within reach. * * * They have chosen a canny spot, between the antlers of a deer, which is nailed above the door.

Some fifty years ago there was an association of sportsmen in this county called the Unadilla Hunt. They met at stated times during the sporting season and hunted the last bears and panthers and deer found in Otsego county. Some five and thirty years since, these gentlemen very kindly sent the author of the "Deerslayer" half a dozen antlers from the very last deer shot by the Hunt. The gift was received with great pleasure, four pair ornamented the house within, one without, and the last was nailed over the front door of Otsego Hall. * * * It is between these last antlers that the poor little persecuted robins have taken shelter. We have many fears, however, that the nest, though fairly begun, may never be finished, there is so much opening and shutting of the front door, so much passing to and fro, that they may leave their task unfinished. * * *

May 30.—A terrible storm this evening, with unusual wind. * * * Pines in the church yard blown down, and the ground there and about the house strewn with broken limbs and smaller twigs; a blind is torn off near the veranda that protects the robins, carrying the railing with it. * * * Our robins have not been driven away by the clatter of the storm. Their nest has quite a finished look, and they have been seen perched on the antlers this evening; probably congratulating themselver upon being under cover.

June 3.—The robins are actually in full possession of their nest. They have shown their good sense and wonderful persistence since they began to build. * * * The lattice work near them has been brushed and cleaned, painters have been to work above and below them, there has been some one in sight almost every hour of the day. * * * Poor little creatures, they have suffered much needless alarm, but, doubtless, they wisely decided that we meant them no real harm.

June 20.—The robins have successfully raised their little family; four eggs were laid. The mother-bird sat patiently brooding over them, one dark eye occasionally turned downward, as we stood watching; at times some needless alarm would drive her from her nest for a moment, but all has gone well with the young brood nevertheless. * * * And now Robin, and Pecksey, and Flapsey, and Dicksey are gone, and with other robins are fluttering about the grounds. The empty nest, as it rests on the antlers, is to remain where the good robins built it, as long as time will spare it.

A BOOK ABOUT INDIANS.—The FOREST AND STREAM will mail free on application a descriptive circular of Mr. Grinnell's book, "Pawnee Hero Stories and Folk-Tales," giving a table of contents and specimen illustrations from the volume.—*Adv.*

CHASE OF THE WHITE GOAT.

BY JOHN FANNIN AND GEO. BIRD GRINNELL.

THE successful pursuit of this Alpine antelope calls for the exercise of all the best qualities of the mountaineer. Under ordinary circumstances, no laggard in the chase will succeed in bringing down this sturdy dweller among the rocks; no city sportsman, careful of his comfort, will attain the cold wind-swept heights where this antelope delights to feed and rest. He who would clamber to the white goat's home needs the muscles, the lungs and the nerve of a cragsman. His legs must be sinewy and firm, well hardened by exercise, able to press ever onward and upward over rock slides that seem interminable, and up cliffs that rise before him like walls; his arms, too, must be stout, for often the climbing is hand over hand up the face of the precipice. His lungs must do their part, for the climbing is exhausting work and in the rarified air of these lofty heights the heart works fast, and it is not easy to supply the blood with oxygen. Stops for breath must of necessity be frequent, but need not be long. But no matter how sturdy and muscular the goat hunter, he will accomplish but little if he has not nerve to clamber along the dizzy heights which he must face, and courage to overcome the obstacles which the frowning mountains throw in his way. He must be ready to clamber hand over hand, up cliffs where a slip would mean a long fall on to jagged rocks below, to run along narrow ledges, brushing with his shoulder on one side a vertical precipice, and looking down on the other into emptiness, where a misstep would throw him tumbling over and over down perhaps 500, perhaps 1,000ft. Once in a while—when a man shoots a goat in such a situation and sees it fall, sometimes whizzing through the air with a rushing sound like the noise made by a stooping eagle, sometimes bounding from crag to crag, and at length tumbling end over end down the rock slide or shooting along the surface of a glacier, ending its fall a mass of pulp and broken bones inclosed in a tough hide—once in a while when a hunter sees this, he realizes that just this might happen to himself should he miss his footing, and a sort of torror seizes him at the danger that he runs.

Besides the nerve needed for the climb, the goat hunter must have the dogged courage and perseverance that refuse to succumb to fatigue or to yield to obstacles. He must plod onward, steadily onward and upward, making his stops for breath as short as possible, wasting but little time in resting. In fact, besides physical endurance, the goat hunter requires the quality known in the West as "sand," and the more of it he has the better will be his fortune.

There are places in the West, especially toward the Pacific coast, where it is sometimes possible to ride a horse almost up to where the goats are found, but such places are not often met with, and, as a rule, the man who hunts this game must be prepared to climb on foot from 1,000 to 3,000 feet, over the very roughest mountain sides. The difficulties and dangers of chamois hunting, which have been so graphically described by European sportsmen, give a fair idea of the toilsomeness of hunting the white goat. It is a sport for mountaineers.

The man who has not had some training in climbing mountains is not likely at first to be a successful goat hunter, unless he have the guidance of a companion who is familiar with the game and its habits. Such a comrade may be able to guide the novice to a point where he can get a shot at the game, but often it will be found in localities where it is impossible to approach within rifle shot of it.

The difficulties of this sport consist almost entirely in reaching the places which the goats inhabit. From what has already been said it will have been concluded that they are not a shy animal. That they are gifted with a keen scent is true, but they do not appear to be very watchful, nor to be quick of hearing. The fact that they live in a region where noises are constantly being heard, where snow slides roar along the mountains, and rocks roll clattering down the slopes, and great masses of slide rocks slip down with a loud rattling crash which sometimes lasts for half an hour, may in part account for their inattention to sounds; yet they are often, we believe, partially deaf, from having their ears filled with wood ticks. The sounds of the mountains to which the goat pays no attention always attract the notice of the mountain sheep (*Ovis canadensis*), which will sometimes stare about for half an hour, in order to discover the cause of a natural sound. I seems probable that the goat is by nature far less alert than the bighorn, and this is due in part, no doubt, to the fact that it is less hunted than the latter. As fear of man comes largely from experience of his dangerous character, and since, as has been said, the goat from its habit is little exposed to attack from the hunter, it does not share the inherited acuteness of the mountain sheep which lives at lower levels and in less difficult situations, which is hunted for its flesh, and which has thus been for a long time more systematically pursued by man.

The impression which one gets from hunting this animal is that it is a dull, slow-going and heedless creature, and this apparent stupidity, while it arises in part no doubt from its gentleness and ignorance of danger, is in part due to the nature of the animal. At the same time it must be said that on a very few occasions under the influence of strong fear we have seen the goat display great activity, and show an appearance of alertness which our previous experience had not led us to expect, and which greatly surprised us.

That this animal learns by experience cannot be doubted, and the case mentioned in a previous article, where a band of goats, three times pursued on the same ground, manifested on each occasion increasing shyness, and finally deserted the mountain on which they had been living, would indicate that a continued and systematic pursuit of this animal would render it as shy as the bighorn or as the famed chamois of the Alps.

Although *Mazama* is not a shy animal when compared with the bighorn, yet there are certain rules common in mountain hunting which must be observed to insure success with this species. One of these is to invariably approach it from above if possible. This rule is well known to men who hunt in the mountains, and perhaps scarcely requires mention. For a variety of reasons it is very important that it be observed with the white goat. This animal commonly carries its head very low, scarcely ever lifting it much above the level of the back. To see it raise its head high, as does a mountain sheep, an antelope or a deer, is most unusual. When looking at anything on the same level with itself it still holds the head low, and seems to look up at the object from under its eyebrows. For this reason it is much more likely to see danger below it than on the same level with or above it. Moreover, a goat, if alarmed, almost always starts to climb up hill. It rarely takes a diagonal course, as a mountain sheep is likely to do, but points its nose straight for the highest peak of the mountain and clambers along at a gait that, to the eye, seems very slow, but which is much faster than a man can follow it. When the hunter approaches from below, therefore, if the game becomes alarmed, pursuit is nearly hopeless; while if it should be alarmed by a hunter above it, it will try to pass him and will very likely give him a shot.

There is perhaps no better way of conveying to the reader a notion of the ordinary incidents which attend the pursuit of this animal than to give the narratives of several goat hunters as detailed by those who took part in them. Such accounts, which lack of space prevents our printing here, may be found in FOREST AND STREAM, and especially in Vol. XVI., pages 64-65, in Vol. XXVII., page 462, and in Vol. XXX., pages 2, 42-43 and 62. The methods here described are those commonly pursued in stalking the white goat.

A correspondent, Mr. L. L. Bales, of the State of Washington, describes a mode practiced there with success. He says: "My way of hunting them is for two experienced mountain hunters to go together. Each man has a good glass, a good rifle, and they arrange a set of signals, either by glinting their gun barrels in the sun, if there is any, or, if the sun is obscured, by motions of the right or left hand. We select the grade—a sharp backbone leading up the mountain over which we wish to hunt—and the best man for climbing starts up the mountain by some other grade than the one selected for hunting on and gets above the goats. After this is accomplished and a signal given to the man below, the latter starts up the grade selected for the hunt, just as if he were hunting goats. If he is careful he can approach within 500yds. of them. As soon as they have seen the man below them, and have started up the mountain, he fires his rifle to notify his companion, and follows them up, acting just as if he wanted a goat. Up the mountain goes the whole band, from two to fifteen or twenty, bouncing up the grade and often passing within a few yards of the man above, who usually succeeds in killing or wounding two or three of them. Then your hunt has just begun, as they generally fall or roll from 100 to 2,000ft. down the mountain side, or into some fissure in a glacier."

This species is sometimes hunted with dogs, which, when trained to the work, follow the animals as they climb upward and bring them to bay, often driving them up on to some sharp pinnacle of rock or into some little pocket in the face of a precipice, where, protected in the rear, they easily keep the dogs at a distance by thrusts of their horns. Trained dogs will often hold a number of goats in such a place until the hunter comes up, when he can easily despatch them all.

This sport, so called, has been desbribed by Mr. W. A. Baillie-Grohman. It is very deadly and cannot be approved as legitimate by sportsmen of the better type, for the reason that under ordinary circumstances it gives the game no chance. It is practiced chiefly by Indians and meat hunters. An idea of the destruction caused by it may be gained from the following extract from a letter from our correspondent, Mr. J. C. McKinnon, who writes us that in British Columbia, about 180 miles north of the head of navigation on the Stickine River, that is to say north of the Cañon, 176 miles from the mouth of the river, a case was reported to him in which a number of Indians of the Taltan tribe, with a pack of dogs, ran 16 goats into a big bluff and killed them all. It is said that the goats were afraid to jump over the bluff on the one hand, and were afraid of the Indians and dogs on the other, and so the Indians butchered them all. They brought some of the carcasses down and sold them to the miners in the Cassian district, and the balance they cached in the trees for winter provision. Happily this mode of goat hunting is not much practiced. But few dogs have been trained for this chase, and unless trained dogs attacking this animal are very likely to be impaled on the goats' horns or to be tossed over the cliff and killed.

To sum up the matter, the pursuit of the white goat requires no great hunter's skill, but it calls for the exercise of the strength, endurance, perseverance and nerve, all the best qualities of the mountaineer. As we have more than once heard an old goat hunter say, "If you've got the sand to climb where they live, it's no trick at all to kill white goats."

MIGRATION OF PRAIRIE CHICKENS.—Vinton, Ia.—In speaking of the prairie chicken in Iowa Mr. Hough overlooks an important item in the habits of the bird. It is a migratory bird, a fact not noted if known by writers on the subject. In the fall of the year for weeks at a time they may be seen every evening going from the northwest toward the northeast across the State and out of it beyond the Mississippi River. Their flight is low, from 20 to 50ft. above the ground, and very deliberate, sailing along just above the trees and housetops. In the spring they return in the same manner. Many of them are killed by gunners as they thus pass over. I have seen thousands of them passing over Illinois in this way. Then too in winter they gather into cornfields in large flocks, coming great distances from regions where food is not to be found. In this way whole neighborhoods may be supplied with birds for the coming season where scarcely any were found the year before.—LEVI S. KEAGLE.

MINKS AGAIN.—Vinton, Iowa, Aug. 10.—Some years ago I acquired by purchase a pair of half-grown minks. They were given as a present to Dr. J. F. Wilson, a celebrated naturalist and taxidermist, who undertood to raise and train them. They were easily domesticated, became very tame and playful, and made no effort to escape. They were omniverous eaters, and a large part of their support was obtained by foraging on their own account. They throve and prospered, became sleek and beautiful; until mistaking a finely-prepared specimen of the taxidermist's art for a toothsome morsel, they paid the penalty with their lives. There is no doubt that they can be raised. They are by no means dainty as to their diet; but the line must be drawn at arsenically-preserved provisions. —LEVI S. KEAGLE.

NETTLE ANTIDOTE.—Ottawa, Ont.—*Editor Forest and Stream:* The article on poison oak and poison ivy, by "Byrne," in your issue of July 21, recalls to my mind another stinger that sportsmen are very apt to fall in with when tramping bottom lands adjoining creeks and marshes when in quest of woodcock or ducks. I refer to the common nettle, and most of your readers who frequent such places have no doubt made its acquaintance, and much to their annoyance. Growing rank in such places, sometimes shoulder high, it is very annoying to both man and dog; indeed, I have seen dogs completely used up with it, while the sportsman only partially escaped by holding his hands above his head when pushing through the rank mass. I have often been punished by this vile weed, and until two years ago knew of no antidote, but I then found one and in this wise. I had gone on the invitation of a rural friend to inspect a low marshy creek which in seasons when the water remained high abounded in wood ducks; and if prospects were good we intended to lay plans for the opening of the season, then some two weeks distant. While tramping through the woods and marsh adjoining the creek, I had my hands severely stung with the nettles which were here very rank. My friend said, "Why suffer? the cure is at hand," and reaching out he grasped a handful of the soft and tender tops of the ferns which are always found growing in such places, and handing them to me directed me to rub them well on the afflicted parts. Well, I did so, and I must say with considerable lack of faith, but presto! in less time than it takes to tell it the smarting and pain had all gone; yes, and gone not to return, until another brush through the nettles made another application necessary. I have often tried it since and always with the same result. One advantage is that you don't have to carry the remedy with you; it is always on the spot and cost nothing.—H. B.

Game Bag and Gun.

"FOREST AND STREAM" GUN TESTS.

THE following guns have been tested at the FOREST AND STREAM Range, and reported upon in the issues named. Copies of any date will be sent on receipt of price, ten cents:

CLABROUGH 12, May 1, '90.	PARKER 10, hammer, June 6, '89.
COLT 12, July 25, '89.	PARKER 12, ham'rless, June 6, '89.
COLT 10 and 12, Oct. 24, '89.	REMINGTON 16, May 30, '89.
FOLSOM 10 and 12, Sept. 26, '89.	REMINGTON 12, Dec 5, '89, Feb 6, '90
FRANCOTTE 12, Dec. 12, '89.	REMINGTON 10, Dec. 26, '89.
GREENER 12, Aug. 1, '89.	SCOTT 10, Sept. 5, '89.
GREENER 10, Sept. 12-19, '89.	L. C. SMITH 12, Oct. 10, '89.
HOLLIS 10, Nov. 7, '89.	WHITNEY SAFETY 12, M'ch 6, '90.
LEFEVER 12, March 13, '90.	WINCHESTER 10 & 12, Oct. 3, '89.

A MORNING WITH THE SHORE BIRDS.

WHEN one has been tied down to business for several years, his only change, a day afield now and then with dog and gun, in a neighborhood where game to be found and killed must be fagged for and the gun held very straight, to such a one the prospect of a vacation, either short or long, sets the blood to moving more freely and the imagination to working more actively. Well! that was my case. A certain friend had returned from several years' ranching in Texas, and, as he expressed it, was "dying for a sniff of salt water." So the time and circumstances being propitious, moreover being myself equally desirous for the salt sea air, we were not long in making preparations, which consisted principally of ammunition, our intention being to enjoy not only the usual delights of the sea shore but "bay bird" shooting, providing, of course, the birds were there.

Our shooting clothes, with decoys, were put into an old single trunk, and we were ready. We took the steamer at B., and enjoyed the all-night sail down the bay and up the winding Wicomico River, the next morning, and still more, the excellent railroad service from Salisbury to Ocean City, our destination; the latter so different from what the traveler had to endure until the Pennsylvania R. R. got hold of it and injected life into the W. & P. R. R., which before was put to shame by any real lively horse car line.

We landed safely in Ocean City in time for a late breakfast. Being an old habitué it came to me to introduce my friend to all the old friends among the longshore men, and especially Capt. Tom, my favorite boatman. Tom informed us that there were "right smart of birds," and we decided to take his boat and start down that night, "for," said he, "we have to go furder down now than ever." About 8 o'clock we sailed out upon the broad Tenepuxent Bay, and with a fair breeze the Jane went along at a good speed.

At 12 o'clock we turned into a cove about ten miles down, and making ourselves comfortable, went to sleep. Just at daybreak Tom called us up, and hastily eating a light lunch, we loaded ourselves with cartridges, decoys, water canteens, guns, etc., and strode manfully across the mile of sandy meadow to the other side of the island along the ocean. The mosquitoes made it lively for us until the fresh morning sea breeze from off the water drove them back. It was yet dark when we reached the beach, and as soon as Tom dug the blind we lighted our pipes and lay back on the rubber blanket to enjoy the delicious breeze, cool, salt and damp, adding additional fragrance to the tobacco. Suddenly it seemed lighter, then streaks of color began to stand out against the eastern sky, changing fast into golden light, our decoys became visible, with a flock of active little sandpipers busily feeding among them. A low "mark" from Tom called me from musing to business, the gun was grasped, a sidelong glance showed that Carl was ready for the little bunch of willet flying low over the tumbling surf. Now Tom gave a low whistle, and instantly they noticed the decoys, set their white-barred wings, and sailed in over their one-legged representatives, dropping their own slender blue legs to stop. Bang! bang! bang! went the Parker. Bang! bang! bang! bang! the Winchesters rattled and roared; the smoked cleared away and five dead or crippled willet were left behind by the remainder of the sadly demoralized flock. Tom gathered them up as fast as possible.

The sun had appeared, and now, if at all, our shooting was at hand. Down close, yonder is a big bunch, here they come. Now! And again the battery roared. Seven down! Here comes one back. Bang! and it joins the dead. Now it is a single bird. Carl dropped it neatly in the nearest ripples. Now it is a pair. He misses the leader with his first, drops it way out with the second,

Mine is killed with first shot. Once five birds came in, and none go out; but both our guns are empty when the last one falls into the surf. Once I killed a pair, but missed quite a number of double shots on account of the hard pull of the trigger.

The flight was not a large success, and only netted us thirty birds—twenty-six willet, two calico backs, and two "hill head" plover; so for want of better amusement, the tide being low and no birds moving but the little sandpipers, we began taking turn about shots for pennies—two pennies in "the pot," the shooter takes the pot if he kills. This became tame after a bit, and we decided to take up and go home. Two hours later we were at the hotel, our birds in the kitchen, and ourselves a few minutes later in the glorious surf, enjoying our first bath.

ELLICOTT CITY. PICUS.

THE BIG SWAMP BEAR.

POINT PLEASANT, Louisiana.—On Dec. 1, 1889, I left home with Jackson, a colored man who hunts with me, to look for bears' sign. The first day, although I found lots of mast, I saw very little sign; but the next day I went to a large over-cup country, and there I found sign in abundance, and some of very large bear. I returned home that night and immediately wrote to the Osborns, telling them I had found plenty of sign, and that we would camp in the Tillett house on the Nebraska plantation, but would leave it to them to set the day as I could go at any time. I received a letter from them the following week saying they would be at camp on the 16th inst. I then had Jack go and buy corn, and have it, with cooking utensils, hauled to camp. On the 15th Mrs. M. prepared what provisions I could pack on my horse, and the next morning I started for camp. I arrived about 12 o'clock, and found Jack there. He had cleaned up, and had the old house looking quite neat and comfortable. I counted what dogs we had, and found ten. After resting I told Jack to prepare dinner, as I thought the Osborns would get in about 3 or 4 o'clock; they lived about 20 miles from camp. Sure enough, about that time I heard their horses in the distance, coming up Tensas River. It was not long before they came into camp, followed by twenty-two dogs. There were Ike A., Rapp and Ichabod O. Rapp called to Jack and told him to look in his saddle pockets and he would find some bear's ribs which he could warm. Rapp said that they had been out the week before and had killed a very large bear, the ribs were a part of it. After dinner we spread down our blankets, and lay down to rest and plan the hunt for next day.

I told them about the quantity of sign I had seen and about the track of a bear that I thought would measure 11in. They all laughed and asked Jack if I did not take a bottle of whisky along when looking for the sign. "Yes," he said, "but that bear's track was there, for I saw it, and you know I don't drink." I told them to wait and they would see.

It was left for me to plan the drive for the next morning. After a good night's rest and an early breakfast, we were ready to start. I sent Ike and Jack to take the stands, Rapp and I taking the dogs. Ichabod said he would go along with us and take his chances in heading the dogs off. The morning was dark and foggy. In going across an open swamp we lost our course, and if Rapp had not had his pocket compass with him we might have had trouble in going to the place we wanted to drive. As it was, while blundering around the dogs started a bear, in fact, three bears; and went off like mad in the direction of the standers. We put spurs to our horses and started after them. We were going as fast as we could, and just got within about a quarter of a mile of them when we heard a gun fire. We checked our horses for a moment and still could hear the dogs running. Ichabod said: "Those fellows have either missed that bear or crippled it, and there will be the Old Nick to pay; so come on and let's get there. But before we had gone far we heard another gun; and still the dogs kept on. When we got close enough we hallooed, and Ike answered saying he had killed two bears and the dogs were after the third one. We tied our horses and took the cane. We had not gone far before the dogs made the bear take a tree about 300yds. from us. I told Rapp if he would go and shoot it I would follow after and cut a trail. The cane was awful thick. I had cut about half way when Rapp fired. In the meantime Ike came up and said he was a younger man than I and he would finish the trail and help Rapp get the bear out, but he was almost famished for water. I took all the canteens and rode to Mill Bayou, about three-quarters of a mile, filled them, and when I returned I found all the bears out in the slough and all the boys as thirsty as old topers.

After cooling off, the weather being quite warm, we concluded to go to camp. We arrived there about 4 o'clock. I went to see a man that butchered to see if we could get him to sell the meat, as we did not want to quit hunting, and the meat would not keep. He agreed to sell the meat if we would give him $5 per day for his wagon and team. I told him all O. K., and to be at camp early enough next morning so that he could get the meat out on Lake St. Joseph by sunrise, as it would not keep longer than that day. Soon after I returned to camp Jack announced dinner. Now, don't you forget it, Jack knows how to cook. We were right for eating, and that dinner disappeared by sections.

About 4 o'clock next morning the wagon came for the bears. For the hunt that day we took the same course, but as it was clear we found no trouble, Rapp and I taking the dogs, Ichabod going with the standers. Near about the same place where we had got a start the first morning, the dogs struck a trail. The trail led in a different direction, but we knew we had men on the stands that knew them all, and we did not feel uneasy about the bear's getting through any of them. The bear jumped close to the stand that Ike was on and tried to get through, but either saw or winded him and turned off and struck for Mill Bayou. Ike knew if she got across the bayou she would give us a long race before we got her; so he put the spurs to his horse; and it was a close shave. Just as Ike got to the bayou the bear came rolling down the bank, a large barren she; with one barrel he tumbled her into the bayou, and as she tried to crawl out on the other side he finished her with the other.

By the time Rapp and I got to them Ike, Jack and Ichabod had her dressed. We carried her up a slough near the trail that led to camp, and hung her up. Rapp and I then took the dogs and drove up Mill Bayou toward the Bearden Cane, the others going to the stands. We had not gone far before the whole team went off at full cry, except two dogs, they going in the opposite direction. On examining the trail we found the two dogs right, the team going on the back track. Bear dogs will often do the like. In the meantime Ichabod came up. I told him to go after the team and Rapp and I would follow the dogs that were after the bear. They ran the bear, a large barren she, until the sun was nearly down, when she stopped to fight. About that time I heard Ichabod coming. When he came up the two dogs were about half a mile from us and fighting. Ike was close to them. Ichabod told Rapp and me to get within speaking distance of Ike and tell him to halloo and he would try to get the dogs to him. He feared if we started to the dogs that were after the bear the others would start a fresh bear and both would get away from us. As it was then getting dark Rapp and I started, and as luck was in our favor, the bear began fighting toward us and met us near half-way. We began to halloo. The bear broke and ran on toward Ichabod and the dogs, and he soon had the whole team after her. I knew then that that bear's doom was sealed. She tried to take a tree, but could not, as the dogs would pull her down every time she attempted to go up it. Again Ike got there, and he barely had time to shoot her before it was so dark you could not see the end of your gun. Ichabad was on the outside of the cane. He blew his horn. Rapp and I went out. Ike and Jack staid with the bear. When I got out of the cane I rode to the house of an old gentleman named Sims, got some lights and two or three negro boys.

We cut a trail to Ike and the bear, and got them out into Sims's field. We then dressed her, packed her on the horses, borrowed a head-lamp from Mr. Sims, and started for camp. We took up the first bear as we went along, and arrived at camp about 10 o'clock, pretty well tired out. We did not wait that night for Jack to cook; every fellow began cooking each one for himself. Some broiled liver, some kidneys, melts, etc. We were a hungry set, but after so long we got the keen edge of our appetites somewhat appeased. Then Jack started his cooking, and about 12 o'clock those that had fallen asleep were awakened to partake of a delicious supper.

The sun was well up the next morning before any of us were astir. Mr. Kennedy came and found every one asleep. We were awakened by the dogs barking and his hallooing to keep them from biting him. He had had good success in selling the meat, and said he could sell more if we wished it. We gave him the two we had killed, and told him what he could not sell to give away as we were going to kill some more that day.

It was late before we got off, as we all were sore and tired. Rapp and I again did the driving. We set out about 10 o'clock. I proposed to go in the direction of where I had seen the big track. I was certain that the bear had not gone far from the place, as I knew he was fat and used mostly around corn fields. We had not gone more than a mile before the dogs struck a fresh trail. I told Rapp to let them go, that some of the boys would kill it, and we would go on and look for the track of the big bear. We went on and got into Negro Bayou, which was then dry, and we had not gone more than half a mile up the bayou toward the fields before we found his track, which had been made some time during the night. In the meantime Ike had killed the bear, the dogs had gone off after a barren she, very fat.

I cut a cane and put it across the big bear's track, and cut it off the width of the track. It measured 11in. I took the cane and started for the dogs. When I got to where Ike and Ichabod were, I showed them the cane and told them that that was the width of the bear's track, and that it was fresh, and that we must get the dogs to it if we had to tie them all and lead them. Ichabod, that morning, in trying to head the dogs off on the upper part of Negro Bayou, had run his horse into Mr. Sims's bear-trap. After getting him out he found that he was unable to travel, so he had got a horse from Mr. Sims. I had left Rapp where we had seen the track, but fearing I would have trouble in getting the dogs, had come on after me. Ichabod, Rapp and I started with the dogs, leaving Ike and Jack on the trails to head off. We did not have much trouble in carrying them, as they were tired. On getting near the place where we had seen the track, Ichabod took our start dog, old Tom, and went on ahead to start him after the bear, knowing that as soon as he began giving tongue, the whole team would go to him. It was no time before we heard old Tom squalling, and the team made a break for him, with Rapp and me in a gallop after them. When we got to where Ichabod was, he was off of his horse looking at the track. "Well, boys," says he, "I have seen many a bear's track, but this one lays them all in the shade."

The dogs did not run long before they came up to the old fellow, and then the fight began. Such a fight I never before heard; although I have bear-hunted for twenty odd years. I got off of my horse and climbed up the bank of the bayou, and stood for some time listening to them, forgetting, for the moment, that it was my duty to assist them. Ichabod was standing close by and said to me, "Did you ever hear the like before?" Rapp had gone, which way I did not know.

I said to Ike, "Let's get from here. The dogs seem to be fighting toward Sims's field. Our best route lies up the bayou. Come, let's be off." We sprang upon our horses, I taking the lead, and struck out, going as fast as we could, only checking our horses to dodge a bush or vine, here and there. We rode at a racing lick where we could. Just as we got into the field where we had a trail leading into the cane, we heard a gun fire. Then again. Then two more reports in quick succession. Then we heard Ike's horn; and we knew that the biggest bear in the swamp was dead. We soon got to Ike, as he had killed the bear on one of the trails we had cut the day before.

I have hunted bears for twenty-five years, and have seen and killed many a one, but never in my life have I seen one to equal that bear, either in woods or menagerie. We had no way of weighing him, but I am sure he would have weighed between 800 and 1,000lbs. I sent his foot to the editor of the *Tensas Gazette*. It measured across the bottom 9in. Ike stands 5ft. 8in.; he lay on the bear after it was turned on its back, and when his toes were at the bear's tail he could not reach its nose with his hands. It took four horses to carry the meat and one to carry the skin to camp.

The only dog killed during the hunt was killed by the big bear. We did not get into camp until late that night. As we were all tired, and had more meat than we could save, the weather being so warm, we concluded to break up and go home. I only saved the fat portion of the meat, and that Mrs. N. rendered into lard, which lasted the family for several months.

That was the last hunt for that season. I fear the hunting for this season will be poor, as the freeze in March killed the mast in the bud. More anon.

HUNTER

STILL-HUNTING FOXES.

I CAN not say that still-hunting the fox is a sure and successful method of capturing them compared with other devices, yet I have, in years past, carried it on to some extent among the good old hills of Vermont and New Hampshire. The fox is the most alert and sharp-scented of our wild animals, and we must consider that man of all else is his common enemy.

Did you ever think how few foxes you have seen in a wild condition, during all the years you have hunted over the hills and fished along the streams of your own town or county? Very few, I dare say. And yet the trails in the snow, and frequent sharp yelp-like bark, convinced you that they were plenty, and near the farmhouse at night, too. Well, this is simply and easily explained. By their quick sense of scent and sound they detect your presence first, and with light bounds seek safe cover at a distance.

I have in the past trapped many hundred foxes and it was always at the season when fur was most valuable that I hunted or trapped them at all. One season I took more than 80 in steel traps; and in the early morning just at daybreak I followed still-hunting to some extent, capturing two one morning in about twenty minutes. I was not always successful and would, then go home, leave my gun and started with my trapping outfit for a round to my traps set for fox, fisher, mink and other animals. It was many years before I got fox-trapping down to a nicety and it was from a thorough study of the animal that I was ever successful at still-hunting them.

I found the best locality for carrying it on was low-lying fields or pastures, remote from farmhouses. Here at daybreak you would find them hunting catlike for the luckless mouse, for which they had a greedy appetite. I would place a composition on my boots, which is a great attraction for the fox, repair to what I know to be a hunting ground for them, walk in a circle on the windward side of some object, a stump, tree or cluster of bushes, secrete myself there and await the animal's appearance. Sometimes I waited in vain, but a sportsman must have patience and it will prove its own reward. The fox would strike this trail and follow it past my place of concealment. I have been able on many occasions to call them within a few rods of my hiding place by imitating the sharp squeak of the mouse. Be careful to have the wind blowing toward you, or else they will scent you and run away.

I stood as silent as a tree one morning and watched a fox catch seven mice in a few minutes, and at last when near enough I pulled the trigger and the game was mine. When I approached and picked up his lordship a mouse dropped from his mouth, and upon examination I found the entire seven mice in his mouth.

If foxes are plenty trapping them is the only successful method of capturing them to any large number.

I have sold many foxes, alive, to hunting clubs at a good price. DAPHNE.

JERSEY CITY, N. J.

We have a man here who kills more foxes in this manner than all the rest with hounds. Of course, still-hunting is impossible unless there is a good tracking snow. When the conditions seem favorable our huntsman "Paddy" Miles shoulders his gun, usually loaded right barrel Bs and left T or TT shot. He starts off with a slow easy gait, but woe to the man that follows him in an all-day trip. I know for I have tried it. He is liable to pass several tracks before he selects one that suits him, and even then he may abandon one after following it a half mile. He seems to know by the direction taken and the crooks and turns the fox makes whether he is soon to lie down for the day. As soon as the track leads toward the leeward side of the hill and by those peculiar turns in and out under small evergreens, etc., "Paddy" assures us that he will not go "fur" before seeing him curled up on a stone pile, snowbank or beside an old stump. He now moves cautiously, and with the eagle eye of an Indian he surveys each likely place before he shows much of his person. Moving on fifty or sixty rods he finds his fox has been joined by another and the pair have trotted along together. The tracks lead into a brush lot and "Paddy" says they are probably lying down together in that gully. Now, with increased caution he moves on. He crawls many rods to get a view into the ravine. He looks, long and carefully, and is about to rise to his feet and walk on when he espies yellow fur at the foot of the old stump, about two-thirds the way up the opposite bank and at a distance of about fifteen rods, too far for a sure kill, so he slides backward until he is out of sight. He has marked a tree on the opposite side, where, if he can reach it, he will be within eight rods. A walk of about half a mile brings him around to the opposite bank. He reaches the tree and cautiously peaks out and can plainly see their heads lying side by side across their forepaws. Slowly raising his gun he fires at the pile. One fox never got out of his bed and the other is killed before he runs four rods. With both in his hunting coat he appears in town, having been out less than three hours. Of course this is an exception to the rule, but he has killed three in one day. Now, if we have any other still-hunter of foxes I would like to hear from them.

EATON, N. Y. WING.

THE MASSACHUSETTS FISH AND GAME PROTECTIVE ASSOCIATION have prepared a cloth placard giving the game and fish seasons. It is an excellent plan to nail these up where they will do the most good. Mr. Richard O. Harding, the secretary, at 304 Washington street, Boston, supplies them gratis on receipt of stamp. The seasons will open on woodcock, quail and partridge, or ruffed grouse Sept. 15. Harding writes: "The seasons of these birds being uniform there is no longer any ground for the old excuse, 'out after woodcock and shot partridge by mistake.' Our Association would like to have had the open season on all these birds begin Oct. 1, but as Oct. 1 would be late for woodcock we met with considerable opposition, and had to be content with Sept. 15."

CHINESE PHEASANTS.

VANCOUVER, B. C., Aug. 6.—*Editor Forest and Stream:* I was much interested on receiving my FOREST AND STREAM of July 31 to read your account of Chinese pheasants in America.

Some of your readers may remember a note I sent you last spring, wherein I stated that a game protective association had been formed here, and that we were importing Chinese pheasants and other game birds.

Our first attempt to import Chinese pheasants was a failure. A committee from our association interviewed the captain of one of the China steamers sailing from this port and asked him to get what we wanted. The captain (one of the sort who promise everything and do nothing) was most agreeable and promised to get us all the birds we wanted, and bring them on the next inward trip, which was April 7. Had the birds arrived by this boat we would have had them in good time for breeding, but on arrival of the boat we found no birds, but lots of excuses from the captain. We determined to take the matter out of his hands, and as we were then too late for this season, it was determined to wait till the hatching was over and send for a lot of young birds, and turn them down this fall. This has been done and we are expecting them shortly, and as soon as they arrive your readers shall have full particulars of our experiences.

I am advised that pheasants round Victoria are wonderfully plentiful and strong. They evidently intend to enforce the law there too, for I see by the papers that two ranchers were fined $50 apiece for shooting them out of season. A few convictions like this and there will be very little shooting done out of season.

Despite our hard winter and wet summer grouse round here are p'entiful. This is partially accounted for, as we had a spell of very fine weather while birds were young.

C. E. T.

CHICAGO DISCOUNTED.

Editor Forest and Stream:

Never until his letter of Aug. 4 appeared in FOREST AND STREAM of the 14th did I notice anything in the breezy letters of E. Hough about "Chicago and the West" to which the slightest exception could be taken. And it is perhaps rather hypercritical, after deriving much pleasure from his contributions, to light on one little paragraph in a long letter to find fault with and contradict in the most express terms.

Although the provocation to become red in the face and get angry at his assertion, is great, I shall endeavor to restrain the tendency to fume, and will in the mildest language try to show that on one important point Mr. Hough is clear off his reckoning and owes the world an immediate and unconditional retraction. In the third paragraph of his letter, speaking of the cheap sporting trips that can be made from Chicago, he says: "I would rather repeat here than anywhere that there is no city from which so varied and so cheap an amount of good sport can be had as the city of Chicago."

That claim contains the *gravamen* against which I beg to protest. Is it not enough that Chicago should possess the Auditorium and a call on the World's Fair, without making an effort to filch from an elder sister city the proud honor of being the center from which the most diversified sport to be had in the United States, or perhaps in the world, can be enjoyed at less expense, and with least lapse of time—I do not say loss of time—for I regard time passed in the field with rod or gun as placed where it will give the best return.

Mr. Hough details with excusable glee the fact that from Chicago he can take "'Ah Look' on either a bass trip, a woodcock trip, a snipe trip, a plover trip or a duck trip, each in season and get game, too." Chicago is fortunate in having such delights at her command, and I hope she will be wise enough to conserve them as far as possible that posterity may derive some pleasure from the bounty of nature. But there is a city that was famous when Fort Dearborn was a trading post, that can lay valid claim to furnishing its inhabitants with all those sporting trips and many more. It is here in western New York, on the banks of the Genesee River, and its name is Rochester.

I am not yet classed with the greybeards, but I have shot snipe, ducks, woodcock, grouse, plover, rabbits and pigeons within the present boundary line of this city, and have had days that it is delightful to remember with the black bass and pike, to say nothing of lower fish within half an hour's walk of the City Hall. It would scarcely be fair to claim that such a variety of game is to be found within the city now. The pigeons especially do not come around in such numbers as they did when we were boys. Neither would it be an easy matter to make a satisfactory bag of ruffed grouse or woodcock in town. But I would undertake, if it was necessary, to get a specimen of either kind of bird within three miles of the center of the city, and would not regard it as at all difficult to find half a dozen snipe or plover of a day between this date and Oct. 15, on grounds almost touched by the street cars.

When "$5 trips" are under consideration we can easily discount Chicago. For about half that sum one can get a railroad ticket that will take him out to and bring him back from grounds where in one day he may get half a dozen ruffed grouse or double the number of woodcock, with an occasional quail or rabbit. A 25 cent trip ticket over the Rochester & Lake Ontario, or the Glen Haven R. R., will put one on the shore of Irondequoit Bay, formerly one of the best duck grounds in America, and where even still, although the points are nearly all covered with hotels and cottages, the widgeon, redheads and bluebills, with all their kindred, love to linger on their semi-annual migrations. Northwest of the city, within two hours' drive, there are five ponds on the shore of Lake Ontario, which to the sportsman of the last generation were as prolific in wildfowl shooting as ever could have been the Calumet River or Kankakee marshes. Even now, although they are popular summer resorts, a dozen families of teal are breeding there, and from October until January there is a fighting chance of meeting with a big day at winter ducks.

If comparisons are tolerable we may well challenge Chicago in respect to facilities for angling. The black bass, pike and pickerel that inhabit the river above the city have no superiors in gameness and all the other good qualities. The city sewage has unfortunately ruined the best of the lower river fishing, which in former years was unsurpassed. The boys I spoke of afford good bass and pickerel fishing. I saw a boy take a 5lbs. big-mouth bass in Irondequoit Bay a week ago, and he had four other good ones. Four lines of railroad—the Central-Hudson; Rome, Watertown & Ogdensburg; Buffalo, Rochester & Pittsburgh, and an electric road compete for the summer travel to the mouth of the river, where perch and rock bass, with now and then a black bass or pickerel, can be caught in great numbers through all a summer's day. The fare is only 25 cents for the round trip. We have one of the best trout streams in the world within sixteen miles of town. The Rochester and Pittsburgh and Erie railroads will take you to its banks for half a dollar, but unless you have an invitation from a member of the club that has leased it you can cast no fly on its crystal waters. But you may visit the State fish hatchery there situated and see the process of hatching fish artificially for distribution over the State. There are besides in the county a few small wild streams where fingerlings and a few trout above the 6in. limit can be taken with "patient angle" if one likes to creep through mosquito-infested and tangled underbrush.

But it is not alone on the home waters that we rely for sport with rod and line. At our doors lies Lake Ontario, and on it ply steamboats which for a consideration will transport the town-weary citizen to the north shore, where, in the Dominion wilderness, he can soon cast his lines in waters alive with bass, pickerel, mascalonge or trout. We command, as it were, the piscatorial resources of all British America, and can draw draughts on streams and lakes that have never failed to respond satisfactorily when approached by the right man at the right time. Down the Lake we have the Thousand Islands fishing to try if we tire of the home or Canadian waters. Then the Adirondacks are next door to us, where trout or deer can be had for asking.

Oh, yes, Chicago is a great city, and her children are full of *chic, élan,* "sand," enterprise, or whatever you want to call it. But when she claims to be a better base of operations from which to carry on field sports than Rochester is, she illustrates that vaulting ambition which o'erleaps itself.

E. REDMOND.

ROCHESTER, N. Y., Aug. 17.

BOSTON NOTES.

JUST the best way to spend a vacation is something of a question. Some are fond of the seashore, where bathing in the morning and sitting on the piazza in the afternoon make up a large part of the programme. But this will never do for the lover of the rod and gun. A vacation means more to him. Mr. A. W. Tompkins, salesman for Foster & Weeks of this city, has a pretty good idea of what a vacation should be to a live young man, and he usually manages to get a good deal out of his annual two weeks. In the first place he objects to going such a distance as will take up some four or five days of his precious time on the road. So he selects some spot nearer home. This year Wayland, Mass., was his choice, and that of his friend Mr. J. A. Tolman. Both are lovers of a good horse, as well as the rod and line. They both drove to a pond in Wayland, not more than 18 miles from Boston. They camped at the pond, where boats and everything was in readiness. Pickerel fishing was excellent. Right here it might be remarked that fishing of this sort has been particularly good in many of the ponds in this State this summer. They caught all they wanted and some of the large ones were sent home. Black bass fishing was good, but the boys preferred pickerel. The pickerel were worth something after they were taken, but the bass they did not try to eat. Nearly every day their mothers, sisters and lady friends came up to see the boys, and one of the features of the vacation was to drive the ladies home at nightfall behind the fast steppers. They then would drive back to camp and finish out a day of rare pleasure in hunting bullfrogs with a jacklight. The glare of the lantern turned upon the frog at a distance of 20ft. would cause froggy to close his eyes, when he fell an easy prey to the club of the frog hunters. The next morning his hind legs furnished a dainty fry for breakfast, or the tidbits were reserved for dinner, when the ladies again came up for pickerel fishing. The boys did their own cooking; and again they did not, for each time the ladies came up they did not come empty handed in the way of the best their culinary skill could produce. The boys are blacker than redmen; that is to say, of the insurance order type, but such a time comes only to those who rough it.

But if reports from Maine are to be credited, the deer are remarkably plenty. Then, if further reports are to be believed, they are being killed out of season. One guide writes me that the deer are plenty at—I am not going to aid other breakers of the law by publishing in the FOREST AND STREAM just where—and that they are shooting them. It is a shame. It is totally unfair, and enough to discourage those who are disposed to obey the game laws. The other day some fishermen were bass fishing in one of the ponds which lie between Bridgton and Norway, Maine, when they saw what they at first took for a duck, swimming rapidly past them and for the other shore of the pond. Soon they saw that it could not be a duck, and they "up killick" and gave chase. It proved to be a deer, and they gained upon it by rowing with all their might. The man at the oars, a stout fellow with tremendous muscle, was determined to overtake the deer, and he came very near succeeding. But the deer soon got to where he could touch bottom, and with a few bounds and splashes he struck the shore and was away into the woods. The oarsman was so exhausted that he could not move for some moments. His idea was to catch the pretty creature alive. This deer was seen at a pond among the farms, and at a point where a few years ago such a creature was never heard of.

At Eustis, I am told, a deer was shot as it crossed the road one day last week. It was a doe, and very thin in flesh. It had come out into the fields to feed. Respect for the law is not sufficient up there to prevent shooting at deer or partridge whenever they are to be seen. On the stage one morning a while ago, in the same town, was a sportsman returning to the city, after having caught about 1,000 trout by count. The number of fish he had caught, which he could not possibly use, brands him a—call him what you please, good reader of the FOREST AND STREAM—I say a man not fit to be in the woods. An old partridge ran out from the underbrush by the roadside and made passes at the wheels of the coach. Her young were doubtless in the brush, and she was using the strategy that such birds will, to attract the attention of wild animals from their young. The poor bird doubtless mistook the coach wheel for some monster that was to harm her young. Our great sportsman, mounted on the front seat, drew his revolver and began firing at the bird. About the fourth shot she fell dead. The cruel fellow jumped off the coach, examined his booty, and finding it "poor as a crow," left it by the roadside. Ah! when will men learn to go into the woods with some sort of knowledge of the habits of the game they seek, and with such a love of nature that they will not kill for the mere sake of killing? The name of the cruel, badly informed booby should be given right here, only that my informant hides his name from me, because he is a friend.

SPECIAL.

AN OLD FASHIONED PANTHER FIGHT.—Quilcene, Wash. —*Editor Forest and Stream:* Deer, wildcats, cougars, and some bears are found in this vicinity. I have not seen any bears, but I see their signs every few days. I have often wondered what hindered the cougars from being very plentiful. They are monarchs of the woods, and are very sly, with plenty of game and cattle to live on. This spring I was talking with an old cruiser (a man who hunts for timber and good land claims), who had followed the business for the last twenty years in Oregon and this State. He never takes a gun, but carries only a blanket and a small axe. He related that one night when he was camping in the head of a ravine about dark he heard a cougar scream on one of the ridges; and this one was answered by another on the opposite ridge. They kept working toward the head, until finally they came together some 300yds. above him in some quaking aspen; and such a row and racket as they made he had never heard before. They rolled down within 100yds. of him; and he says that he was pretty well scared; but he kept up a big fire and stayed behind that. They quieted down in a couple of hours, and the next morning, when it was light enough, he went on to the battle ground. He found one of them lying there dead, all cut and torn to pieces. It was a very large one. Four days afterward, as he was coming back the same way, some 500yds. from where he had found the first one he had stumbled ugon the other one, dead. This, too, was all cut and torn as the first had been. At another time, in Oregon, he heard a big fight going on, but did not go to see the results. He was stopping one night with an old Indian, who had hunted and trapped all his life, and was telling him about the fight, when the Indian said that that was the way when two old males met; one or the other was killed, and very often both; and that whenever the male would find the young ones and the mother absent he would kill the last one of them, but if the mother were with them she would keep him off. That must be the reason that the mother goes with the young until they are nearly two years old. They say that all the cat kind will kill their young. We know that this is so with the domestic cat.—C. B. P.

CODIFICATION OF THE NEW YORK LAWS.—There was a meeting of the Commission for the Codification of the Game Laws, which is composed of the Hon. R. U. Sherman, E. G. Whittaker and Robert B. Roosevelt, formerly president of the Fishery Commission, and afterward Minister to the Netherlands. The meeting was held at Sayville, where Mr. Roosevelt has a country residence, and entertained the Commission during their stay. Notice had been extensively given out not only by advertisement in the local papers, but by the printing and distribution of hand bills; but although there were some 30 or 40 persons present at the meeting the netting interest was not largely represented. Special efforts had been made to get them to be present, as the Commission was anxious to get their views. Those who did come differed as usual, the pound-net men laying the diminution of fish, which all admitted, to the fly-netters, the latter putting the blame on the set-net owners, and all uniting in saying that the hook and line fishermen were most to blame for catching more fish than they could use and allowing these to spoil and rot till their smell was offensive to the neighborhood. To show his associates how great was the loss from this cause Mr. Roosevelt took them in his yacht to the famous Cinderbeds, where they found some thirty other boats hard at work at this nefarious destruction. However, as the entire Commission did not catch a single fish in two days' fishing, and could not ascertain that any of the thirty boats caught more than twenty, the unlucky members from the rural districts came away with decided doubts whether hand-line fishing was so ruinous as alleged, especially when they remembered that these thirty boats were the means of having spent on the bay men not less than $500 and on the hotel keepers a great deal more. The next meeting of the Commission is appointed for Staten Island and Peconic Bay.

HUNTS AND FISHES AND RUNS THE "HERALD."—Indeed, the younger Bennett possesses many of the best traits of his great father, the founder of the *Herald.* It is a common error that he leaves to others the management of his newspaper. Very few journalists are so ever-present and pains-taking; for though hunting for tigers in the jungles of the Soudan; or fishing for haddock in the Arctic Ocean, this wizard of the tripod carries a wire with him, and keeps his hand ever upon a galvanic battery. It is to this watchful and exacting, this original and restless spirit, that the *Herald* owes not only its peculiar influence and vitality at home, but its supremacy among American journals abroad, where it stands alone and without a rival.—*Louisville Courier-Journal.*

MINNESOTA PRAIRIE CHICKENS.—Detroit, Minn., Aug. 13.—*Editor Forest and Stream:* In my note to you last Monday, I believe I stated that the deer season was from Nov. 15 to Dec. 1. I am mistaken in thus writing, as the season is from Nov. 1 to Dec. 1; and from Dec. 1 to Dec. 15 to get the game out of the country. I regret making such a blunder, but feel consoled when I read in the St. Paul *Press* and the Minneapolis *Tribune* this morning that the chicken season opened the 15th inst., a blunder inexcusable from two of the great dailies of the State. I learn this afternoon that a party of four are out after chickens to-day. The grouse season will open Aug. 21.—MYRON COOLEY.

FOREST AND STREAM, Box 2,832, N. Y. city, has descriptive illustrated circulars of W. B. Leffingwell's book, "Wild Fowl Shooting," which will be mailed free on request. The book is pronounced by "Nanit," "Gloan," "Dick Swiveller," "Sybillene" and other competent authorities to be the best treatise on the subject extant.

THE TRANSGRESSORS' CORNER.

A PHENIX, R. I., correspondent sends us a report, taken from the Providence *Telegram*, of the trapping of one Geo. L. Hoxsie, the game officer at Hopkinton, R. I. President Penney, of the Society for the Protection of Game and Fish, received word that Hoxsie was out shooting with a hired man. Tuesday morning President Penney and Geo. T. Anthony, one of the special detectives of the society, enlisted the services of Deputy Sheriff Beny, of Westerly, to assist them. The party went to a place near Hoxsie's house and concealed themselves behind a stone wall with a full view of the premises about his place and patiently awaited his return from the shoot. About 11 o'clock that night Hoxsie with another man went into the yard. The watchers saw him hang the birds down into the well. After the family had retired the two betook themselves to a farmhouse, where they were stopping, and remained there till 2:30 o'clock in the morning, when they again returned to watch Hoxsie. They lay in wait till he came out. He looked anxiously up and down the road, and then went to the well and drew up the rope to which was attached the basket of birds. The detectives started for him, but he discovered them when within 300yds. of the house. He was on the alert, as he afterward explained, he had been warned by E. C. Green, the pharmacist of Hope Valley. He ran with the basket of birds, but the Sheriff and President Penney were equal to the emergency and they overtook him.

Mr. Hoxsie said he had not been shooting. The warrant was read to Hoxsie, and while a conversation was going on between two of them, the sheriff, who had been looking for the birds, returned with a basket which contained twenty-one partridge and two woodcock.

The case came before Justice Whipple in the Third District Court at Westerly. Hoxsie was adjudged guilty and fined $20. Justice Whipple dismissed the twenty-three separate complaints. Hoxsie's counsel pleaded that having been convicted of having one partridge and paid his fine he could not be fined for each bird in his possession. The president of the game club has not given up Hoxsie's case yet. Mr. Penney has employed more counsel and is going to make this a test case of the game laws of this State; and if there are any defects in the law it will be brought up before the next meeting of the General Assembly.

Game Warden Collins, of Hartford, Conn, has been waking up things again. On Sunday, Aug. 3, Joseph Notine, a Hartford barber, went up into the Ten-mile woods in Windsor with a party of friends to have a clam bake. He unfortunately took along his gun and young bird-dog for the purpose, as he says, of training the dog and having his picture taken. Monday morning Game Warden A. C. Collins, of Hartford, Conn., received information that Notine was seen with a dog and gun and shots were heard fired in that vicinity. Upon this he promptly got out a warrant for Notine's arrest, and he was summoned to appear at the town hall in Windsor at 5 P. M. Wednesday, to be tried before Justice Sidney E. Clarke of Hartford. Game Warden Collins conducted the prosecution for the State. The accused pleaded not guilty. The State produced five witnesses who testified to seeing Notine in the woods, wearing a hunting coat and having with him a bird-dog and gun, also to hearing two shots fired in the direction in which he had gone. Notine denied the charges and produced three witnesses to substantiate his statements. Mr. Collins argued that the State had made out a case under section 2,532, Revised Statues of 1888, which provides that: "Any person found with a bird-dog and gun upon land where woodcock, quail, ruffed grouse (called partridge), are known to exist, shall be deemed *prima facie* to be there for the purpose of pursuing said birds with intent to kill;" and also under section 2,533: "Every person who shall on Sunday shoot or hunt or have in possession in the open air the implements for shooting, shall be fined not less than seven nor more than twenty-five dollars." The court found the accused guilty and the fines and costs amounted to $31.01, which he promptly paid; and no doubt charged the same up to profit and loss.

Judge Desnoyers, Mr. W. S. Walker, attorney for the Fish and Game Protection club, and Mr. Alex. N. Shewan, secretary of the club, returned to Montreal on Saturday from Beauharnois, having succeeded in convicting three parties after a hard fight, of shooting and killing wild duck during the close season. The court was held at the court house, Beauharnois. The costs and fines amounted to some $60 for killing two ducks.

Camp-Fire Flickerings.

"That reminds me."

BOSTON.—Mr. W. T. Farley of the dry goods jobbing firm of Farley, Harvey & Co., is spending his vacation at the Adirondacks, Mrs. Farley is with him. He writes the firm that they may think of him as jacking a deer every night. The other members of the firm all understand what that means, for they have been there themselves. They tell a good story of a Boston merchant at the Adirondacks last year. He was particularly anxious to kill a deer. He employed "one of the best guides in the region," and they jacked and jacked nearly all night, amid great suffering of the would-be shooter. Not a deer did they see nor hear. The shooter was nearly dead from sitting in one position. Toward morning they passed a swampy place, and there was a rustling in the reeds. The guide asked in a soft whisper if the shooter heard it. He did hear it, and his teeth were already chattering with buck fever, or with cold, he could not tell which. He signified his willingness to shoot by the trembling of the gun in his unsteady hands. The guide again whispered that the rustling was a deer, and for the merchant to watch for eyes, but if he could not see any eyes, to shoot as near as he could at the sound. At the same time the guide suggested the caution that the shooter should be careful and not shoot him. The hunter fired. The echoes awoke, and the splashing and rustling had ceased. The guide told the merchant that he had shot a deer, and "by the sound" he judged that it was a large buck. He had doubtless secured a beautiful pair of antlers. But the swamp was so thick and of such a nature that it would not be possible to get the deer, but when winter came the place would freeze over, and then the horns and hide could be secured. He would take the earliest opportunity to get them and forward them to Boston. The merchant came home in the full faith of his success. When cold weather came he daily expected the horns. The express was watched, but they have not come to hand. Later in the winter he learned that some guides arrange with another guide to go into the swamp, get behind a tree, so as to be safe from the shot, and then to rustle and splash till the tenderfoot shoots. After which all is still, and the tenderfoot is satisfied. He has shot a deer. Now that merchant does not care to have his friends mention the pair of horns he expected. SPECIAL.

THE YELLOWSTONE PARK AND DINING CAR ROUTE.—The Northern Pacific Railroad, stretching from the Great Lakes to the Pacific coast, with its elegant vestibuled service of dining cars and Pullman sleepers, not only affords business men, tourists and others a route of travel equal in every respect to any in the country, but renders accessible to sportsmen the only region in which can be found to-day the large game which was once so plentiful in all the West. In addition to the large game, the sportsman will find in the country along the line of the Northern Pacific Railroad such quantities of small game as is unknown in the East. This line, penetrating the Lake Park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green rivers, as well as lying in close proximity to the hunting grounds of the Big Horn, Snowy, Belt, Bitter Root, Rocky, Coeur D'Alene and Cascade Mountains, is unquestionably the sportsmen's route of America. The pamphlet, "Game Preserves of North America," together with other interesting publication, descriptive of the Yellowstone Park and Alaska tours, will be mailed free on application to Chas. S. Fee, G. P. & T. A. N. P. R. R., St. Paul, Minn.—*Adv.*

Sea and River Fishing.

FISHING NEAR NEW YORK.

FOR practical and specific directions to reach several hundred fishing resorts within easy distance of New York city, see issues of 1889 as follows: April 18, April 25, May 2, May 9, May 30, June 6, June 13, June 20, June 27.

THE SOUTH BRANCH OF THE POTOMAC.

THE south branch of the Potomac is equally famed for its picturesque beauty and the fine sport which the limpid stream, well stocked with bass, affords the angler. There can be found all that the enthusiast regards as essential to happiness. Rugged gorges, lovely valleys, deep vistas and forests, the clear dancing waters of the river, and other natural features are present to give the coloring that adds zest to the angler's pleasures. The north and south branches of the Potomac River join at South Branch depot of the Baltimore & Ohio R. R., a point 18 miles east of Cumberland, Md. The south branch rises in Highland and Pendleton counties, West Virginia, in the Shenandoah Mountains, and flows northward through Pendleton, Grant, Hardy and Hampshire counties. It is about 115 miles long. From Petersburg, W. Va., to the mouth of this branch the distance is 60 miles, and the stream ranges from 100 to 250yds in width and can be traversed by small boats the whole way, there being no falls or rapids bad enough to obstruct the passage. The water is well-suited to bass, being fed by many small mountain streams. There is no pollution whatever as there is in the north branch, which has several manufacturing towns and coal fields along its banks. The river is full of riffles, shallow places, deep holes and plenty of bold rocks, affording just such haunts as the bass like.

As is well known the black bass was introduced into the Potomac Basin, at Cumberland, in 1853; the first recorded introduction being made by Gen. W. W. Schriver, of Wheeling. To-day the south branch is one of the finest streams for small-mouthed bass (*Micropterus dolomieu*) east of the Alleghanies.

More bass have been caught in this river during the present season than for several years past. This is probably due to the fact that last season's freshets kept the water in so turbid a state for the greater part of the summer, that fewer anglers visited the river, and the bass had an opportunity to grow and multiply. While there are plenty of fish they run large, and now and then a genuine mossback is lured from the stream. It is not a rare thing to catch 4 and 5lb. bass either with the fly, minnow or trolling spoon. While expert fishermen with the fly do not catch the largest fish, yet they will show greater numbers and a heavier string for a day's work. It is our belief that the best method of fishing the south branch is to have a well-stocked fly-book, an 8oz. split-bamboo of ten or twelve feet, and to wade along the banks of the stream, whipping it as one goes along. In this way we have had many successful days on the dear old stream, and have had the satisfaction of sharing in the largest catches on record, except one, which we shall mention later on. For those who use live bait there are plenty of crawfish, helgramites, shiners or bright-sided minnows, chubs and black-nosed dace. These are found in the small brooks running into the river. For bait-fishing a short rod is the proper thing for this stream, but that to angler's liking, long ones can be used as there is no trouble in wading along the river's banks at a distance so far from shore that the trees do not interfere with casting.

One of the famous resorts is the hanging rock, at Col. Isaac Parsons's. This spot, in the very heart of the bass region, is attractive because of its scenic beauty, and also on account of a ready and hearty hospitality one meets with there, and which has gone forth to make the name of "Ike" Parsons a familiar household word among anglers. This was where ex-President Cleveland was entertained on his 1887 hunting and fishing trip to the south branch, when quite a number of fish were caught. This rock is about 12 miles from Green Spring Run, on the B. & O. R. R. It is the camping ground of the Wheeling Bass Fishing Club, members of which were among the first to discover the fine sport to be had in the south branch by the angler. It was to this club that Mr. Otho Heiskell belonged, enjoying the sport with the younger men, who called him Uncle Otho. The best grounds are above Romney, the terminus of the South Branch R. R., 16 miles from Green Spring Run. Romney is a great gathering place for anglers and sportsmen—156 miles from Washington, D. C., 160 from Pittsburgh, and 27 miles east of Cumberland—it is situated on a level plateau 300ft. above the river, and is supplied with pure, cool sandstone water, piped from a mountain spring. The town is surrounded by mountains and is well shaded, the nights during the summer are cool and pleasant. The roads are fine, and the town and county are entirely free from malarial diseases. At this point is located the State Fish Hatchery.

Above Romney the best fishing is to be had in the "trough," a marvellous gorge formed by two mountains that seem to rise abruptly from the water, and run parallel for a distance of five miles. Here, we do not hesitate to say, is to be found the best bass fishing in the whole river. The trough is ten miles above Romney and is not reached by railroad, but by conveyance from Romney. The gorge averages from 100 to 150yds. in width, and the stream runs swiftly through, now rushing over shallow places forming riffles, and now eddying in deep rocky holes, which afford fine hiding places for the bass. Here the bass reach a large size. Mr. Gibson caught one of 6lbs. weight, which we saw weighed after he had carried it eleven miles to Romney. As high as 6¼lbs. of bass have been taken by a single rod in one evening's fishing; from twenty to forty fish a day are very frequent catches. We quote some good records from the Morefield *Examiner* of July 31, 1890: "On last Tuesday (July 29) Frank Turley and George Strawder broke the record on fishing with hook and line. They went from town to below the old stone mill in a boat, fishing as they went down. They report a catch of 180 bass. The river appears to be full of bass. It seems a small matter for two or three fishermen to go out and bring in from fifty to a hundred in a day. We venture to say that within the past two weeks 700 or 800 have been caught between Petersburg and Morefield, besides a great many have been caught below here."

It is not unusual for parties to go to Morefield, secure boats, and fish to the mouth of the river, which is a distance of fifty miles. These trips are generally very successful; 1,400 bass have been taken by three men on a single voyage of this kind. This party was made up of anglers, and most of the fish were returned to the river unharmed. While the bass are in great numbers and appear to be multiplying, despite the efforts of the anglers, there are very few, if any, other fish in the river. All along the stream strangers will find places of shelter, where they can rest and be fed. There are excellent camping places, plenty of good springs of excellent water, and farmhouses near by where vegetables, etc., can be had.

Besides its picturesque beauty, and its ever renewed supply of bass, there is another reason why the south branch has a place near the heart of every true angler.

It was on the banks of this stream that a boy, who afterward became one of the most prominent fishculturists of the world, fished for mullets, suckers and eels, for that was before the introduction of the bass, and it may have been his contemplation of nature, as shown by the humbler members of the finny tribes, that inspired him to the great work of his life—the artificial propagation of fishes—which has added so much both to the wealth of the land and to the pleasure of the angler.

EASBY.

ANGLING NOTES.

AS a rule striped bass are not caught on any bait but the genuine article; they seem too shy and suspicious to be tempted by the various imitations. But we have heard of several instances lately where they have taken the phantom and whitebait minnows. Another successful lure lately used is a gang made of one treble hook on gut with a small revolving spoon above. A sandworm is hooked on to this gang, and the bass, attracted by the glistening spoon, rushes for the bait and is captured. It should be trolled slowly in shallow water with 80ft. of line and no sinker—a good-sized swivel is sufficient weight.

Mr. John Yale, one of our prominent fly-fishermen, has just returned from a trouting trip to the upper waters of the Rondout. He says that owing to the intense heat there was very little fly-fishing to be had during the daytime, but after dark the fish rose freely to a good-sized ginger-palmer and coachman. The fish, as usual during the night, took the fly as if they meant it and fought bravely. He killed a number of fish running from 12 to 14in., and among them a rainbow, which in its eagerness to escape jumped fully 3ft. up the bank.

Fly-fishing at night to those who are not used to it is a peculiar and rather uncanny experience. The rushing water looks as black as ink, and even when the sky is bright the shadows cast by the trees and bushes make the stream seem intensely dark. It is better to use only one fly and a short stout leader. The large trout feed entirely at night during the hot weather, and after one gets used to the strange surroundings it is very charming sport, for the small fish do not trouble the fly then, and the big ones take hold sharp and with a loud splash. Large bright flies should be used as a rule, but strange to say, in Lake Colden, in the Adirondacks, the black gnat is the most killing fly.

We regret to learn that in Tupper Lake region the trout fishermen are killing more deer than trout. It seems to have been done very openly, and we should think that the game wardea for that locality would have no trouble in securing convictions.

Mr. M. S. Tweedie, of the Red Cross line of steamers, office 18 Broadway, is getting up a circular relating to the fishing and shooting in Newfoundland. He will be happy to send a copy as soon as it is printed to any sportsman who will take the trouble to apply for it. The shooting resources of Newfoundland are enormous, and little understood by Americans. Many English sportsmen make yearly trips to that country for salmon, sea trout and caribou. Now that the Red Cross line of steamers run to Pilleys Island, it is an easy trip. Mr. W. Holberton, a well known sportsman of this city, intends to make this trip in October, mainly for the purpose of exploring the Island and finding out what is to be had in the way of fishing and shooting. It is probable that a party will be made up to go there this season.

CHICAGO AND THE WEST.

CHICAGO, Ill., Aug. 13.—There was on exhibition today, in front of the Milwaukee, Lake Shore and Western Railway office, a magnificent mascallonge whose great size and perfect beauty and symmetry kept a crowd alike of gawkers and anglers about it. The fish was 41in. in length and 35lbs. in weight. Across the back and up and down through the body it was exceptionally heavy. In every line it was shapely as a salmon. It was a grand fish. This beautiful specimen of a fresh-water giant came down from Crosby's place on Twin Lakes, Wis., and was taken by Mr. Harry Goodall, of the *Sun and Drover's Journal*, of this city. This fish was not only big, but beautiful, and to take a prize like that must be a joy forever to an angler. Mr. Ryder, agent of the road above mentioned, commenting on the symmetry of this fish, said, "I can tell one of those Twin Lakes mascallonge nearly every time as soon as I set eyes on it. They don't catch so very many there, but when you get one it is nearly always a big one and a beauty at that."

Mr. Chas. Levings, of the C. & A., was down on the Kankakee at the C. & A. crossing the other day, and seized the opportunity for a little fishing. He fished an hour and a half, and made the rather remarkable showing of 4 small-mouth bass, 3 wall eyed pike, 8 croppies, 3 dogfish, 2 turtles and 1 clam (mussel). The bass were all taken on the fly, and the other things on the frog. The croppies were very large, and they took frog in theirs. The mussel also bit the frog, clamping down on his hind legs in great shape and making a very gamy fight. The bass were small, not running over a pound. Mr. Levings says he had more fun with the dogfish than anything else.

E. HOUGH.

NAMES AND PORTRAITS OF BIRDS, by Gurdon Trumbull. A book particularly interesting to gunners, for by its use they can identify without question all the American game birds which they may kill. Cloth, 280 pages, price $2.00. For sale by FOREST AND STREAM.

ON CANADIAN RIVERS.

[The following chapter is taken from Mr. E. A. Samuels's new volume, "With Fly-Rod and Camera."]

THE mellow, flute-like song of the hermit thrush awoke me before sunrise on the following morning. Nudging my friend to arouse him, I stepped outside the tent. The camp-fire had burned out, nothing of it remaining but a few black embers. The two guides were sound asleep under their blankets, the heavy covering being pulled up over their heads completely.

Taking our rods, Frere and I stepped past the sleeping men on our way to the pool; they awoke instantly, however, for your bush sleeper is easily awakened. With a big yawn they arose and began to move about their camp duties, the first of which being invariably filling and lighting their pipes.

"What sort of a day is it to be?" I asked of Hiram, as I prepared my tackle for a cast at the foot of the pool, Frere having gone to the head.

Hiram gave a look at the mist which completely enveloped the forest about us, and then at the drenched leaves which trembled slightly in the breeze.

"Oh, it'll be bright enough by and by," he replied, "the wind is sou'west, and the webs are plenty." As he spoke he pointed to the gossamer webs which had been spun on the bushes and brakes and weeds about us.

It is almost an invariable sign, that if gossamer webs are abundant in the morning, the day will be fair.

"Well, Hiram," said I, "here's for luck," and I began casting above the rapids at the foot of the pool.

"Luck to you!" he replied, and returned to the camp, where his axe was soon heard busy in preparing wood for the breakfast fire.

The morning was dark, and the mist hung so heavy above the pool that I could but indistinctly see Frere, who was at work at the upper end. For my own fly I had my favorite, a silver-doctor. It is a fly with which I can do better work than with any other, in all waters and with all fish.

Now, silver-doctors are to be met with in most varied forms. At one time I had upward of four dozen of them in my books that I had gathered here and there, and hardly two of them were alike. If the body is silver tinsel it matters but little, in the opinion of many tyers, how the rest of the fly is made, and the result is that when one speaks of this fly he conveys but a vague meaning. I have silver-doctors with whole wings and with made wings; with all kinds of hackles and with none at all, and with tails and without.

My favorite style is made with pure silver tinsel body—no other is worth using. The tail consists of two or three webs of a widgeon's or teal's mottled feather, together with the same number of webs of the ruffle of the golden pheasant. I like a small hackle on a silver-doctor, and if I were to have a dozen tied, should have three each with gray, brown, yellow and black hackles. Not heavy, but nice neat hackles.

Doubtless some one will say, "Ah, but that's not my idea of a siver-doctor at all." "All right," I reply, "it's mine; I want a small hackle on it."

Now for wings. I don't like whole wings, that is, wings made of whole feathers, but prefer made ones, those which are made of varied fibers selected from many feathers, among them always a few shreds of the mottled feather of the widgeon or teal, two good feathers from the ruff of the golden pheasant, and over all, two or three good sprays from the crest of the same bird.

Above all, I want the fly tied so hard and firmly that I cannot move it at all on the hook. If it is loosely tied, it soon becomes worthless, in fact it is unsafe, for the hook is likely to pull out with the first fish. I always reject a fly that is not stiff, or which is at all movable on the hook. It is an expensive fly, such as I have described, but it is the most killing in existence. The silver-doctor commonly sold is a cheap affair compared with this, but deliver me from such and all other cheap flies. I always prefer to have mine "tied to pattern," and do not accept any which will not stand a rigid scrutiny.

I began casting with a short line, my invariable habit, and worked further and further out into the pool with every few casts. I believe in covering thoroughly every foot of water as I go. Your salmon does not always lie away off in the pool, and it is much better to strike your fish on a short line than a long one, particularly if you are lifting for a back cast. A single instance will illustrate this. I had been fishing the upper end of a pool, and had worked down to nearly the foot; I had a long line out; so as to reach the further shore, and had carelessly allowed it for a moment to swing in the eddy. As I lifted for another cast, I noticed that my fly was hardly ten feet from me. When I gave the lift the fly swung in, and and at that instant a salmon, that had been lying beside a boulder almost at my feet, arose and took the lure.

Of course the tip of my rod went to "smithereens" on the instant and the salmon "hooked off." Yes, I always cover the water thoroughly as I go and do not lengthen my line until I have had my fly all over the surface in my reach.

Frere was busy at his end of the pool, but saving a few trout which he shook off his fly without disturbing the water, he had got no rises.

I also got a few trout up, but did not hook them, for we were after salmon, and the flouncing of a few trout on the surface of the water is sufficient, generally, to keep salmon from rising.

It is quite a "knack," that the salmon fisherman acquires, to shake off a trout that has seized his fly, without "stirring up the water," as the expression goes, but it is a necessary accomplishment. Occasionally one will hook the trout so firmly that it must be landed, and then the better way is to waste no time but to drag it as expeditiously as possible bodily through the water and up on the beach. The pool is thus disturbed but little, for the fish is landed before it has a chance to flounce about.

I had been casting for fully ten minutes, during which I had successfully shaken off two or three small sea trout, and was just on the point of casting over to an eddy across the pool, below a huge boulder that arose from the depths, when a large sea trout took my fly, and with a splash and a plunge down he went to the bottom, and into the eddy that I had been essaying to reach.

Away spun the line, my reel shrieking to me discordantly just then, my rod bending in a circle with my efforts to keep the trout from disturbing the salmon.

But in vain! A large sea trout is a very strong fish and active withal, and I could not check mine even with the full strain of my rod. Suddenly from the depths of the pool, where the trout was darting about, out sprang a salmon, a goodly fish, leaping several feet into the air, and falling back with a tremendous splash.

Another near by also sprang out, and the guides who had joined me, and who supposed that the leaping fish was fast to my hook, exclaimed.

"He's a lively fish, sure! Mind, Doctor, or you'll lose him."

Frere, who also came to my side said, "You are giving him too much strain."

"Giving the old Harry too much strain," I exclaimed, "I've only got a pesky trout on."

"Oh! that's no trout," said Hiram, flourishing the gaff; "sure we saw him twiste [twice], 'twas a saumon, and a good one, too."

"Yes, but he is not hooked, confound him," I replied, reeling in the trout that was now about tired out.

"There he goes again!" shouted William, but this time they plainly saw that the salmon was leaping in fright, and not with my fly in his mouth.

The truth was that the trout in swimming about, had run the casting line against two or three of the salmon, which, doubtless fearing a net or some other of man's snares, leaped to avoid them. A salmon is as suspicious and as shy as a crow, and the least disturbance or noise or molestation will put it on the *qui vive*.

It is not at all uncommon for the casting line to strike a fish in the pool, when it is fast to another, and I have more than once had my hooked salmon send several into the air by rubbing the line against them.

We landed the trout, and killed it. It was only of about three pounds weight, but it was very strong for its size.

Of course after such a disturbance we concluded that we had better rest the pool a while, and as breakfast was soon to be ready, we laid aside our rods, and, after a wash, repaired to the camp, at which the guides were busy preparing our morning meal. And such a royal breakfast as it was! and such appetites as we had when we sat down to it! Boiled sea trout, fried grilse, boiled potatoes, pilot bread and butter; listen, fried onions, and coffee with condensed milk.

Boiled sea trout is, gastronomically, in my estimation, the most delicate of all fish. Nothing can compare with its delicacy, yet richness, of flavor. It should be cooked and eaten as soon as possible after it is killed, for it soon deteriorates and becomes insipid.

No other way of cooking than boiling brings the sea trout to the epicure in all its excellence, and in fact this is true of most fish.

A fried sea trout is not nearly as acceptable, and I do not fancy one broiled, although broiling is better than frying. Next in my opinion to the sea trout comes the grilse, and that is also better boiled than fried.

Never shall I forget the exquisite enjoyment with which one of these fish was eaten on a certain occasion.

We had been in the canoe four or five hours in a chilly drizzle of a rain, through which we saw the sun only for a few minutes during the entire day.

We were descending one of the Canadian rivers, our party consisting of one of my friends, myself, and our two guides or canoemen, all in one large canoe.

Tired we were and hungry, for we had been running rapids and fishing the glorious pools that lay between them all the time, and such work gets up a wonderful appetite. At last the "*arret-la*" was spoken, and we came to a landing place. Hauling the canoe upon the pebbly shore, our men soon had a fire started and the tea kettle steaming.

Taking from the canoe a grilse weighing about four pounds, and cutting up the rich blood-red meat, they cooked it in the frying pan, using but very little fat, that contained in the tissues of the fish being sufficient.

The fresh-caught fish thus cooked was of delicious sweetness, and the meat was firm, nutty, and with just the right degree of richness. Yes, that was a fish ever to be remembered; it was eaten with exactly the right sauce, and under the right circumstances. Many a time have I eaten my fresh-caught salmon or trout by the camp fire in the woods, but it seems to me that none other ever tasted like that particular grilse.

Hiram, as an accompaniment to my fish, gave me two boiled potatoes, and such potatoes! Early Rose they were, which had been grown on newly cleared land, called "burned land," because it had been lately burned over. Unless one has eaten such potatoes, he knows nothing of what constitutes a good one. Mealy it is to the extent of almost falling apart in a powder when its "jacket" is removed, and so sweet and delicate! No other potato can compare with the "burned land" potato.

After disposing of our substantial and abundant breakfast, a smoke was of course the first thing to be attended to. Ah! what a comfort one takes with his pipe or cigar after a hearty meal in the woods! Could anything be accepted as a substitute for it? Could anything replace it? I doubt it.

Very soon Frere was busying himself in overhauling his fly-book, and arranging his flies, taking such comfort out of the operation as only your enthusiastic angler can find. At length he arose from his recumbent position, exclaiming, "Well, Doctor, this is not business," and taking his rod he proceeded to the pool, where I soon joined him.

The mists that had hung low above the river had been dispelled, and the sun was shining brightly through the patches of blue which showed now and then through the golden and roseate clouds that were drifting away to the east.

A light breeze was moving, just strong enough to ripple the surface of the pool to that degree which one so much desires, and the indications were good for a satisfactory day's sport.

Frere began casting about midway from the head of the pool, and getting out a long line was soon reaching well over to the further shore.

I took a seat upon an old log on the crest of the beach and watched my friend at his work; for next to casting the fly myself, I love to see another engaged in the fascinating recreation.

How gracefully, and with what a true and even sweep the line rolled along on the surface of the water, uncoiling itself, as it were, with an uniform motion, the casting line or leader taking up the same sweep, until the fly dropped upon the water as lightly as would the living insect.

It is a great acquirement to cast the fly as Frere did, and I have seen but few who attained to equal proficiency. I have fished with scores of different anglers in my time, and after watching their work, varied as it has been, I have come to the conclusion that adepts at fly-casting with the two-handed rod are "few and far between."

There is an indescribable motion of the rod, which is made in the forward stroke or delivery, that acts upon the line in such a way that it seems to be but a continuation of the rod itself, and the same bends and curve of the rod are followed by the whole length of the line, which, as it falls upon the water, seems to unroll itself its whole length, permitting the fly to drop softly and noiselessly.

In a number of casts I can get this motion a few times, but I am not always certain of it, and my experience extends over thirty years.

I can get out and handle as good a length of line as the average, and can drop a fairish neat fly, but despair of being an expert in making what I call a rolling cast.* A very great deal depends upon the exact balance of the rod and line.

In every book on fishing that I have read, and I have quite a number of them in my library, are given instructions, more or less elaborate, in casting; but I have never read any yet that supplied information which would enable a novice to become even a passable fisherman.

Practice, much practice, is a requisite, but no practice in my opinion can compare with that which one has on the pool where he knows the fish are lying.

Some writers recommend practicing on the lawn, but this is of very little value except in familiarizing one with the action of his rod.

To lay out a line neatly and smoothly on the water and recover it in good style is one thing; it is quite another to do it on a grass plot.

Frere continued at his work, covering all the water as he moved toward the foot of the pool.

Gradually he drew nearer and nearer to the eddy on the other side; that from which the salmon had leaped when my sea trout created such a commotion.

At length his fly dropped in a curl of the water near a rock that showed faintly beneath the surface; motionless it remained an instant, then sinking an inch or two was just on the point of receiving the first motion or drag from the rod, when a swirl, a faint splash, and then the scream of the reel announced that a salmon had been hooked.

Scarcely had the fish felt the barb when, with the speed almost of lightning, he darted to the head of the pool, and then back in an instant to the deep water in the middle, thus securing a dangerous bight in the line, which only the greatest activity at the reel could overcome in time, and Frere but just succeeded in getting his line straightened before the salmon repeated his performance, this time his run being broken by three leaps in quick succession, all of them being at least three feet in the air.

He then returned to his former position, and Frere began giving him the strain of the rod, for the runs in quick succession and the leaps had sobered the fish, and if the fight were now forced, it was evident it would be a short one. The tactics which the salmon now adopted were such as every one who has been "fast" to one of these noble fish is acquainted with.

Now he was apparently standing on his head in the water, evidently rubbing his nose on the rocks on the bottom of the pool to free himself from the barbed steel. Finding this unavailing he would shake his head savagely like a terrier worrying a rat. This also proving ineffectual, he would endeavor to wind the casting line about one of the rocks in the water, by which a purchase could be obtained, so that the hook could be twisted from its hold. All in vain, however, Frere kept his steady strain on the rod, keenly watching every movement of the fish, and meeting, with a sportsman's skill, all its rises and attempts to escape.

At length the tension of the line proved too great for the fish, and it began to show unmistakable signs of fatigue.

Perceiving this, Frere commenced reeling in the line, all the time keeping the strain upon it.

Suddenly, without any warning, the salmon gave a magnificent leap, and then plunging to the bottom, darted to the shoal water down to the foot of the pool.

"Oh, give him the butt, give him the butt!" we all shouted to Frere, but too late, Frere was doing all that the rod could stand, but, passing like a flash down into the stream, running out the line in a way that made the reel wildly whistle, the fish glided between two rocks in the bed of the stream, turned across the shoals, and then sped back up the swift water and around another rock, securing leverage, and he was free.

"Too bad, too bad!" I exclaimed. Frere made no reply but began reeling in his line which the fish had carried out to the extent of at least one hundred yards.

"Confound it all," exclaimed Hiram. "He was a wide-awake divil sure!"

"Yes, a fresh-run fish," added William, "and full of life."

"Life! any amount, sure," replied Hiram, who, now that the fight was over, was quietly filling his pipe and preparing for a smoke.

Did you ever notice that your guide, if a smoker, and he almost always is one, invariably lights his pipe when a big fish is landed or lost? If not, watch him when you are next out. I never knew it fail to happen.

When Frere had reeled in his line so that the leader could be reached, I took it in my hand and examined it. It had parted at one of the knots, and evidently had been carelessly fastened.

"The knot was a poor one," said Frere, examining the gut, "but if it had been perfect it would not have held that fish."

"No, no gut was ever made that would hold him," said Hiram. "Nor line neither," assented William, "unless it was a cod line."

Frere quietly removed the portion of the gut that was left, and placing it in his fly-book, selected another new leader, and putting it in the water and anchoring it with a pebble, left it to soak and become pliable. He bore his disappointment and loss philosophically, and gave no sign that he felt it even as much as we did.

The sun was now shining brightly, the fleecy clouds having been entirely dispelled. The breeze had also subsided, and the surface of the pool was as smooth as glass,

* The "Spey" of writers.

save where the ripples and eddies showed the moving current, and flecks or bunches of foam from the rapids floated down on the water, swam about for awhile, and then passed down the river out of sight.

[TO BE CONTINUED.]

A FEW REMARKS ON BASS.

ALBANY, N. Y., Aug. 7—*Editor Forest and Stream:* Ever since reading your Black Bass Number I have wanted to contribute some of my experience with these fish, covering a period of twenty-two years.

It seems that the big-mouth fellows must be gamier in the West than in the East, for I have never handled any that fought as their small-mouthed brethren do; they always sulk and run for the grass like a pickerel. Frequently when fishing upon certain portions of Lake Champlain I have seen a native hook a fish, and heard them call out "swago" before they had seen the fish at all. I have caught them in Kinderhook Lake, near Albany, but never had them jump as the other fellows do, except in a few isolated cases. They do not seem to inhabit the same waters, the large-mouth thriving in muddy ponds, where the small-mouth do not do well at all. I should think that of the two the big-mouth fellows were the most prolific.

My first acquaintance with black bass began in the Mohawk River, where my father and I used to go twice a week. We would get up about three or four o'clock in the morning, drive six or seven miles, get a mess of fish for a good-sized family, and occasionally a few to give away, then return home by dark.

Bass are very wary, as I had demonstrated two days ago when one darted out from under a big rock at my fly, but seeing me when he was within a foot of the fly, he turned like a flash and went back; nor could I coax him out again. But they also have a great amount of curiosity, as have numbers of fishes. When river fishing, we always anchored the boat bow and stern across the current, each one fishing with a rod over the end and a hand-line over the side, thus enabling us to throw well down into holes, as we always anchored above them, fishing down stream. Our boat, a common, flat-bottom skiff, leaked some; and when fishing got very dull father would often say, "Hen, guess I will bail boat and see if that won't stir them up," and many a time it did. I have always noticed that bass will almost always bite immediately after the anchor is put down, if there is any ripple on the water, and I never could do much with them on a still day, unless in October when they are on the reefs; then if you see a swirl, either when they are playing or chasing minnows, throw a good minnow in that direction and you get a strike every time. Their curiosity must be stronger than their fear. An old gentleman, whom I met fishing at Stony Island in Lake Ontario, told of one being around the boat for a long time, but would have none of his baits; so finally he took his knife and cut a large white button off the neckband of his shirt, put it on his hook, and presto! the bass took it and was landed.

Well do I remember a few years ago, fishing for bull heads on Lake George one evening, there was a small bass around the boat which would turn up his nose in contempt whenever I put my hook of worm bait in his direction. I had given him up in disgust, until happening to see a large fat worm crawling down the side of the boat I took it by one end and slung it at the fish, which immediately gobbled it down. This gave me an idea. Selecting a nice worm and hooking him just in the head I let him swing out in the bass direction, and in two minutes he was mine.

I have always found that they would bite best in a very stiff wind. One day coming down on the inside shore of Shelburne Head, Lake Champlain, the wind was blowing a gale, at times the spray flying clean over me. I had in the boat my boy George, 9 years old, and his two sisters, 7 and 5, a very helpless and precious freight to have out in such rough water. Of course I had to row and the boy fished astern, trolling a minnow, I doing the same over the shore side, thus fishing right in the outer edge of the breakers. We struck a school of bass and got five nice ones, and the boy a pickerel weighing 3lbs. We were using light rods and my hands were well occupied to keep the boat off shore, for she would have swamped and filled the instant we struck. As it was I took in a pail or two of water, and concluded that the risk was getting too great, so we went ashore, left the little girls there and returned to the spot, fishing all along the shore; but they had gone. Most likely they had been working a school of minnows which moved off and the bass followed.

My remarks, bear in mind, relate wholly to the small-mouthed variety. I have never found them in biting humor when on their beds, but of course they will take anything if dropped directly on to it. They used to catch large numbers of spawners at the Winooski Falls, but since they are enforcing the Vermont law more stringently in years past this has been checked. The favorite bait at this time was dobson, but I never hankered after fish with spawn in, so let them alone. After they leave the spawning ground they work out into deeper water, forming schools, and then along the ledges and reefs on the jelly that forms there. This, I think, is the reason we all have such poor success in mid-summer, as the bass and the wall-eyed pike are both full of this jelly in July and August, coming out in grasshopper and cricket time, fat and plump and ready to bite again, and give the poor patient fisherman a chance. Lake fish seem shorter and thicker than those in swift rivers and not quite so quick, at least that has always been my impression, and have heard many others assert the same.

Take him wherever you may find him, he is always the same plucky, never-yielding fighter, king of all fresh-water fish his weight and inches. DEXTER.

LAKE TAHOE TROUT.—Dr. Carl H. Eigenmann has recently investigated the fish fauna of Lake Tahoe, Cal., and found a variety of names in use for the trout. There were brook trout, black or red trout, bulgers, silver trout and the yellow belly. Three names are applied to different ages of the same fish. The trout were observed to be spawning in the lake instead of ascending the tributary streams for this purpose, as usual. This may have been due, the Doctor supposed, to the exceptionally cold water of the streams this year. The Fish Commission has traps and dams in the streams to secure spawners for the hatchery. After taking their eggs the trout are returned to the lake.

A LAKE ST. JOHN WINNINISH.

WE have received from Mr. Geo. H. Dana, of Washington, D. C., a small winninish, which was caught by one of his party in Lake St. John, Aug. 1. This was the largest salmon captured at the time, and Mr. Dana wrote that few large ones were to be seen. Unfortunately, the specimen arrived in a poor state of preservation, although every effort was made to get it through in good condition, and it is difficult to make a satisfactory comparison with sea-run salmon of the same species. In all essential particulars, however, as the proportions of the different parts of the body, number of fin-rays, size of scales, structure of gills, colors of head, body and fins, it shows no great difference from the anadromous *salar* after a brief residence in streams. One feature that deserves mention is the massiveness of the upper jaw, particularly in its posterior half. This leads us to the belief that the example is a male, though lacking the characteristic elongation and hooking of the jaws so noteworthy in salmon approaching the spawning season. If, on the contrary, the fish in question be a female, a point which must remain in doubt because of the absence of the abdominal viscera, we have in the heavy upper jaw, small size, large dark blotches, so well displayed in Kit Clarke's "Where the Trout Hide," page 52, and the relatively great size of the fins, a series of distinguishing marks of the northern winninish by means of which the angler and the ichthyologist may recognize it at sight. It appears to be unusually difficult to get a Lake St. John winninish safely into the hands of a student of the salmon family, but we will not give up in despair. "All things come to him who can but wait." In the meantime, if any reader of FOREST AND STREAM will help to shorten the period of waiting by sending a prime winninish to this office, wrapped in coarse cloth or birch bark and packed in ice, we will duly express our thankfulness and contribute our share toward the complete description of this peerless salmon. It may be that a little later in the season a specimen could be successfully shipped without ice by means of one of the modern preservatives frequently referred to in these columns. For scientific purposes, however, there is nothing better than alcohol, and the methylated spirit will answer fully as well as rectified spirit.

BROOK TROUT IN NORTH CAROLINA.

MR. PIERRE LOUIS JOUY, well known in connection with explorations in China and Japan, has recently visited western North Carolina in search of health and natural history collections. In the class of fishes he found a variety of members of the great family of minnows (*Cyprinidæ*), which gave him opportunity to make some valuable color notes from the fresh specimens. We were particularly interested in the brook trout of that region, and Mr. Jouy brought back with him to the Smithsonian Institution the following information as to the present condition of the trout streams of the Roan Mountain country:

"Trout are tolerably abundant in the small mountain streams of western North Carolina up to about 4,000ft. elevation (Roan Mountain). In the lower sections, about the settlements, the streams are almost fished out. Occasionally three or four are caught, with other fishes, by seining a stream after a heavy rain, when the water is so muddy that the fish are unable to see the net. The combination of worm and fly on the same hook has proved too much for the trout in the lowlands, and for good fishing one must go up the mountains to where the stream is only a few feet wide, but swift enough to scour out deep holes in which trout love to hide. In such places pretty good fishing can be had, and if the fisherman is a sportsman he will adhere to the rule of throwing back all under 6in. Trout have been offered for sale at the hotel at Cloudland, N. C., as low as ten cents per pound."

BLUE HERON AND TROUT.—A note from Portville, Pa., in a Pittsburg paper says: James Shuman, of this place, shot a blue heron on Page Creek yesterday which had 39 brook trout in its stomach, none of them in the least advanced toward digestion, showing that the big bird had taken them all at the meal it was still engaged in securing when it was shot. As a large number of these immense birds have been fishing along Page Creek for a couple of weeks past, incalculable numbers of trout must have been destroyed by them if 39 trout, none less than a yearling, are not sufficient for one meal for a single heron. No one remembers having ever seen a heron along the brook before, and a party is to be organized to hunt the army of greedy marauders off the stream. The heron Shuman killed stood four feet high, and measured seven feet from tip to tip of its wings.

VANCOUVER, B. C., Aug. 6.—Trout fishing is at its best just now, and some fine baskets are being brought in. There is another big run of salmon on the Fraser just now, and there appears every probability of being a pack, despite the late run. Last Saturday one of the canneries had 15,000 fish waiting to be packed, all these were caught the previous night; the cannery had thirty boats out, making an average of 500 to a boat. How's this for fishing?—CHARLES E. TISDALL.

THE BIG BASS OF BELMAR.—At Belmar, N. Y., Aug. 13, Mr. G. J. Ferry caught a 26lbs. bass in the surf at the mouth of Shark River. One man who heard of this said he would like to catch three of the same size; but one such fish in a season should satisfy the ambition of the average Belmar fisherman. Our correspondent "Big Reel" fishes in the same surf.

RESCUE OF ILLINOIS FISHES.—Dr. S. P. Bartlett reports that the work of rescuing fishes of the Mississippi Valley is now in full progress. Fish are abundant, the weather is cool and pleasant, and everything favorable to a great season's result. When the operations began this summer it was very hot, and this made the efforts to handle fish extremely difficult.

BASS FISHING AT COSSAYUNA LAKE.—Greenwich, N.Y. —Mr. Charles Ferris and friend, fishing at above lake Aug. 14, took 42 small-mouth black bass; 6 large-mouth black bass, 5 pike (pickerel) and 3 large bullheads. The bait chiefly used was frogs. Some of the bass were of very large size, and all were above the average.—J. H. K.

MACKEREL AND SHINERS.—A solid school of medium-sized mackerel were up Annisquam River, off Smith's Landing, Aug. 12. They refused to take the hook, and only one mackerel was caught. They were after the shiners, and the large schools of this fish afforded them good feeding. On the morning of Aug. 13 the mackerel had entirely disappeared, to the great disappointment of many fishermen who were seeking them in the afternoon. It is the finest fun on earth to catch them when they bite sharp.—*Gloucester (Mass.) Daily Times, Aug. 13.*

[The shiner of Gloucester is *Menidia notata*, the common silversides or friar of the New England and Middle Atlantic coast. It is a hard-scaled but savory fish, four or five inches long when adult, and swarms along the shores in salt and brackish water in countless numbers. Not only the mackerel, but also the weakfish, bluefish and other carnivorous food species derive a large part of their subsistence from the slender little shiner. In the aquarium this fish is conspicuous on account of its broad silvery stripe along the side and semi-transparency of its tissues.]

In this week's issue the well known "Seal Island," situated below Quebec, and noted as a resort for geese and wildfowl of all descriptions, is offered for sale. This presents a valuable opportunity for a club to secure an excellent preserve, with an almost inexhaustible supply of birds, and intending purchasers are offered a chance to shoot over the ground when the season opens. A. Toussaint & Co. of Quebec are the owners, and will give full particulars on application.—*Adv.*

The Kennel.

FIXTURES.

DOG SHOWS.

Sept. 1 to 5.—First Annual Dog Show of the Youngstown Kennel Club, at Youngstown, O. S. D. L. Jackson, Sec'y.

Sept. 2 to 5.—Dog Show of the Wilmington Fair Association, at Wilmington, Del. F. R. Carswell, Supt., 101 West Sixth street.

Sept. 2 to 4.—Dog Show of the Midland Central Fair Association, at Kingston, Ont. C. H. Corbett, Secretary.

Sept. 2 to 5.—Third Annual Dog Show of the Michigan Kennel Club, at Detroit, Mich. M. V. B. Saunders, Secretary.

Sept. 15 to 19.—Second Annual International Dog Show of the Industrial Exhibition Association at Toronto, Canada. C. A. Stone, Secretary.

Sept. 23 to 26.—Second Annual Dog Show of the Central Canada Exhibition Association, at Ottawa. Alfred Geddes, Chairman Committee.

Sept. 23 to 26 —Third Dog Show of the London Kennel Club, at London, Ont. S. F. Glass, Secretary.

Oct. 6 to 11.—Ninth Annual Dog Show of the Danbury Agricultural Society, at Danbury Conn. B. C. Lynes, Secretary.

Dec. 30 to Jan. 3, 1891.—First Dog Show of the Buckeye Poultry and Pet Stock Association, at Canton, O. James Sterling, Sec'y, 39 North Market street.

1891.

Jan. 20 to 25.—First Annual Dog Show of the Louisiana Poultry and Pet Stock Association, at New Orleans, La. A. E. Shaw, Secretary, Box 1653.

Feb. 24 to 27.—Fifteenth Annual Dog Show of the Westminster Kennel Club, at New York. James Mortimer, Superintendent.

March 24 to 27.—Second Annual Dog Show of the Massachusetts Kennel Club, Lynn, Mass. D. A. Williams, Secretary.

FIELD TRIALS.

Sept. 9.—Field Trials of the Manitoba Field Trials Club. Thos. Johnson, Winnipeg, Secretary.

November.—Second Annual Field Trials of the Brunswick Fur Club, at Brunswick, Me. J. H. Baird, Secretary, Auburndale, Mass.

Nov. 3.—Fourth Annual Field Trials of the Indiana Kennel Club, at Carlisle, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 3.—Second Annual Field Trials of the Canadian Kennel Club, at Chatham, Ont. C. A. Stone, Toronto, Ont., Secretary.

Nov. 17.—Twelfth Annual Field Trials of the Eastern Field Trials Club, at Otterburn Springs, Va. W. A. Coster, Saratoga Springs, N. Y., Secretary.

Dec. 1.—Second Annual Field Trials of the Central Field Trials Club, at Lexington, N. C. C. H. Odell, Mills Building, New York, Secretary.

1891.

Jan. 19.—Eighth Annual Field Trials of the Pacific Kennel Club, at Bakersfield, Cal. H. H. Briggs, Secretary.

Feb. 2.—Third Annual Field Trials of the Southern Field Trials Club. T. M. Brunby, Secretary, Marietta, Ga.

COURSING.

Oct. 21 to 25.—Fifth Annual Meet of the American Coursing Club, at Great Bend, Kan. I. D. Brougher, Secretary.

INDIANA FIELD TRIALS PUPPY STAKE.

INDIANAPOLIS, Ind., Aug. 17.—*Editor Forest and Stream:* The entries for the puppy stake of tht Indiana Kennel Club closed Aug. 1 with thirteen nominations. All were born after Oct. 1, 1889:

DOCTOR W. (L. C. Newman, Stanton, Tenn.), black, white and tan English setter dog (Gladstone Boy—Clara).

EFFIE K. (G. E. Gray, Appleton, Minn.), black and white English setter bitch, pedigree not given.

FLORA (Dr. G. G. Ware, Stanton, Tenn.), black, white and tan English setter bitch (Gladstone Boy—Clara).

HOPE'S MARK (D. E. Rose, Lawrenceburg, Tenn.), black, white and tan English setter dog (Gath's Hope—Lady May).

IDAHO (Elms Kennels, Forest Lake, Minn.), lemon and white English setter bitch (Monk of Furness—Pearl Laverack).

MARIE BURR (W. F. Burdell, Columbus, O.), liver, white and tan English setter bitch (Paul Gladstone—Latonia).

MINNESOTA (Elms Kennels, Forest Lake, Minn.), black, white and tan English setter bitch (Monk of Furness—Lady Faydette).

NUTWOOD (Fairbank & Board, Indianapolis, Ind.), liver and white pointer dog (Ossian—Nellie E.).

ONOTA DON (F. L. Cheney, Pittsfield, Mass.), red Irish setter dog (Chief—Bizrena).

ONOTA PEG (F. L. Cheney, Pittsfield, Mass.), red Irish setter bitch (Chief—Bizrena).

PAXICO (A. J. Gleason, Alma, Kan.), liver and white pointer dog (Ossian—Nellie E.).

ROSE OF CLAREMONT (F. H. Perry, Des Moines, Ia.), red Irish setter bitch (Claremont Patsy—Nino).

TENNESSEE JOE (D. E. Rose, Lawrenceburg, Tenn.), liver and white pointer dog (Ossian—Nellie E.).

P. T. MADISON.

THE NORTHFIELDS YORKSHIRE KENNELS have advice that the manager, Mr. Thomas, will sail from England in the Venetian and is due here on Wednesday, the 27th. Mr. Thomas will bring the well-known Irish terrier dog Breda Bill and two bitches of the same breed, one of them in whelp to champion Breadenhill. He also has in charge a Russian corded poodle bitch, by champion Achilles, and the dog Dexter, the longest corded poodle on record. A King Charles spaniel with a pug and some Yorkshires, all purchased through Mr. Richard Toon, of Sheffield, Eng. Mr. Thomas intends to show all of the dogs at Detroit.

THE BEAGLE FIELD TRIALS.—Boston., Mass., Aug. 18,—*Editor Forest and Stream:* The National Beagle Club's field trials will be held at Hyannis, Mass., beginning on Tuesday, Nov. 4, and continuing through the week. The running rules will be ready Sept. 1.—F. W. CHAPMAN, Sec'y.

HAYFEVER sufferers use Peshall's Remedy. Certain relief. All druggists or by mail, Price 75c, GEO. L. WILMS, Jersey City, N. J.

THE ENGLISH SETTER.

HIS SELECTION AND TRAINING.

I HAVE no apology to offer for the following system of training. The work is not intended for the instruction of professional trainers, but for young sportsmen of limited means who must, perforce, do their own breaking. While many experts follow different rules when handling a large number of dogs, animals of the highest excellence have been broken by the author's system, and, where the sportsman has but a single dog or a brace in hand, I am convinced that none easier of application or more satisfactory can be employed.

WHICH SHOULD BE BROKEN FIRST.

In most instances where the sportsman has been unsuccesstul in breaking his dog,tit will be found to have been owing to his own mistake in not breaking himself before undertaking the education of his canine servant. Retrospection and introspection, in hundreds of instances, will disclose the fact that the undeserved blows and kicks and—shame to the brute who practices such a barbarity—the shootings administered to young dogs, would have come much nearer the seat of the difficulty if bestowed upon the breaker.

The sportsman who begins training a dog, forgetting he has a temper and the necessity for constantly exercising self-control and unfailing patience, will, if he be at all quick-tempered, ruin him completely. So important do I regard it to be unfailingly patient and kind with my dogs that I never take them out for a drill if feeling any degree of irritability. Firmness in enforcing commands and patience at every step of training are absolute pre-requisites to successful dog breaking, and, I need not say, the latter is very rarely exercised when one is irritable or angry. It will be much better that you suspend teaching your pupil for an entire day—which should not under ordinary circumstances be done—than that your passion should betray you into treating him with unmerited severity, thereby, possibly, rendering him timid for life. This may be considered a trifling rule, but, in my judgment, it is the most important one connected with kennel science; and, I assure you, you shall be successful in the degree that you are mild yet firm, quick to detect a fault, and prompt, calm and deliberate in administering proper punishment, and as you are unfailingly good-tempered; for the main object to be attained is to teach your pupil that while you are his master you are also his friend.

SELECTING A DOG.

In selecting an English setter, particular attention should be given to the purity of the strain from which you are about to choose. Droppers and other mixed breeds should be rejected. It is undeniably true that such curs occasionally make good fielders, but it should not be forgotten that a dog's hunting life, ordinarily, does not exceed eight or nine years, and that however good a crossbred dog may be in the field, his availability and usefulness end with his hunting days—he is utterly worthless as a sire—and what can be more provoking than the inability to reproduce a favorite? In ninety cases out of one hundred the produce of mixed breeds is unsatisfactory, they usually transmit to their progeny all their bad and few of their good qualities. It is true that in purchasing you are somewhat at the mercy of the seller, but you can and should assure yourself of the genuineness of the pedigree before buying. There are many honorable fanciers upon whose word you can rely with absolute safety, and whose address may be obtained from any of the sporting journals. Any setter of pure blood is good enough, but I shall always hold it beyond argument, with the almost numberless first-class dogs in this country constantly offered for sale, that it is unpardonable and bespeaks a dense ignorance to purchase a cur when a well-bred dog can be obtained at a moderate outlay.

It is not always possible to select the best puppy in a litter if taken at three months of age or under, but there are certain points, which if understood, will be of great value to a purchaser. Your choice being an English setter, let his muzzle be square, with a high, well-defined forehead, moderately wide between the eyes, ears only moderately long and drooping, without the slightest tendency to cock. If the ears when drawn forward reach to the end of the nose. I suspect spaniel blood, especially if the hair inclines to curl. The nose, if possible, should be black or dark liver colored; he should be deep chested, with powerful loins, well ribbed up, and the pasterns well bent. I especially like the head where it joins the neck to be clearly defined and of good height. The feet may be either cat or wolf-shaped, and in old dogs they should be well protected by hair-tufts. Size and color being matters of taste, no space need be devoted to them. The eyes should be large, liquid, dark and expressive. The hair should be soft, lustrous and silky, without curl. The feather upon the tail and the back of the legs should be of good length and perfectly straight. The nostrils should be wide apart and the entire fleshy parts of the nose should be cool and moist. Attention should be given to the manner in which the tail is carried. This should be slender, slightly curved and carried in a line with or a little higher at the tip than the back, not drooping, as this indicates a timid, possibly a gunshy, disposition. Reject a flesh-colored nose. Observe well how the puppy bears himself—whether he carries his head high and showily, or drooping—something, it may be, of his disposition will be revealed in the general carriage, shine out of the mischievous eyes, or be observable in the playful and friendly wag of his tail, remembering at the same time that you are not only selecting a faithful servant, but one of the pleasantest companions and a devoted friend.

It is of high importance that he should be descended from broken parents. The value of this I shall discuss hereafter, only pausing at this stage to remark that too much importance can not be attached to the value of heredity.

WHEN TO COMMENCE TRAINING.

The best time to commence training is as soon as the pup leaves its dam. It is remarkable how speedily and easily one may yard-break a dog if his education is commenced at this age. It is no exaggeration to say that you may train him in a single fortnight, and so thoroughly shall the work be done that he will never forget it if occasionally exercised in that which you have taught him. All dogs should be yard-broken before being taken to the field, and this can, and should be done, long before they are old and strong enough for field work—other writers to the contrary notwithstanding.

A dog which has been thoroughly so broken, may, in a great measure, be said to be field-broken, so readily does he learn to apply in the field that which has been taught him at the kennel. In respect to early impressions, "puppyhood" is much like childhood. If early received and properly instilled such impressions are lasting; but if a boy or a dog learns the "street tricks," they are well-nigh ineradicable, and, in the one case, a blackguard and a vagrant is the result; in the other, his canine prototype, essentially—a cur.

FIRST LESSON—CHARGING.

I have long since abandoned the practice of compelling my dogs to lie prone upon the earth when at a charge. I think it a useless cruelty. The sight of a dead bird falling and of others upon the wing is indescribable enjoyment to them—enjoyment which they thoroughly deserve. Besides, if permitted to sit—or stand as some sportsmen prefer—they will not only unerringly mark the dead, but very frequently the live, birds much more closely than can the sportsman. I invariably teach my dogs to sit down at command. The value of this method can hardly be overestimated, in a country infested with venomous reptiles as is that in which the writer resides. Had dogs been so trained and taught to sit when delivering a dead bird to hand, many instances of reptile poisoning might have been avoided. The word down or sit may be used for this purpose but you must use only one of them.

Commence by ordering him to sit, in an ordinary tone of voice, unaccompanied with raised hand or other motion. Avoid loud shouting. It is perfectly absurd to roar at a dog within ten feet of you in a voice loud enough to be heard half a mile away. He will not, of course, understand you. Place him gently in a sitting position, and keep him thus for a moment, at intervals repeat the word sit. Do this several times daily, being mindful not to continue until he becomes tired and loses interest in the lesson, but at such times only as he appears to be wide awake and ready to receive it. Continue for a week or more. At the end of this time, if he does not sit to order, place him in position a little roughly and if he do not then obey, resort to very gentle punishment, such as pulling his ear or a tap with the fingers or open hand upon the rump. Severity must only be resorted to in extreme cases—such as are seldom met with in a life time. You will probably succeed without going to extremes.

After he has become perfect in his first lesson, teach him to lie down by using the word "charge," and by placing him in the proper position and holding him there until ordered to "hold up." I should not advise teaching him the second lesson until he is thoroughly obedient to the command "sit," as there is, at this early age, danger of confusing him. As it is often desirable in upland shooting to have your dog charge at a distance from you, upon the approach of waterfowl or other game, without making any noise, teach him after he has thoroughly acquired his two first lessons, to charge by a blast on your dog-whistle and raised right arm. By gradually increasing the distance between you and him when at practice and insisting upon instant and implicit obedience every time you give the order, in a short time you will find that he will charge the instant the whistle is sounded or the arm is raised. By pursuing this plan I have avoided the use of the spike-collar and check-cord. Within the limits of this article I cannot pause to give the method of using these, at times, indispensable implements. Nor is it necessary, as all dealers having them in stock send complete instructions with them free of charge. They may be obtained from any gun house in all our principal cities. My advice is to do without their use if possible. In the hands of an expert trainer they are invaluable; in the hands of a novice, very dangerous.

Accompanying these lessons teach the dog to hold up by so ordering him, at the same time lifting him to a standing position. This, I think, he will learn sooner than any other command.

POINTING.

To teach him to "to ho," commence by placing or tossing his food 4 or 5ft. from him. He will at once spring toward it—young dogs are always voracious—when you should seize him, calling out in an ordinary tone of voice "to ho." Hold him standing, facing the food. If he struggles, as he probably will do, hold him firmly, repeating the command. See to it that his tail is kept stationary at the proper elevation—he may wag it if undeterred. After holding him thus a few seconds, release him, when he will again spring forward, but you should catch him again, repeating the command. Do this often, and finally at the order "hold up," allow him to eat. Do this whenever you feed him, and in a few days he will come to understand and obey instantly, which, of course, he should do shortly without being held. This lesson, if you prefer it, may be substituted for lesson first, and they should be taught together as soon as he understands both orders and obeys at once.

Any other words than "to ho," "hold up" and "charge" may be substituted, but as they are sonorous and distinguishable at a considerable distance, and are in general use among sportsmen, they are of advantage when hunting in company with others who have their dogs with them.

After your dog understands that he must point when ordered so to do, charges obediently to command and to the uplifted arm, you may proceed to teach him to retrieve, which ordinarily can be begun in from seven to fourteen days after the first lesson, dependent, of course, upon the native sense of the subject, which you can readily determine by the progress that he has made in his education.

RETRIEVING.

Young dogs are usually either so-called "natural retrievers" or they can be easily taught to fetch. Especially is this true if the sire and dam were taught this accomplishment. Save, possibly, the hunting and pointing instinct, I know of no other inherited quality so marked. I have repeatedly observed that my own dogs and those owned by other sportsmen bred from parents broken to retrieve, were either "natural retrievers" or became good retrievers by a little handling. For my part, I do not think that any superiority of form, style or mere beauty could induce me to purchase a puppy from unbroken parents, if I could possibly do otherwise. If compelled to so purchase, I should make a difference of at least 50 per cent. in the price paid. By procuring only the progeny of broken parents the young sportsman will find the labor of breaking greatly lessened. It is established beyond controversy by the experience of the great majority of breakers and sportsmen that dogs inherit, in a remarkable degree, the good and bad qualities of their immediate ancestors, and it follows that the better broken the sire and dam the more valuable the young dog.

In order to teach him to "fetch," procure an old glove or a stocking that has been worn. Toss it a few feet from him—first ordering him to sit. He will, upon being ordered to "hold up," spring forward and seize it. Persuade him to bring it to you, which he will probably readily do. When he delivers it within your reach order him to sit, and only take it from him when in that position. As he has obeyed you, you should praise and caress him, calling him "good dog," "good fellow," or the like. After repeated daily trials, in this simple manner, in a few weeks he will become perfect in this most necessary duty. If he fails, after weeks of patient and kindly endeavor, to obey you, the check-cord and spike-collar must be resorted to in order to effect your object. This, however, with very young dogs, will rarely occur, and when it does it is usually attributable to the fault of the handler, from too great severity, impatience, haste or the like. Do not keep him at this lesson until he tires of it. Three or four trials or even less will be sufficient if you give it him once or twice daily. But little more need be said on the subject of retrieving. Persistence, patience, rewards and mild punishments will accomplish wonders where a failure to enforce commands, impatience and cruelty will insure failure. He may now be said to be yard-broken if he has become promptly obedient in the foregoing.

RANGING AND QUARTERING.

When your puppy has arrived at a suitable age, say from 6 to 8 months, and, in case he be very strong and forward, even at an earlier age, you should teach him to range and quarter his ground. Upon this subject a diversity of opinion prevails among sportsmen. One wishes his dog to quarter his ground from fence to fence, turning outwardly at each crossing, not passing at more than 20yds. in advance of his last line; while others only teach theirs to hunt in the most likely places for the bevy. I shall not pause to discuss this matter further than to say that the necessity for closely quartering his ground depends largely upon the dog's nose and his sagacity. But I wish to emphatically state that I consider no dog broken if he do not quarter his ground to the whistle or order—the former being preferred. This, too, he should do unaided by motion of the hand.

You teach him to range and quarter by encouraging him to precede you, you yourself going to the right or left, covering the ground as you wish him to do, all the while ordering him to "hold up," "hie on," "hie on, my boy," in a kind tone of voice. When he has gone as far as is desirable, utter a sharp whistle either with you lips or a dog-whistle, and immediately retrace your steps upon a line about 15 or 20yds. in advance of your last, encouraging him as before. You will find this will require considerable time and patience, but you should persevere until he shall hunt his ground to your satisfaction. In the course of time he will come to turn and quarter the instant you sound the whistle, while you may walk leisurely through the field. This is of all the most perfect way in which to instruct him, as after a while he will learn that he may go as far as he pleases in any direction until the whistle is sounded, when at once he must turn. In woodcock and ruffed grouse shooting and upon quail, after the bevy is flushed and scattered, quartering is often absolutely indispensable. MONOQUET.

[TO BE CONTINUED.]

A. K. C. AFFAIRS.

Editor Forest and Stream:

As I don't want to further weary an already "tired" public, I will not engage in the Peshall-Watson war, but wish to point out about how the present position strikes most business men that I have heard from on the matter. Mr. Peshall has set forth certain statements of the A. K. C. secretary, indicating that the books have not shown the truth. Mr. Aldrich's statement supports this view, but neither prove anything whatever as to the books being "faked." At the most, they are indicative only. Mr. Watson stands triumphant on his examination of the books, and insists that he has disproved everything that Mr Peshall alleges. The truth is that he has not proved, or disproved, one single thing. I appeal to any business man as to the weight he would attach to any investigation of mere books without the papers on which the book entries are based. Mr. Belmont does prove one thing, *i. e.*, that he did not pay in money, as no one that I know seems disposed to doubt his word. In a private note to me, Mr. Watson adduces one item of proof that he strangely seems to have overlooked in his public statements. As I understand him, he roughly checked the cash account of receipts on stud book account with the entries in the book, and found they agreed fairly closely. This is indicative of the account being honest. The items that carry any weight with me are, Mr. Peshall's statement as to what was said to him, Mr. Belmont's denial, Mr. Aldrich's statement and Mr. Watson's checking of the cash and stud book entries; and I certainly am not going to wear my small brains out endeavoring to extract the meat in this husk pile.

For my own part, I have absolutely no opinion as to whether the books are honest or faked, nor will I entertain any opinion whatever on the matter until a competent accountant of unquestionable honesty has examined not only the books, but its vouchers, on which the book entries were made. I do not believe that outside of Messrs. Peshall and Watson there are half a dozen readers who have a definite idea as to what the charges and denials, specifications and opposing specifications are. All of us have something else to consider and bear in mind than interminable details of a wrangle like this, and unless every detail is remembered we are in a fog.

I do most sincerely hope that the A. K. C. will order an independent investigation of its own account, followed by a public report of the results. Depend upon it, gentlemen, you will make a most grievous mistake if you shut yourselves up any longer in your closet of a social club. You represent, and should consider, every man interested in dog matters, and while it is not necessarily true that "where there is so much smoke there must be some fire," yet I do assure you, as honestly as I can, that the affairs of the A. K. C. are looked upon with suspicion by very, very many dog men who have taken no part in this row, and any more of your shutting yourselves up within yourselves, will just convert this suspicion into certainty. Do be warned in time.

W. WADE.

HULTON, Pa., Aug. 18.

DOGS OF THE DAY.

A FEW days ago I dropped across quite a find in the shape of "A Treatise on Field Diversions. By a gentleman of Suffolk; a staunch sportsman." It was printed at Yarmouth in 1824, and was evidently quite a standard work a century ago, for the preface begins as follows: "This interesting pocket volume, being decidedly the best work on the subject on which it treats, having for many years been out of print and become very scarce; at the suggestion of several eminent sporting characters of the counties of Norfolk and Suffolk, has been reprinted VERBATIM from the edition of 1776."

Here then we have a work devoted to dogs as old as the United States, recognized as possessing so much merit as to require a second edition fifty years later. Further, the author speaks of what was recognized as correct and well known fifty years before he wrote, so that he carries us back to 1726, and I don't know of any other book which in this respect can compare with it. The setter of the present day was then unknown. He was a mongrel according to this "staunch sportsman," for he says: "There are now various kinds called Setters, from their being appropriated to that service; such as between the English Spaniel and the Foxhound, ditto the Pointer, and the pure Pointer simply by himself. Whim gave rise to the *first* cross, very probably; but most assuredly indolence contrived the latter. None can lay any just claim, however, to the appelation, but what is emphatically called by way of eminence, *the English Spaniel.* The Irish insist—*their's* are the true English Spaniel; the Welsh contend—*their's* are the aborigines. Be that as it may: whatever mixture may have been since made, there were, fifty years ago, two distinct tribes—the black tanned—and the orange, or lemon and white. * * * Was I to choose one of this sort, he should be rather tall than otherwise; flat ribbed, and longish in the back; for a dog, when speed is a principal requisite, must, as well as a horse, in the language of the turf, 'stand upon ground.' A gentleman, who resided some time in Wales, tells me, this is a true description of their finest Setters."

Our author has not a very high opinion of the pointer, of which he says: "This kind of dog was introduced here in the beginning of the present century, and is acknowledged to be a native of Spain or Portugal. * * * The first I remember to have seen was about forty years back. Black and white—heavy—slow—without any regularity in beating—under no command—but a *Natural Pointer.* * * * They have a ferocity of temper which will not submit to correction or discipline unless taken in hand very young."

Reference is also made to a breed of rough pointers, introduced to Suffolk by the late Earl of Powis, from Lonain, of which the author remembered a very few capital. They took to sheep killing and were done away with on that account.

Lastly we come to "the Springing Spaniel," as the chapter is headed, and of which the author says: "The cocking or gun Spaniel, of *true perfect* breed, is of one general or whole

colour: either black or black-tan, commonly called King Charles' Breed; or red, in different shades, paler or deeper; such as in horses, we would call a blood bay, or a bright bay, I have known some (very rarely) absolutely so; without the admission of a different hair: though, for the most part, there is some white on the breast and bottom of the throat. Coat loose and soft, but not waved. Back broad and short. Legs short with breeches behind.

"There is a great variety at this time in different mixtures; of red and white, brown and white, black and white, grizzled, etc. Some, with a short, hard coat; others, with a waved coat, inclining to curl. But in all these pied or party-coloured; there is some tincture remaining, either of the Beagle or water Spaniel. * * *

"I have bred puppies by a Beagle and Spaniel bitch, and the reverse. But, by continuing the Spaniel to the females produced in that manner to three or four generations, the Beagle has been entirely lost, as to tongue, carriage, form of hunting, etc., but yet retained the mixed colours. * * *

"Mr. Mott, an old gentleman, called the father of sportsman, had of this red strain, fifty years ago, that greatly exceeded: and at this present there is a similar stock at Sir Joshua Vauneck's, superior to most. The same blood is doubtless to be met with, in most parts of England; for it cannot be supposed, that all the gentlemen of taste are foggotted up in Suffolk."

Our friend, the Ardent Sportsman, was a rare fellow for fancy, a parti-colored spaniel to him indicated a beagle cross, and a parti-colored greyhound a lurcher cross, but we have had about enough of him for one week.

This question of color in spaniels reminds me that Mr. Fellows told me a few years ago that he got the creams or reds from bitches with black and tan blood in them. Then here is part of a letter bearing on the same subject which I got a little while ago from Mr. J. P. Willey, in which he said: "I am breeding some red pups now. None of my bitches would throw those reds, but I have found where they come from. There must be some cross of liver and white or something of that kind. None of my Blackie III. stock will throw them, but mate the liver and white bitches to Obo II. and I get a red or two, and the same by my stock from Newton Abbot Laddie. I have bred two bitches by him to Obo II., and each of them has thrown a red pup. Hemingway's Miss Nance was the first bitch to throw reds that came to my knowledge; she was by Obo II., if you recollect, and her dam, Darkie, was out of Blackie by Beau, a dog I shall have to bring up again. I see there is a bitch bred and registered in England by Beau out of Blackie, a black and white, and if one will only follow it up he will find there is something of that kind in the breeding of the bitches that throw those reds."

I said when these reds came out first that it was the sport spoken of by Darwin, of white appearing in in bred blacks, but it would seem to be as Messrs. Willey and Fellows say, the black on a liver and white or black and tan strain does it. Can Mr. Fellows tell what happens when the creams or reds are interbred.

I regret to learn that after all Mr. Mercer's efforts to add to the muster roll of Clumber spaniels through breeding and leaving his recently purchased bitch Snow in England it has come to naught. Every one of her puppies died.

I have an apology to make to Mr. Keyes, of the Rideau Kennels, Ottawa. My original statement, that his stud circular claimed that Obo, Jr., had beaten Young Obo and Young Obo for a stud dog prize at Newark, N. J., was incorrect. Having destroyed the circular I could not refer to it when the claim was said to be incorrect, and presuming I had not misquoted I so wrote. Mr. Keyes has now forwarded me a copy of the circular, and I freely acknowledge it was my blunder. The only balm left in this Gilead is that I said I was sure the Rideau Kennels had not meant any deception.

Mr. Wm. Miller, of Providence, has purchased in England the St. Bernard bitch Dorothy IV., by Pouf out of Lady Unslow.

I understand that Mr. Vredenburgh has prepared a complete index of all dogs which received a prize or commendation, giving the full record of every dog during the season of 1890. This will be continued to the close of the season and published as an appendix to the Stud Book. That is just what was wanted to make the Stud Book what it should be.

No reply is necessary for me to make to Mr. Peshall's letter published broadcast last week. My letters have been strictly confined to a discussion of the A. K. C. accounts of 1888, and Mr. Peshall's many erroneous statements regarding them. There is as much truth in all these stories as in his telling Mr. Lacy last Wednesday that he had had papers served in his suit against the A. K. C. My friends, there will never be any such suit begun, and no one knows this better than Mr. Peshall. The whole thing is a dead cock in the pit; let us have live issues hereafter. J. W.

THE WILMINGTON DOG SHOW.

Editor Forest and Stream:

I find a very annoying error has been made in our premium list. Pointers, class 20, should read: Open class, dogs under 55lbs., instead of 50lbs., as printed.

A special prize will be given to the owner or handler having the largest number of dogs in his care, and one to the owner or handler having the second largest number. The amount of the above prizes has not yet been decided upon.

Mr. M. F. Hayden offers 25 rose plants, value $10, for the best fox-terrier in Wilmington; 25 rose plants, value $10, for the best pug owned in Wilmington; 25 rose plants, value $10, for the best fox-terrier; 25 rose plants, value $10, for the best Irish terrier. Other special prizes will be announced in the catalogue.

The Adams, United States, and Balto. & Ohio Express Cos. have offices on the grounds, and will deliver direct to the building. Those who intend shipping dogs to the South for the field trials, etc., can have them sent to the Wilmington show and afterward forwarded wherever desired. All dogs are returned free to original shipping point. Prof. Parker's troupe of trained dogs will perform every day.

Exhibitors should notice that the entries close on Thursday, Aug. 21.

The entries are coming in rapidly, and our show will be a success. F. R. CARSWELL, Supt.

DEAF "HEARING."—*Editor Forest and Stream:* Apropos of Mr. Watson's remarks in last FOREST AND STREAM, I would say that the little blind mute, Helen Keller, is as susceptible to sound of even distant and moderate thunder as I am; this I distinctly noted myself. She noticed the distant roll of thunder as quickly as she did the heavy, nearby peals. Mr. Watson has done good service in stamping out such utter nonsense as that Boston show test of deafness. Dr. Perry rendered an equal service at Newark show some years since, by introducing the practical test of whether a dog was castrated; clearly demonstrating that the dog was entire, when the vets all declared most positively that we was emasculated. A little common sense is worth bushels of scientific theory sometimes.—W. WADE.

TORONTO DOG SHOW.

TORONTO, Aug. 15.—*Editor Forest and Stream:* The following arrangements have been made with the railway and express companies in regard to the transportation of dogs to and from the grand international bench show of dogs of the Industrial Exhibition Association, to be held at the city of Toronto, Sept. 15 to 19. The Graud Trunk and Canada Pacific railroads will return dogs free on payment of regular fares for outward journey. The Canadian and Dominion Express companies will also do the same. The trunk lines, which include the entire Pennsylvania Railroad system east of Erie and Pittsburg, will carry three dogs free when accompanied by owners, and will also carry owner for a fare and one-third upon procuring certificate from ticket agent. The New York, Lake Erie and the Northern Central and Western railroads will also carry three dogs free. The Lake Shore and Michigan Southern, Chicago, Grand Haven and Milwaukee, Toledo, Saginaw and Muskegon, Grank Trunk Michigan system will carry one dog free. Exhibitors are carried over the Canadian railways for one fare for the double journey. Exhibitors from Detroit show will be provided with accommodation the week previous to the show, thus enabling parties to exhibit at Toronto without returning home, thereby saving the double journey. Entries close Sept. 3, and should be addressed to C. A. STONE, Secretary.

INTERNATIONAL FIELD TRIAL.—Chatham, Ont. The meeting of sportsmen at the Garner House on Tuesday evening, for the purpose of forming a Field Trial Club, was well attended. Letters and telegrams from Detroit, London, Hamilton, Forest and other places were received, regretting inability of the senders to attend, but expressed sympathy with the object of the meeting and promised every assistance. Sheriff Mercer was elected President, F. W. Eddy, Detroit, 1st Vice-President; Dr. Totten, Forest, 2d Vice-President; W. B. Wells, Secretary and Treasurer. Executive Committee—J. B. Field, C. A. Davidson, H. Avery and another of Detroit; Montague Smith, Forest; T. G. Davey, London; S. Holmes, C. R. Atkinson, Jr., Jos. Kime, V. S., and F. Bennet, Chatham. The feeling of the meeting was in favor of the spotting as against the heat system of judging, under which the trials were run last year; also that there should be three judges instead of one. The trials will begin Nov. 3, and will take the place of the rials which were to be held under the auspices of the Canadian Kennel Club. The International Field Trial Club was the name adopted.

DR. H. T. FOOTE had the bad luck to lose by death five of the litter of black and tan terriers out of his English Lady, by Broomfield Sultan. He attributes the loss to the recent ocean voyage of the bitch, as she arrived here only two days previous to her whelping.

CARBOLIZED SHEEP DIP.—We have received several inquiries regarding the preparation of the sheep dip described by "Hibernia." We do not know the formula for its preparation, but it can be procured of any dealer in agricultural supplies.

SOUTHERN FIELD TRIALS.—The judges appointed for the third annual field trials of the Southern Field Trials Club are Messrs. B. P. Holliday, F. I. Stone and W. E. Venable.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Prepared Blanks sent free on application.**

Flura. By H. J. Brown, Berlin Mills, N. H., for fawn mastiff bitch, whelped June 21, 1890, by Boss out of Molly Stark.

Cartcret. By John H. Dey, Red Bank, N. J., for liver and white pointer dog, whelped June 29, 1890, by Brake out of Marguerite II.

BRED.

☞ **Prepared Blanks sent free on application.**

Derby Hebe—Bombardos. Chas. D. Cugle's (Baltimore, Md.) bulldog bitch Derby Hebe (Reeve's Crib—champion Hebe) to his Bombardos (champion British Monarch—Gentle Gertrude), Aug. 2.

Molly McGinty—Cherry Boy. J. M. O'Brien's (Worcester, Mass.) cocker spaniel bitch Molly McGinty (Black Duck—High Rock Jet) to C. G. Browning's Cherry Boy (Ebony—Fanchon), July 26.

Rhoda—Cherry Boy. Harry B. Tallman's (Providence, R. I.) cocker spaniel bitch Rhoda (Nick—Carlotta) to C. G. Browning's Cherry Boy (Ebony—Fanchon), Aug. 4.

WHELPS.

☞ **Prepared Blanks sent free on application.**

Hornet. Wm. West's (Philadelphia, Pa.) cocker spaniel bitch Hornet (champion Doc—Lady Pluto), July 15, five (two dogs), by C. G. Browning's Cherry Boy (Ebony—Fanchon).

Starlight. F. F. Dole's (New Haven, Conn.) bull-terrier bitch Edgewood Fancy (Hinks—Starlight), Aug. 7, six (three dogs), by his Bendigo (Marquis—Kit).

White Gipsey. Frank F. Dole's (New Haven, Conn.) bull-terrier bitch White Gipsey (champion Como—Miss Gladstone), Aug. 5, ten (five dogs), by his Bendigo (Marquis—Kit). Two bitches and one dog since dead.

English Lady (formerly Beauty). Rochelle Kennels' (New Rochelle, N. Y.) black and tan terrier bitch English Lady (formerly Beauty) (Jackson's Gordon—McMee's Bess), Aug. 11, seven (six dogs), by T. Ellis's Broomfield Sultan. Four dogs and one bitch dead.

SALES.

☞ **Prepared Blanks sent free on application.**

Spider. White fox-terrier dog, whelped April, 1889, by Regent Jock out of Snip, by J. B. Martin, San Francisco, Cal., to H. M. Noel, Harford, Cal.

Guess. White, black and tan fox-terrier bitch, whelped Aug. 25, 1888, by Dick out of Norwich Belle, by J. B. Martin, San Francisco, Cal., to Wm. Maitland, Santa Cruz, Cal.

Lord Disbro. Stone fawn mastiff dog, whelped Nov. 15, 1888, by East Lake Major out of Piqua Belle, by J. C. Comstock, La Gro, Ind., to C. C. Carroll, Springfield, Ill.

Dick—Rochelle Lass whelp. Black and tan fox-terrier dog, whelped Jan. 27, 1890, by Rochelle Kennels, New Rochelle, N. Y., to Mr. Wilson, Norwalk, Conn.

Dick—Meersbrook Girl whelps. Black and tan fox-terrier dogs, whelped Nov. 21, 1889, by Rochelle Kennels, New Rochelle, N. Y., one each to Jas. Jennings, Penn Yan, N. Y.; Geo. Strell, Chicago, Ill., and R. Wright, Toronto, Can.

Rifle and Trap Shooting.

RANGE AND GALLERY.

SAN FRANCISCO.

SAN FRANCISCO, Aug. 10.—The range at Shell Mound Park was well patronized to-day. Several companies of the National Guard held their monthly contests, and the members of the San Francisco Schuetzen Verein and Independent Rifles competed for the trophies offered by their respective organizations.

To-day was a good one for shooting, the wind blowing a steady breeze all day, which prevented the smoke from obscuring the targets from the marksmen. The question of having a 500yds. target is again being considered. Some enthusiastic rifle shots have taken the matter in hand, and it is safe to say that in a short while those who feel so disposed will have an opportunity of practicing at that distance.

The San Francisco Schuetzen Verein was out in force and kept the markers busy. The contests in several instances were close, and the utmost good nature and friendly rivalry marked the day's proceedings. The winners of the medals in the classes are: Second class medal, L. Bendel, 365 rings; third class, H. Tietjen, 336; fourth class, F. Hilsz, 218. The medal for the first best shot was won by C. Scheurer with 24 rings, and the medal for the last best shot was carried off by L. Bendel with 23 rings.

The Rifles had also its monthly medal shoot and the following was the result:

H Donnermacher	40	T Hammann	30
E Uthe	40
Capt Schmalzholz	28	J W Urthman	29
H Joost	27
H Kortz	29	H Beverson	34
H Edson	30
E Moenning	29	C L Woest	28
F Staude	21
H Gaetjen	34

In this company the member making the highest score is entitled to the champion medal, and the one making the lowest score bears off the leather medal and holds it until some one is unfortunate enough to make a lower score.

An interesting match was shot by four members of the Nationals, and keen interest was manifested by the participants. F. O. Young and Chris Meyers contested against A. Johnson and C. F. Waltham. Below is the summary of each of ten shots by the participants:

F O Young	45 42 43 43 44—217	A Johnson	45 43 42 44 44—218
Chris Meyers	42 43 43 43 45—218	C F Waltham	44 44 44 45—221
	435		439

Johnson and Waltham beat their opponents by only four points. This was close shooting, considering that 200 shots were fired.

Two teams composed of four men each from the Nationals also shot a match for a frog dinner à la fourchette. Sparrow's team won by eleven points. The score standing:

Sparrow	41	Meyer	42
Grave	35	Petty	45
Fonda	30	Dunker	29
Caldera	25—131	Brown	14—120

NEW JERSEY SHARP SHOOTERS.—Jersey City, Aug. 12.—*Editor Forest and Stream:* The annual prize and team shoot of the United Rifle Association of New Jersey was held at Caledonia Park, Newark, N. J., Aug. 11. The feature of the day was the contest between the different rifle clubs for the championship. The conditions were five men to compose a team, each man to have 5 shots on the 12-ring target, possible score for each man 60 points. The Excelsior Rifle Club of Jersey City, consisting of L. P. Hansen, W. H. Hallowell, F. G. Kittredge, Chauning and J. Speicher, won the first prize, five solid gold medals of elegant design. The score was 295 points out of a possible 300. The Lakesides of Newark won second prize. The holding and score of the Excelsiors was superb, and won much admiration. On the individual target J. Coppersmith led with a score of 217, possible 225, with Fred Sneller second, L. P. Hanson and Dr. Boyken third, A. P. Pierson fourth, Adam Graef fifth and J. Speicher sixth. On the target of honor, Geo. Chapman, Wm. Root, G. D. Wogman and D. Ersbine were first, second and third respectively. Sweet music was rendered by Prof. Nichols's orchestra, and dancing was enjoyed on the spacious pavillion by members and guests of the association, and their wives and sweethearts. The shooting committee were Messrs. Hingee, Coppersmith, Widman, Targett, Sr., and Watts, and the association is to be complimented on so wise a selection. The day was delightful, and we hope the affair proved profitable, and that we may be permitted again to visit the United Rifle Association at their annual festival.—DAPHNE.

EPHRATA, Pa., Aug. 15.—North-End Rifle Club, of Lancaster county, met on the range for practice. The weather was very fine, no wind; Standard American target, 200 yards off hand, national rules:

C S Wenger	7	9	6	9	6	10	6	6	6	5	—70
L M Weist	8	6	6	9	8	5	6	6	3	9	—66
J M Sheaffer	6	8	5	7	7	5	6	5	7	4	—60
W D Winters	9	8	10	5	5	7	5	3	4	4	—60
J A Stober	5	5	8	9	7	5	8	4	5	10	—58
C Konigmacher	6	10	8	8	6	0	4	4	8	5	—59
W Carpenter	9	5	8	5	7	5	8	6	4	9	—52
M Kufroth	10	3	5	8	5	6	0	5	5	3	—50
R W Bickley	9	4	0	5	9	4	4	8	6	7	—47
D B Lefever	3	4	3	7	3	0	5	5	8	5	—44

The club will meet again to-morrow afternoon (Aug. 22) for practice. On Thursday, Aug. 28, the annual shoot for medals will take place. All rifle teams in the country have been invited, and a grand time is anticipated. The shooting will be at 200 yards, standing rest.—D. B. LEFEVER, Sec'y.

ST. LOUIS, Mo., Aug. 15.—Sam. Dorman made the top score at the last shoot of the St. Louis Pistol Club. An even dozen took part in the affair, and the scores made average up quite well. A 12½yd. Standard American target is used for all shooting. The score:

S G Dorman	9	9	9	10	10	9	8	8	9	10	—91
M C Billmeyer	10	9	7	10	9	8	8	9	10	10	—89
A McBean	9	8	10	10	10	9	9	7	9	7	—88
E C Mohrstadt	10	9	8	7	10	9	8	9	8	9	—87
M Summerfield	10	9	7	7	8	9	7	10	10	10	—87
A E Bengel	9	9	8	10	7	10	5	9	10	10	—87
J Stussell	6	9	9	8	10	9	8	10	9	8	—86
W Bauer	10	10	9	7	8	6	10	7	9	10	—86
W C Mackwitz	8	8	8	9	7	10	8	8	10	7	—81
W H Hettel	10	10	5	8	5	8	6	8	10	9	—79
S V D Penet	6	7	7	6	7	4	9	7	7	10	—70
B Grainger	5	4	6	7	5	4	7	5	5	6	—54

UNSER FRITZ.

MARION RIFLE CLUB.—Jersey City, N. J., Aug. 12.—*Editor Forest and Stream:* The thirteenth annual prize shoot of the Marion Rifle Club, of Jersey City, N. J., will be held at their range on Labor Day, Sept. 1, at Marion, N. J., near the Pennsylvania R. R. station. Two hundred and fifty dollars in cash prizes, elegant gold medals and pieces of solid silverware are offered to all comers on the target of honor, prize target, Creedmoor target (500yds.), ring target, and a very fine programme for the 75ft. range.—DAPHNE.

CREEDMOOR, Aug. 13.—There was a large attendance of members of the Seventh, Eighth, Twelfth, Thirteenth, Twenty-second, Twenty-third, Forty-seventh, and Seventy-first Regiments, N. G. S. N. Y., at Creedmoor to-day, the third free practice day of the season. Seventy-one guardsmen made the required score at 200 and 300yds. to qualify as marksmen.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

FIXTURES.

If you want your shoot to be announced here, send in notice like the following:

Aug. 22.—Middlesex Live Bird and Target Shoot, Dunellen, N. J.

Aug. 26 27.—Live Pigeon Match, at Milford, N. J., given by Mahlon H. Rupell, proprietor Milford House, whom address.

Aug. 26-29.—Twelfth Annual Convention and Tournament of the Central Illinois Sportsmen's Association, at Jersayville, Ill. Com. R. Hutchinson, Sec'y.

Aug. 26-30.—Grand Inanimate Target Shooting Tournament of the West End Gun Club of Harrisburg, Pa., to be held at Williams Grove, Cumberland county, Pa. For programmes address H. B. Shoop, Secretary, Box 321, Harrisburg, Pa.

Sept. 1-2.—Hackettstown, N. J., Gun Club Shoot, Labor Day, Sept. 1, at targets; Sept. 2 at live birds. For programme address E. Richter, Sec'y.

Sept. 3-4.—Beeville, Tex., Gun Club Tournament. T. J. Skaggs, Secretary.

Sept. 3-4.—Tournament of the Springfield Shooting Club, Springfield, Mass. J. T. Herrick, Sec'y.

Sept. 4-5.—White Plains, N. Y., Gun Club Tournament at Bluerocks. C. P. Rowley, Sec'y, 241 Broadway, N. Y.

Sept. 9-10.—Harvey Hurd's and F. R. Huminger's Peoria Black Bird and Bluerock Tournament, at Petersburg, Illinois.

Sept. 9-11.—St. Paul Gun Club Tournament, Hamline, Minn. Professionals barred. F. D. Pononsby, Pres., St. Paul.

Sept. 9-12.—Cincinnati, O.—Al Bandle's Sixth Annual Live and Artificial Shooting Tournament, open to the World. Avenue Ball Park, Sept. 9, 10, 11 and 12. Guaranteed Purse. Wm. E. Limberg, Sec'y.

Sept. 30, Oct. 1-3.—Sixth Annual Tournament of the Middlesex Gun Club, at Plainfield, N. J. Two days targets, two days live birds. $1,000 guaranteed. Programmes ready for distribution Sept. 1.

DUNELLEN, TO-MORROW.—Middlesex Gun Club, Dunellen, N. J., will have a one day's shoot, Friday, Aug. 22, commencing at 10 A. M. sharp. Live birds and inanimate targets. Refreshments and loaded shells on the grounds.—CHAS. SMITH, Manager.

THE TORONTO TOURNAMENT.

TORONTO, Aug. 12.—Seldom has Toronto seen such a large and enthusiastic gathering of trap-shooters as assembled on Stark's athletic and shooting grounds this morning to take part in the McDowall first annual bluerock tournament, held under the auspices of the associate gun clubs of Toronto.

The sky could not have been clearer, nor the atmosphere better adapted to such an occasion, while under the able management of Mr. McDowall, assisted by Mr. Paul North, of Cleveland, Ohio, and the committee of management, an incessant firing was kept up from 9 o'clock in the morning until the bell tolled the hour for tea. The rapid firing system is new to Canadians generally, but it is safe to assert that it will be universally adopted for matches hereafter, considering the fact that under the old style of shooting, it would take as long to shoot at 500 birds as it did to shoot at 4,000 to-day. Messrs. Verity and Briggs officiated as referees, and acquitted themselves in a most satisfactory manner, while the cashier and secretary were complimented by the Americans on the manner in which their duties were performed.

Among the more prominent visitors in attendance from the United States and Canada were the following: L. Harrison, Minneapolis; F. D. Kelsey, East Aurora, N. Y.; R. O. Heikes, Dayton, O.; E. Andrews, Sardinia, N. Y.; H. Whitney, Phelps, N. Y.; W. Crosby, Batavia, N. Y.; J. A. Ruble, Beloit, Wis.; E. S. Benscotten, Toledo, O.; W. King, H. B. Mohler, H. Levis, Pittsburg, Pa.; Paul North, Cleveland; J. Snyder, Towanda, N. Y.; W. A. Skinner, St. Paul, Minn. Canadians: J. Wayper, Hespeler; H. Cotton, Ridgetown; Capt. Dalton, A. W. Throop, Ottawa; A. R. Potter, Elora; A. W. Thompson, Preston; S. Glover, Carleton Place.

The following is the detailed score of the various events: Event No. 1, at 10 singles, entrance $1:

Skinner	9	Andrew	9	Wayper	8
Charles	7	Henry	9	Potter	6
King	10	Wakefield	9	Dalton	8
Levis	8	Glover	7	Thompson	8
Paul	9	Mohler	6	Throop	5
Catton	8	Leitch	9	Walton	5
Kelsey	10	Snyder	6	McDowall	7
North	9	Draisey	7		

Event No. 2, 15 singles, entrance $1.50:

Skinner	11	Kelsey	15	Draisey	11
Charles	13	North	15	McDowall	15
King	15	Paul	10	Mohler	10
Levis	11	Glover	13	Thompson	8
Andrews	12	Walton	14	Potter	11
Wakefield	10	Snyder	10	Wayper	12
Catton	11	Leitch	13	Throop	8
Henry	9	Walton	7		

Event No. 3, 20 singles, guaranteed purse $100, W. McDowall, entrance $3, first, $20; second, $20; third, $20; fourth, $20; fifth, $20:

North	17	McDowall	18	Wayper	19
Heikes	19	McClure	10	Dalton	14
Shawdon	13	Wakefield	15	Benscotten	19
Leitch	18	Paul	19	Henry	13
Glover	19	Emond	11	Andrews	16
King	15	Mohler	16	Walker	11
Levis	16	Kelsey	20	Whitney	18
Throop	17	Draisey	14	Catton	20
Skinner	17	Tymon	9	Windsor	17
Charles	18				

Event No. 4, 10 singles, entrance $1:

North	9	Mohler	8	Potter	7
King	10	McClure	7	Snyder	5
Levis	9	Walton	5	Thompson	7
Charles	9	Leitch	10	Throop	7
Kelsey	10	Glover	9	Dalton	6
Catton	8	Paul	8	McDowall	9
Wakefield	8	Wayper	7	Whitney	9
Andrews	10	Henry	7		

Event No. 5, 15 singles, entrance $1.50:

North	12	Charles	14	Paul	13
King	11	Mohler	13	Dalton	10
Levis	12	Glover	11	Wayper	14
Kelsey	15	McDowall	10	Throop	10
Wakefield	13	Leitch	13	Thompson	6
Catton	9	Emond	9	Potter	12
Andrews	15	Whitney	13		

Event No. 6, 20 singles, guaranteed purse $100, the Charles Stark Co. (Limited), entrance $3, first, $20; second, $20; third, $20; fourth $20; fifth, $20:

Benscotten	19	Heikes	16	Kelsey	20
Emond	13	Wayper	18	Andrews	17
Wakefield	18	Dalton	11	Charles	15
North	16	Mohler	14	McDowall	13
Skinner	16	Kemp	12	Paul	11
Glover	18	Tymon	13	Whitney	19
Levis	18	Sawdon	10	Windsor	19
King	18	Thompson	13	Draisey	12
Throop	16	Peardon	14	Catton	17
Snyder	13	Leitch	16		

Event No. 7, 5 singles and 5 pairs, entrance $1.50:

Charles	10	Kelsey	14	McDowall	9
North	14	Andrews	10	Throop	12
Skinner	10	Pal	6	Dalton	10
Leitch	12	King	8	Benscotten	10
Glover	10	Levis	12	Windsor	12
Heikes	14	Mohler	10	Wayper	12
Whitney	12	Emond	10	Catton	5

Event No. 8, 20 singles, guaranteed purse $50, entrance $2; first, $10; second, $10; third, $10, fourth, $10, fifth, $10:

Levis	10	Skinner	17	Blea	11
King	18	Leitch	13	Kemp	13
Benscotten	18	Henery	10	Emond	6
North	17	Dalton	18	Catton	16
Heikes	18	Mohler	14	Charles	16
Razzle	9	Wayper	19	Whitney	18
Wakefield	14	Peardon	12	Windsor	18
Throop	11	Andrews	17	Carruthers	11
Kelsey	20	Henry	13	McDowall	14
Glover	18	Crosby	16		

Aug. 13.—The second day of the McDowall international bluerock tournament was in every sense far ahead of the opening day. About ten arrivals were registered on the books in the club house, six of whom were Americans. The average for the day was a close race for first between Rolla Heikes and F. D. Kelsey, with odds in favor of Heikes of two in 150 targets. Charles, McDowall, Catton, Wayper and Glover, of the Canadians, are drawing money from all events, but cannot hope to beat such men out as Rolla Heikes, Kelsey, Benscotten, Whitney and Ruble, although the latter do not want to "miss a straight."

At a meeting of the committee of management it has been decided to shoot all guarantee purses to-morrow, including the merchandise shoot, on account of the American cracks having decided to attend the Keystone tournament at Corry, Pa., which begins on Monday next, therefore there will be $300 in guaranteed purses and about $150 donated, with entrance free in the latter. The following are the scores for the day:

Event No. 9, 10 singles, entrance $1:

Skinner	9	Besser	5	Whitney	10
Charles	6	Levis	7	Scott	6
Draisey	7	King	9	Benscotten	10
Glover	10	Potter	5	Crosby	7
Catton	10	Thompson	7	Andrews	9
Wayper	8	McDowall	7	Grant	6
North	7	Heikes	10	Mohler	6
Shane	6	Davidson	6	Razzle	10
Kelsey	10	Henry	5	Windsor	7

Event No. 10, 15 singles, entrance $1.50:

Charles	11	Benscotten	9	Andrews	13
Emond	12	McDowall	10	Mohler	12
North	12	Skinner	13	Shane	10
Levis	11	Kelsey	13	Thompson	14
King	14	Whitney	15	Davidson	9
Heikes	15	Potter	11	Grant	10
Wayper	11	Catton	12	Draisey	13
Glover	14	Razzle	13	Windsor	13
Throop	13	Crosby	13	Besser	11
Dalton	11				

Event No. 11, 20 singles; guaranteed purse, 100; Toronto Gun Club; first $20, second $20, third $20, fourth $20; fifth $20; entrance $3:

Heikes	18	Mohler	15	Miller	9
Kelsey	19	Benscotten	18	Throop	18
Whitney	17	Margetts	14	Dalton	17
Crosby	20	Skinner	19	Sawdon	13
Razzle	20	Charles	16	J Thompson	16
King	18	Peardon	11	Windsor	16
Geris	17	Glover	19	McDowall	15
Catton	17	Wayper	19	Andrews	16
North	18	Henery	11		
Potter	15	Pears	12		

Event No. 12, 10 singles; entrance $1:

Levis	6	Potter	6	Dalton	10
King	10	Henry	7	North	8
Razzle	10	McDowall	5	Besser	9
Mohler	9	Benscotten	9	Andrews	10
Windsor	8	Charles	9	Thompson	6
Heikes	10	Chapman	5	Throop	8
Whitney	8	Wayper	8	Miller	6
Crosby	9	Margetts	6	J Thompson	7
Catton	9	Glover	10		
Kelsey	10	Skinner	9		

Event No. 13, 20 singles; guaranteed purse, $100; Hamilton Powder Co.; entrance $3; first $20, second $20, third $20, fourth $20, fifth $20:

Catton	17	Kelsey	19	Dalton	12
North	16	Skinner	17	Wayper	18
Windsor	18	Henry	16	Mohler	16
King	19	Charles	19	Andrews	19
Levis	18	Throop	18	Besser	13
Razzle	18	Benscotten	19	Emond	14
Potter	16	Thompson	14	Miller	11
Heikes	20	Glover	19	J Thompson	15
Crosby	20	Margetts	11		
Whitney	19	McDowall	13		

Event No. 15, 10 singles, entrance $1:

McDowall	9	Skinner	10	Andrews	8
Levis	9	Benscotten	9	Heikes	10
King	8	Mohler	9	North	8
Glover	9	Charles	10	Henry	7
J Thompson	6	Dalton	8	Razzle	10
Besser	6	Wayper	9	Potter	8
Kelsey	9	Throop	5	Windsor	10

Event No. 16, 20 singles, guaranteed purse $100, Cleveland Target Co., entrance $3; first $20, second $20, third $20, fourth $20, fifth $20:

Whitney	19	Mohler	13	Andrews	18
Kelsey	20	Windsor	18	Grant	10
Crosby	16	McDowall	14	Benscotten	20
Heikes	19	Skinner	18	Dalton	17
King	19	Glover	17	Charles	16
Levis	16	Throop	16	Sawdon	11
Razzle	17	Wayper	17	Potter	11
North	14	Margetts	15	Miller	13
Catton	15	J Thomson	13		

Event No. 29, 20 singles, guaranteed purse $50, Stanley Gun Club; entrance $2, first $10, second $10, third $10, fourth $10, fifth $10:

Levis	15	Razzle	16	Henry	11
King	17	Skinner	18	Charles	16
Wayper	18	Catton	17	Chapman	14
Glover	17	Kelsey	20	Crosby	16
Dalton	14	North	19	Besser	14
Heikes	20	Mohler	18	Andrews	16
Throop	17	Whitney	19	Sawden	10
Emond	14	Kemp	4	Grant	9
Benscotten	19				

Aug. 14.—A larger number of shooters and a like addition in the attendance of spectators was the result of the very attractive programme catalogued for the third day of the tournament. Heikes carried off the best average for the day, with a score of 136 out of a possible 140, with Whitney a close second at 135. Windsor, Kelsey, and Benscotten, however, were following quite dangerously in their wake, with scores of 131, 126, and 125 respectively, while the Pittsburg contingent were making a good showing. Wayper, Glover, Charles, Catton, Ruth, and McDowall, of the Canadians, were all shooting in better form than the day before, but still could not hope to get an average against the powerful combination from the other side. G. H. Briggs, Charles, and Paul North officiated as referees during the day, and were thoroughly impartial in their decisions.

The following is the detailed score for the day. Event No. 17, 10 singles; entrance $1:

North	9	Charles	7	Throop	8
Henry	4	Thompson	10	Dalton	7
Kelsey	9	Emond	6	Crosby	9
Glover	9	Heikes	9	Windsor	10
Razzle	8	Whitney	10	McDowall	6
Skinner	9	Grant	7	Andrews	10
J. Thompson	8	Potter	7	Levis	8
Catton	8	Miller	7	Davidson	8
Wayper	7	Benscotten	10		

Event No. 18, 15 singles; entrance $1.50:

Skinner	12	Charles	10	McDowall	11
J. Thompson	8	Heikes	14	Andrews	15
Kelsey	13	Benscotten	12	Levis	14
Thompson	12	Dalton	9	Potter	15
Mohler	13	Whitney	15	Davidson	11
North	13	Crosby	13	Emond	8
Razzle	14	Miller	11	Ruth	11
Wayper	15	Throop	14	Windsor	14
Glover	13	Grant	10		

Event No. 19, at 20 singles, guaranteed purse of $100, by Owl Gun Club, entrance $3; first, second, third, fourth and fifth, $20 each:

Windsor	20	Ruth	17	Andrews	16
Charles	17	Crosby	18	Evans	11
Skinner	16	Mohler	18	Davidson	13
Benscotten	19	Glover	18	Redpath	17
Heikes	19	Throop	17	McDowall	15
Kelsey	20	Wayper	18	Dalton	16
King	19	North	18	Powell	12
Levis	17	Fern	12	Wilkinson	9
Whitney	18	Razzle	18	Townson	12

Event No. 21, at 20 singles, C. H. Riggs, cash donation, $40, entrance free; first $15, second $10, third $7, fourth $5, fifth $3:

North	18	Skinner	14	Glover	17
Razzle	18	King	20	Wayper	19
Andrews	17	Levis	15	Hoffmann	8
Ward	12	Catton	18	Burgess	11
Tee Kay	13	Ruth	9	Emond	7
Evans	12	Windsor	19	Henry	17
Thompson, J	13	Crosby	19	Thompson	9
Fern	11	Heikes	20	Criss	15
Wilton	13	Kelsey	17	Powell	10
Draisy	17	Robertson	6	Miller	14
Potter	12	Moses	14	Davidson	16
McDowall	11	Throop	18	Dalton	13
McCready	9	Bugg	18	Redpath	13
Benscotten	18	Ruth	14	Avery	16
Whitney	19	Mohler	14	Brown	14
Charles	12				

Event No. 23, 20 singles, guaranteed purse $100, W. McDowall; entrance $3, first $20, second $20, third $2, fourth $20, fifth $20:

King	17	Miller	11	Andrews	17
Kelsey	18	Glover	18	Charles	16
Mohler	13	Wayper	16	North	17
Skinner	19	Throop	15	Razzle	14
Heikes	20	Thompson, Jr.	11	McDowall	16
Ruth	14	Douglass	16	Avery	13

Glover	18	Levis	18	Wayper	17
Mohler	20				

Aug. 15.—The McDowall four days' tournament closed to-day. The number of Canadian shots participating was not as large as was expected, but in connection with the Americans the attendance was large enough to make the tournament a success, not only financially, but in every particular. The management was about perfect, and the shooting was of a quality not excelled at any of the large American tournaments. The American experts, who in the course of a year attend many tournaments, were unstinted in their praise of the grounds and accommodations provided for the shooters, and say it is very rare for a large tournament to pass off so absolutely free from any disagreeable features as this one has been.

Event No. 25, 10 singles:

Glover	9	Skinner	8	Winchell	8
Henry	2	Grant	7	McDowall	4
Razzle	10	Wayper	9	Andrews	10
Kelsey	9	Blake	3	Anderson	3

Event No. 26, 15 singles:

Razzle	14	Anderson	9	Winchell	10
Kelsey	14	North	11	Heikes	15
Glover	13	Grant	11	Benscotten	13
Skinner	12	Blake	12	Throop	12
Wayper	12	Hening	6	Dalton	10
McDowall	12	Andrews	13		

Event No. 28, 5 singles and 5 pairs:

McDowall	11	Wayper	10	Anderson	w
Sims	8	Razzle	12	Skinner	8
Kelsey	13	Throop	9	Winchell	9
Heikes	14	Benscotten	12		

Event No. 30, 10 singles, entrance $1:

McDowall	6	Henry	7	Benscotten	8
Kelsey	8	Anderson	7	Skinner	8
Razzle	7	Glover	9	Wayper	8
Grant	9	Heikes	10	Winchester	8
Blake	4	Throop	8	Dalton	8

Event No. 32, donated prizes, entrance free, 25 singles:

Benscotten	24	Blake	18	Windsor	23
Razzle	21	Skinner	19	Robertson	13
Glover	21	Wayper	18	McDowall	18
Throop	18	Henry	14	Winchell	12
Draisey	21	Anderson	15	Dalton	19

Boswell	14				

COLT TOURNAMENT.

HARTFORD, Conn., Aug. 15.—*Editor Forest and Stream:* Herewith find inclosed scores made at the tournament of the Colt Hammerless Gun Club, which was held on their grounds the 13th inst. Among the contestants were ex-Senator E. H. Lathrop, Dr. G. T. Herrick and L. H. Mayott, of Springfield, Mass.; John R. Pitt, of Middletown, who in his pleasant way makes friends at every turn; Thomas P. Bill, the fun-maker; J. H. Ames, of New London, the genial commercial tourist; the well-known sportsmen Hart, Upson and "H. D. L." from Collinsville: C. H. Merrick, of Rockville; Sterry and Root, of Tolland; A. Merriman, of Meriden; Judge S. D. Douglas and F. P. Griswold, of Windsor Locks; Postmaster M. White, Manchester.

The club held its annual meeting Aug. 13, and the following officers were elected: A. C. Collins, President; Egbert Decker, Vice-President; Millard F. Cook, Secretary; W. R. Hopkins, Treasurer; Executive Committee, A. C. Collins, Egbert Decker, M. F. Cook, W. R. Hopkins, and J. C. Capen. The report showed that the club is in a very prosperous condition. The scores follow:

First event, 8 Keystones, 5 angles, 70 cents entrance, 7 entries:

E I Root	1111111—8	Thomas P Bill	0111010—5
E Decker	1011111—7	C L Hotchkiss	1111010—5
F H Whittelsey	1111101—7	C H Merrick	1000111—4
C Sterry	1110101—6		

Root first; Decker and Whittelsey div. second; Sterry third; Bill and Hotchkiss div. fourth.

Second event, 10 Keystones, 5 angles, 75 cents entrance, 6 entries:

C Sterry	1111111110—9	E I Root	1111111111—10
C H Merrick	0101101001—5	F H Whittelsey	1111111111—10
C L Hotchkiss	1110011011—7	E Decker	1111101101—8

Whittelsey and Root div. first money on 10; Sterry won second on 9; Decker won third on 8; Hotchkiss fourth on 7.

Third event, 10 Keystones, 5 angles, 75 cents entrance, 15 entries:

C H Merrick	0001001101—5	John Alger	0111111111—9
C Sterry	1111111111—10	C B Manley	1010000011—4
E I Root	1101110111—8	A Bailey	1101101111—8
A "Wood"	1010111010—6	J H Ames	0111011111—8
E Decker	1010011111—7	C Upson	0011011101—6
John R Pitt	0110110100—5	C Hart	0111011010—6
C L Hotchkiss	1101000111—6	"Duff"	0001010110—4
F H Whittelsey	0011011001—5		

Sterry first on 10; Alger second on 9; Root, Bailey and Ames div. third on 8; Decker fourth on 7.

Fourth event, 10 Keystones, 5 angles, 75 cents entrance, 10 entries

C Sterry	1111111111—10	E Decker	1110011010—6
E I Root	1111111111—10	M F Cook	1110001101—6
F H Whittelsey	1111011111—9	John Alger	0C10110101—5
John R Pitt	1111111001—8	C B Manley	0101110001—5
C L Hotchkiss	0111011010—6	C H Merrick	0001011110—5

Sterry and Root divided first on ten, Whittelsey won second on nine, Pitt won third with eight, Hotchkiss, Cook and Decker div. fourth on six.

Fifth event, 5 pair Keystones, 75 cents entrance, 9 entries:

C Sterry	10 10 11 10 11—7	John R Pitt	10 10 10 11 10—6
C H Merrick	10 10 10 10 10—5	E I Root	11 11 10 00 11—7
C B Manley	11 00 10 10 10—5	F H Whittelsey	10 11 11 10 11—8
E Decker	11 00 10 11 11—7	A Bailey	10 11 00 11 10—6
B A Johnson	10 01 11 11 10—7		

Whittelsey won first with eight, Sterry and Root won and div. second in shoot-off on ties on seven, Pitt and Bailey div. third on six, Manley and Merrick div. fourth on five.

Sixth event, 10 Keystones, 5 angles, $1 entrance, 17 entries:

John R Pitt	1111111111—10	C Hart	1110011111—8
B A Johnson	1111011111—9	"H D L"	1111011011—8
C Sterry	1111011111—9	A Bailey	1001111111—8
E I Root	0111111111—9	"Duff"	1111100101—7
S D Douglas	0111111111—9	A "Wood"	0111110110—7
E Decker	1101111111—9	C H Merrick	0111100110—6
John Alger	1011111011—8	F H Whittelsey	1010101101—6
F H Griswold	1111001111—8	C Upon	1010010111—6
Chas L Hotchkiss	1111101011—8		

Pitt first with ten, Johnson, Sterry, Root, Douglas and Decker div. second on nine, Alger, Griswold, Hotchkiss, Hart, "H. D. L." and Bailey div. third on eight, "Duff" and "Wood" div. fourth on seven.

Seventh event, 10 Keystones, 5 angles, entrance 75 cents, 19 entries:

F H Whittelsey	1111111111—10	A "Allen"	1010111101—7
C Sterry	1011111111—9	C Upson	0111001111—7
J R Pitt	1111011111—9	J H Ames	1010101111—7
E Decker	1111101111—9	C H Merrick	0111100111—7
J Alger	1111111110—9	B A Johnson	1111110000—6
E I Root	1011111111—9	A Bailey	1100101101—6
S D Douglas	1011111111—9	C H Hart	1001011110—5
A "Wood"	1111101111—9	"Duff"	1010111000—5
T P Bill	1100111111—8	M White	1100101010—5
F H Griswold	1011111110—8		

Whittelsey first with 10, Root, Alger, Sterry and Decker div. second, Bill and Griswold div. third, Merrick, Ames, Upson and "Allen div. fourth.

Eighth event, 10 Keystones, 5 angles, 75 cents entrance, 23 entries:

E Decker	1111111111—10	T P Bill	0011101110—6
S D Douglas	0111111111—9	F H Whittelsey	0110111110—6
B A Johnson	1111111101—9	A "Wood"	1101011100—6
F P Griswold	1011111111—9	C Hart	0101101011—6
E I Root	1011111111—9	M White	0010100111—5
"H D L"	1111101111—9	C Upson	0111001100—5
J Alger	0111110111—8	E H Lathrop	1100010011—5
C Sterry	1111001111—8	C H Merrick	1010110000—5
J R Pitt	1110011101—7	J T Herrick	0101001100—4
"Allen"	1110001111—7	L H Mayott	0010000111—3
"Duff"	0110110111—7	A Bailey	1001000001—3
J H Ames	0011110111—7		

Decker first, Johnson, Root, Douglas, Griswold and "H. D. L." div. second, Alger and Sterry div. third, Ames, "Allen," Pitt and "Duff" div. fourth.

Ninth event, 10 Keystones, 5 angles, $1 entrance, 16 entries:

John Alger	1111111111—10	S D Douglas	0101111111—8
"Allen"	1111111111—10	John P Pitt	1001111111—8
C Sterry	1111111110—10	E H Lathrop	1111110011—8
E Decker	1101111111—9	F P Griswold	1100111111—8
E I Root	1011111111—9	F H Whittelsey	0111111001—7
Burr A Johnson	1011111111—9	John Melrose	0101111100—6
Thos P Bill	1101111111—9	J T Herrick	0011100100—4
C H Merrick	1111110011—8	L H Mayott	0000000100—1

"Allen," Alger and Sterry div. first, Decker, Root, Johnson and Bill div. second, Lathrop, Griswold, Pitt, Merrick and Douglas div. third, F. H. Whittelsey fourth.

Tenth event, 10 Keystones 5 angles, 75 centrance, 24 entries:

E Decker	1111111111—10	B A Johnson	0011101111—7
"Allen"	1101111111— 9	E I Root	0111101011—7
C Sterry	1111111110— 9	John Melrose	0100110111—6
C L Hotchkiss	1011111111— 9	C H Merrick	1110110100—6
John Alger	1110111111— 9	John R Pitt	0011110001—5
F P Griswold	1111110111— 9	M F Cook	1000111010—5
T P Bill	1111111110— 8	E H Lathrop	0001001111—5
J H Ames	1101111110— 8	"H D L"	0101011100—5
A Hart	1011110111— 8	John S Holt	1010100101—5
"Duff"	1111101101— 8	A Merriam	1101000010—4
J T Herrick	0110011111— 7	C Upson	0010100110—4
F H Whittlesey	1101111001— 7	S D Douglas	0010010100—3

Decker first, Sterry, "Allen," Hotchkiss and Alger div. second, Bill, Ames, Hart and "Duff" div. third, Herrick, Whittlesey, Johnson and Root div. fourth.

Eleventh event, 10 Keystones, 5 angles, $1 entrance, 15 entries:

John Alger	1111111111—10	S D Douglas	1110110101— 7
C Sterry	1111011111— 9	John S Holt	0111110111— 7
C H Merrick	0111111111— 9	John R Pitt	0111110011— 7
A Merriman	0111111111— 9	Jno Melrose	1101011011— 7
"Allen"	1101111111— 9	Thos P Bill	0101101011— 6
T P Griswold	0111011111— 8	B A Johnson	0101000111— 5
E Decker	1111100111— 8	E A Lathrop	0001110001— 4
F H Whittelsey	1111001111— 8		

Alger first; Sterry, Merriman, Merrick and "Allen" div. second; Whittelsey, Decker and Griswold div. third; Melrose, Pitt, Holt and Douglas div. fourth.

Twelfth event, 10 Keystones, 75 cents entrance, 21 entries:

F P Griswold	1111111111—10	John S Holt	0111001011— 6
S D Douglas	0011111111— 8	Burr A Johnson	0011111001— 6
J H Ames	1111111001— 8	John R Pitt	0101101010— 5
C L Hotchkiss	1110110111— 8	F H Whittelsey	0111000110— 5
E I Root	1011101111— 8	A Merriman	0100101111— 6
C Sterry	1111011011— 8	C H Merrick	1010010100— 4
"Allen"	1011110111— 8	A Conton	0100100111— 4
Thos P Bill	1011111011— 8	C Knox	1001010000— 3
J T Herrick	1111101100— 7	L H Mayott	0011010000— 3
John Melrose	1111110001— 7	E H Lathrop	0100000001— 2
E Decker	0111101101— 7		

Griswold first; Bill, Sterry, Root, Hotchkiss, Douglas and Ames div. second; Herrick, Melrose and Decker div. third; Johnson and Holt div. fourth.

Thirteenth event—Helpmate race; 8 Keystones, 5 angles, 50 cents entrance. Two men for each bird; if first didn't kill, second man to shoot. Nine entries, or 18 men:

C Sterry		F H Whittelsey	
E I Root	11111111—8	John R Pitt	10111110—6
"Allen"		M White	
E Decker	11111111—8	A Merriman	11101100—5
T P Bill		C Hart	
J H Ames	11111111—8	"H D L"	11011001—5
John S Holt		B A Johnson	
John Melrose	11110111—7	F P Griswold	11001011—5
S D Douglas			
C H Merrick	11101110—6		

Decker and "Allen" first; Holt and Melrose second; Merrick and Douglas third; Root and White, Hart and "H. D. L.," Johnson and Griswold div. fourth.

Fourteenth event, 10 Keystones, 5 angles, 75 cents entrance, 13 entries:

E I Root	1111111111—10	"Allen"	1101111001— 7
F P Whittelsey	1101111111— 9	John S Holt	1101111100— 7
B A Johnson	1101111111— 9	C H Merrick	1110110100— 6
E Decker	1111101111— 9	John R Pitt	1100010111— 6
C Sterry	1111111101— 9	W Knox	0000000000— 0
J F Herrick	1111111110— 9	J H Ames	0100010w
T P Bill	1110111101— 8		

Root first; Sterry and Johnson div. second; Bill third; "Allen" and Holt div. fourth.

Fifteenth event, 10 Keystones, 5 angles, 75 cents entrance, 21 entries:

E I Root	1111111111—10	"Allen"	1101110111— 8
J R Pitt	1111111110—10	C L Hotchkiss	1011011101— 7
C Sterry	1111111110—10	E Decker	0111001111— 7
J T Herrick	1111111001— 9	C H Merrick	0110011111— 7
F P Griswold	1111111110— 9	T P Bill	1100111110— 7
J Melrose	1110111101— 8	J S Holt	1010111110— 7
F H Whittelsey	1111011011— 8	A Merriman	1010011011— 6
J Alger	1110110111— 8	E H Lathrop	0011111000— 5
B A Johnson	1110111110— 8	"Duff"	0110000100— 3
M Conton	1111011011— 8	W Knox	0100100001— 3
J H Ames	1011111011— 8		

Sterry, Root and Pitt div. first; Herrick and Griswold div. second, Whittelsey and "Allen" div. third, Decker fourth.

Sixteenth event, 5 pairs Keystones, 50 cents entrance, 7 entries, 3 moneys:

C Sterry	10 11 10 11 11—8	T P Bill	10 10 11 10 10—6
F H Whittelsey	10 11 10 10 11—7	C H Merrick	10 10 00 10 10—4
"Allen"	01 11 10 10 11—7	J S Holt	01 10 10 00 00—3
J R Pitt	01 11 10 10 10—6		

Sterry first, "Allen" and Whittelsey div. second, Pitt and Bill div. third. A. C. Collins.

ST. LOUIS.

St. Louis, Mo., Aug. 15.—A team match was shot by the Compton and Oak Hill Gun Clubs last Wednesday at bluerock targets, which resulted in favor of the former by 28 birds. At the conclusion of the match a couple of sweepstakes were shot off to fill in the day. The weather was favorable and some good scores were made by the participants. Five traps were used and the rules of the A. S. A. governed all events. Following are the scores:

Shoot No. 1, team match, 13 men a side, 20 bluerocks per man:

Oak Hills.

F Rawlins	1011110110— 7	J Prendergast	0001110110— 5

Four moneys, all ties were divided. Unser Fritz.

BROOKLYN, Aug. 14.—One of the largest gatherings of old-time wing shots, members of the Unknown Gun Club, met yesterday at Dexter's Park shooting ground, Jamaica Plank road, L. I., to hold the regular monthly shoot. Fifteen members went to the traps to shoot at 7 birds each, club rules, gun below the elbow until the bird is on the wing, only one barrel to count in score. H. Knebel, Sr., the president of the club, killed 7 straight and won the gold club badge with the first prize. J. Boyle won the second prize after outshooting Hyde and Pfohlmann,

A NEW DIVISION SCHEME.

HARRISBURG, Pa.—*Editor Forest and Stream:* Clubs and managers of shooting tournaments know the difficulty experienced of late in getting their events filled each time and in attracting shooters that will enter each event. Dividing purses into four equal moneys, and paying for best averages each day has had some good effect, but at all shoots there are possibly half a dozen good shots that win most of the prizes and the others think it useless to compete with them and so refuse to enter, or if they know of any experts being in attendance, they stay away altogether.

For one I claim that the prizes belong to the best shots, and it has cost the so-called expert lots of time and money to become a good shot and it is natural he should want to get some of that money back. But a number look at it from a different standpoint, and that number is considerable and they are the ones wanted to fill the events at a tournament.

Now, at a recent shoot I talked with a number of well-known trap shots regarding the following plan of dividing prizes, and they were of the opinion that it is a good one, but I would like to have an expression from a number of shooters, and would like to see the plan tried at different places. Our club intend trying it at our next tournament, and you shall have the result here.

The plan is to place a value on each target shot at, and a double value on each one missed.

For example, if the entry is for 10 targets at $1 (price of targets extra), the value of each target hit should count 10 cents, each one missed 20 cents, and for each miss 20 cents would be deducted from the amount of entry. The money remaining in the "pot" for misses should then be divided into 50, 30 and 20 per cent. as usual, and go to those with highest scores. If the entry money is $2, the value of the targets hit would be 20 cents, of those lost 40 cents. The events can be so arranged that each target has its value.

To illustrate more fully we will suppose a match at 10 targets per man, 10 men enter at $1 each (targets extra):

No. 1 breaks 10, wins for targets				$1 00
No. 2	"	9	"	" 80
No. 3	"	9	"	" 80
No. 4	"	8	"	" 60
No. 5	"	8	"	" 60
No. 6	"	8	"	" 60
No. 7	"	7	"	" 40
No. 8	"	6	"	" 20
No. 9	"	6	"	" 20
No. 10	"	5	"	" nothing.
Total				$5 20

Now the above leaves $4.80 to be divided into 50, 30 and 20 per cent. No. 1 gets $2.40 in addition to the one dollar, making his winnings $3.40; Nos. 2 and 3 divide $1.44 to be added to their 80 cents each, and Nos. 4, 5 and 6 divide third money. Now the shooters breaking only 6 or 7 ordinarily would get nothing, but by this arrangement they get enough back to pay for their ammunition at least, and that is just the point, for no matter how small a share of the prize money a shooter gets it is my experience he will enter the next shoot. No. 10, only breaking 5 targets, ought not to get a cent any way. I think it will also tend to improve the shooting. If a participant knows that each bird missed has a certain money value he will be apt to shoot more carefully.

This method possibly takes a little from the first money, but betters second and third prizes. We know that it will better our attendance of shooters here, but would like to hear from other points and see the reports in Forest and Stream. We don't want trap-shooting to lose its interest, and if this plan don't work it may set some one to thinking out one that will. Another thing with target shooting is that it is getting like glass balls, the boys are getting "on to them" and becoming too mechanical. We want a target that will be more uncertain in its flight, but yet give a good-sized mark and fly long enough. I have something of the kind in my head, but won't inflict it on you now.

Jack Rabbit.

HACKETTSTOWN, N. J.

Hackettstown, N. J., Aug. 11.—I send you scores and winners of our shoot, held Aug. 5. No. 1, at 6 bluerocks: Ruple 3, Mason 4, Baxter 4, Stewart 2, Richter 1, Riggott 5, Parliman 5, Apgar 3, Smith 4. Tie for third shot off in next sweep and won by Ruple.

No. 2, at 9 bluerocks: Ruple 6 Mason 5, Parliman 8, Stewart 5, Smith 8, Riggott 7, Apgar 5, Ayres 7, Baxter 6, Richter 6, Bell 5. Tie for third shot off in next sweep and Baxter won.

No. 3, at 12 bluerocks: Ruple 5, Parliman 8, Stewart 10, Riggott 10, Baxter 0, Smith 9, Apgar 8, Mason 10, Richter 7, Ayres 9, Bell 6.

No. 4, at 9 singles and 3 pairs:

Ruple	1010111011 11 10 10—10	Apgar	1111111110 10 10 10—11
Stewart	1111110000 01 00 00— 7	Baxter	1011011101 10 10 11—10
Mason	1101000111 01 11 11—11	Ayres	1110011010 00 01 10— 7
Vliet	1011110011 01 11 10—11	Parliman	0111111111 11 10 11—13
Smith	1110011111 11 11 11—13	Riggott	1110111011 10 10 10—10

Ruple won third on shoot-off.

No. 5, 9 bluerocks: Baxter 5, Ruple 8, Riggott 6, Stewart 4, Mason 4, Vliet 5, Smith 7, Apgar 5, Richter 5, Skinner 6, Ayres 8. Ties shot off for third, Skinner won.

No. 6, 6 singles and 3 pairs: Richter 4, Baxter 6, Apgar 7, Parliman 9, Smith 9, Riggott 8, Mason 8, Skinner 7, Stewart 6, Ruple 12, Vliet 8, Ayres 8. Riggott won shoot off for third.

We now began shooting live birds and continued until late in the evening.

No. 7, 4 live birds, a Jersey sweep, $3 entrance:

Canon	0110—2	Smith	2221—4
Riggott	2222—4	Stewart	1010—2
Parliman	1120—3	Baxter	0101—2
Ruple	0121—3	Vliet	1210—3

Second shot out and won by Parliman.

No. 8, 5 live birds, $5 entrance: Canon 3, Stewart 3, Smith 2, Riggott 4, Parliman 4, Ruple 4, Vliet 5.

Extra No. 1, 4 birds, Jersey sweep, $3 entrance: Canon 3, Riggott 4, Smith 4, Parliman 4, Stewart 3, Apgar 2. Canon wins second in next sweep, Apgar third.

Extra No. 2, Jersey sweep, Canon 3, Riggott 3, Smith 3, Parliman 4, Stewart 3, Apgar 3. Second shot off miss and out and won by Canon.

Thus ended the first day's shoot on our new grounds. The rapid firing system was used, and nothing occurred to spoil a fine day's sport.

We are making great preparations for our tourney, Sept. 1 at targets, Sept. 2 at live birds. E. Richter, Sec'y.

STAMFORD.

Stamford, Conn., Aug. 13.—The Stamford Rod and Gun Club held a trap shoot on Wednesday afternoon, Aug. 13. The following were the scores in detail. First event, 5 bluerocks:

J D Goulden	10110—3	Chas E Smith	00101—2
Harry Bell	10011—3	J P Tafft	01111—4
E Vanderwerken	00011—2		

Tafft took first; for second, Goulden won; for third, Vanderwerken won.

Second event, 5 bluerocks:

J D Goulden	11111—5	E Vanderwerken	01010—2
G T Hendrie	11101—4	C E Smith	11110—4
Harry Bell	10110—3	J P Tafft	11111—5
Dr Schavoir	10110—3		

Goulden won first; second, Smith; third, Bell.

Third event, 5 bluerocks:

J D Goulden	10110—3	E Vanderwerken	11010—3
G F Hendrie	11011—4	C E Smith	11000—2
Harry Bell	11010—3	J P Tafft	11111—5
Dr Schavoir	11001—2		

Goulden won third.

Fourth event, 5 bluerocks:

E Vanderwerken	00100—1	Harry Bell	01101—3
J D Goulden	11111—5	G F Hendrie	10110—3
Dr Schavoir	00010—1	J P Tafft	11010—3
C E Smith	11110—4		

Tafft won third.

The officers of the club are W. B. Rice, President; Dr. Chas. E. Rowell, Vice-President; J. P. Tafft, Sec'y and Treas.

MONTREAL.

Montreal, Aug. 11.—Le Club de Chasse et de Peche had a sort of formal opening of their organization to-day at their lately acquired island below Sorel. The steamer Berthier had been chartered for the occasion, and between two and three hundred gentlemen and ladies left the wharf at 9 o'clock, accompanied by the Harmony band. It was a magnificent day for the river trip, even if the wind was a little strong, so that when the Top channel was reached the time had seemed to pass very quickly. The gentlemen who are at the head of this club are:

President, E. J. Phaneuf; Vice-President, Charles Desmarteau; Treasurer, D. Dion; Secretaries, J. B. Bureau and L. A. Lapointe. Committee, H. Boisseau, Jos. Riendeau, H. Clouthier, H. Dubuc and J. O. Pelland.

The club is to be congratulated on its good judgment in the choice of a location, for better shooting grounds could hardly be hit upon anywhere in the country. About ten miles below Sorel the entrance to the upper channel is reached, and here what looks like a narrow river is entered, and although only about 100yds. wide it is plenty deep for vessels of the draught of the Berthier. The scenery here is as pretty as some of the most picturesque spots among the Thousand Islands. The channel, about a mile from its opening, is divided by several small islands, low-lying, and flooded in the spring, and the home of plover, woodcock and duck when the water subsides. At last Isle du Chenal du Moine is reached, and the first view of the new club house is caught between the trees. When the steamer drew up to the wharf, it was seen to be a substantial two-story building, the top flat being at present occupied by eighteen camp beds.

As there were two different sporting contests on the card no time was lost in getting all hands to work, and those who had come out to capture fish as well as prizes soon had their rods and lines in order and in making their way to some quiet spot, where the big fellows most do congregate. Then the shooters crossed the channel and the traps were soon in working order. There were two competitions, one at blackbirds and one at live birds and both were kept going simultaneously. The entries were greater than was expected, there being 28, and when the last man stepped to the score there was just one bird short. The shooting was kept up until 7 o'clock, and then there were some ties to shoot off in the blackbird match, which was done on board ship, their traps being adjusted on the upper deck. Following are the scores:

Shoot at 7 live pigeons, plunge traps, 26yds. rise, 7 prizes:

G A Contant	6	E Archambault	7
F X Lamoureux	5	C Muir	4
E Octave	7	L P Pariseau	7
R Bocel	5	E Dionne	6
A Sicotte	5	C Siotte	5
F Dubuc	5	W Coughtry	6
H Lajeunesse	6	A Boa	5
J B Bebard	6	L St Jean	3
H Belland	4	G Chapleau	7
O Brienne	4		

F Desroche 7
O Guy 3
L Lebeouf 5
J Bousquet 6
H Lareau 7
H Boisseau 5
B Boucher 6
Bpte Boucher 6
S St Jean 5

Judge, Eugene Lanthier; scorer, E. A. Lapointe.

Ladies' shoot, 9 birds:

Jos Bosquet	7	A Boa	7
E Octave	7	L Siotte	7
J E Pariseau	7	H Martin	7
F X Lamoureux	7	E Archambault	7
L Lebeuf	7	J O Guy	6

W Coughtry 6
A Contant 5
G B Bedard 5
H Lajeunesse 5

There were some half dozen other shooters, but as the scores were small they did not interfere with the distribution of the prizes.

There were two special prizes given for the largest game fish taken, which went to Mr. Jos. Rindeau for a 12lbs. dore. The second special prize for the largest perch was won by A. Dorion, Jr.

CLAREMONT.

Claremont Shooting Association.—Aug. 16.—Many shooters took advantage of the half-holiday and fine weather to run down and waste a little powder and shot. The hundred live birds on hand soon proved insufficient, being all shot by 2 o'clock, and the bluerocks were brought out and were the order of the day after 2:30 P. M. Some parties for the first time shot on these grounds, and expressed pleasure at the afternoon's sport—the wonder is that there are not fifty to a hundred every week. Plenty of birds will be on hand the first of the week and all through the week hereafter, this is the first time we have run short; we have used nearly 3,000 birds in four months. Below are the scores of most of the events with averages on bluerocks:

Ten bluerocks, 5 traps, 50 cents entry, Keystone rules, all events alike, ties divided:

	1	2	3	4	5	6	7	8	9	10	Average pr.ct.
Lindsley	5	8	8	8	8	9	7	7	7	9	77
Collins	10	10	10	10	10	8	8	9	9	8	92
Wm Sigler	10	9	6	10	9	10	9	9	10	8	90
Lyons	7	8	5	..	7	2	7	6	5	..	59
Hathaway	7	6	6	6	6	8	..	6	5	9	70
Barry	4	..	5	..	..	..	..	5	..	..	50
Richmond	6	..	7	8	6	10	7	7	8	8	75
Stanwix	6	..	..	..	7	..	10	5	..	..	70
Rose	8	..	7	..	5	..	8	9	..	..	74
Mooney	8	6	10	8	7	7	8	9	9	..	80
Gayler	10	..	..	..	..	..	..	5	..	..	75
F Sigler	6	8	..	9	5	9	8	..	6	..	71
Redmond	..	9	..	..	..	..	..	5	..	..	70
Landreck	..	..	5	..	..	..	..	..	..	..	
Gayles	..	..	2	..	..	..	..	..	..	..	
Cattes	..	..	5	2	4	..	..	5	..	..	40
Vincent	..	..	..	..	..	..	5	..	..	..	

Four live birds, $2 entrance, 2 moneys:

Howard	1011—3	Redmond	2121—4
Mead	0022—2	Stanwix	2100—2
Money	2111—4		

Three live birds, $2 entrance, 2 moneys:

Howard	102—2	Redmond	221—3
Mead	1o0—1	Stanwix	210—2
Money	121—3	Barry	0o0—0

CLEVELAND, O., Aug. 14.—The regular shoot of the Cleveland Gun Club was held at the club house, at Bluerock, this afternoon. In addition to the club shoot the shoot for the gun offered by the Jenney & Graham Company, of Chicago, took place. The contestants all shot under a handicap previously arranged and the totals given below correspond with the amount of the handicap allowed. L. O. Jones and Gothan were tied for the gun, Jones winning on the shoot-off. Cogswell won the class A badge of the club, and J. Jones the B badge:

A B Jones	49	W A Calhoun	41	Kilby	46
H J Martin	49	H C Holt	49	Rudolph	26
Sweetman	46	Haycox	39	J Jones	48
Ashley	52	James	40	C Calhoun	22
Cathan	55	Weaver	45	Elford	50
Storey	54	W Harris	23	Berger	33
W H Tamblyn	50	J Rodgers	42	Turner	37
L O Jones	55	Rob	47	Silsby	50
Frederick	54	Wagner	48	Williams	46
Reynolds	42	Cogswell	50	Du Boy	44
Alexander	51	Gault	32	Marbach	30
Jaet	51				

SAN FRANCISCO, Aug. 9.—The Alameda County Sportsman's Club held its sixth and last shoot for 1890 at the Oakland Trotting Park this afternoon at live pigeons. The day was pleasant, and the presence of a large number of ladies and gentlemen to witness the races gave an air of life and gaiety to the scene that otherwise would have been lacking. The wind was directly from the west and across the line of the traps, but not sufficiently strong to interfere with the sport. The prizes for the season were as follows: First, gold match-safe, with diamond setting; second, gold medal for chain; third, gold dog-whistle for chain. Mr. C. M. Osborn won the first with a score of 64 out of a possible 72. W. W. Haskell second with 59 birds, and S. I. Kellogg third with 58 birds. The shoot for August was an interesting one, as the birds were of the liveliest sort, the score standing as follows:

Osborn	1101111111111—11	Mayhew	1111111111111—12
Knowles	0111110111111—10	Wilson	1111011111101—10
Cadman	1111111111110—11	Schroeder	1001111101111— 8
Plummer	0000011001111— 5	Bell	1111011011111—10
Jones	0011110011111— 7	Kellogg	1111111110110—10
Haskell	1111101111111—11		

Particular mention should be made of the fine skill in shooting displayed by the veteran trap-shooter, Mr. W. E. Mayhew, who, it will be observed by reference to the score, killed his 12 straight birds with his first barrel and no retriever needed to score his birds. The challenge shoot of the Alameda against the Gun Club of San Francisco will take place at the grounds of the Oakland Trotting Park on the last Saturday in August.

JERSEYVILLE.—St. Louis, Mo., Aug. 15.—The twelfth annual tournament of the Central Illinois Sportsmen's Association will take place Aug. 26, 27, 28 and 29, at Jerseyville. The programmes for the affair are out, and but a glance is necessary to show that experienced heads were instrumental in its make up. R. Hutchison, the secretary of the Association, has labored diligently to make the affair a success, and to his efforts is due the fact that $500 in valuable prizes have been donated to be contested for by members of the Association. Besides the special prizes the Association guarantees $350 in cash, distributed among the open-to-all events on the card. Inanimate targets will be used exclusively, and the A. C. A. rules will apply. There will be two sets of 5 traps, and with the substitution of the walk-around system will insure plenty of sport for a large crowd. On the last day Jim Elliott, of Kansas, who recently defeated W. C. Beck, of Indianapolis, for the champion's cup, and Ed Spencer, of Carrollton, Ill., will engage in a 100 live-bird match for $100 a side.—Unser Fritz.

LONG BRANCH, Aug. 15.—Excellent pigeon shooting took place at Pleasure Bay, near Long Branch, N. J., this afternoon. The contestants were "Phil" Daly, Jr., and Edgar Murphy. Daly was beaten by five birds, Murphy killing 94 birds of the 100 shot at, while Daly disposed of 89. It was a rattling contest from start to finish. Murphy is an old-time expert with the shotgun, having won many notable contests, while this is the first match at live birds that Daly has ever shot. Before the match Murphy, on the strength of his high reputation, was a hot favorite. Not until the twentieth bird did Murphy fail to score, missing both shots at a swift in-driver. His next bird fell dead out of bounds, and the Daly contingent were in ecstacy. The unlooked for success seemed to "rattle" Daly for a time, and he failed to bring down either his twenty-second or twenty-third bird. Murphy's twenty-fourth effort was a failure, and at the end of the first twenty-five rounds the score rested even, each having missed three birds. A fast flyer on Daly's left quarter in the twenty ninth round eluded his gun, and Murphy assumed the lead once more and never again relinquished it to the finish. At the end of the first half of the match Murphy was one bird in the lead, having killed 45 to Daly's 44. At the end of the seventy-fifth round he had increased his advantage to three, and at the end of the shooting was five birds in the lead. The last bird that Murphy missed was the sixty-second, the next thirty-eight going down before his unerring aim in unbroken succession.

BROOKLYN, Aug. 13.—The 15 members of the Parkway Gun Club who assembled at Miller's Dexter Park to-day did some remarkably good shooting, only 28 of the 105 pigeons fired at in the regular competition getting away. Three of the contestants, J. Blake, W. Levens and Farmer Bennett, tied on full scores of 7 each for the club medal and first prize. In the shoot off Levens missed in the fifth round, the other two continuing until the ninth round, when Bennett's bird, although hit hard on second fire, dropped dead half a foot outside the rear boundary, which, under the new rule of the club, runs on a line with the outside edge of the platform. In a sweepstake which followed R. Phicker, Jr., J. Bennett, A. Andrews and J. Savage were the winners. The result: Regular club shoot, 7 birds each man, under modified Hurlingham rules, club handicap, 80yds. boundary—E. Steinheuser 3, J. Blake 7, H. Steinheuser 5, E. Helgans 6, H. Bookman 6, J. Haller 5, Branwell 5, M. Meyer 2, M. Bonden 4, A. Andrews 4, R. Phister, Jr., 6, Col. Selover 4, J. Bennett 7, J. Savage 6, W. Levens 7. Ties for first place—J. Blake 9, W. Levens 4, J. Bennett 9. Sweepstakes at 3 birds each man, ties miss and out, 25yds, rise—R. Phister 7, J. Bennett 7, E. Steinheuser 6, Col. Selover 4, H. Bookman 3, A. Andrews 2, J. Savage 2, E. Helgans 1, H. Steinheuser 1, W. Levens 0.

TORONTO, Aug. 8.—A friendly shoot took place on Stark's athletic grounds between members of the Toronto Gun Club. Sides were chosen by the president and vice-president, the shoot to be at 15 artificial birds per man, for refreshments to be paid for by the losing side:

President's.		Vice-President's.	
C H Briggs	101111111100010—10	J Rice	011010001101111— 9

	44		49

GRANGER PICNIC AND SHOOT.—Harrisburg, Pa., Aug. 14.—The West End Gun Club, of Harrisburg, Pa., will hold a five days' tournament at Williams' Grove, Cumberland county, Pa., Aug. 26-30. This is on the occasion of the Grangers' seventeenth annual picnic and exhibition. The committee have spared no pains to make this one of the greatest shoots ever held in Pennsylvania. There will be guaranteed purses each day, and liberal prizes will be given for averages. Everything possible will be done to make it pleasant for all who will attend. The grounds are located 12 miles west of Harrisburg, Pa., on the line of the Cumberland Valley Railroad, and very low excursion rates are given on all railroads in Pennsylvania, good until the following Monday.—M. H. B.

WELLINGTON, Mass., Aug. 16.—Many of the gunners have returned from their summer vacations, as was shown from the increased attendance at the grounds of the Wellington club to-day. In the third merchandise match for the month, at 10 singles and five pair hubs, Perry was first with 17. The other scores in this match were: Bennett, 16; Warren, Bradstreet and Amsden, 15; White, Weaver and Gore, 14; Purdy, 13; Walker and Melcher, 12; Bond and Sanborn, 11. The winners in the sweepstakes follows: Six hubs—Bennett and Gore. Six bluerocks—White. Six hubs—Bennett and White. Six hubs—White. Three pair hubs—Bennett, White, Melcher and Amsden. Six hubs—Bennett. Six hubs—Bennett and Lee. Six hubs—Amsden and Bond. Six hubs—White, Sanborn and Lee. Three pair hubs—Gore and Perry. Ten hubs, merchandise match—Bennett, White and Bradstreet. Five pair hubs, merchandise match—Perry. Six hubs—White and Gore. Three pair hubs—Bradstreet. Six hubs—Amsden and White.

ADAMS AND PARK.—Waverly, N. Y., Aug. 16.—A much talked of match between Joe Adams, the champion bird shot of Tioga county, and W. K Park, the Bradford county champion, of Athens, Pa., took place here Aug. 16, on the grounds of the Rod and Gun Club. Both contestants are members of the club and considerable rivalry existed between them, and both were backed by Waverly parties. The ground is a hard one to shoot on, as a high hill on the right and thick trees on the left make the birds difficult to "get on to." Kingbirds were used, and not a balk or broken bird occurred during the entire race. The match was as follows: Fifty single kingbirds, 3 traps, unknown angles, American Association rules, for $50. P. J. Lang judge for Adams, Dr. Tucker judge for Park; Mr. Loomis, of Brooklyn, referee:

J Adams.....1110111111101111111111111111101000111111111111—44
W K Park.....1101110111111110011110011110110111101111101011—39

KING BIRD.

Every week we are obliged to defer to the next week trap scores which come in too late for publication in the current issue. It is particularly requested that scores be sent us as early as possible.

Canoeing.

The list of officers and directions for joining the A. C. A. and W. C. A. will be found in the first issue of each month.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

FIXTURES.

AUGUST.

8-22. A.C.A. Meet, Jessup's Neck
23. South Boston, Open.
23. Plymouth, Cruise, Cape Cod Bay.
30. Orange, Annual.
30, 31, Sept. 1, South Boston, Harbor Meet.

SEPTEMBER.

1. Ianthe, Annual.
1. Arlington, Ann., Arlington.
20. New Jersey Athletic, Bergen Point, Fall.

THE A. C. A. MEET OF 1890.

JESSUP'S NECK.

At no previous meet has the camp sprung up and taken definite shape so rapidly as the present one; though only opened on Friday, by Sunday morning it presented the appearance of a very large camp, and now that many more tents have been pitched the view from the water is very picturesque. The first arrivals pitched their tents in a long row near the edge of the east bluff, here about 15 to 20ft. high, leaving a wide road between the tents and the bluff. In front of each encampment is a flagpole; the many club flags showing their bright colors to advantage above the white tents. Highest of all is the official signal staff, on which one signal or another is displayed at almost every hour of the day. This code, for which the Association is indebted to Com. Stanton and Mr. E. W. Brown, has already proved a great convenience, as well as a constant source of occupation to every one, and is likely to become a permanent institution. Every one in camp, ladies and children included, has a copy of the handsome little signal book, and as soon as the gun announces a new signal it is read and translated in every part of the camp. Among the most frequent messages thus sent out are the following: L, T, The mail is now ready for distribution. B. J. A notice which requires immediate attention has been posted on the bulletin board. J. W. The members of the A. C. A. are invited to an entertainment this evening, the particulars of which are posted on the bulletin board. The code of signals is quite lengthy and comprehensive, covering all the probable contingencies of races, meetings, capsizes, etc. The only difficulty encountered thus far is the amount of work imposed on the chief signal officer, as the communicant visiting yachts involves the use of the International, the Yacht and the Larchmont special code, as well as the special A. C. A. code. After two days of steady signaling Mr. Brown was threatened with an attack of nervous prostration, and Dr. G. L. Parmele was appointed First Assistant Signal Officer.

The organization of the camp is as follows: Com. Stanton is in command, with Sec'y Dunnell and members of the various committees as aids. The following officials have been appointed: Fleet Surgeon, Dr. J. A. Gage, Vesper B. C.; Postmaster, D. M. Bond, Red Dragon C. C.; Bugler, H. E. Jepson, Puritan C. C.; Captain of the Guard, R. J. Wilkin, Brooklyn C. C. In addition to the Officer of the Day, who has general charge of the camp, a number of pickets are appointed each day, who are stationed on the wharf, at Squaw Point and in various parts of the camp.

Trespassers are by no means uncommon, carriages drive into camp and small craft land at the wharf, bringing numbers of unwelcome guests, most of whom look on the camp as a circus, and gaze into each tent as into the cages of the animals in a menagerie. To keep out the ordinary sight-seer without discourtesy to friends of members, or others who would be welcome in camp, is a difficult matter; but past experience proves that stringent measures are necessary if a desirable degree of privacy is to be secured. Visitors from the docks or from the shore who have friends in camp are welcomed every day between 10 A. M. and colors; and many have presented themselves.

Unfortunately, like all other good locations, Jessup's Neck is by no means easy of access, and many canoeists have had difficulty in reaching the camp. The Transportation Committee, Mr. Bennett in particular, has worked hard to perfect all arrangements, but unforeseen difficulties have cropped up, overturning all the plans. The trip from New York by the steamer Shelter Island was a very easy one for those who came up to Sunday, as she landed them on the camp dock, though at the witching hour of 2 A. M. Those who came on Tuesday night, however, were less fortunate, there being so much wind and sea that the steamer refused to land for fear of injury to the rather light dock, and carried men and canoes to Sag Harbor, whence they straggled over by wagon, launch or canoe.

Even at best the steamer is only available on every other day, and many must depend on the railroad. This lands them in Sag Harbor, where more trouble awaited some, the launch originally engaged to run to that place and Greenport from the camp was not able to pay expenses at 25 cents each. Early on Monday morning the indefatigable Mr. Bennett sailed over to Sag Harbor in his boat, returning in triumph at noon with a staunch naphtha launch which he had chartered. He at once proceeded to organize the Jessup's Neck, Sag Harbor & Greenport Naphtha Transportation Co. with the following board of officers: E. W. Brown, Pres.; Dr. G. L. Parmele, first Vice-Pres; W. H. Brown, Second Vice-Pres.; M. Sherwood, Sec'y; L. B. Palmer, Ass't Sec'y; C. V. Winne, Treas.; F. L. Mix, Ass't Treas; H. Stanton, Gen'l Counsel; R. B. Burchard, Att'y; J. Johnson, Chief Engineer; R. P. Wagenan, Gen'l Pass. Agt.; Dr. Gage, Ass't Pass. Agt.; M. V. Brokaw, Gen'l Freight Agt.; W. R. Huntington, Ass't Freight Agt.; M. G. Foster, Traffic Mgr.; Wm. Whitlock, Auditor; N. D. Bill, Purchasing Agt.; Paul Butler, Advt. Agt.; R. S. Oliver, Paymaster General; H. T. Keyser, Supt. of Mails and Telegrams.

This company is doing an excellent business and is a great accommodation to the campers.

The disturbances on the railways, together with the crush of travel to the G. A. R. celebration at Boston, have complicated matters and caused much delay. A large party, some thirty in all, from Toronto, Galt, and other points in Canada, started from Toronto on Saturday, having made arrangements for a special parlor car and a freight car for their canoes. The parlor car was not forthcoming in consequence of the strike, and though, having started by the Erie R. R., the party came through with little delay, reaching Sag Harbor on Monday, the freight car was greatly delayed, not reaching Sag Harbor until late on Tuesday. A sloop was chartered, bringing over a couple of loads during the night, but it was Wednesday night before all were settled in camp. The party included Judge and Miss Dartnell, of Whitby, Messrs. Jaques, Mason, and several other members of the Toronto C. C., Mr. English, the canoe builder, of Peterboro, and the MacKendricks from Galt, with others of the Ubique C. C.

Though the first fond hopes of the Transportation Committee have by no means been realized, the arrangements are no more inconvenient than might be expected in a camp which is intentionally located in a secluded and isolated place. The perfect camp, which may be easily and certainly reached by canoeists, and yet is free from intrusion by cheap-rate excursions and similar unwelcome guests, has not yet been found.

As it is, the camp itself, it possesses most of those natural advantages which we mentioned as essential some two years since: the ground is dry and elevated, giving good drainage and a full view of the race courses; the wharf, store and mess-tent are in the center of the camp, between the main and the ladies' camp, thus separating the two. At the same time the ladies camp is convenient to the store and mess-tent. The ground is hilly and irregular, but being a smooth turf with hardly a stone, the walking is very good. There is little shade, the only trees being in the ladies' camp and on the extreme end, and these only cedars, but thus far the weather has been so cool, with cloudy skies and fresh winds, that the tents in the open have been very comfortable. In fact, it seems as if the spot had been made on purpose for an A. C. A. camp; the only possible improvement would be a few shade trees along the center of the main camp.

The beach is all that could be expected on salt water, and answers very well. The pebbles, in size from a hen's egg to a pigeon's, are not as good as sand, but being round and smooth, a canoe can be beached without damage. The tide has a rise and fall of only 2 to 3ft., and with the platforms this makes no trouble. The stages are similar to those at Stave Island and Lake George, built on short posts which raise them just above high water. Of course an inclined section, not needed on dead water, must be built to run the boats on at low tide, but this is easily made. Altogether the difficulties from the tide have proved less formidable at Jessup's Neck than at any other of the many points visited by the site committee.

On Monday the wind was strong from the west, working to N.W. by night and threatening another thunder squall as on Sunday. Early in the morning Vice-Com. Brokaw took charge of a three pole tent, 80×40ft., sent up from New York, and with a large and efficient force of amateur "canvas men" to aid (especially to advise) the old mess tent was taken down and the new one securely pitched in its place, the floors being extended and more tables built.

The day was spent in putting the various encampments in order, unpacking boats and sails, and greeting the new arrivals as they came in.

During the morning a scrub race was sailed over two rounds of the 1½ mile triangle, Com. Stanton setting the buoys early in the day. Among the starters were Messrs. Butler, Goddard and G. P. Douglas. Mr. Goddard, in the old Blanche, was the winner, with Mr. Douglas second.

This camp has one new and pleasant feature, it is readily accessible for large yachts, and they are arriving and departing at all times. On Monday the schooner Phantom, Mr. Parmele, N. Y. Y. C., anchored off the camp for several hours, her owner and family coming ashore. Nymph, of the Larchmont Y. C., was also off the camp. A small sloop came in from Bridgeport with several canoeists on board and a canoe in tow, having met with heavy weather Sunday night. On Tuesday the schooner Tidal Wave came in, also the sloops Emmy C., of the Newark Y. C., Frolic and Arab, Atlantic Y. C., and the little cutter Beth, the latter flying the colors of the Corinthian Y. C. Elfin, schr., Vice-Com. Jackson, Larchmont Y. C., also paid a visit, and Lotowana, Mr. Foster's cutter, came in for the night.

On Monday night a camp-fire was lighted at headquarters, most of the music being furnished by the Yonkers C. C. During the night a strong wind blew from the north, working around to N.E. by morning, with a cloudy sky that lasted all day. Among the arrivals were some members of the Yonkers C. C. with the big war canoe Ko-ko-ko-ho.

A very unpleasant arrival was a big working sloop from Sag Harbor, with a barber's pole over the stern and a bar on deck, which anchored during the morning close in shore and directly in front of headquarters. She deliberately lowered and unbent her mainsail and converted it into an awning, expecting to remain permanently. A request from the commodore that she should leave the camp was entirely disregarded, but after staying for a day and finding no custom, the mainsail was bent again and she weighed anchor.

The abundance of white pebbles and beautiful scollop shells along the beach has opened a new industry in camp, and some of the club camps are ornamented by very artistic decorations. In front of the Red Dragon camp is a huge dragon, built of various colored shells set in the sand, the tongue and claws being of yellow pebbles. Standing out from a red background of powdered bricks, the design is quite effective. A sign near by requests visitors not to poke or feed the animal. This ambitious work of art is located at the corner of Broad and Chestnut streets, as an improvised lamp post indicates on its faces. Underneath the lamp is a short section of the characteristic Philadelphia brick gutter and the deceitful "soft brick".

The next camp, that of the Puritan C. C., boasts a similar ornament, a *fac simile* of a Pilgrim ship, the hull of scollop shells, the spars and sails artistically marked in white pebbles, and the water indicated by dark brown stones. The name Mayflower is worked in white pebbles, with a border of pebbles and large land crab shells. On Thursday the Puritans ornamented the corner of Beacon street, on which their camp is located, with the only original Plymouth rock, whereupon the Dragons at once procured a large stump, warranted to be that of Penn's Treaty Tree, and planted it beside their guardian spirit.

The Ianthe camp has the club flag worked out in pebbles, while the Vesper club has neatly laid out its entire camp with pebble walks. As usual the Vespers have one of the best locations and the neatest camp at the meet; they pitched in a small grove at the extreme end of the grassy part of the Neck and some distance from the main camp. The club workshop is again a feature and proves a convenience to many. The Vesper fleet has its customary display of some of the best canoes in camp.

Tuesday was cool and cloudy, with a strong N.E. wind. Beyond the arrival of the yachts mentioned and a number of canoeists, the day passed without incident. Wednesday opened with a stronger east wind and quite a sea in the main front of the camp. But few canoes were out, the Vesper Club being the best represented. Mr. Taylor, a novice, was doing some fine sailing, his canoe nearly leaping out of the water as she ran before the seas, when his main yard broke and over he went. The only war canoe in camp is the Ko-ko-ko-ho, and in the evening she was out with a party of ladies. A camp-fire was held in the main camp and one in the ladies' camp. During the evening the wind shifted to west, and though a little rain fell during the night, Thursday dawned with a bright sky and warm sun, a great change from the previous days. The wind was light and the water smooth enough to tempt even the ladies to launch their canoes. During the morning the sloops Arrow and Circe, and the schooner Comet visited the camp, and Nymph anchored for a time in the afternoon. During the day a rather puffy westerly breeze made good sailing, the water being quite smooth, and a number of the cracks were out, Messrs. Butler, Gage, Gedney, Ford Jones, Oxholm, Goddard, Palmer, Douglas, Brazier and Forrest. There were comparatively few arrivals during the day. The camp is full of a sort of field mouse, a very tame little animal that runs in and out of the tents and under the tent floors. One tent boasts a tame specimen, while in front of the publication office of the *Daily Disturber* is another in a wire cage. In the evening the Vesper B. C. gave a camp-fire, to which the entire camp was invited—and went. The camp, with its pebbled space, around which the tents were grouped in the form of a horseshoe, was brightly lighted with colored lanterns, showing the many bright flags against a deep blue sky, in which the stars were shining, while on each side of the narrow neck was a wide expanse of dark rippling water. About the big camp-fire of fragrant cedar logs were grouped a party of nearly 150, including many ladies. With a full chorus, and an orchestra composed of banjos, guitars, mandolins and a cornet, there was plenty of music. Refreshments, including unlimited candy for the ladies, were handed around by the hosts. The meeting broke up about 10:30, after a very pleasant evening.

While it is too soon yet to make any definite plans for next year there is some talk of Lake Champlain as the site for the general meet, which goes to the Eastern Division. It would of course be unsatisfactory to follow the present meet by another on salt water near Newport or Boston, or along the north shore of Long Island Sound; and a meet on Champlain would be as convenient as any that could be held within the borders of the Eastern Division for the Canadian members.

The Northern Division, whose meet lately closed at the Lake of the Two Mountains, near Montreal, have under discussion a plan for a good cruising meet in Georgian Bay next year. These waters are unsurpassed for such a cruise, and it would by its novelty attract many. The many islands make it possible to lay out various routes each day, so that those who choose to may proceed slowly to the end of a day's run by a direct line, while for the fast paddlers and sailors a longer route around the islands will be selected. A steam launch will probably accompany the fleet as a tender. The Atlantic Division has not yet held its meeting, but will probably do so on Monday night. No plans have been made yet for the Division meet.

The races do not begin until Monday, but some of the prizes are already on exhibition at headquarters, the sailing trophy, now held by Mr. Jones, the paddling trophy, held by Mr. Torrance, and the Pecowsic cup, held by Dr. Gage. Com. Stanton has presented two very handsome cups of copper and silver, for the combined race, as first and second prizes.

The camp now boasts a barber shop presided over by a real tonsorial professor, and also a dark room for the photographers, of whom there are either fewer than usual, or the general use of the detective camera makes their work less conspicious. A few years ago it was no uncommon sight to see half a dozen tripods set up around some unoffending canoeist who had fallen into a too striking attitude.

In spite of a threatened thunder storm on Thursday night, Friday proved clear and warm, the pleasantest day since the meet began. Com. Stanton, who had been called away to New York on Wednesday, leaving Vice-Com. Brokaw in charge of the camp, returned early on Friday morning. Under his direction a ladies' paddling race was arranged. The race was called at 11 A. M., the course being from the flagship Vandal to the dock. Four canoes started, each manned by two ladies using double blades. The race was quite exciting, the leading boat, paddled by Misses MacKendrick and Sherwood, winning by a length.

The camp offers such facilities for amusement in the way of canoeing, yachting, and bathing that no one is ever idle. Many of the cracks are afloat, sailing over the triangle or spurting along shore in the light paddling canoes, of which there are a number of new boats built to the limit, 16×28, and over 40lbs. weight. Yachts, catboats and launches are constantly coming and going, bringing visitors to the camp, and carrying off parties from Squaw Point on various expeditions to Sag Harbor, Greenport, and other places. Canoes with select parties of two are afloat off the beach at all times. The bathing is very fine, the water being clear and warm, and many avail themselves of the chance for a salt bath. The fishing is very good, weakfish being plentiful, though bluefish, which are usually found off the point of the Neck, are scarce just now. The beaches and woods offer pleasant walks, and the views from the bluff to the west of the camp, or from the point of the spit, is well worth the journey.

Taken altogether, the camp is a very pleasant one. The long dock is quite a fashionable promenade in the evening, being neutral ground between the forbidden precincts of Squaw Point and the main camp.

Though not so boisterous as Lake Champlain, Jessup's Neck is a perfect blow hole, the wind is never still, and the sailmen have had nothing to grumble at thus far. It is a curious fact that the wind has been from moderate to strong all through the meet until the signal flags were set for the first race on Saturday, when the S.W. breeze of the morning fell to a calm. Fortunately it did not last long, and a good breeze set in before the start. On Friday evening a camp-fire was held at Squaw Point.

Among the craft that have visited the camp or are here with their owners are Mr. Jones's auxiliary naphtha launch Etcetera, Dr. Wilson's new auxiliary Duplex, Mr. Bishop's canoe yawl Buster, 15×5ft., Mr. Frederick's canoe yawl Wraith, formerly Penguin.

Saturday was a busy day in camp, with arrivals every hour by land or water, some driving over from Sag Harbor at midnight. The first event, the club race, was called in the afternoon, being won by the Yonkers C. C. In the evening a fine naphtha launch, the Katrina, came in from Norwich, with a large party of Eastern Division men on board.

All through Saturday night the wind blew heavily from N. E., and men were busy with guy ropes and tent pins. On Sunday the wind went to the west again, but blew very hard, rolling up a surf on the west shore and sending the big seas across the waters to the east of the camp. In the morning services were held in the Ladies' Camp, and the day passed very quietly. Chairman French of the regatta committee arrived late on Sunday night.

This year, with a larger attendance than ever before, a very decided change in the composition of the camp is noticeable. The third meet of the Association at Lake George in 1882 was marked by a large influx of new members, chief among them being the new Mohican club; in fact it was not until this meet that the Association really extended its growth beyond the small circle which formed it and constituted the attendance in 1880-81. In the following year the first Canadian meet, at Stony Lake, exerted a similar influence in what has since become the Northern Division, and a very large number of Canadians were added to the roll.

These two meets brought out many new racers, and started a strong rivalry between the clubs which are rapidly forming in all parts of the country. The fame of the camps and the races also extended beyond the circle of active canoeists, and canoeing became better known to the general public than it ever had been before. The men who came into canoeing at Lake George in 1881

and Stony Lake in 1883, the Mohican, Rochester, Toronto, Rondout, Pittsburgh, Knickerbocker, Newburgh, Springfield, Unique and Ottawa clubs, made a point of attending the meets for some years, and formed the main body, about which new recruits gathered at the three famous meets at Grindstone Island. Year after year the same men pitched their tents in the same places on the hillside, and entered against each other in the races, the club organizations being but little changed. As time goes on, however, and men grow older, great changes have occurred, and this year they are specially marked in the absence of many familiar faces and the presence of a very large number of new and younger men.

Among those present are: Gen. Oliver, E. B. Edwards, F. L. Mix, W. B. Wackerhagen, F. F. Andrews, C. B. Vaux, H. T. Keyser, R. J. Wilkin, J. G. Edwards and W. P. Stephens. Of these only one, Mr. Stephens, was present at the first meet in 1880. On Sunday two more who were present at that time visited the camp, Messrs. L. Q. Jones and W. W. Cooke. Among the most notable absentees are: Messrs. Gibson, Phil Wackerhagen, now in Racine, Wis.; Chas. M. Shedd, now in Washington Territory; B. W. Richards, now in California; Major Fairtlough, now in India; R. W. Bailey, of Pittsburgh, who was unable to be present on account of illness. Many of the old clubs, such as the Pittsburgh, Newburgh and Rochester, have few or no representatives this year; but others, like the Mohicans, have sent a large delegation of young members, who promise to take the places of the older in time. Besides there are more new clubs than ever before, the Yonkers, Ianthe, Puritan and Red Dragon have each a goodly number, while clubs hitherto unrepresented have pitched their tents on the Neck.

From so large an attendance a big entry list is certain. Among the racers now in camp are Butler, with Fly and Wasp; Gage, with the Owl; Brazer, with a new Elida; Goddard, with the old racer Blanche; Quick, with the Uno; Oxholm, with the Beta; Vaux, with the new Everson Bonnie; Howard, with the Toltec; Nadal, with the Pterodacty]; Palmer, with the Bat; Forrest, with the new Joyner, Dimple No. 4; Ward, with the Seabright; Dunnell, with the Eclipse; Anderson, with the Teaser; Elliott, with the Truant; Whitlock, with the Queen; Ford Jones, with the Canuck; G. MacKendrick, with a new "Mac;" and Harry MacKendrick, with a new "Chum." The new paddling trophy has brought out a number of new and handsome paddling canoes in addition to the sailing craft.

One fact is already plain, the sliding seat is the most effective method of twisting and straining a racing craft that has yet been devised, and it is likely to cause a radical change in canoe construction. It does not need an expert to see that with a canoe weighing 60 to 100lbs., and a man weighing 130 to 170lbs, seated on a plank extending 2ft. beyond the side of the canoe, and with all the sail that can be crowded on, the light little shell must suffer severely in the weakest part, the waist. In one canoe the planking on the bilge has been started by the pressure of a brace under the seat; in another the deck has been split, and evidences of straining are frequent. Capsizes, too, are more frequent this year, which may be laid to three causes, clumsy handling of the deck seat, breaking down of the seat, and big mizens. When a sliding seat does break there is something to follow, the man is likely to drop 50ft. or so into the drink, ending his chances. The big mizens, too, require much more skillful and careful handling as the size has grown from 20 to 60 or 70ft. One canoe, the No. 3 Dimple, carries two sails of 75ft. each. With such a rig, or even a much smaller mizen, a jibe is anything but the easy and simple matter that it once was, and many come to grief on the jibe.

On Sunday evening Mr. Emil Knappe, of Springfield, came into camp in a 14x40 canoe with 100ft. of sail, having left New London at 5 A. M. and crossed the Sound, having met some heavy water on this side. During the night the wind blew very heavily from W., dropping about 2 A. M. after a terrible blast, and then coming out of the north. The morning was cloudy and at colors rain began, causing a postponement of the unlimited race, set for 10 o'clock. By noon, however, the rain had ceased but left a calm.

As there was no wind the paddling race was called at noon, bringing out twenty-four starters, Mr. Carnegie winning after a hot race. After dinner the unlimited sailing race was called, but after the fleet was at the line the race was postponed and the tandem paddling substituted, there being no wind. This race was won by J. N. and H. F. MacKendrick.

In the evening the annual meetings of the Atlantic and Eastern Divisions were held, the following officers being elected: Atlantic Division, Vice-Com., I. V. Dorland, Arlington, N. J.; Rear Com., E. D. Anderson, Trenton, N. J.; Purser, Richard Hobart, Newark, N. J.; Executive Committee, H. L. Quick, Yonkers, N. Y., and H. M. Kraemer, Philadelphia. The Eastern Division had forty members present, representing twelve clubs. The officers elected are: Vice-Com., James W. Cartwright, Boston, Mass.; Rear Com., Dr. G. L. Parmele, Hartford, Conn.; Purser, Raymond Appollonio, Winchester, Conn.; Executive Committee, Paul Butler, Lowell, Mass.; E. S. Towne, Holyoke, Mass.; Dr. S. Bishop, Bridgeport, Conn.

At 9 P. M. a meeting of the executive committee was held, at which Mr. W. U. Lawson, of Lowell, Mass., was elected commodore, and Mr. Ralph F. Brazer, the retiring purser of the Eastern Division, was elected secretary-treasurer. The committee also passed an amendment to the sailing rules prohibiting standing rigs after this year. During the evening a large camp-fire was given by the Mohican C. C. in front of its camp on the bluff.

THE W. C. A. MEET, BALLAST ISLAND.

ANOTHER year has rolled by and, without the aid of telescope or more effect than was required to "get there," the members of the W. C. A. have located another bright star in the gathering constellation at Ballast Island. The memory of this miniature emerald isle has a fond resting place in many good hearts, and as the time for our annual sojourn comes around we gladly bow our heads to the scenes left behind and head our bows for this snug harbor. Those who have not experienced it, cannot appreciate the quiet pleasure derived from meeting here each successive year our tried and faithful comrades, and further cementing the bonds of true fellowship. God bless all the Ballast Island boys, for they are true-hearted, every one of them.

The members of the W. C. A. are rather proud of the stability of their home, and one and all are loyal to good old Ballast. No "off with the old love and on with the new" here. We know our home this year will welcome us the coming season, and we are spared the feelings of a peripatetic house-renter, such as to a certain extent must come to our brethren of the A. C. A. in their yearly migrations. Then, too, the labors of our various Committees are much lightened, certainly a desirable factor of vacation time.

Our family is not large, but it is closely knit together, and from that comes true enjoyment. No clique is tolerated there, and club factions are an unknown quantity. Stranger canoeists are ever heartily welcome, and some of our most loyal members of to-day became so largely owing to the cordial greeting extended to them on their first visit.

As regards the number in camp this year, it was rather smaller than usual. Chicago usually sends down a solid delegation, but did not break up fairly this year, a number of her most active canoeists being unable to come. Dayton also dwindled in her representation, and Toledo deserted us entirely. Cincinnati also fell behind in her attendance, and the death of Judge Longworth of this city robbed us of a comrade whose place no one can fill. Many times was the "Skipper" spoken of, and oftener thought of.

This year brought out still more class C. canoes, until now they are in the majority. The class B. captains might resent it should I speak of this tendency as a possible illustration of the survival of the fittest, and yet when cruising time comes these same class B. fellows seem very willing to leave their craft on the dock and accept an invitation to ship as crew on the larger craft. Ye Gods of wind and water; think of it. Resigning a captaincy for the position of deck hand! To a certain extent this tendency to larger craft is to be deplored, for the smaller classes are the only true canoes, although the owner of a 16x40 stoutly claimed that it could be efficiently paddled. His entry for the paddling races must have been misplaced, for it could not be found anywhere.

However, for the waters of Lake Erie, and in fact for all open water cruising a class C. canoe is beginning to be accepted as the acme of comfort, and the squally weather this year demonstrated fully their staunch qualities and general weatherlines. With a gale blowing and the lake one mass of white-caps, they would start out under reefed sail and disappear to windward like magic.

In order that the canoes of both classes can be brought together in an amiable rivalry, and full opportunity be afforded to demonstrate any possible superiority of one class over the other, a movement has been started to make one of the cup races, perhaps the W. C. A. Trophy, open to all classes. If so arranged, this race should result in the evolution of the most perfect type of canoe for Ballast Island waters, and it is safe to say that it would be a good, all-around craft.

The same complaint was made this year in regard to the racing programme—too long. Next year there will probably be but three sailing races, the Gardner Cup, the Longworth Cup and the Trophy. However, it is proposed to sail each of these races in three heats. In each heat, points will be awarded similar to the methods now used for record events, and the canoe scoring the most points in the three heats will be the winner of the cup. Races are to be called at the exact time previously announced for them, without regard to the weather, and it is this fact that is to a great extent depended on to bring out the best all-around boat.

The weather this year was exceedingly erratic, and most of the time anything but true canoe weather; many of the winds being squally and very uncomfortable to sail in, with perhaps an occasional day of flat calm thrown in to strike a general average. This same fitful wind prohibited the annual carnival, to which a number of guests had been invited. When the appointed evening came the lake was in no mood to be trifled with, and the gale of wind blowing prevented even a decoration of camp with the lanterns.

In the way of rig and fittings there was but little that was new or startling. Two canoes came to camp fitted with athwartship tillers and next year will see more of them. A number of the canoes appeared with the lowering topmast rig, but did nothing to indicate its superiority, and in fact it does not commend itself as the ideal sail. One canoe was rigged with leg-of-mutton sails made with a fair amount of draft, and proved her general ability by winning the Longworth Cup.

The annual business meeting resulted in the election of the following officers for the ensuing year: Com., D. H. Crane, Chicago; Vice-Com., N. B. Cook, Chicago; Rear-Com., O. A. Woodruff, Dayton; Secy.-Treas., J. H. Ware, Chicago. Just why so many plums were captured by Chicago is not apparent, unless it be that that city has the Cook and therefore knew best what part of the cake to help itself to. The above officers, together with C. J. Stedman, G. H. Gardner and W. H. Huntington, comprise the Executive Committee.

The hop, held on Thursday night of the second week, proved a great success, for not only did all enjoy themselves, but a fair amount was cleared above all expenses. This year the Hop was held at Wehrle's, the music being furnished by the Great Western Band of Sandusky. Good music, a smooth, spacious floor, not orowded, and a perfect night, all combined to make a success of it. At about 2 o'clock in the morning, the return was made to Ballast, but not to sleep. This proved the chosen night of the "Kit-Kats," and although their old chief was not with them, yet the old adage "a bad penny always turns up" proved its truthfulness, for "Penny" did turn up and led the braves to the onslaught. Many a charge was made that night, on the slate, and the dust was bitten by many a poor creature, sand-flies principally. Some of the more sedate heads in camp denounced the painting of the Island red as a cardinal sin, and it may be that next year the Commodore will be expected to restrain any such excess of spirits.

The races began on Tuesday of the first week, and should have been disposed of in time to leave the entire second week for cruising, but the wretched weather caused the posponement of a number of the events, making them borrow two days from the second week. Most of the races proved close and well contested, and afforded much pleasure to the contestants as well as the spectators. The free-for-all race has heretofore been sailed twice around the Island, but this year was changed to twice around the regular course, and gave much satisfaction.

The following is a brief summary of the race:

Class 1, paddling, was won by C. F. Pennewell, of Detroit; O. A. Woodruff, of Dayton, second.

The upset race was won by Nat. H. Cook, of Chicago.

The novice race and consolation race were sailed as one, the winner being D. E. Mead, Jr., of Dayton, a novice who demonstrated his ability by beating some of the old heads. J. O. Shiras, of Cincinnati, was second.

The trophy race was sailed in a stiff northeaster and the course was altered to keep the canoes out of the big seas as much as possible. Leaving everything to port, the course was around the "Umbrella Tree" Buoy, thence to the channel stake between Buckeye and Lost Island, and to the home buoy off the dock. Entries were as follows: N. B. Cook, Carrier Pigeon; G. H. Gardner, Ah Tarez; H. Root, Showandasse; T. S. Gates, Isabel; and J. O. Shiras, Katydid. The wind made the boys attend to their "knitting," but made a lively race of it. As the pace became too hot all gradually dropped out excepting Cook and Gardner, who kept fairly close together. On the third round Cook capsized in jibing around the outer buoy, leaving Gardner to sail it out alone. At the time of capsizing Cook had a fair lead and might have saved the race had he taken the precaution to tack. In this race all canoes crossed the line reefed down, but one by one shook out their full canvas as their desire to get there was stimulated by the rivalry. Mr. Gardner sailed a good race and got all the speed possible out of his boat. Mr. Cook was hampered by his light weight and consequent inability to hold his boat up.

In the Longwood Cup race Charles Weeks and D. H. Ware came into collision on the first round, and before they could clear away the wreckage were far behind and so dropped out, leaving Bartlett and Nat Cook to finish it. On the third round Cook parted his main halliard while in the lead, and lost 3m. 48s. before getting under way again. Col. Bartlett held his lead well thus gained, and Cook had to be satisfied with second place. The other races were:

Paddling, Class 2—J. S. Gates first, D. E. Mead, Jr., second.
Paddling, Class 3—O. A. Woodruff first, C. F. Pennewell second.
Sailing and Paddling—O. A. Woodruff first, B. M. King, second.
Capsize—N. H. Cook first, O. A. Woodruff second.

Protest was entered against C. F. Pennewell in regard to the record on account of his not "paddling his own canoe." It was sustained, making record stand as follows: First, O. A. Woodruff, 190 points; second, N. B. Cook, 120; third, T. S. Gates, 110; fourth, G. H. Gardner, 80; fifth, D. E. Mead, Jr., and B. M. King, both 40 points.

THE NORTHERN DIVISION MEET.

ISLE CADIEUX, Aug. 7.—Every A. C. A. meet must of course have its special feature, and whatever question there may be as to what constitutes the special feature of other meets, there can be none that the first eastern meet of the Northern Division, which to-morrow comes to an end, was peculiarly remarkable for thunderstorms. They were not nice little evolutions of cloud land with a few theatrical flashes of lightning, an odd rumble and a few drops of rain either; they were veritable cloud bursts and cyclones, without the slightest regard for the comfort or convenience of the campers, and they interfered seriously with every single attempt toward organized enjoyment. Stave Island was a wet meet, and it blew there sometimes, but the Stave Island rain was the falling of dew drops, and the Stave Island breezes were gentle zephyrs compared to those which visited Isle Cadieux.

The site of the camp is the western extremity of Isle Cadieux, a long, narrow, much indented island, which juts far out into the waters of the Lake of Two Mountains, about midway between Como and Vaudeville. The headquarters dock is located upon the narrow neck which divides the island from the mainland, and the camp ground is a well elevated promontory of stony land, dotted by a few fine maple and oak trees, and connected with the island by a neck of marshy land, one side of which is well wooded. The ladies' camp is located on a beautiful little bay about half a mile from headquarters, and midway between the two is the mess tent, a fine big pavillion, which Mr. Seavey would be inclined to utilize for other than dining purposes if he were here. The camp is in every particular a pretty one; there is a good background for the tents, immediately in front of it the wide waters of the lake spread out to the blue mountains of Oka, the ground has remained dry in spite of all the rain, and the harbor is a good one.

The first man in camp was Harry MacKendrick, with his new Chum, and the little racing machine he calls his paddling canoe. The new forty pound rule has had its effect upon this canoe, for two bulkheads and a keelson have been put into her, and an open canoe with bulkheads is a decidedly new departure, but then bulkheads weigh more than quarter inch cross braces. By July 30, however, there were a goodly number of men in camp, including several Ottawa men. The mess tent was in good running order, and the first service under the trees was well attended.

On Monday half a dozen tents went up, and there were quite a number of men in camp to loaf about headquarters and eat three tremendous meals a day. From the very first the camp caterer showed that it was not his intention to eclipse that famous Long Island mess of unpleasant memory, and in spite of wind and storm, three good substantial, palatable, and what is more, nicely served meals, were disposed of every day. There has been no attempt made to rival a second-class railway restaurant, but there has been a good solid breakfast at 7, a good cold lunch at 1 o'clock, and a three-course dinner in the evening, and if any one grumbled it was because he did not know any better. All through the first week new men and old came dropping into camp. The Scotts, accompanied by three ladies, came in on Tuesday. On this occasion, as upon others, they did not cruise the whole distance to camp, but they did cruise sixty miles down the Ottawa in two open canoes, with the ladies on board. The Oolah, Mr. N. Dwedney Jones's pretty little steam launch, came in on the same day, with three Ottawas on board, and her crew put up the tent, which was at once the envy of the rest of the camp, and the center of it in a social sense. On Wednesday a party of three Ottawas cruised in under the lead of Mr. W. McL. Manigny, whose gray hairs have not abated in the slightest his enthusiasm for the cruising canoe, and he proved that he not only believed in, but could handle his craft by bringing her through a thunderstorm which struck his little fleet off Oka, in full view of the camp, in fine form.

The most sensational arrival during this first week was, however, that of Dr. Douglas. It was a lovely moonlight night and the camp was lounging about the camp-fire, resting after a big hustle with a thunderstorm, when into the center of the firelight marched the vice-commodore of the A. C. A. He had paddled up from St. Anns, after a long railway journey, with no better knowledge of the situation of the camp than the fragmentary instructions of the lockmen, bringing with him his whole camping equipage for a two weeks outing, in the little Perdita, a decked log canoe of only 22in. beam. She is a very pretty and graceful boat, and the way her captain paddles her is such as to make many a younger man envious.

The first week was mainly spent in wrestling with thunderstorms, but there were a couple of interesting cruises of the picnic variety, one in particular, to the Indian village of Oka and the great Trappist monastery above it, being a very interesting one. There was more time spent in monkeying about the tents, in chatting under the flies and in concocting cooling drinks, however, and indeed the weather was so changeable that it was hardly safe to go very far from camp, if dry beds were considered desirable.

On Aug. 2, however, the quiet of the camp was pretty well broken, for this was the day of the Point Claire Boat Club regatta, which had been specially arranged for to suit the convenience of the A. C. A. men. Nearly a dozen canoes cruised down in the morning, and the camp steamer and barge went down in the afternoon with a large party on board.

The principal races of the day, which possessed more than local interest, were the canoe and skiff sailing races, the tandem and the four paddling races. The sailing race was a match between the big two and three men canoes, into which the St. Lawrence skiff has developed, sailing under their own rules; and the canoe pure and simple sailing under A. C. A. rules. Up to the last moment it was expected that the fastest up-river skiffs would come down to sail against Wallace in the Freyja, but not one of them turned up, and only two first-class skiffs, the Freyja, W. J. Wallace, and the Jean A., C. Monserat, both of Point Claire, entered against five decked canoes. The Mac, W. S. MacKendrick, Royal Canadian Y. C., Toronto; Mab, C. Archibald, Pointe Claire C. C.; Chum, Harry MacKendrick, Galt C. C.; Aloha, H. McLean, Pointe Claire C. C.; Isis, D. A. Poe, Pointe Claire C. C. In all thirteen boats and canoes started in this race, the largest fleet ever sent across the line on Lake St. Louis, and a fine sight it was. There was hardly a breath of air at the start, but a light breeze from the southeast sprang up shortly after the gun fired, and the fleet began to string out.

The Freyja took the lead from the first, with the Mac close behind her, and these two led the fleet straight around, with the Mab a good third. The Freyja beat the Mac 3m. 30s. elapsed time, on a five mile course, but as she allowed her 4m. 30s. on a length over all measurement basis, the Mac won the pennant for the best corrected time over the course, and a handsome piece of plate for her victory in her own class.

For the tandem single blade paddling race, two Western crews—the MacKendrick brothers and Messrs. Muntz and Lightburn, entered against three Eastern crews, Messrs. G. H. Duggan and E. Shearwood, F. Stewart and F. Fairbanks, and H. and C. Routh. This was the first time for some years that a thoroughly representative Western team had paddled on Lake St. Louis, and the greatest interest was taken in the race. Duggan and Shearwood, the winners of the Lachine cups, and of every tandem race on Lake St. Louis, came in easy winners, the Rouths were second, and the MacMendricks third. In the "four in a canoe" race the Western team also won.

After the regatta the St. Lawrence Y. C. cruise to camp began, and the steamers Nereid, Iris, Windemere and another took in tow the Valda, Lulu, Minnie A., Freyja and Kathleen. It was late when the fleet with the A. C. A. barge in the lead got into camp, as the channel into camp is unlighted, but a good dinner was awaiting in the mess tent, and it was late when the camp went to bed that night. An unfortunate incident of the tow up was that the Mab got under the bobstay of a yacht and had her side crushed in.

On Sunday morning the St. Lawrence Y. C. burgee was hoisted on the main staff under the Association flag, for the club was the guest of the Association, and the camp settled down to enjoy itself. There was a very beautiful and solemn service under the trees at 11, and the day would have been one of perfect rest and serenity had it not been for the inevitable thunder storm in the afternoon, which interfered sadly with the departure of certain of the guests of the camp. During this Sunday there must have been fully two hundred visitors in camp, and once a hundred members and the St. Lawrence Y. C. men were under canvas.

On Monday morning the racing commenced, the paddling races being put on as follows:

Event No. 1, record decked paddling:

Chum, H. MacKendrick, Galt C. C.	1
Mac, W. G. MacKendrick, R. C. Y. C.	2
Aloha, H. McLean, P. C. C. C.	3
Isis, D. A. Poe, P. C. C. C.	4

Event No. 2, record open paddling:

R. G. Muntz, Argonaut B. C.	1
F. L. Girdwood, St. Ann's B. C.	2

Event No. 7, paddling tandem:

H. T. MacKendrick and L. Girdwood	1
G. H. Duggan and F. Shearwood, St. L. Y. C.	2
H. Routh and C. Routh, L. St. L. C. C.	3
F. Stewart and F. Fairbanks, L. St. L. C. C.	4
R. G. Muntz and F. I. Lightburn	5

This completed the racing for that day, as a heavy thunderstorm came on in the afternoon, and the Nereid went ashore and was bilged.

On Tuesday morning the Volda, the flagship of the St. Louis Y. C. left camp, and from the main dock the canoeists cheered her lustily as she went past. The first race put on was

Event No. 3, combined sailing and paddling, three miles in all, paddle and sail alternate half miles:

Mac, W. G. MacKendrick	1
Chum, H. F. MacKendrick	2
Flying Scud, M. L. Williams	3
Nereid, P. Sherwood	4
——, L. Girdwood	5
——, P. D. Scott	6

Record sculling, four and a half miles:

Mab, C. Archibald, P. C. C. C.	1
Mac, W. G. MacKendrick, P. C. Y. C.	2
Chum, H. F. MacKendrick, Galt	3
Allie, W. H. Warren, L. St. L. C. C.	4
Flying Scud, M. L. Williams, P. C. C. C.	Withdrew.
Aloha, H. McLean, P. C. C. C.	Capsized.
Isis, D. A. Poe, P. C. C. C.	Withdrew.
Ivey, F. McCallum, P. C. C. C.	Withdrew.
——, F. T. Girdwood, St. Ann's	Withdrew
Iolanthe, W. M. T. Mainguy, Ottawa	Withdrew.

In the afternoon the 7½ mile race for the Orillia cup was put on and six boats, Mab, Mac, Chum, Isis, Mona and Banshee, A. Adamson, of Ottawa, started. There was a strong breeze from the west and a great black thunderstorm was rising swiftly in that direction when the gun was fired. Isis went away with the lead, but Mab and Mac passed her on the run, and Chum took third place on the reach. Two rounds were sailed with no great alteration in the position of the boats, excepting that as the wind fell lighter the Mab dragged out her reefs, and as she was the only boat in the fleet that could do this she increased her lead considerably. While the third round was being sailed the thunderstorm came down and every boat in the fleet went over from the pressure of the breeze on her flapping sails. It was a veritable cyclone while it lasted and a sea was raised which, when the size of the water stretch which supplied it is considered, was simply tremendous. The Mona was sufficiently close to camp to run in before the squall struck, Mab was also close inshore and got in without any harm befalling her. Mac and Chum were well outside, however, and Isis was capsized at the West Buoy, and the crews of the first two boats took refuge in a barge which had been manned by the men ashore to go to the sailormen's rescue. Isis was paddled ashore with a broken down rig. The only canoe at all seriously injured was the Mac, which went ashore and was seriously bruised.

It rained that night, but a large party from camp went down to Vaudreuil to a dance given in honor of the A. C. A. by Mr. Wm. Cassets at his beautiful summer residence there.

On Wednesday it blew too hard to get the sailing races off, but there was a hurry-scurry, won by Harry MacKendrick, and a tug of war, which was won by a mixed crew streked by Girdwood. The enforced idleness of the canoeists was taken advantage of to get through the general meeting. After a good deal of discussion the nominating committee agreed to recommend that the next of the division meets should be a cruising meet, and although nothing was decided as to details this decision was arrived at mainly because the camp had fallen in love with a more elaborate scheme for a grand cruise among the islands that fringe the eastern shore of Georgian Bay, from Pentanguishene to the French River, which has been prepared by Mr. I. N. MacKendrick, of Galt. The general meeting approved of the cruising meet idea and unanimously indorsed the recommendations of the committee.

The officers for the year elected were as follows: Vice-Com., Col. W. H. Cotton, Kingston; Rear-Com., I. G. Edwards, Lindsay;

Purser, C. E. L. Parteous, Kingston; Executive Committee, F. H. Gisborne, Ottawa, and Colin Fraser, Toronto.

On Thursday the Orillia cup race was sailed, *pro forma*, for it had really been lost and won on the day of the big blow, and as Mac, Chum and Mona had left camp when the race started, Mab had nothing to beat but the old Inez, Mr. F. McCallum. Mab took 2.40 to sail the race in a light wind, and beat her competitor by about two miles. The lead Mab secured in the two rounds sailed on the day of the storm was, however, such as to have insured her the race in all human probability, had it not been stopped. Mr. Archibald not only sailed very pluckily, beating a faster boat by good handling and a good working rig, but he faced a disaster which would have taken the heart out of most men, and afterward managed in one day, to get his boat well repaired and into camp in fit order to win a race. His success is well deserved.

In all 74 members and 230 guests registered at the camp during the two weeks, and the camp was a pleasant one in spite of the tremendous storms, the rain and the fact that there was a great deal of physical illness and mental depression. To a far greater extent than has perhaps ever been known before, the work of preparing for and carrying through this meet has fallen upon the vice-commodore, Mr. N. J. White, and the purser, Mr. C. M. Whitlaw, and they fulfilled their arduous duties in a manner that was admirable.

Under the new record rule only two men gained a place in it, W. G. MacKendrick coming first with 18 points out of a possible 20, H. MacKendrick second with 17 points.

IANTHE C. C.—The sixth annual regatta of the Ianthe C. C. will take place from the club house on the Passaic River, foot of Grafton avenue, Woodside, Labor Day, Sept. 1, at 2:30 P. M. Programme of races: Event 1, paddling, any canoe. Exempt from "one man one canoe" rule. Event 2, sailing, record event. Event 3, sailing, juniors, record event. Event 4, sailing and paddling combined. Event 5, sailing, maneuvering and upset. Event 6, paddling, record event. Event 7, paddling, juniors, record event. Event 8, paddling tandem. Canoes 30in. beam or over. Event 9, hurry-scurry and upset. Event 10, burlesque. A. C. A. rules will govern all races, open to all canoeists. In case the weather is unfavorable, the races will take place on the following Saturday.

A. C. A. MEMBERSHIP.—Eastern Division: George R. Hazard, Newport, R. I.; Ernest N. Hazard, Peace Dale, R. I.; Willis S. Adams, Hartford, Conn.; Henry H. Edgerton, Danbury, Conn.; T. S. Cheney, Hartford, Conn.; Edward R. Kellogg, Hartford, Conn.; Frank A. Woods, Holyoke, Mass.; J. B. Welch, Pittsfield, Mass.

Yachting.

"West India Hurricanes and the Great March Blizzard." By Everett Hayden, U. S. Hydrographic Office. Large quarto, with 23 lithographic plates. Price $1. Contains full history of the great storm of March, 1888, with practical information how to handle a vessel in a cyclone; use of oil at sea, etc.

FIXTURES.

AUGUST.

22. Quincy, Club, Quincy.
22. Pleon, 3d Cham., Marbleh'd.
23. Hull, Cham., Hull.
23. Larchmont, Oyster Boats, Larchmont.

25. Miramichi, Chatham to Newcastle and return.
27. Hamilton, 35 and 40ft.
27. Queen City, 1st Class, Tor.
27. Royal Can., 30ft. Class, Tor.
27. Quaker City, Closing Cruise and Review.
30. Lynn, Lynn.

OCTOBER.

4. Hamilton, Sweepstakes.

CORINTHIAN Y. C. SWEEPSTAKES, AUG. 11,

FOR a second time the Corinthian Y. C. of New York has been specially fortunate in the weather and other conditions for its forty-foot sweepstakes, and, as in 1889, it has contributed to the racing calendar one of the most striking events of the year. The race sailed off Newport on Monday of last week is specially interesting in comparison with its predecessor of last year. The course and the weather conditions were as nearly the same as possible; three legs of 8½ knots each, making a beat against a moderate S. W. wind, a run, and a reach home in a freshening breeze. This year the starters were less by one than last, Tomahawk being withdrawn with her change of ownership, while of the seven which started only three were old boats. Of the eight starters of last year, only Minerva, Liris and Mariquita came to the line; of the others, Gorilla is laid up, Tomahawk was sold, as stated, after her entry by Mr. Morgan, and Pappoose, Helen and Alice are not in with Gossoon and Minerva.

Of the new boats, all designed by Mr. Burgess, the best, Gossoon, is a keel craft, Ventura being a very deep and narrow centerboard, Moccasin a less extreme craft, and Choctaw a counterpart of the modern compromise type best represented by Nymph and Verena.

The races of the Eastern Y. C. and the New York Y. C. cruise have narrowed the question of supremacy in the 40ft. class down to two boats—Minerva, the champion of last year, and her newer Yankee rival, Gossoon; so that no one was surprised to find that in spite of Minerva's delays and misfortunes she shared with Gossoon the honors of the day.

The entry fee was the same as last year, $100, with $25 forfeit for those withdrawing after entry, which made a total of $725, of which the club took $72.50, leaving three prizes of 60, 18 and 12 per cent., or $435, $130 and $87. The race was in charge of the regatta committee of the Corinthian Y. C.: Messrs. Eben B. Clark, W. H. Plummer, Wm. Gardner and C. S. Davison. The course was from off Brenton's Reef lightship, the first leg of the 25 knot triangle being toward Point Judith and nearly to windward. After the final race of the New York cruise all the racers hauled out to paint and make special preparations for this important race, and by Monday morning they were at the line in fine form.

The first gun was fired at 11:56:55, with the start at 10m. later, 5m. being given to cross the line. Capt. Charles Barr sailed Minerva, with Capt. John Barr as mate, while Mr. Burgess sailed on board Ventura, her owner steering. Minerva, like all the others, had set her large club, but after the preparatory gun she attempted to shift to her second club and got into serious trouble with some of her topmast gear. She finally started with a heavy handicap, carrying her big clubtopsail. The yachts crossed on starboard tack, Gossoon first, with Liris, Mariquita and Moccasin in line close astern of her. Choctaw, with a working topsail set under her club, came a distance astern, and Ventura, with no topsail, was close on the handicap time. Minerva for once was last of all, having a handicap of 5m. 10s. at the start. The times were:

Start	11 56 55	Choctaw	11 59 01
Gossoon	11 57 04	Ventura	12 01 20
Liris	11 57 17	Handicap	12 01 55
Mariquita	11 57 24	Minerva	12 07 05
Moccasin	11 57 36		

Last year, with the same breeze, the leaders held off shore on starboard tack for all the early part of the windward work, while the four boats that worked down the Narragansett shore, Gorilla, Pappoose, Alice and Helen, gained considerably on them by stronger winds. This year the fleet set out on the offshore tack, apparently with the intention of holding it, but when Minerva finally crossed she took the inshore tack at once. Even with the handicap the others did not propose to trust her far out of sight. Ventura tacked after her, and soon all the rest followed. The wind was freshening, and though she set a baby at the start, Liris soon took it in, none of the others carrying jiptopsails. Choctaw soon struck her clubtopsail, leaving the thimbleheader set, while Minerva found her big club too much for her and sent it down, replacing it by a thimbleheader, with some loss of time. Gossoon was leaving the pack to windward, while Minerva was coming up from the rear. Moccasin came to grief early in the race, being disabled in her gear and turning for home. Before the first mark was reached she passed Ventura and Choctaw in succession, and pulled up well on the leaders, having made nearly 4m. on Gossoon in actual time in a distance of 8 miles. Gossoon had gone well clear of the boats that crossed the line with her, but Mariquita was making a good race and beating Liris. The centerboarders were not in the windward work with the keel craft, being very badly beaten as the following times show:

	Time at mark.	Time over 1st leg.
Gossoon	1 30 35	1 33 31
Mariquita	1 31 34	1 34 10
Liris	1 33 43	1 36 26
Minerva	1 36 48	1 29 43
Ventura	1 42 40	1 41 20
Choctaw	1 47 18	1 48 17

Thus Minerva had gained 3m. 48s. on the Gossoon, 4m. 27s. on Mariquita, 6m. 43s. on Liris, 11m. 37s. on Ventura, and 18m. 34s on Choctaw.

The next 8 miles was run with booms to port and spinakers set, save that Minerva started with a balloon jibtopsail, not breaking out her spinaker until 20m. had passed, though she set her large club again. Ventura also set a clubtopsail, leaving only Choctaw with a thimbleheader up. The second mark was timed:

	Time at 2d mark.	Time over 2d leg.
Gossoon	2 25 39	0 55 04
Mariquita	2 26 18	0 54 44
Liris	2 28 09	0 54 26
Minerva	2 32 06	0 55 18
Ventura	2 43 06	1 00 26
Choctaw	2 43 56	0 56 38

Down wind Liris had done the best work, though it was a matter of seconds among the keel boats, and of minutes between them and the centerboards. Before the second mark was reached spinakers came in, and at the turn the yachts jibed to starboard. On the reach home Gossoon and Mariquita set intermediate jibtopsails, Gossoon holding on the finish, while Mariquita took in hers about half way home. Liris and Choctaw carried only lower headsails, but Minerva set her small jibtopsail on the last half of the leg. The times over the leg were:

Gossoon	48 29	Minerva	49 06
Mariquita	48 24	Ventura	49 50
Liris	48 03	Choctaw	47 46

Choctaw made the best time on the reach, passing Ventura, but this did not save her from a very bad beating. The official times were:

	Start.	Finish.	Elapsed.	Corrected.
Gossoon	11 57 04	3 14 08	3 17 04	3 15 08
Minerva	12 01 55	3 21 12	3 19 17	3 15 36
Mariquita	11 57 24	3 14 42	3 17 18	3 16 28
Liris	11 57 17	3 16 12	3 18 55	3 18 55
Ventura	12 01 20	3 32 56	3 31 36	3 29 00
Choctaw	11 59 01	3 31 42	3 32 41	3 20 21
Moccacin	11 57 36	Withdrew.		

Thus Gossoon beats Minerva 28s., Mariquita 1m. 20s., Liris 3m. 47s., Ventura 13m. 52s., Choctaw 15m. 13s.

So far as its technical merits are concerned the race belongs to Minerva, as she practically finished with Gossoon after giving her 5m. at the start. Thus far the result of the races on this side of the Cape have gone to disprove the conclusions drawn from Gossoon's performances at Marblehead, and to show that if she is to score any decided victory over Minerva when the score is made up at the end of the season she will have to travel faster than she has done of late.

BEVERLY Y. C.

THE 163d race, first open race of the season, was sailed off Marblehead Rock, Aug. 17. Course for first and second classes, 10 miles to windward and return; for third class, 5 miles to windward and return.

The day opened with a good northerly breeze, but it died out and hauled round to the eastward, till finally the judges gave the course S.S.E., just 15m. after advertised time.

The wind was then a very gentle breeze from S.S.E.; 5m. later the first class, 30 to 40ft. waterline, started, Minerva keeping up her record by making a beautiful start; Mariquita was next, but was bothered by Augusta, a second class sloop, who had got into trouble right on the line. Gossoon was third at the start, Ventura bringing up the rear.

Minerva seemed to hold a little the best wind, Gossoon to foot a trifle the faster. It was a nip and tuck race, till Minerva figured she could fetch the mark and tacked to the eastward, fetching the mark. This, of course, put the Gossoon behind, as Mariquita had followed in Minerva's wake and took second place. The large number of steamers and tugs which were on hand watching the squadron of evolution made it difficult to locate the tug serving as turning point.

Had not Gossoon overstood, she and Minerva would have reached mark very nearly together. Ventura early in the race broke her bobstay and withdrew.

Both were timed at outer mark: Minerva 1:54:45, Mariquita 2:03:05, Gossoon 2:03:30.

On the run home the wind increased till finish was was made in a good breeze. Gossoon beat Minerva 28s. and Mariquita 65s. on the run.

The result in the third class was a surprise to all and the result of a bad fluke. The entry included everything of any note except the new Mildred, and almost every boat of note from 21 to 30ft.

The large majority of the boats stood to the southward and westward, Saladin, Hawk, Shark, Harbinger and Almira taking the lead. For a long hitch on first tack Harbingor and Almira fully held Saladin, while Hawk and Shark, further to southward, were in a very good place; and when Saladin went on starboard tack off Nahant, followed by Harbinger, Hawk, Shark and Almira were well ahead, but to leeward; they had decidedly overstood mark; and besides wind inshore was lighter and continually heading them off. Saladin and Harbinger went for mark, apparently with no one to fear; but here came in the fluke—a small white sloop was seen coming in from the eastward and well ahead; it turned out to be the 25ft. boat White Fawn, who rounded mark 2:14:20. Allowing for the difference in start Gossoon had beaten her only 50s. actual time in a 10 mile beat to windward.

She had tacked to the eastward with Elite and Sprite, and got a tremendous slant, letting her fetch up well on to the mark in one long starboard tack.

Some of the other boats were timed as follows:

Saladin	2 18 01	Almira	2 44 45
Mignon	2 26 25	Hawk	2 46 03
Harbinger	2 27 53	Moondyne	2 57 38
Sprite	2 37 40	Chieftain	2 58 55
Shark	2 44 10		

In the third class keels perhaps the fairest race of the day was sailed. All the class stood to the eastward and all got the favorable slant. Hornet won, as was expected, but Kraken gave her a good race.

In the third class centerboards very few of the cats entered against the jib and mainsails, only the Burgess cat Wanda, the Hutchings boat Edith and the two Cape cats, Madge and Kiowa, starting against all the crack jib and mainsails on the bay. The light air seemed to settle it in favor of the jib and mainsails before the start.

Tom Cat and Wanda got the best of the start, Kiowa bringing up the rear. The fleet at once went on port tack and made several hitches along Tinker's Island, except Tom Cat and Eureka, who were having a hot fight a little further east, and rather in the lead of the fleet. Numbers of the boats soon found the pace too hot and dropped out. Kiowa led past outer end of Tinker's Island, closely pressed by Edith, who was proving formidable, and followed by Madge, who was not in her best form, and the jib and mainsail Gleam.

At this time Wanda was well to leeward, and tacked to eastward fluke-hunting, getting it with a vengeance, as after a long starboard tack she suddenly found herself within a quarter of a mile of the turning point, which she rounded about a minute and a half ahead of Eureka and five minutes ahead of Tom Cat. The latter two boats, followed by Trifle, had tacked east and got the advantage of the fluke, but not as much as Wanda.

Gleam in the meantime had left the others and gone east. She came home ahead of Trifle, but crossed wrong side of stake boat, and it is uncertain whether or no she rounded the outer mark. In the meantime both Edith and Kiowa outsailed Madge, and as the air died out Edith beat Kiowa a little. Later as it breezed up a little and they met more of a bobble Kiowa turned the tables.

Kiowa increased her lead a trifle on Edith and a good deal on Madge by the latter's overstanding before tacking to the eastward; and, once heading the sea, dropped them both, till Madge abandoned the race in disgust.

Kiowa rounded the mark just half an hour after Wanda, and 4½m. ahead of Edith. In the run in, Eureka and Tom Cat passed Wanda, Tom Cat gaining on Eureka. Kiowa dropped Edith a couple of minutes, and gained 7m. on Wanda.

The measurements of the E. Y. C. were used in the 40ft. class, those of the B. Y. C. in other classes.

Almira had but two men aboard and could not set her spinaker. She sailed the course but crossed the wrong side of the line.

Harbinger's length is not official; she will be remeasured. Eureka protests her length, but she was officially measured the night before the race.

FIRST CLASS.

	Length.	Elapsed.	Corrected.
Minerva, J. L. Carroll, Jr.	46 07	3 50 24	3 48 17
Mariquita, Aug. Belmont, Jr.	48.35	3 59 21	3 59 21
Gossoon, Adams Bros	47.92	4 03 41	4 03 10
Ventura, C. H. W. Foster	47.00	Withdrew.	

SECOND CLASS.

Saladin, W. P. Ferole, slp	38.07	4 09 24	4 09 24
White Fawn, A. E. James, slp	31.08	4 11 38	4 01 58

CLASS 11.

Mist, Jos. Sandford	17.10	2 18 35	2 18 35
Bayonne, E. Van Buskirk	16.05	2 26 40	2 25 35
Dandy, Eugene Gezine	17.00	2 24 42	2 23 52
First Attempt, Harry Kalenstroth	17.03	Did not finish.	
Edna, Edward L. Phillips		2 19 20	2 19 20

Winners—Class 5, Our Own; class 6, Leader; class 8, Nedeya; class 11, Mist, Dandy second. The Nedeya wins the prize for making the best actual time; Leader for best corrected time. Judges, Rudolph Puhlmann and Major Rufus King, Pavonia Y. C. Regatta committee, A. F. Adams, Hardy Bush and Wm. Humpage.

RIVERSIDE Y. C., SPECIAL REGATTA, AUG. 9.—Club course No. 3; from club house to Red Bouy off Greenwich Point, to Red Buoy off western end of Captain's Island, to the starting line, distance 8 miles; weather fair; wind easterly and very light; flood tide. Summary:

	Length.	Elapsed.	Corrected.
Sirene, H. E. Doremus	24.07	2 30 19	2 30 19
Pearl, H. Wilmot	25.06	Time not taken.	
Dot, C. J. Pierce	24.00	Withdrew.	

The race was for classes 8 and 9 of catboats, but class 9 did not fill. Prizes were presented by the ladies of the club. Regatta committee, F. B. Jones, W. A. Haffington and L. A. Lockwood. Judges, E. D. Hurlbut, W. S. Lines and Erwin Edwards. Launch Alice, Capt. P. C. Schutt, took the committee over the course.

GOLDEN FLEECE.—The auxiliary steam yacht Golden Fleece, chartered by Mr. F. P. Osborn, of New York, arrived at that port on Aug. 13, having left Falmouth, Eng., on July 17.

JESSICA.—Mr. McDonough's new 46ft. cutter is now at New London, where her racing rig is being fitted up.

WILD CAT.—The steam launch Wild Cat was launched from the works of C. L. Seabury & Co., Nyack-on-Hudson, N. Y., at 8:30 on Saturday evening, 16th instant. She is designed specially for speed and is owned by Mr. Fred D. Hughes, a well-known New York yachtsman. Following are the dimensions of the Wild Cat: Length over all, 40ft., extreme beam, 5ft. 10in., draft 28in. She is double framed with very light cedar planking, copper fastened and riveted, finished throughout in mahogany, and develops a speed of 18 miles per hour. A number of engineer's trial trips have been made and proved very satisfactory to the owner and builders. The machinery consists of a 50 H. P. compound engine and a Seabury patent safety water tube boiler. She is allowed 250lbs. working pressure and turns a 27in. wheel 400 revolutions per minute. The boat is open cockpit style and has a square stern with propeller aft of the rudder. The Wild Cat will be used by Mr. Hughes as a pleasure boat in New York waters and vicinity.

New Publications.

SPORT.

THIS is the title of a large illustrated work, now being published in parts by Messrs Bradlee Whidden & Co. of Boston, and devoted to depicting various phases of shooting and fishing. Sections I. and II. are now before us.

Only a publisher, we imagine, can have any conception of the difficulties and the expense attendant upon the production of a work of this character. These difficulties have to do almost entirely with the illustrations, for there are many men who are competent to speak intelligently of the animals to be included in a collection of this kind, and it is quite possible to select from among our sportsmen an editor, or better still a corps of editors with experience broad enough to enable him or them to properly supervise the work. When we come to figuring the wild denizens of the plains and woods and streams the case is different. To find an artist who knows how to draw and color a particular fish or animal, and who is at the same time a landscape painter is not always easy. If in addition to this it be demanded that he know something of the habits of these creatures, and of the circumstances which attend their capture, the difficulties of a choice are greatly increased, and it is found that the number of men who can acceptably furnish the illustrations for a work of this kind is still further reduced. Besides, each artist should be able to superintend, at least in a general way, the reproduction of his own sketches. It will thus be recognized that special knowledge of several different kinds is required for a successful work in this field. In the selection of the artists for the present work the publishers have had a fair measure of success.

The parts now at hand include the text and illustrations treating of the salmon, the moose, the brook trout, the black bass, the tarpon and the antelope; subjects for half a dozen essays of considerable length and for illustrations which might stir the sportsman's blood. The exigencies of publication have, however, obliged the publishers to limit the text to two pages on each species treated, one being devoted to a brief description of the fish or quadruped and the second to a short sketch of how it is captured. These handsome pages are 17in. by 12in. and are superb specimens of typography, press work and paper, but they are disappointingly short.

The main interest of the work therefore is in the pictures. These differ in excellence and the later are better than the earlier ones. The black bass illustration is spirited and well done, and the scene is attractive and natural. So too is that of tarpon fishing, which has a fine flavor of the sea. Mr. Remington's illustration of antelope shooting is characteristic and gives a capital idea of the wide sweep of the plains. His horses, and the cow puncher, with his shaps and his six-shooter, who is holding them while his companion shoots, would be recognized anywhere. It may be objected that the antelope play a small part in this sketch, but from the composition of the picture this is unavoidable.

We have said the later pictures in these two parts are better than the earlier ones, and it may fairly be assumed that as the work progresses, the experience gained by those connected with it will result in the pictures of each succeeding number being better than those which have gone before.

It is unnecessary to speak at length of the text of the work, which is brief and as a rule elementary. We note the inexact statement that the female antelope has horns, while, as is well known, a good majority of the does are without them, at least for some years. The generic name *Antilocapra* is misspelled, but this is the only typographical error that has caught our eye.

There should be a broad field for a work like this, and we shall look forward with interest to the appearance of future numbers.

Answers to Correspondents.

All other lengths at proportionate prices.

GEO PRICE, 171 East 84th St., New York
Send for Catalogue. Mention this paper.

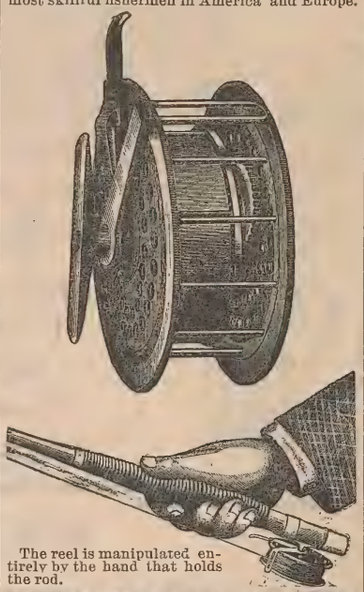
When a sportsman finds anything which adds to his pleasure, without increasing his labor, he wants all his brother hunters and anglers to know of it and share with him the newly discovered "helper."

WHAT WE CLAIM FOR

The Automatic Reel.

FIRST.—It will wind up the line a hundred times as fast as any other reel in the world.

SECOND.—It will wind up the line slowly if the angler chooses.



THIRD.—No fish can ever get slack line with it.

FOURTH.—It will save more fish than any other reel.

FIFTH. It will prevent tips, lines and snells from being broken by large fish.

SIXTH.—It enables the angler, and makes it desirable, to use lighter tackle.

These claims have been substantiated by the most skillful fishermen in America and Europe.

The reel is manipulated entirely by the hand that holds the rod.

For Sale.

Valuable Game Preserve
FOR SALE.

The proprietor of the celebrated Seal Island (Batture aux Loups Marins) below Quebec, is disposed to sell this property. It is renowned for the immense number of wild geese, including the snow goose, brant, black duck, teal, plover, snipe, and great variety of beach birds, which frequent it. A club or other parties intending to purchase, the owner will give an opportunity of proving that it is historically true the greatest game preserve of its kind in America. Over 250 black ducks by one gun were bagged during the rise of one tide. For further information and references apply to A. TOUSSAINT & CO.,
Proprietors, Quebec.

N.B.—Hunting opens on 10th September next. Parties intending to purchase should write before this date, to try their luck in due time.

DAVIES & CO., 1 Finch Lane, Cornhill, Eng.

The New York Herald.

IF there are any sportsmen so wise that they cannot learn something from this little book, their modesty prevents their fellow men knowing it. The compiler seems to have thought of everything from managing fine guns to snelling hooks, tying knots and skinning eels. He has chapters on rifles and shotguns, hunting and trapping, fishing, camping, dogs, boating, yachting, camp making, cooking, surgery and medicine, and one headed "miscellaneous" seems to include everything which the others have omitted. His paragraphs number more than six hundred. Newly fledged sportsmen who go out for more than a few hours will find it to their advantage to put this book in their pockets, or, better still, commit it to memory before they start.—*New York Herald, Oct.* 20.

This note refers to "Hints and Points, compiled by Seneca." Published and sent on receipt of price ($1.50) by the Forest and Stream Publishing Company.
DAVIES & CO., 1 Finch Lane, Cornhill.

YACHTS, BOATS
AND
CANOES,
WITH SPECIAL CHAPTERS ON MODEL YACHTS AND SINGLEHANDED SAILING.
BY
C. STANSFELD-HICKS.
AUTHOR OF "OUR BOYS, AND WHAT TO DO WITH THEM."
NUMEROUS ILLUSTRATIONS AND DIAGRAMS
AND
WORKING DRAWINGS OF MODEL YACHTS AND VARIOUS SMALL CRAFT SUITABLE FOR AMATEURS.

DESIGNS:

Model Yachts.—Defiance, Isolde, Bonny Jean, and 10-tonner with sail plan.
Canoes.—Birch, Mersey Paddling Canoe, L'Hirondelle, Sailing Canoe.
Sailing Boats and Yachts.—Dabchick, Wideawake, Myosotis, Una, Singlehander by C. P Clayton, Puffin, 3-ton Racer, 3-ton Cruiser, 24ft. Auxilliary (steam and sail) fishing boat.

This volume contains much that is valuable and interesting to American yachtsmen and canoeists. The design, construction and use of small craft of all kinds is treated of in a simple and entertaining style, and the instructions are clear and easily understood.
Large crown 8vo., 380 pages and 16 large folding plates.

Price, Postpaid, $3.50.

FOREST AND STREAM PUB. CO., 318 Broadway, N. Y.

UNCLE LISHA'S SHOP.
Life in a Corner of Yankeeland.
By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

WILD INDIAN LIFE.

PAWNEE

HERO STORIES AND FOLK-TALES,

With Notes on the Origin, Customs and Character of the Pawnee People.

By GEORGE BIRD GRINNELL ("YO.")

Cloth, 417 pages. Illustrated. Price $2.00.

Pawnee customs and beliefs are richly illustrated by the folk-tales, and in the copious notes Mr. Grinnell gives an uncommonly spirited account of Pawnee life in peace and in war. There is an account of the defense of a Pawnee village by 200 sick men, cripples, old men and squaws, against 600 Sioux warriors, which for sheer gallantry and indomitable pluck will match almost anything in military history. The Pawnee warriors were all away at the time, and the Sioux counted upon an easy victory. But the Pawnee cripples and women actually beat them off after a hard day's fighting, and at last so terrorized them that the bold assailants fled in panic and sustained a heavy loss. Mr. Grinnell also has written a picturesque and vivacious sketch of one of the last Pawnee buffalo hunts, in which the Indians commonly reverted to primitive weapons and usages, often hunting quite naked with no other arms than their bows and arrows. A particularly interesting part of the book is that which treats of the Pawnee doctors or medicine men. The statements of Mr. Grinnell show the possession by some of these men of a kind of skill in sleight-of-hand far beyond that usually attributed to Indians; some of the facts here described are as puzzling and unaccountable as those performed by the famous jugglers and fakirs of Hindostan, while one of their tricks is a close parellel to the East Indian mango feat. . . . Those who desire to learn of the many other wonders done by the Indian doctors must refer to its pages for themselves. As it is certainly one of the best works on Indian life, legend and character that has been written for a long time, it should obtain a wide circulation.—*N. Y. Tribune.*

ANSWERS TO CORRESPONDENTS.

THE CAMP-FIRE.

IF, as Warner says in his "Back-Log Studies," "the open fire furnishes the room," the camp-fire does more for the camp. It is its life: a life that throbs out in every flare and flicker to enliven the surroundings, whether they be the trees of the forest, the expanse of prairie, shadowed only by clouds and night, or the barren stretch of sandy shore. Out of the encompassing gloom of all these, the camp-fire materializes figures as real to the eye as flesh and blood, peopling the verge of darkness with grotesque forms, that leap and crouch and sway with the rise and fall, or bending to the wind, of the flame, and beckon the fancy out to grope in the mystery of night.

Then, imagination soars with the updrift of smoke and the climbing galaxy of fading sparks, to where the steadfast stars shine out of the unvisited realm that only imagination can explore.

The camp-fire gives an expression to the human face that it bears in no other light, a vague intentness, an absorption in nothing tangible; and yet not a far away look, for it is focussed on the flame that now licks a fresh morsel of wood, now laps the empty air; or it is fixed on the shifting glow of embers, whose blushes flush or fade under their ashen veil. It is not the gaze of one who looks past everything, at nothing, or at the stars or the mountains or the far away sea-horizon; but it is centered on and revealed only by the camp-fire. You wonder what the gazer beholds—the past, the future, or something that is neither; and the uncertain answer you can only get by your own questioning of the flickering blaze.

As the outers gather around this cheerful center their lips exhale stories of adventure by field and flood, as naturally as the burning fuel does smoke and sparks, and in that engendering warmth, no fish caught or lost, no buck killed or missed, suffers shrinkage in size or weight, no peril is lessened, no tale shorn of minutest detail. All these belong to the camp-fire, whether it is built in conformity to scientific rules or piled clumsily by unskilled hands. What satisfaction there is in the partnership of building this altar of the camp, for though a master of woodcraft superintends, all may take a hand in its erection, the youngest and the weakest may contribute a stick that will brighten the blaze.

What hospitality the glow of the camp-fire proclaims in inviting always one more to the elastic circle of light and warmth, that if always complete, yet expands to receive another guest. A pillar of cloud by day, of fire by night, it is a beacon that guides the wanderer to shelter and comfort.

The Indian weed has never such perfect flavor as when contending with heat and smoke, one lights his pipe with a coal or an elusive flame, snatched from the embers of the camp-fire, and by no other fireside does the nicotian vapor so soothe the perturbed senses, bring such lazy contentment, nor conjure such pleasant fancies out of the border of dreamland.

There is no cooking comparable with that which the camp-fire affords. To whatever is boiled, stewed, roasted, broiled or baked over its blaze, in the glow of its embers or in its ashes, it imparts a distinctive woody flavor that it distils out of itself or draws from the spiced air that fans it; and the aroma of every dish invites an appetite that is never disappointed if the supply be large enough.

It cannot be denied that the camp stove gives forth warmth and with more comfort to the cook, serves to cook food of such tame flavor as one may get at home. But though the serviceable little imp roar till its black cheeks glow red as winter berries, it cannot make shanty or tent a camp in reality or impart to an outing its true flavor. This can only be given by the generous camp-fire, whose flames and embers no narrow walls inclose, whose hearth is on every side, whose chimney is the wide air.

SHOOT MANAGEMENT.

THE returning German marksmen come back with unanimous report that the management of the big shoot at Berlin was not all that it should have been. In fact, if half the instances cited of errors and blunders be true, it is difficult to see how the management could have been much worse; and in view of the excellent fashion in which large tournaments are carried through on this side, it is not to be wondered at that President Walther thinks the Germans should come over here and pick up a few ideas on the subject before they undertake to manage another such affair as that so unsatisfactorily conducted at Berlin.

It is no easy matter to carry out such an affair as a large competition. There are so many minor hitches, so many chances for mishap, so many slips that get in at the last moment, that the utmost care is necessary to insure to each contestant an equal chance to show his skill against all fellow competitors. It is so easy to upset a marksman, so many little matters of detail which go into the making of a single bullseye shot—much more a string of them—that the shooter ought to go into the match with all possibly removable impediments entirely out of his way. He takes his chances against wind and weather. If he gets a gust of wind, a flash of dazzling sunlight, a drenching dash of rain, he simply gets thus the luck of conflict and has no blame to lodge against the management, but when clumsy or inadequate target machinery breaks down, when the facilities are ridiculously disproportionate to the entry list, or when the records get mixed up in inextricable confusion to the detriment of the shooters, then it is that the competitor comes away with a hearty growl.

In the case of the German shoot, it is not that the Americans did not gain prizes. In many respects they were far superior to the home talent, and this superiority shows itself in a liberal list of medals, cups and other insignia of victory; but they were won under conditions made unnecessarily harassing by the poor management; and just here comes in the criticism lodged against those in charge. It is very easy to say that in the case of a German shooting meeting it is an attempt to mix beer and bullets which so often leads to a disastrous compound; but in this instance this does not appear to have been the case. There was a sufficiency of shooters present to assure a successful meeting. The feasting and the firing were kept separate. Whether the feasting suffered through bad arrangements does not appear; from all reports it did not, but it is quite certain that the firing did.

Here on this side rifle and trap tournaments have been brought down to a precise management, so exact that we rarely nowadays hear of a disastrous jumble. The American Shooting Association has been doing good work in showing shooting clubs all over the country how to run a meeting smoothly and fairly. Penrose has been a pioneer in his clever, fair and rapid Keystone system. In rifle shooting, the National Rifle Association, at its Creedmoor meetings, has put through large competitions with substantial fairness to all concerned. Our Berlin managers had but to take a run over to England to get pointers in plenty from those who for twenty years and more have carried on the gigantic enterprise into which the Wimbledon shoots have grown. There was absolutely no excuse for any errors in such a direction, and particularly in so important a gathering as this widely-heralded Berlin shoot had grown to be. At any rate it has had one good effect. Our fellow citizens who went over and have come back again will now have a heartier respect than ever for American ways of doing things, and we shall not be compelled to listen to invidious comparisons after each poor score made, of how much better things move in "Fatherland."

MORTALITY AMONG BLACK BASS.

IN Black Creek, North Carolina, large-mouthed black bass, locally known as chub, are dying by hundreds from some unknown cause. A specimen sent to the U. S. National Museum was found to have nothing in its stomach and intestines. The gills showed no inflammation and were free from parasites; but Mr. Benedict noticed a moderate number of parasitic copepods, belonging to the genus *Lernæocera*, on the back and gill-covers, which, by irritation, had produced sores. In such cases question arises as to the relation of the parasite to the disease of the fish, whether that of cause or accompaniment. The degraded crustaceans called lernæans attack certain fishes in overwhelming numbers in the fresh waters and are killed or rendered harmless by contact with brackish or salt water. This is well known in connection with salmon and trout, and recently Mr. W. P. Seal has related in FOREST AND STREAM his successful treatment of injured aquarium fish in brackish water tanks. In salt water the parasites are comparatively inactive, seldom abundant, and cause the host little annoyance; but in fresh water the anadromous fish, when in its weakest condition, is overrun with lernæans, which produce small sores; next in order comes the salmon fungus (*Saprolegnia*), and soon the victim succumbs to the inevitable. If the salmon were originally inhabitants of the fresh waters, of which there is no adequate proof at present, perhaps the habit of going to sea was acquired through the necessity of ridding themselves of troublesome parasites.

CALIFORNIA BIRDS FOR MASSACHUSETTS.

THE Massachusetts Fish and Game Protective Association's enterprise of stocking the covers of that State with game birds is noteworthy because of the scale on which it is conducted. The quail which have already been put out are generally reported to be doing well; and now the "Committee on Acclimatization" is devoting its energies to securing pinnated and sharp-tailed grouse from the West. It is intended to put out something like a thousand of these birds by next Thanksgiving Day. The Committee is also providing the introduction of California quail; and contracts are about to be given for several hundred of these birds. The investigation set on foot by the members of the committee to gain information as to the comparative game qualities and hardiness of the mountain quail and the valley quail has resulted in a mass of evidence of such a conflicting nature that the Massachusetts men are more in the dark than they were before. It should be quite practicable, however, for them to secure definite advice on this question. The FOREST AND STREAM invites any of its readers who may be willing to communicate with the Committee on this subject to do so, either through the columns of this journal or by direct correspondence with the secretary of the committee, Mr. Henry J. Thayer, 176 Washington street, Boston.

OUR Black Bass Number, July 24, has proved a great hit; and there is a constant call for it.

The Sportsman Tourist.

AROUND CAPE HATTERAS.

"To Mitchell's, the pride of the mountain,
To Hatteras, the dread of the sea." —*Old Song.*

IT is but a question of time, and a very short time at that, when the eastern North Carolina coast will be as familiar and well known to the Northern sportsman tourist as the Adirondacks or the Thousand Islands.

That section running from Pasquatank River to Cape Lookout, some 300 miles long, embraces in its borders the finest game preserve on the American continent, and it is a region that will afford fine sporting for years to come, for nature has fenced it in with swamps, and interspersed it with impenetrable coverts where game can retire and rest in safety when too closely pursued. Immense fens and bogs abound, and these are further protected by miles of shoals, the water of which is but a few inches in depth. The water is too shallow in places to impel a craft, and the mud so soft as to make wading a labor infinitely more wearisome and fatiguing than even the treadmill.

Thus it is that feathered game cannot be exterminated, and as the tillable land can only be found in spots and is of a low sandy soil, agriculture does not pay. Besides, the whole region is most unhealthy; bilious fevers and chills abound, and keep all emigration away. Most of the inhabitants are fishermen or shingle cutters, and use their little farms more as a residence than a source of profit, for agriculture as a means of support in this swampy country means starvation. A few barrels of nubbins, a few score of stacks of peanuts, a few hundred rows of cotton stalks, constitute the crops. As most of the young men leave home to get a livelihood elsewhere, the population keeps stationary, the country remains unsettled, and the region still continues to be the paradise of sportsmen.

Since the completion of the Philadelphia & Seaboard Railroad, sportsmen can now leave New York in the morning and reach Norfolk the same evening, thus enabling them to take the evening trains and boats for their destination and to be ready for a shy at the game the next morning. There are five great sounds lying close to each other, each a noble sheet of water, full of fish and ducks.

These sounds are connected together by a canal deep enough to float large steamers. Most of the names were given to these various waters away back in 1600.

There is the Albemarle, named after England's great duke, Chowan, Pamlico, Currituck—all Indian names—and Cove Sound, after its discoverer.

These sounds are fed by different rivers that pour in fresh water, while the inlets from the ocean admit the salt water, and thus the sounds are at times fresh, salt and brackish. Indisputably at some remote age all these sounds were a part of the Atlantic Ocean, but after the sand dunes arose from some powerful action of Nature, they become inland seas. At no very distant day the homesteads and farms on the land separating sounds from the ocean were but shallow sand banks. Spence writes in 1800, "All along the sea coast is a belt of low narrow sandy islands, which look as if they were a bar placed to defend us from the stormy ocean outside. That bar of sand has a good deal to answer for."

It is to be seen from the map, that the extreme eastern limit of North Carolina consists of a narrow strip of land extending along the entire coast, and separating the ocean from the interior waters. This strip is sandy, varying in width from about one-fourth of a mile to about five miles; in places it is entirely bare of vegetation, being merely the beach of the ocean; in other places, especially in the neighborhood of Cape Hatteras, where it is the widest, it is covered by live oaks, red cedars, and the ordinary trees of the main land, and a shrub called yeopon from which is made a tea much valued by some. This strip of land is called the "Banks." It is broken only by four considerable inlets: Hatteras, Oracoke, Beaufort, and the one at the mouth of the Cape Fear River. Through these vessels from the sea enter the interior waters. The depth of water which can be carried into the interior through Hatteras or Oracoke is 8ft., at Beaufort 16ft., at the mouth of the Cape Fear River 12ft. This strip of land is not suited to agriculture; the frequent winds prevent the cultivation of the grains, or of any but low growing vegetables, but the soil is not in most places barren; and the melons and sweet pototoes grown on the Banks are considered to have more saccharine matter than those of the interior. It is pretty thickly populated, the people living by fishing and pilotage.

All through eastern North Carolina the quail abound. Every field has its one to a half-dozen flocks, and a sportsman mounted on horseback, who can ride from one clearing to another, can shoot day in and day out to his heart's content. There is a wide difference though in the manner of shooting these birds down here. No gunner, no matter how expert, can decimate a flock, for when flushed they usually fly in the reeds, and then they are safe, as they can run between the canes faster than a dog can force his way through. To my mind this mode of hunting partridges is more exciting than spending hours in hunting for the scattered birds in one flock. From 40 to 90 shells is the usual number fired in a day. More often the latter than the former. The number bagged depends, as Nathan Cobb would say, "how the gun was pinted." The most put in my shooting coat in one day was thirty-four; of course I lost some dead birds in the swamp. I carry with me eight dogs, and hunt them on alternate days; yet the country is so rough that in a couple of weeks nearly all of them are limping, drooping and shaky, and as thin as razor-back garpiked hogs.

While writing about dogs let me narrate a circumstance of how one of those—I cannot call them men, but *things* and *its*, called dog poisoners—came to grief. It happened in this way. I made my way to North Carolina by land, stopping *en route* with various friends, and shooting as I went. I stopped for several days at what was once a stately old hall, not a thousand miles from Petersburg, Virginia. In *ante bellum* days this old plantation was a famous one, and was a renowned hunting rendezvous for the young planters. The country round about is so poor that it merely keeps the wretched inhabitants from starvation and that is about all.

On the side of the road, in an old tumble-down house, that seemed as if it had the ague fever for years and had nearly shaken itself to pieces, dwelt a sour, morose, ill-favored individual, who had lately married a young and comely female—for the whys and wherefores of women are past finding out. This Daniel Quilp hated everybody, but he hated a sportsman more than anything else in the world, and whenever he saw a party heading his way he would slyly scatter eggs charged with strychnine around in the fields, and thus he poisoned many noble animals far above him in the scale of creation. One day last fall he saw a couple of sportsmen riding along the road, accompanied by a half dozen setters, one or two which climbed the fence and were ranging in his field. This Snarleyow—the Dog Fiend—spread a half dozen poisoned eggs in his yard and left the gate open, he then disappeared in the stable. Fortunately his own two dogs gobbled up the eggs, and in a short time they died in agony. Nor was this all—"the poisoned chalice" returned to other lips, that ought to have been dear to him. A little darky found one of these eggs, carried it to the house, and her mistress later on made a batter-bread pudding, using unconsciously the loaded egg. The consequences were that she had spasms that night; the doctor was called, and in her agony the wife declared that her husband had poisoned her. An examination showed signs of the *nux vomica*, and by the next morning the neighborhood was ringing with the excitement. The big brothers of the wife organized a posse, dashed in the house, seized the dog poisoner, and getting a rope, swore they would hang him. Had the wife died, as she was expected to, they would have swung him from his own fig tree, by commands of Judge Lynch, but she getting better, explanations ensued, and the truth coming to light, he was released. Query: Is not a man who is base enough and cruel enough to poison innocent dogs, too mean to live?

On the way to Hatteras I spent a few days with an old gentleman living on the banks of one of the wide streams that run into Croatan Sound, N. C. It was more like a stately river or a frith, at the point his house was built. I, in company with two friends, was paddling along a creek, when on suddenly turning a bend the narrow inlet broadened into a spacious sheet of water, on one side of which was a low but spacious farm dwelling with numerous outbuildings. The elderly owner hailed us from the banks and with that proverbial North Carolina hospitality invited us in, and later on insisted on our staying with him as long as it suited our convenience. As an inducement he promised us that we could kill any number of ducks by "toling." We had hunted ducks for years, in every imaginable way, but never in that fashion. "Toling" consists in the use of a trained dog gamboling on the beach and attracting the ducks through curiosity close to the shore, where the gunner lies hid.

"I believe I am the only one in this region that shoots ducks by toling," said the old gentleman. "It used to be a common thing in my day. However, I will show you how it is done to-morrow, for it is going to be a cold rough night and it will drive the ducks in from the open Sound."

That evening as we sat around the midnight lamp, over our pipes and toddy, Mr. Menefee reeled off story after story of the immense amount of game, especially waterfowl, that a few years ago used to haunt the Sound. Some of his statements were almost incredible, yet fuller investigation showed me that they could have been true. An illustration. The late Edmund Ruffin, of Virginia, was one of the most learned and scientific men that Virginia ever produced. He spent years in tireless efforts to bring to the outside world the hidden wealth of Virginia and North Carolina. In one of his letters, written in 1869, he says in relation to the section referred to:

> Nor is game less abundant. Its extent is scarcely known by any one out of this region. There are ducks of various kinds, of which the canvasback is the most esteemed. There are also wild geese and swans exceeding all conception of any person who has not been informed. They are often so numerous as to entirely cover acres of the surface of the water, so that observers from the beach would only see ducks and no water between them. These great collections are termed "rafts." The shooting season commences in autumn and continues through the winter. The returns in game killed and secured, through any certain time to a skillful and patient and enduring gunner, are as sure as the profits of any ordinary labor of agriculture and trade and far larger profits for the capital and labor employed. The following particular facts I learned from the personal knowledge of a highly respectable gentleman and a proprietor on the Sound (Currituck) Princess Anne. The shooting (as a business) on his shores is done only by gunners hired by himself and for his own profit, and who are paid a fixed price for every fowl delivered to him according to its kind, from the smallest or least prized species of ducks to the rare and highly valued swan. He has employed thirty gunners during a winter. He provides and charges for all the ammunition they require, which they pay for out of their wages. In this manner he is obliged to know accurately how much ammunition he gives out, and it may be presumed that the gunners do not waste it unnecessarily at their own expense. In this manner, and for his own gunners, and his own premises only, in one winter he used more than a ton of gunpowder, and shot in proportion, which was more than four tons, and 46,000 percussion caps. From this expenditure along the shore of one farm only, there may be some conception of the immensity of the operation and the results along the shores extending for full 150 miles, and on all of which the same business is regularly pursued.

We were awakened before the break of day by our host, and by sun-up were safely ensconced in a blind made of sea weed, a few feet from the water's edge. The sight before us was one to make a sportsman's blood rush through his veins. As far as the eye could reach could be seen ducks in couples, groups and ricks, while the air was alive with them flying inshore, and lighting with a great splash. We crouched in the blind, Mr. Menefee telling us not to move nor speak. The dog was an aged setter, a cross, it seemed to me, for he was neither Irish, Gordon, Laverack nor belton. He knew his business, though, for his master had trained him years ago, and used him regularly to supply his household wants. Mr. Menefee took a position some fifty yards from our blind, and behind a small mound of sea weed only large enough to conceal his body, and ordered Rex to "hie on."
